eristic method practised by the Aryans in India. old Greeks and the Germanic tribes. monly practised by the Slavs and the Celts as l. This method of disposal of the dead places oldest Indo-European peoples of whom we know nething definite, namely the Aryans of the rveda and the Greeks of the Homeric poems, in rp contrast with other peoples of antiquity— Experience, the Aegean Sea people, the Sumer-s, the Semites, and the peoples of Asia Minor, cording to the findings of Archaeology in Europe, cording to the findings of Archaeology in Europe, Europeans in that continent simply exposed 2 dead in the early Stone Age, in the late Stone is, this was followed by burial, and finally, in the onze Age, burning was the method practised f O Schrader, 'Reallexikon der Indo-Germanhen Altertuinskunde', pp. 76 ff., 11. Hirt, 'Die do-Germanen' II pp. 601 ff., 733-734). The discription of the Indo-Europeans did not take place which the Bronze. Ago, for we see that the relier than the Bronze Age, for we see that the me Indo-European word for bronze is found in alic (Latil ars), Germanic (Gothic ar.) and Indorryan (Sanskrit ayas the word came to mean ron' in India). It cannot, of course, be proved eyond any doubt that the Indo-Europeans in ner undivided state outside India practised ner cremation. But indiging from the fact that this practice (along with a number of other octo-religious ideas and usages) was shared a common among the most widely-separated a common among the most wherev-separated node-European peoples, the legitimate inference vould be that it was an inheritance from before he time of dispersion. The practice of larnax-purial, again, which is such a noteworthy thing in the culture sites of Mohen-jo-Daro and elsewhere. nowhere mentioned in the extant documents of

old Indo-European peoples
The Rigyeda in the main is an Indian document, although it is quite probable that considerable portions of this collection were composed outside India in the Indo-Iranian period, and some of it quite conceivably is even earlier. There of it quite conceivably is even earlier There are strong traces of non-Aryan influences on the culture world of the Rusveda. Aryanisation of groups of original non-Aryan speakers seems to have started quite early and it is not to have started quite early, and it is not unlikely that methods of disposal of the dead other than by cromation were practised among some of the Aryanised non-Aryans. Similarly the custom of placing the dead on trees, which we find men-tioned in a later Indo-Aryan document, the Maha-bharata, was undoubtedly non-Aryan. Dr. Das's discussion of Rigveda X. 18, 14, does not have much bearing on the question. He is 'not aware of any one throwing any light' on this verse. There

of any one throwing any light on this verse. There are some European scholars who have translated are some European acholars who have translated and have sought to throw light on it But apart from that the verse has been explained in a perfectly satisfactory manner in the Brihaddevata. My respected friend Pandit Vidhusekhara Sastri of sintiniketan, to whom I applied for information on this point, has very kindly looked up the passage to the and obtained for me the reference to the me and obtained for me the reference to the Ruhaddevata*. Rigveda X, 18, 14 reads—mam ahani 'snah parnam ira dadhuh: Praticim

tayabha vacam asvam rasanaya yatha.

Brihaddevata, cd. Macdonell, Text. p. 80: Practicine yathahan apahrty' etarans tu, Ahahsu pitara dadhur ety asaste 'naya' sisah : Ahahav agamisu og mam prayantam samajivayan.

and bearing a sold of the sold

Pandit Vidhusekhara translates Like a feather of an arrow, tney (the Fathers, as in the previous verse) have placed me in the days which come towards or approach (i. e in future days). I have caught the word that comes towards

(i.e the future word), even like a horse with the rein'
Dr. Das's attempt to see a burial 'in a slanting
(i. e not fully stretched on length) posture,' to give his own words, goes against the views of the pur-racaryas, to say the least and does not throw any further light on the question

I should indeed be surprised if the words adhi-Sindhau, in Rigireda I, 126 I were to mean 'in (the land of) Sindh' and not 'on the Sindhu or Indus river', pace Sayana We have adhi Gangayam, adhi-Yamunayam exactly in the same way to mean by the Ganges, by the Jumna' We would certainly the Ganges, by the Jumna' We would certainly expect Sindhusu if the people or the country were meant Is the use of Sindhu in the restricted sense of the present-day Sindh tract older than the 7th Century A C' Sindhu meant all India, as the Iranian form Hindu and the old Chinese name Sin-tu or Han-tu would show the commonly finds in Sanskrit literature Sindhi-Saucira for the Sindh of the present day. Sindh was certainly outside the pale of Arvan lands in the Brahmana period. Even in the early Buddhist Pali literature we do not find Smidhn, or Samera, among the Sixteen Great States (Mahajanapadas) of Northern India. Aryani-sation of or Aryan settlement in Singh seems to have been a comparatively late thing. And this lateness of Arvan settlement in Sindh (as much as of certain other tracts in Eastern and Southern Inda) is clearly borne out by Baudhavana's munction (1, 1, 1, 13, 14) that Arvans who went there had to perform a sacrifice by way of penance

saria-prstaya va. Dr Das might have spared himself the trouble bringing in Bhavya and the rest when nell and Keith's Vedic Inder is so handy, to help us to bring in our paper, the necessary air of original

to bring in our papers the necessary air of original study if we chose to do it.

Dr Das evidently is sceptical about 'Western Scholars' and their methods. He certainly will repudiate the appellation 'Western, if one were to apply it to the scholarship and the methods which have been displayed in his Rigiedic India, a work which will always remain famous in the history of modern research in India as having put forward in all seriousness the proposition (among others) that India was the home of a highly civilised Aryan people in the Pleistocene Age. Perhaps following the favourite way of indicating contrast, Pr. Aryan people in the riestocene age remaps for lowing the favourite way of indicating contrast, Dr. Das will call this other kind of scholarship and method of research 'Eastern' but as a native of the East I would protest against that For whatever label one might put on it, this anti-Western' type of scholarship is not entire unknown in the West either and the first way with common there not very many in fact, was quite common there not very many decades ago and a distinctive feature of this brand, whether in India or in Europe 1s its strong undercurrent of theological chauvinesm, sweeping away the results of specialised study and investigation by the very daring and recklessness of its assertions and conclusions.

SCRITT KURAR CHATTERJI. Calcutta University.

TEMPEST

Tempest growled "No".

Half asleep on the shore you dreaded the voice of Tempest When he thundered in your ears his "No."

You had said to each other
that the store had its plenty,
the house had its comfort,
When suddenly grinding his flashing teeth

But I have made Tempest my comrade and left my shore, My ship tosses on the sea. I have trusted the Terrible, have filled my sails with his breath and my heart with his assurance

that the shore is there. He cries to me, "you are vagrant Even as I am myself,

Victory to you".

Things are shattered to pieces scattered by the wind,

The timid murmur in despair,
"The end of time has come"
Tempest cries, "Only that remains

which is utterly given away "With trust in him I march forward,

I look not back
While the hoarded heap is swept away by flood.

My traveller's need is tuned with the tune of his loud laughter, it sings

"Away with lures of desire, with bonds that are fixed with the achievement that is past and hope that is idle.

Learn for your drum the dance time
of the reckless waves beating against rock,
Away with greed and fear
with tyranny's banner borne by slaves.

Come Divine Destruction
drive us away from the house
from safety's easy path,
Come with the flutter of your wings of death,
Spread upon the wind your cry "No".

No rest, no languor,

No load of feebleness weighing down the head.

Knock and break open the miser's door,

Scatter away the musty gloom of storage.

banish the self-distrust

that seeks a hole wherein to hide

and let your trumpet proclaim

in the wind

Your terrible cry, "No".

The Fatherhood of God

In an article on "The Mysticism of Jeous" contributed to the Century Magazine, Mary Austin writes .—

"Jesus saw God as no man before him. He saw God as the father, and man the veritable son; God stuff in man, He in us and we in Him"

That Jesus saw God as the father, is quite true; and it is one of his claims to eminence as a religious teacher. But that he saw God as no man before him, is not true. Dalman, in his work entitled *The Words of Jesus*, pp. 184—194, gives numerous examples of God being addressed as father in the pre-Christian sacred literature of the Jews, and observes.

"Jesus adopted this term for God from the popular usage of his time.....The instances cited above also show the incorrectness of the idea that the relation of God to the individual was not set forth until the New Testament revelationIt was therefore nothing novel when the fatherly relation of God was also applied within the Jewish community to the individual."

Nor was the idea of the fatherhood of God a conception peculiar to the Jews. In the sacred books of the Hindus, the fatherly relation of God was recognised centuries before the birth of Christ. In the Rig-Veda, 10 82. 3., we read, "Yo nah pita janita sa vidhata"—"He who is our father and progenitor is the Ordainer". In the white Yajur-Veda, 37. 20., we read, "pita no'si", "thou art our father". There are many such other passages, which we need not quote.

As for "God stuff in man, He in us and we in Him", it is a pre-Christian Upanishadic doctrine. In lact, when Mary Austin writes, "If Jesus said, love your neighbour as yourself, he meant not in a Jewish shopkeeping fashion, measure for measure, not even as one of yourselves, but in the sense of being yourself, undivided part of the spirit made manifest as men, mankind", she unconsciously gives a sort of paraphrase of the Vedantic doctrine, "tat tvam asi", "thou art That", which has been thus expounded by Professor Deussen in his Philosophy of the Vedanta:

"The Gospels fix quite correctly as the highest law of morality: Love your neighbour as thyself. But why should I do so, since by the order of nature I feel pun and pleasure only in myself, not in my neighbour? The answer is not in our Bible,

THE PARTY OF THE PARTY OF

but it is in the Veda, as in the great formula, "tal twam asi," which gives in three words metaphysics and morals all together. You shall love your neighbour as yourselves because you are your neighbour, and mere illusion makes you believe that your neighbour is something different from yourselves".

It is true that the Jews thought of God as specially the father of the Israelites but Jesus also had that sort of Innitation, as Mary Austin herself tacitly admits when she writes.—

"he [Jesus] was a Jew and a small-town man ...He had no books but the law and the prophets; no words, no figures, no illustrative anecdotes that were not small-town in shape and Jewish in color. He was as much bound by these things in the transmission of his message as telegraphy is bound by dots and dashes."

This view is supported by Pfleiderer, Primitive Christianity, vol ii, pp 419-420, when, in speaking of "the traditional assumption that Jesus had separated the hoped-for Reign of God from any close connection with the Jewish people and had thought of it as destined for all men," that author observes;

"That is directly contradicted by the dialogue of Jesus with the Syrophornician woman, in which He declared that He was only sent to the lost sheep of the house of Israel, and that it was not right to take the bread which was meant for the children of the house and give it to the dogs (heathen) (Matt. xv. 24 ff). So, too, He commanded His disciples not to go into the "way of the Gentiles," nor to enter any city of the Synaritans but only to the lost sheep of Israel (Matt. x 5). He never sought out the Gentiles, only when they came to him unsought and asked his help did He by way of exception, answer their earnest petitions, as in the cases of the Syrophoenician woman and the centurion of Capernaum. The passage about the Son of Man judging all the nations (Matt. xxv 31f) does not come from Jesus but from the ecclesistical Evangelist, as does the saving about preaching the gospel in the whole world (Matt. xxiv. 14) and the command to baptize all nations (xxviii.18f), the origin of which from the later convictions of the Church is betrayed by the Trinitarian formula."

"The Ancient and Recognised Right of Self-Government"

The preamble to "The Commonwealth of India Bill", drafted by Dr. Annie Besant, and her co-workers contains the words, "whereas it is the desire of the Indian people to exercise anew the absent and recognised

right of self-government, enjoyed by their ancestors from time immemorial," etc. In commenting on these words in the Bill, The Indian Social Reformer of January 24 writes :-

"By way of introduction, we may say we do not like the assertion in the preamble that the ancestors of the Indian people enjoyed the ancient and recognised right of self-government from time immemorial. Local self-government of a more or less complete kind they certainly enjoyed up to the British period; but they never enjoyed the right of self-government, which does not, of course, mean government by an indigenous autocrat such as the Indian States enjoy even to-day. Such a gross historical inaccuracy is scarcely the most auspicious beginning for Indian self-government." like the assertion in the preamble that the ancestors

Our information is that it is not "a gross historical inaccuracy" to assert that the ancestors of the Indian people enjoyed the ancient and recognised right of self-government from time immemorial From the year 1907, in which this Review was founded, it has been trying to obtain and spread information regarding forms of government pievalent in India in the past and the rights, if any, possessed by the people.

In March 1907, in an article written by the late Sister Nivedita and ourselves, it was said on the basis of information then available that "India has been from ancient times immensely more skilled in the mode and habit of democratic self-government than England has ever cared to know or believe".

In June, 1907, we quoted the following sentences, among others, from an article on oriental research in the Times of India by Sir R. G. Bhandarkar

"The Indian Aryans had, like their European brethren, the rudiments of free political institutions And actually the existence of aristocratic republics is alluded to in Buddhist Pali books,

In the same issue (June, 1907) we wrote: Mr. Vincent A. Smith also says in The Early

History of India. The Punjab Eastern Rajputana, and Malwa for the most part were in possession of tribes or clans living under republican institutions......The reader may remember that in Alexander's time these regions were similarly occupied by autonomons tribes, then called the Malloi, Kathaioi. and so forth." (p. 250, second edition).

In April, 1908, appeared an article on "The Popular Assembly in Ancient India" in monarchies by Dr. Abinaschandra Das. It gave some idea of a kind of limited monarchy.

In August and September, 1910, we published many Notes on self-rule in the East. We quoted from Dr. Hoernle's presidential

address at the Asiatic Society of Bengal, delivered in 1898, passages stating that Mahavira, the "founder" of Jainism, was born in a State which was an oligarchic republic. We quoted also various passages from The Early History of India by Vincent Smith (second edition), pp. 25, 67, 270, 271, referring to, or descriptive of, various republics in India We gave some long extracts from Buddhist India by Dr. Rhys Davids. We may repeat a few sentences from it here

absorption of these domains, and also of the republics, into the neighboring kingdoms, was already The evidence at present available is not an torce. The evidence at present available is not sufficient to give us an exact idea either of the extent of country or of the number of population under the one or the other form of Government. Nor has any attempt been so far made to trace the history of political institutions in India before the rise of Buddhism. We can do no more, then they state the first mast interesting from the then, than state the fact—most interesting from the comparative point of view—that the earliest Buddinst records reveal the survival, side by side with more or less powerful monarchies, of republics with either complete or modified ındependence

It is significant that this important factor in the social condition of India in the sixth and seventh centuries BC. has remained hitherto unnoticed by scholars either in Europe or in India They have relied for their information about the Indian peoples too exclusively on the Brahmin books, and these, partly because of the natural antipathy felt by the priests towards the free republics, partly because of the latter date of most of the extant priestly literature and especially of the law books, ignore the real facts. They convey the impression that the only recognised, and in fact universally prevalent form of Government was that of kings under the guidance and tutelage of priests But the Buddhist records, amply confirmed in these respects by the somewhat later Jam ones, leave no doubt upon the point."

We reproduced in the notes referred to above some passages from Dr Leitner's Indegenous Elements of Self-Government in India, published in the last century

The conclusion reached by us in 1910

was stated as follows -

"The extracts from various authors given above show that republics existed in India, that they existed at least as early as the days of Buddha and Mahavira (sixth century B. C) and as late as the reign of Samudra Gupta (fourth century A. C.) and that they were situated in the extensive tract of country stretching from the Panjab to Bihar and from Nepal to the southern borders of the Central Provinces. So the republican form of Government in ancient India had a duration of at least one thousand years. We do not know of any other country, ancient or modern, where democracy has prevaled for a longer period. In ancient Italy the republic of Rome lasted for five hundred years. In ancient Greece the republic of Athens lasted for a little more than three hundred years. And these

countries, which in ancient times were dotted over with small republics, are certainly not as extensive as the parts of India which in olden days could boast of many republics. As for achievements, the history of these Indian republics is too little known to enable us to say anything positive on the subject. But we suppose, the fact that they gave to the world a Buddha and a Mahavira will not even in these jingo and materialistic days be considered unworthy of being blazoned in letters of gold in the pages of history."

As to popular rights and checks on kingly power in monarchies, we were privileged to publish in 1912 some results of the special study made by Mr K. P. Jayaswal to find out what constitutional progress, if any, Ancient Indians had achieved. "A connected paper," writes Mr. Jayaswal in the preface to his recently published great work Hindu Polity. was read to the Hindi Literary Conference in 1912 and its translation published in the Modern Review, 1913, under the title 'An Introduction to Hindu Polity.' Before the publication of the Introduction there had been no work in any modern language on the subject."

It is not necessary for us to enumerate exhaustively all the notes and articles on selfgovernment in ancient India published in this Review, but we should state that, as mentioned in the preface to Hindu Polity, we had the honour to publish Mr Jayaswal's paper on Paura Janapada in April, 1920.

Our object in writing this note is to show that so far as this journal is concerned it has tried to make available to the public the results of the researches of scholars on the subject of self-government in ancient India, as periodicals are dipped into more often than learned brochures and treatises. The remarks quoted from the *Indian Social Reformer* at the beginning of this note show what little success has attended our efforts.

It goes without saying that scholarly works are entitled to greater attention than popular monthlies. It is hoped, therefore, that Mr. Jayaswal's Hindu Polity will be studied particularly by those who do not believe that the aucient Hindus enjoyed and exercised the right of self-government in their monarchies and republics. If this book does not convince them in the main, they will do a service both to the author and the public by stating definitely why they think our ancestors had not made any constitutional progress as self-governing free men. This is not to claim that our ancestors never lived under tyrants. They did, like all other peoples, in some period of history or other. What Mr. Areawal contends is that Hindu polity, under

monarchies and republics, "had a of at least thirty centuries of historycareer longer than that of all the politics known to history".

The topics discussed in Hindu Polity are: (1) The Sovereign Assembly of the Vedic

times,
(2) The Judicial Assembly of the Vedic times,
(3) Hindu Republics (1000 B.C. to 600 A.C.),
(4) Hindu Kingship (from the Vedic times to

600 A.C.).
(5) The Janapada or Realm Diet, and the Paors.
Assembly of the capital (600 B.C.—600 A.C.).

(6) The Council of Ministers under Hindn Monarchy (1000 B.C.—600 A.C.), (7) Judiciary under Hindu Monarchy (700 B.C., -6(0) A.C.), (8) Taxation (1000 B.C.—600 A.C.),

(6) The Hindu Imperial Systems (1000 B.C.— 600 AC), and

(10) Decay and Revival of Hindu Constitutional Traditions (650 A.C.—1650 A.C.)

The book shows that the Hindu race has experimented in great and various systems of State and political machinery.

The number of republics discussed in the book is eighty-one. Many of them were small States, but some were large and powerful.

Incidentally our countrymen reminded here that as they have entrusted a committee with the work of drawing up a scheme of Swaraj, it would be profitable for them to explore all the methods and machinery of administration described in Hinds Polity. For, perhaps there may be some detailed in that book which are more suited to Indian conditions than Western devices.

Conquest and Sense of Justice among the Ancient Hindus

In continuation of our Note on "Excuses for Usurpers and Exploiters" in the last issue, we may be permitted to make the following extract from Hindu Polity, Part II. pp. -190-191 :-

"Laws of war and conquest were incorporated into the Civil Law as one of its limbs. So much so that the question of conquest was often discussed from the point of view of Municipal law, the standard being the standard of the morality of law, its state was conquered, its government was to be re-entrusted into the hands of the old ruling house. This was what the Manava Dhama-Sastra hand down after an experience of a nearly all the standard of the standard of the old ruling house. laid down after an experience of a nearly all-India, one-king empire, extending from sea to sea, from Madras to the Hindu-Kush. It was India, one-king empire, extending from sen to sea, from Madras to the Hindu-Kush. It was based on the analogy of the legal theory of legitimacy. It was not a mere theory which was once preached as a pious opinion and then forgotten. It was largely followed from the 4th to the 10th century A.C. In the Allahabad pillar inscription, of the great conqueror Samudra Gunta in the of the great conqueror Samudra Gupta

17.5

inverted Gusta dynasty we find the same principle that Laidess records the same practice. Substitute hubammadan writer bears winess to the wars they wage with the neighbouring coinces are not usually undertaken with a view when a prince makes himself master of some reaction, he confers the government upon some forces, of the royal family, (1851 A.C.—Account Methods Sulaiman recorded by Abu Zaid, 19718) by the Abbe Renaudot). In the age of Rindu Rationalism which formed the palmiest lays of Hindu history, the theory existed in the form noticed by the Greek writers with regard to dindu attitude to foreign politics. Arrian drawing ages Megasthenes records in his Indika (ix):—

"Sense of justice, they (Hindus) say, prevented any Indian king from attempting conquest beyond the limits of India."

Only such a theory would explain the great fact that although Chandragupta's was "the mightiest throne then existing in the world" (Rhys Devide) and so it remained under his two successors, and that although the Maurya emperors found their next-door neighbour, the Seleucid trapire, weak and crumbling, yet no inclination was exhibited to go beyond the Hindu-Kush, the next-door findia of those days.

The Brahmo Samaj and the Swaraj Movement

Forward has published an abridged report of a speech of Mr. Bipin Chandra Pal, in which he explained the contributions of the early Brahmo-Samaj towards the development of national consciousness in country.

The seed of the present-day movement for national freedom, known as the Swaraj movement, Si, Pal said, was shown for the first time in the said of Bengal by the stalwarts of the early Brahmodians incovement, such as Raja Ram Mohan Roy, Raharshi Debendranath Tagore, Keshab Chandra Sen, Raj Narayan Bose and Sivanath Sastri. Each of them worked in his own field in his own way to evoke and nurture the spirit of freedom in its different aspects and their joint services resulted in terming the national mind to seek and appreciate the wealth and beauty of the religion and philosophy which had been handed down to the Indian second by their forefathers.

Swami' in its crudest sense is generally understand to stand for the complete elimination of the littles Raj from the administration of the country. The stand for the complete elimination of the littles Raj from the summistration of the country. The stand beauty term.

Inharmhi Debendranath Tagore drew the attention of the Indian educated countrymen to the sublimity in Indian the tide of the increasing tendency of the Indian of pride which now throbs in every tendence of this country is to be traced to his seathers.

Chandra Sen's services in the foreign

Chandra Sen's services in the foreign tries his preachings and propaganda enabled

the world to assess the culture and civilization of this country at their true worth and thus gave a strong fillip to the patrictism and national pride of the children of the soil.

Raj Narayan Bose anticipated Bankim Chandra's idea of the need of organisation and sacrifice as reflected in the Ananda Math. The necessity for reasoned non-co-operation with the government machinery and civil disobedience was felt long ago by Pandit Sivanath Sastri and the young band of workers who followed his lead.

Concluding the speaker said that the ideal of

Concluding, the speaker said that the ideal of Swaraj was indissolubly connected with the ideal with which the Brahmo Samaj was started. Political emancipation of the country was an essential condition for the realisation of the Truth by the condition for the realisation of the Truth by the people. Slavery stood in the way of the nation rising to its fullest stature. Poverty and its attendant evils were the direct outcome of political servitude. The ill-nourished, short-lived, cringing individual could not convey the idea of the Eternal Beauty of God after whose image he has been created. Swaraj was, therefore, a spiritual necessity with the Indian people according to their religious philosophy. The pioneers of the Brahmo Samaj, which was primarily a religious movement, therefore, worked heart and soul to evoke a longing for Swaraj as part and parcel of their religious mission.

British Propaganda in America

Some time ago the following paragraphs appeared in The New York Times:

Otto Rothfeld, for many years a member of the Indian Civil Service, who has come to the United States to lecture, expressed confidence in an interview with a reporter for The Times yesterday, that discontent with British rule in India would die out as the result of the policy of conciliation and cooperation adopted by the British. Mr. Rothfeld believes that the British reform scheme will succeed, and that the majority of the Indian people desire to remain in the empire. Sympathizing with their hope to obtain greater Indian control of the Government of India, provided safe-guards were established against too sudden transitions, he stated his belief that India would gradually take her place in the British Empire with its other component parts.

place in the British Empire with its other component parts.

Mr. Rothfeld, throughout his career in India has advocated liberal views similar to those which in the last three years have been embodied in the reform scheme. He was head of a district for many years, and during the last three years has been a member of the first Legislative Council in Bombay under the reform scheme. His last post in India was head of the Cooperative Department in Bombay. He is now on leave, preparatory to retiring. Besides lecturing in this country, he is a representative of the London book-distributing firm of Simpkin, Marshall, Hamilton & Kent. He is a graduate of Oxford, a Fellow of the London Geographical Society and a former President of the Anthropological Society in Bombay.

May we enquire, who paid the expenses

May we enquire, who paid the expenses Mr. Otto Rothfold's lecture tour in of Mr. Otto America, himself or the British Government in India?

He spoke of "the policy of conciliation

and ecoperation adopted by the British". Indian opinion would characterise the policy exactly in the opposite way. We have no space either to quote in full what he said in response to the questions put to him by the reporter or to expose the half truths and untruths which he uttered. But the reader will be able to judge of his glozing from the following extract.

"It is essential to realize the background against which political discontent has arisen and become visible. The primary fact, I think, is that in the last twenty-five years India has altered roughly as much as Europe did from the middle of the thirteenth to the middle of the fifteenth century. It has passed in twenty-five years from medieval-ism to something of a remaissance or modernism. The transition has been complicated by the fact that, unlike the change to the renaissance in Europe

The transition has been complicated by the fact that, unlike the change to the renaissance in Europe it was not confined mainly to the things of the spirit but had also to face added complexities of industrialism and capitalism. The economic change from a system of handicrafts to the full force of a capitalist industrial system has been even greater than that introduced in Europe by the influx of gold after the discovery of America.

"In those twenty-five years, therefore, the Indian has seen many of his cherished social institutions swept away or modified and the whole social fabric disturbed by new economic conditions. The marriage system has largely altered, the old joint family has almost disappeared, artisans have abandoned the villages, the ownership of land has passed to a large extent into the hands of business men, and the cities have become congested and unwholesome. Above all, in twenty-five years prices have risen to at least four or five times as much as they were. All this of course creates unhappiness and mental unrest."

It is true that prices have risen at least four or five times, but it is not true that the old joint family system has almost disappeared, or that India has felt "the full force of a capitalist industrial system". But the most surprising falsehood which Mr. Rothfeld uttered is contained in the second of the two sentences quoted below:-

"Gandhi's main principle was a revolt against capitalism and industrialism. To him the British Government was satanic simply because it supported or tolerated factories and banks."

It was a deliberate perversion of the truth to suggest that there was no political reason for Mr. Gandhi to call the British Government "Satanic" and to say that the reason why he called it "Satanic" was solely or even partly economia.

The Dayananda Centenary

The celebration with besitting splendour the centenary of the birth of Swami Caramanda reminds one afresh of the perso-

nality of that great religious reformer and the services rendered by him to

country.

He is known and will be known principally as the founder of the Arya Samaj. And as the Arya Samaj has been directly and indirectly the means of rejuvenating to some extent the Hindu community in the Panjab, the United Provinces and other regions of upper and northern India, he is looked upon generally as a great benefactor of Hindu India. But his services to Hindu India are themselves sufficient to show that he was a regenerator of India as a whole. A chain is as weak as its weakest link. A nation is as weak as the weakest community included in it. So whoever contributes to make a weak community strong, really thereby makes the whole nation strong. The Swami had a remarkable virile personality. And he has infused his virility into the Arya Samaj, making that body full of selfconfidence, making its members feel that they can, if they will, accomplish whatever they set their hands to in any part of the globe.

The Tribune of Labore rightly ob-

Serves :-

"The Swami is a rare instance of a primarily religious reformer who placed the political and material well-being of his people almost on the same level with their spiritual well-being. He laid great emphasis on love of country and was among the first in this generation in India to demonstrate the nirst in this generation in India to demonstrate the value and usefulness of organisation as an instrument of national regeneration. He was equally clear and equally insistent on the parameter necessity of the people realising their political rights as well as their political obligations, both of which he detailed at great length in his famous work. Satyartha Prakash. Secondly, he was the first Indian on this side of India to realise the supreme importance both of the advention and smarcination. importance both of the education and emancipation of women and of the all-round healthy development of the child, who is not only the father of the man, but the maker of the nation......He was also the first Indian reformer to emphasise the necessity of a common language. Lastly in the anso the first indum reformer to emphasize the necessity of a common language. Lastly in the sphere of social institutions he was strong and unequivocal in his condemnation both of early marriage and of the treatment meted out to widows in many Hindu families. The most enduring of in many Hindu families. The most enduring of his contributions in this sphere, however, was the emphasis he laid on the paramount necessity of putting an end to the institution of depressed classes. Here, as elsewhere, here prehaps more than anywhere else, he was a true pioneer, and of his many titles to immortality perhaps the greatest is the imperishable service he rendered to his country and people by drawing pointed attention to this plague-spot in the Hindu social system."

Saying and Doing Frederick the Great is reported to have said once upon a time that there was they were free to say what they liked it he was free to do what he liked. It is notice that a certain person the been saying very uncomplimentary things that him, he simply observed drily: "How many soldiers has he behind his back?"

There is no such understanding between the British Government and the people of india as there was between Frederick the freat and his people. In fact, many a man has here been sent to jail and put to untold suffering for saying things that were true but palatable to the bureaucracy. But so far the council chambers at Delhi and in the council chambers at Delhi and in the council chambers at Delhi and in the council state that underlying Frederick's

synical remarks.

The Government of India and the Government of Bengal assigned certain reasons for promulgating the Bengal ordinance. spromulgating the Bengal ordinance. At space, Mr. J. Chaudhuri took them to pieces in The Calcutta Weekly Notes and showed that the reasons alleged were not based on both. When the ordinance came up for dispassion in the Legislative Assembly, Pandit Motilal Nehru showed in the same way that the reasons assigned by Government were unsubstantial. What is written in newspapers may or may not be replied to by Governmont : Government officers may truly, or pretend, not to have read them. But when the spokesmen of Government are faced in council chambers and listen to the comments of the spokesmen of the people, the former must either come forward with their replies admit their silence that they have no reply. As there was no reply to what Pandit Motifal said, the conclusion reached is that Government had nothing to say in answer. Hence Pandit Motilal's speech was a more tective exposure of the position taken up by Government than the criticism published in The Calcutta Weekly Notes.

It is laid down in the Government of India Act that there shall be freedom of speech in the Council Chambers. Many of the legislators like the Pandit have taken alreating of this provision to make outself speeches. If we do not mention all of them, it is simply because all of them do not at this moment come to mind, and also there is no need to be exhaustive. But a few recent instances may be noted. Mr. Bipin Chandra Pal suggested that many offences and the doors of the anarchists might be

due to the activities of agents provocateurs. Mr. Jamnadas Mehta said that an ordinary cheat or swindler was sent to jail, but when a finance member defrauded the people of India of forty crores of rupees by the sale of reverse councils, he was elevated to a provincial satrapy. Mr. Patel said in the course of a very outspoken speech:

"You don't listen to us here because there is no sanction behind us, no army of our own to back us. You have an army behind you; that is how you enforce your orders."

Whenever the Indians claimed the grant of Responsible Government or the grant of more constitutional rights they were told "you are unfit to rule because you are unable to undertake defence to-day". Therefore, he supported with all his heart the proposal to establish a Military College in India for training of officers for the Indian Army. But the Government, said Mr. Patel, was insincere. It did not want them to learn the defence of their country.

During the Military College debate, Pandit Madan Mohan Malaviya and Mr. Jinnah and some other members made strong speeches.

Mr. Jinnah's words, uttered with a ring of sincerity and force which is peculiarly his own proved most bitter to Treasury Benches. He charged the Government with bad faith and with no desire to equip India, to defend herself. There was the proof that the Indianisation of Army had only recently been thought of and still there was no proper scheme for it. Every Indian distrusted the Government intentions. Even that loyal friend of the Government Sir Krishna Gupta who was a member of the Esher Committee, distrusted it. If the Government was sincere let it prove its bona fides by appointing a committee to draw a scheme of the Indianisation of army and for the establishment of a Military College.

Perhaps the heldest and strongest speech

Perhaps the boldest and strongest speech ever made in any council chamber in India was that of Mr. Tulasi Charan Goswami, in which he accused Government of being more anarchical, terroristic and lawless than the anarchists, and so forth.

Every time that either in the central legislature or in any provincial council Government is "defeated", it is claimed by our people, in the language of the school-boy poem, that "it was a great victory." But when Peterkin asks what good came of it, old father William of the poem only repeats his observation that "it was a great victory".

Of course, we are not so cynical as to suggest that these victories are of no use at all. It is certainly necessary and profitable for us to try to convince our people and the rest of the world (perhaps including official and non-official Englishmen also that reason and justice are on our side. But the

. FF-1

the same it remains the chief thing for us to ponder why, say what we will, the bureaucracy are in a position to do what they will. The problem of problems facing us is to devise some means whereby we can prevent the bureaucracy from doing what they please and make them either carry out the will of the people or give up their official positions. It is easy to say that the solution lies in the attainment of Swaraj. But what is Swaraj, and how to attain it?

Agents Provocateurs

More than once have we referred in this Review and in Prabasi to the fact that repeatedly, when the occurrence of some "anarchical" outrage or some "religious" riot, some circulation of revolutionary pamphlets, some find of bombs, arms or ammunitions, would come handy to the British rulers of India in England or in India, such things have happened just in the nick of time. More than once have we suggested that such coincidences could not be accidental or "providential", but might be due to the existence of secret agents. Other journalists may have said similar things. Mr. Bipin Chandra Pal made a similar suggestion in the Legislative Assembly. In his the Bengal Ordinance, Pandit speech on Motilal Nehru referred to a remarkable representation sent to the Secretary of State by some State prisoners in which they undertook to substantiate the charge that a certain agent provocateur whom they were prepared to name was responsible for the recent outrages which were alleged by Government to have been perpetrated by the revolutionaries. Government benches did not take up the challenge implied in the Pandit's speech.

Shortly after Forward published a letter addressed by a State prisoner to the members of the Indian Legislative Assembly in session in which he repeats the charges contained in the memorial to the Secretary of State. We will make a few extracts from this re-

markable letter.

We stated in our representations to the S. O. S., that a man who, we had every reason to beleive, was an agent provocateur exploited the high patriotic fervour and idealism of the Bengali youth and managed to get up a party of violence during the N. C. O. Movement and at a convenient movement succeeded in committing the few outrages and the Government used these as a handle to checkmate rubble propagands in connection with the Swarajys acceptance with snapidion and disfavour from the succeeding. Outrages and discoveries of arms We stated in our representations to the S.O.S.,

and explosives continued the series being played to the tune of the course of public events. Every action and discovery significantly preceded one or other momentous motion in a Legislature. These or other momentous motion in a Legislaurs. Inese have all been mentioned in our statement but the news of the publications of the "RED BENGAL" leaflet did not reach us then, but it was cabled in time to be published in the British papers on the morning of the House of Lords debate on the Indian Questions. The Peers and the press in England fulminated and followed in its wake the Ordinance and the reinvigorated application of the Ordinance and the reinvigorated application of the rusty Regulation.

The charge is repeated in another part of the letter thus :-

We have very unambiguously put it that all acts of violence that have been committed in Bengal after the NCO, movement have been inspired, engineered and committed by the group got up by that particular agent provocateur and it was significant that the Bengal Government statement published along with the Ordinance mentions again and again that the outrages were all the works of a particular again. mentions again and again that the "outrages were all the works of a particular group of the party". The word "Party" here has no particular sense about it and it is used for a body, the existence of which is assumed or the public is invited to assume. On this point, I beg to draw your attention to His Excellency the Viceroy's statement which makes mention of "Two terrorists organisations" and not one.

Some details are given in a subsequent part of the letter.

We know that two Bengali ex-interness who served the police during the period of their detention were sent to Europe at the expense of the "Secret Service". Much has been made of the activation of the services of the servi Secret Service". Much has been made of the activities of these two men, one of whom was described in course of the proceedings in Cawapore as the manager of the "Vanguard". Ultimately at a certain moment, literature began to flow into the country in spite of strict censorship and report of such literature coming into the country began to be published in communiques from time to time.

A case was set up and the world knows the nature of the case, the unwillingness of the prosecution to go into the source and origin of the matter of the case and the rest of it and I leave it to you to form your own conclusions. Of course, I stick to our joint statement to the S.O.S. and I repeat it that the educated public particularby the young men of the country are intolerant of their present resistion as serfs and helots in their own country and they are groping in darkness to find their way to freedom.

The writer of the letter indignantly repudiates the charge that he and his fellow prisoners were guilty of any acts of violence.

This is the long and short of all that has happened in Bengal. We have demanded public trial, we have challenged the genuineness of any proof against us, we have made the very allegations that all activities that appeared lawless were inspired. Yet, to add insult to injury those very persons, who inspired aided, abetted and utilised for their own selfish ends the murders and other acts of violence, have been using these very materials for calumniant ing and libelling men whose connection with a selficients.

paire bear accept to be preced. Rather res-cation paire of he standing of Mesars and Lamford admitted in interviews with the of that they were awars that we had not the continuous of the continuous and perfect these irresponsible talks from the continuous and yet these irresponsible are continuing mericien. Particularly one person among them who already made himself famous by virtue of his amageous utterances, if not by anything else, has the so far as to forget the high responsibilities of it position. Neither the sanctity of the court, nor shame of attacking men not in a position to shame of attacking men not in a position to stand themselves, has been enough to restrain this personage. He pronounced on several "subtice" cases; while we were in detention he concept as with acts of violence in various speeches. cotes is with acts of violence in various speeches. Act of us from the Midnapur jail sent a wire rotesting against his Council Speech but that was a consequence to him. One of his latest permanages is, what may be called his "Outlaw" that "Men who defy the law if it is and act outside the lawhave no right to be protection of the law" about men who have lover been tried lawfully, is, to say the least no tried of tath in the civilised canons of law which that men should be considered innocent so ware that men should be considered innocent so his guilt is not proved in a court of law.

The letter concludes with some further

The Revolutionary Movement after the N. C. O. Government is a bogus thing stage-managed by the L. D. If possible all the facts should be made nown to the foreign countries, including the Labour arty in England, so that the Government is suspelled to make the enquiry. On you devolves it is sacred duty and your devotion to the Mother much counted upon. You may suggest some mentions to M. L. A. regarding the nature of the constitues of ex-State prisoner Shisir Kumar Ghose into 1921. If anything was paid to him for tour lover Bengal in 1921? What was the object of into tour? Is it a fact that he was called by Mr. I have a few days before Sankaritola outrage? Is a fact that the D. I. G. of C. I. D. instructed the most that the D. I. G. of C. I. D. instructed the secution to withdraw the case of Kona murder than and Sailen? Will the Government article the correspondence? Also please ask some please ask some than the correspondence? Also please ask some than the Europe? How do they maintain them the Europe? What is the nature of their than the Europe? What is the nature of their fact that all the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the four men acted as informers in the material and the fou

By the by, these questions suggest a which ought to be laid to heart by all herents and advocates of secret societies. that the members of such movements never be sure of not having spies andmiers and traitors among them.

The Bengal Budget

A Company Action 1

Bengal Budget for 1925-6 is a deficit

nine lakes of rupees. In spite of that fact, the amount budgeted for police expenditure is greater by over three lakes than the current year's estimated expenditure. Moreover, a loan of Rs. 8,50,000 is preposed to be floated for building better houses for the Calcutta Police.

Crime and Its Causes and Remedies

It would be foolish to suggest that there should not be unremitting efforts made for the prevention, detection and punishment of But it is not statesmanship, but its opposite, to think that that object can be gained merely by increasing police expenditure. Some crimes there are which are due to economic causes, and perhaps these form the majority. Some there are which are due to insanitary conditions and conditions which stand in the way of decent and moral living. Some are due to bad social customs and Some are due to the facilities arrangements created for obtaining drink and drugs. Some are due to animal propensities and the forces of immorality not being curbed or eradicated by proper education, culture, recreation, etc. Some are due to political and politicoeconomical causes.

Therefore, while adequate police arrangements ought to be made to cope with crime, the more important and statesmanlike step to take is to strike at the roots of crime. That can be done only by improving the educational, social, moral, sanitary, hygienic, economic, political and other conditions of the country. But Government has never taken any adequate steps for such improvement.

It was not wrong for Lord Lytton to draw attention to the absence of adequate social service in the country, though he was ignorant of what social work was really being done. But he forgot that social service, too, depends for its efficiency on political freedom. Without political freedom, that confidence and that hopefulness cannot exist without which adequate efforts cannot be made. Moreover, social improvement in many directions depends on new or improved legislation.

Why is it that Government has often borrowed large sums for war and police expenditure, but has never, to our knowledge, borrowed such amounts for educational, industrial and sanitary purposes?

Public Health

It is noteworthy that in the Bengal Budget the Public Health grant has been reduced by more than two lakhs. Perhaps Bengal has been rapidly growing into a sanatarium!

Treatment of State Prisoners

Complaints of cruel and barbarous treat-ment of Bengali State prisoners transferred to Burma have found publicity in the columns of the Rangoon Mail and thence in other papers. A contrast is often drawn between the treatment of political prisoners in England and their treatment in India. But as such prisoners are not suspected in England of overthrowing British rule and substituting any other rule in its place, they are not considered guilty of any unpardonable crime. Here, in India, political prisoners are suspected of trying to put an end to the predominance of the Anglo-saxon race, who constitute the modern "chosen people of God". What crime can be greater than an offence against "God's anointed" people? And as the object of punishment is to give pain, it is only fitting that the maximum of pain should be inflicted on those who are guilty of the most serious offence.

Alleged Inhuman Tortures at Nabha

Not a day passes without our receiving one or more letters from the Shiromani Guru-Prabandhak Committee containing details of cruel treatment meted out jathas. members of Akali While we are thankful to that committee for its generous effort to keep us informed about what is going on in the Panjab and Nabha so far as the Akalis are concerned, we have always regretted that we have not been able to make any use in this monthly journal of most of the information so kindly supplied. We can, however, assure our friends that we have felt for them and respect their heroism and perseverance. If we may make a respectful suggestion, we would say that the committee would do well to cultivate greater concentration and conciseness, and refrain from recording unimportant details.

The following message, dated the 19th instant, received from the committee, has been

published in many newspapers :—

Reports from Natha just received give harrowtag details of inhuman tortures including wholesale THE REAL PROPERTY AND ADDRESS OF THE PARTY AND

merciless beating to unconsciousness, dragging by "Keshas" (hairs) and beards, ducking into water, putting hot iron rods on various parts of the bedy and hanging by their feet, heads downwards, resulting in several deaths on the spot. Many more are in a precarious condition. A large number is seriously wounded. No rations were issued on 13th and 14th instant to some Jathas. Great excitement prevails. The situation is very serious. Immediate action is necessary.

We are greatly pained to read this. refrain from making the usual request to the powers that be to enquire into the allegation and take speedy action. For we know that they will do or not do just what they please without our request or its absence making the least difference.

Weaving Department of the Institute of Rural Reconstruction. Visva-bharati

From the annual report of the weaving department of this institute we learn that it was started on September, 1922. Its object is to revive the indigenous weaving and other allied cottage industries of this province. The reports states:

Formerly there was a large number of weavers in this district of Birbhum. They manufactured a large quantity of silk and real Muga cloth. The cotton industry also was very prosperous at that time. But this weaving industry is now practically ruined. A class of middle-men supplied weavers yarn on dadan system (i.e., they advanced yarn and took back the production at a low rate). The weavers did not get fair wages for their labours. weavers did not get fair wages for their labour.

During the last twenty years many attempts were made to revive this important industry. Many people tried to revive it by introducing the workshop system. Many workshops were started in different parts of the country, but almost all of

them failed owing to the following reasons.

(a) There was no arrangement for cheap yarn

supply.
(b) This (b) This industry can prosper only if the weaver can work in his own home in co-operation with women, children and other members of his family. In addition to their daily works, each member of his family can help his work in sizing, winding and other preparations, whereas in workshops these works made the industry more costly. Considering the above conditions, we have adopted the following methods for reviving the

considering the above conditions, we have adopted the following methods for reviving the weaving industry of this district.

(1) We are giving the weavers training in new designs which are sure to bring more profits for

their work.
(2) When they go back to their homes after finishing the training, we supply them yarn at a cheaper rate than the hiddle-men of the market and take back their product paying the proper price for it. Thus we save them from the clutches of the Mahajans. This eystem increases their income. Filteen weavers were taught by the during the last year and they are now exacting better livelihood. The people of other classes, who want to wanting for any pleamenting their income twee svery facility according to their needs the stoye-mentioned ways. In this year, seven-serious received training in this way and of them are still working in our weaving their labour. They are earning a handsome amount their labour. The rest are working in their pactive homes utilising hitherto the waste time their family members.

their family members.

To spread this home industry throughout the whole province we have given attention to the meations institutions also. We have invited the stockers or High and Middle English schools and hastes to get training in weaving, dyeing, printing and durri-making etc., so that they may open classes in vocational training in their respective schools. The heginning of this year, we have trained the heginning of this year, we have trained the heginning of this year, we have trained the heginning of the year, sixteen M. E. School schools, two Pundits of Pathsalas and sixteen students of Guru-training school of Bolpur.

The knowledge of dyeing is essential for the weavers depend upon outsiders that they want their business. So have given equal attention to the dyeing indus-

have given equal attention to the dyeing indus-

Along with dyeing, calico-printing invariably contains. So we have made sufficient arrangement to the sheep of this locality were not

for vegetable and chemical printing.

The formerly the sheep of this locality were not about. We made an experiment to find out whether the wool of local sheep may be made into yarn. This experiment has fortunately become successful and now we have begun to teach blanket-making.

(3) In this year, we have trained altogether severity-two students. Amongst them forty-one were the teachers of different schools. We shall have to help and guide them in continuing their work in their own schools. We shall try to arrange occasional visits to their places to stimulate their works.

The Ahmadiyas in Kabul

The world was shocked when the news of the stoning to death by judicial order of an Abmediya gentleman in Kabul was first pubtished some months ago. Recently the stoning to death of two other Ahmadiyas in Kabul thirty other Ahmadiyas are in prison in that green, perhaps awaiting a similar fate.

These barbarous punishments for difference religious opinion cannot but lower Afghanistan and its king in the eyes of all civilized people.

Hindu Fissiparousness

cont meeting of the Madras Legislative Council:-

That this Conncil recommends to the Govern-that that at least 48 per cent of posts in both the least and upper grades of the services under Government be reserved for the non-Brahman

Hindus, 10 per cent to the depressed classes, 15 per cent to the Mahomedans, 10 per cent to the Brahmans, and the rest for the representation of other communities and for recruitment by competitive examinations."

The Musalmans, no doubt, first started the game of demanding that a certain proportion of government posts should be reserved for them. But still they had the good sense to make that claim on behalf of their entire community. No one among them demanded that the Saivids should have so many per cent, the Sheikhs so many per cent, the Pathans so many per cent., the Borahs so many per cent, the Khojas so many per cent, Julahas so many per cent., etc., of the posts reserved for Musalmans. The Hindus are

going one better.

They are demanding that different castes, communities and classes among them should have a fixed proportion of the posts, showing that there is no solidarity among the Hindus. We suggest that a further subdivision be made; -- that the posts to be reserved for the non-Brahmans be apportioned among the Reddis, the Naidus, the Mudaliars, the Pillais, the Nairs, the Chettis, etc., according to their numbers, and the number to be reserved for the Brahmans be proportionately distributed among the Aiyars, the Aiyangars, the Acharis. the Acharlus, the Sastris, etc. or there may be a sub-division of posts among the followers of Ramanuja, of Madhvacharya. etc.

It is one of the farces of contemporary history that the Indian people demand Swarai. claiming to be a united people having national solidarity, and at the same time display to the world the highly edifying petition for posts laid at the feet of an alien government which this Swaraj-loving people wish to send adrift.

Dr. Zia Uddin Ahmed on the Safeguarding of Minority Rights

The Asiatic Review contains an article on the safeguarding of minority rights in India. There is nothing new in the article which calls for special notice. The article proper begins with the third and fourth paragraphs, wherein it is stated:

A new situation developed in 1906, when the Minto-Morley Reforms began to be discussed.

We now reach what may be termed the molitical era, which is marked by the address presented on October 1, 1906, by the Muhammadans, under the leadership of His Highness the Aga Khari to the Minto, from which I take the following.

1.1

as being points that were emphasized in the address."

As Maniana Mohamed Ali said from the Congress presidential chair, this address-presenting business in 1906 was a command performance, that is to say, the Musalman deputation waited upon Lord Minto at a suggestion emanating from the latter. This finds support from what Lord Morley wrote to Lord Minto. "You started the Moslem hare," the former wrote to the latter. Vide Morley's Recollections. So it was the Aga Khan and his correligionists who ought to have commemorated Lord Minto by a park, a pillar or a statue, not Pandit Madan Mohan Malaviya.

That is, however, neither here nor there.

Dr. Zia Uddin Ahmed calls his article "The Safeguarding of Minority Rights in India", but pleads only for his own community by name. We do not blame him for what he has done, but we only wish that he had given to his paper a somewhat different title, e.g., "The Safeguarding of

Moslem Rights in India".

Among the minorities in India Moslems are the most numerous, the strongest and the best organised. Therefore the rights of other minorities, which are smaller, weaker and less organised, require far greater safe-guarding than Moslem rights. But the rule is, every one for himself and the devil take the bindmost. So, in 1906, the bureaucracy, as represented by Lord Minto, its head, took care of its predominance by seeing to it that India's demand did not become a united demand; and ever since the tendency among us to divide and subdivide has gone on increasing, most communities thinking separately of their own interests but not of the interests of the whole people of which each is a part. There are honourable exceptions like the Indian Christians and the Beni-Israel community etc. who are courageously and wisely prepared to take their chance.

Dr. Zia Uddin Ahmed concludes his

article by saying:

".....We need a stable Government in India, and I would add that it will not remain stable unless equal facilities are given to every community and the interests of the minorities are adequately safeguarded."

That is true.

The writer advocates separate representation by means of election by separate electrones and the reservation of fixed proportion of posts in the public services for his attention. Obviously, therefore, in order

to act up to the principle enunciated in the lines quoted above, that is to in order to give equal facilities to ever community and to adequately safeguard ti interests of each minority body, separa electorates, representation, separate separate reservation of posts must in b opinion be provided for each of our con munities; there is no other or better wa We have not yet seen any scheme or pa which makes any such provision. Dr. Uddin Ahmed is a great mathematician. should not, therefore, be difficult for him take up the Imperial and Provincial volum of the Indian Census Report for 1921. prepare such a scheme. When ready, t scheme should be published in pamph form.

Of course, the scheme will have to revised after the publication of the report each decennial census. That may con after. In the meantime, sufficient unto t

day is the trouble thereof.

The learned Doctor thinks that no gover ment in India will remain stable which do not act according to the principle he is laid down. He may be right or he may wrong. But we are prepared to learn wisdo and would, therefore, ask him to not some countries in which government is owed its stability to separate representation by separate electorates and the reservation posts for different communities. Should say that the lessons to be learnt from a political histories of other countries are applicable here, we would not quarrel whim.

Western Praise of Eastern Wisdom.

Most Western people profess the Chr tian religion. It is, therefore, natural i them to extol the excellences and ide of Christianity. And that religion rea possesses many merits and teaches many he ideals. It is for professing Christians judge whether their lives conform to the teachings and ideals of their faith.

Similarly, Moslems boast of the ma high ideals taught in the Quran and the l and sayings of the prophet Muhammad a the lives and doings of the early Caliphs. Th also quote the high praises bestowed on Isls by some European writers. It is natural them to do all this. But the more importations for them to attend to is wheth present-day Moslem society conforms to a high ideals and teachings of Islam whi

indicastedly influenced the lives of many tollowers of the faith in the past.

Hindus and Buddhists and others also indialge in similar boasts, and feel flattered speaker speaking in high terms of the spiriteality of their religions. We have ourselves sometimes quoted such praise—we confess, with serious misgivings as to whether we were doing quite the right thing. For, though such praise sometimes encourages and stimulates, oftener it perhaps has a soporific and narcotic effect. Particularly, owing to our "slave mentality," when praise comes from Eurobean sources, we appear to be confirmed in our easy-going belief that all is right with our collective and individual lives and no reform, no improvement is needed. Hence it is ways vitally necessary for us to cultivate a critical and discriminating spirit. Neither ourselves nor the Europeans are infallible. **Thould** judge for ourselves whether that which is praised is really worthy of praise. and if it be worthy, whether we in our present-day intellectual social, moral and entritual condition and with our existing social customs and arrangements can claim that praise as bestowed on something which we can now call our very own.

It is one of the delusions engendered by the almost all-engrossing political sensation-mengering of many politicians that a people can be politically enslaved and remain so in spite of its being intellectually, morally, physically, socially and spiritually all that it abould be. The fact, however, is that the different aspects of a people's inner and outer life are not water-tight compartments: they are interdependent and interact on one

another.

100000

When we hear our ancestors or their faith and wisdom and spirituality praised, we should consider that praise to be an exhortation addressed to us to be worthy of our ancestors and of the eulogy bestowed on them.

in Literature, the Arts and the Political Beckwardness and Progress

The Indian Daily Mail of February 21 (second dak edition) contains a leading article on the poet Rabindranath Tagore entitled An Apostle of World Peace". Quite rightly has he been so named. We also endorse the eticle. But we cannot identify ourselves

with the opinions expressed in its opening sentences, viz. :-

There is no more trite explanation of the back-wardness of India than that its political condition is a barrier to progress. Even granting that in industry and commerce success is controlled by political factors, none can contend that they stand in the way of advancement in literature, the arts and the sciences. Dr. Rabindranath Tagore, his brother (?) and Sir J. C. Bose have risen each in his own sphere to an international reputation. Indeed, own sphere to an international reputation. Indeed, Italy and Germany during the darkest days of their political history produced men who in the domain of arts, literature and science had no equals. More than one of the European peoples who secured their independence at the conclusion of the Great War have thrown up men and women, whose genius has given them an international reputation.

We do not say that progress in every other direction depends entirely on political progress: but we do assert that progress in any direction is generally dependent on progress in every other direction. We cannot here pause to prove our proposition, but we will simply ask a question or two. India is equal in area to Europe minus Russia, and Europe is mostly practically free, India not free. During the last 25 or 50 years, how many men of international reputation in literature, art and science has Europe minus Russia produced, and how many such men has India produced? Nay, leaving aside such a big Western area let us take comparatively small regions like England, France, Norway, Denmark, Italy, etc. During the period named above, how many men of international reputation has each of these small countries produced, and how many has India produced? Some time ago, we had occasion to consult a voluminous list of original papers in chemistry contributed by chemists in different countries of the world, and we were humiliated to find how very few India's contributions were. Such or perhaps worse is the case in other branches of science. The Indian Daily Mail refers in the course of its article to the Nobel Prize. If the award of that prize be taken as a test, it will be found that it has gone to one Indian out of 320 millions of Indians only once and that Much smaller countries only for literature. than India have won it more than once for literature, science, etc. Leaving aside the case of a few exceptional men, progress of the body of the people in literature, art and science depends on ample educational facilities, including libraries, laboratories, museums, etc., and it is only a politically free people who can provide these for the selves adequately. We confess we

NOTES

not derive much comfort in our present backward intellectual condition from the repetition of the names of Tagore and Bose as a certain worthy old body was said to draw from the word Mesopotamia, though perhaps we have always written as much about them as any other journalist, and we hope not in unduly unappreciative terms.

Rabindranath Tagore's Return

Rabindranath Tagore returned to Bombay on the 18th and to Calcutta on the 23rd February last.

"In a special interview, which he gave a representative of The Indian Daily Mail, he explained the circumstances which led to his visit and stated some of his impressions, When he was in Kobe during his visit to Japan last year he was approached by the Ministers of Peru and Mexico with invitations from their respective Governments to visit those countries. The representative of the Government of Peru was particularly anxious that his visit should coincide with the centenary of South American independence and that he should take part in the celebrations. The event at which he was invited to be present as a representative not only of India but also of the whole of Asia was of such significance that he was obliged to accept the invitation in spite of his indifferent health.

health.
"He returned from his far eastern tour feeling greatly run down after his strenuous work in China greatly run down after his strenuous work in China greatly run down after his strenuous work in China and Japan. As the date of the centenary celebrations was approaching he was unable to stay in India long enough to regain his health. His friends and admirers were greatly perturbed at the prospect of a long journey and the risk which he was taking but he could not be persuaded to abandon the tour. He set out on his journey via Colombo. On reaching Marseilles he abandoned his original intention of staying for a time in Europe and failing to get a direct passage to Peru, proceeded to Buenos-Aires, the capital of the Argentine Republic. The reception accorded to him on his arrival there by the people and the Government was enthusiastic beyond description. He was greatly moved by the genuinepeople and the Government was enthusiastic beyond description. He was greatly moved by the genuineness of the hospitality shown to him. What was more remarkable and gratifying was the interest which the people of Argentine seemed to have taken in his works, almost all of which have been translated into Spanish. He got an idea of this even on board the steamer. For no sooner the passengers came to know of his presence than almost every one of them brought out some volume or other of

came to know of his presence than almost every one of them brought out some volume or other of his works in order to get his autograph on it.

His health became so bad at Buenos-Aires that the doctors who were consulted declined to permit him to undertake the journey to Peru either by land or by sea. He had therefore to leave South America greatly disappointed that he could not taifil his engagements. On his return he availed kimself of the invitation he had from Italy and went to Milan where he was enthusiastically welcomed by the people. He delivered some public lectures and faifilied several engagements. The strain of these functions was so great that he again that had not cancel his visit to Turin. Venice,

and the second second second

he set out to India and arrived in Bombay. He said that he had promised his Italian friends to visit their country again as soon as he was well enough. He also added that some friends were arranging to get a house for him near Lake Como in order to enable him to spend the summer months there there every year. In conclusion he observed that his health was still so bad that he would not be able to take part in any public engagements for some considerable time."

The Women of Egypt

The Woman Citizen of New York records .--

"The women of Egypt have issued an "Appeal to public opinion of the world" on behalf of Egypt in its present differences with Great

Britain.

"It is one of the most interesting facts in history that whenever a nation is in trouble with another, the women rally to its support and the government is overwilling to receive any favors or service the women can perform. The women of Egypt are following the example of the women of all nations in making this appeal. The questions involved, however, are between Egypt and Great Britain. Public opinion elsewhere can exert much pressure upon nations involved in difficulties, and doubtless will in this event. will in this event.

"The women of Egypt charge Great Britain with exercising tyranny in order that she may force the Egyptian Government to yield new rights over Egypt and the Sudan. These women appeal to public opinion to come to the aid of the "cradle of civilization," which they call the "Hyphen between the Orient and the Occident". They declare that assistance to the "Hyphen" will facilitate good relations between East and West and bring nearer the peace of the world."

Indian Ladies' Acadamic Distinctions

Last month we had the pleasure to record the academic distinction won by Nirmala Bose. In this issue we are pleased to record the achievement of a married Hindu lady named Sunitibala Chanda, who was married in 1912, and has passed all her University examinations since then, taking the M. A. degree of the Calcutta University in Indian Vernaculars and standing second in order of merit. We also read in Stridharma:

It is noteworthy that a Muslim lady Furuhk Sultan Muayidzada has stood first in the list in the subject of Persian in the M. A. Degree examination of the Calcutta University. She is the daughter of His Eminence Aga Muayedul Islam, Editor of the well-known weekly journal Habiul Mathin. Though brought up in purdah, she has had a brilliant Unit-versity career. She is accomplished both in Orienal and Western languages, knowing Arabic, Persian, Urdu, French and English. Her eldest sister Beguin Sultan, stood first in the Praliminary Law examination and her younger sister Khawer Sultan secured first-class Honours in History in the B. A. examination.

d. . .

the Convocation of the Hindu University, state, areat ampliance was given to a lady, Miss Adhicari who received her M. A. degree.

The S. B. Harra, has the unique honour of becoming a member of the Senate of a University. She senator of the Patna University and she practise in the High Court as a Vakil. She has also been exist a member of the Syndicate of the University at the High Court as a Vakil. She has also been exist a member of the Syndicate of the University at the Hadhabal. B. A., Zemindarni of Coomaramanian, in her election six months ago, for the Syndicate of the University of Madras.

The Age of Consent Bill

The Select Committee on the Age of Con-Bill has proposed to lower the age of fixed in the Bill, to 13 years in the married girls. We are entirely New As India serves :-

Fourteen is low enough to wreck the bodies of harfortunate girls who become mothers at that harf no words can be strong enough to condemn motionity the heartlessness of husbands who can strice their child-wives to the Moloch of their the even a lower age than that. To talk of contain the case of a child of thirteen is a frightful set language. We should have imagined that have for married girls might have been made 14 the age for their arronger grounds than the age for their even stronger grounds than the age for their married sisters; for violation of the latter has chances of being brought to the notice of the than compulsion of wives...Marriage or no mar-te, the cruelty of forcing motherhood on a ten-piri unfit for it is the same.

CHILD-MOTHERHOOD

that in the case of the female population is that in the case of the female population is a sudden leap upwards of the number of the at the age of 15. The only factor to account it is the giving birth to children. If we could be suffered by girl-mothers in delivery, the case of some, and the permant weakening of the hody and the consequent the degeneracy of the children born of such the children, and of the race-stock due to the birth of a children, and of the race-stock due to the birth of a children, and the effect also of the training the children, and the mothers, who can possibly to notions on the subject, perhaps the public science would awake.

Physiologically no age lower than sixteen the case of married girls ought to be the the age of consent to sexual life in the age of their husbands, and in the case may person who is not related to a girl her husband, the age of consent should be for said, say 18 or 21.

low an Indian Nationality Can be

history of Aurangzib which Professor

now complete. The fifth and last volume has been published. Its publication at this time, when the problem of Hindu-Moslem unity is being discussed, is very opportune. For just as Akbar has been generally looked. upon by historians as a conscious or unconscious builder-up of an Indian nationality, his greatgrandson Aurangzib has been considered as the destroyer in that age of all hopes of the growth of a united Indian nation. The history of his life should, therefore, have its lessons to teach us who are now seeking to solve the problem of

nation-building.

As Professor Jadunath Sarkar is not engaged in the game of politics but is only a critical onlooker of informed and mature judgment, his words should carry weight. Contempolitics may warp our judgment, but the student of history, which is in one of its aspects the politics of the past, is in a position to take a more dispassionate view of things. That Professor Jadunath Sarkar is competent and qualified to take such a view appears incidentally from the that the Hindus in Maharashtra have sometimes complained that he is biassed in favour of the Persian historical records left mostly by Musalman writers, whereas Moslems and some interested Anglo-Indians have complained that he is prejudiced against Musalmans and is in favour of Hindus!

Professor Sarkar has done full justice to the character of Aurangzib. He has dwelt on his courage and coolness and his learning

and self-preparation.

"In addition to possessing constitutional courage and coolness, he had early in life chosen the peruls and labour of kingship as his vocation and prepared himself for his sovereign office by self-reverence, self-knowledge, and self-control. Unlike other sons of monarchs, Aurangzib was a

Unlike other sons of monarchs, Aurangzib was a widely read and accurate scholar, and he kept up his love of books to his dying day."

"Besides book-learning, Aurangzib had from his boyhood cultivated control of speech and action, and tact in dealing with others; and even the dizzy eminence of the Peacock Throne and lordship over 'nine hundred thousand horsemen' did not intoxicate him into losing the curb over his tongue, temper and heart for a single day during an exceptionally long life. As a prince, his tast. an exceptionally long life. As a prince, his tast, sagacity and humility made the highest bobles of his father's Court his friends; and as Emperor he displayed the same qualities in a degree which would have been remarkable in a subject. No wonder his contemporaries called him the days is in purple.

Of Auranguib's industry, moral punt and simplicity of life, his historian writes

"His private life, dress, food and recreating were all extremely simple, but well ordered

A THE STATE OF THE STATE OF

NOTES 378

was absolutely free from vice and even from the more important pleasures of the idle rich. The number of his wives fell short even of the Quranic allowance of four, and he was scrupulously faithful to wedded love. The only delicacies he relished,—the reader will smile to hear,—were the acid fruit corinda (Carissa carandas) and a sort of chewing gum called Khardak.

"His industry in administration was marvellous."

These few extracts from Professor Sarkar's description of Aurangzib's character and habits, show that he has not written of him as a carping critic but as one who appreciates the subject of his voluminous work to the full. Such a historian has devoted the last chapter of his work, chapter lxiii, to the theme "Aurangzib and Indian Nationality". We cannot here either reproduce or summarise that chapter, shall reproduce the last section thereof, entitled, "The significance of Aurangzib's reign: how an Indian nationality can be formed" :-

"The detailed study of this long and strenuous reign of fifty years that we have pursued through five volumes, therefore, drives one truth home into our minds. If India is ever to be the home of a nation able to keep peace within and guard the frontiers, develop the economic resources of the country and promote art and science, then both Hinduism and Islam must die and be born again. Each of these creeds must pass through a rigorous vigil and penance, each must be purified and rejuvenated under the sway of reason and science. That such a rebirth of Islam is not impossible, has been demonstrated in our own days by the conqueror of Smyrna. Ghazi Mustafa Kamal Pasha has proved that the greatest Muslim State of the age can secularise its constitution, abolish polygamy and the servile seclusion of women, grant political equality to all creeds, and yet not cease to be a land of Islam. "The detailed study of this long and strenuous

"But Aurangzib did not attempt such an ideal, even though his subjects formed a very composite population, even though the Indian world lay at his feet and he had no European rivals hungrily watching to destroy his kingdom. On the contrary, he deliberately undid the beginnings of such a national and rational policy which Akbar had

a national and rational policy which makes as to foot.

"History when rightly read is a justification of Providence, a revelation of a great purpose fulfilled in time." The failure of an ideal Muslim king like Aurangaib with all the advantages he possessed at his accession and his high moral character and training,—is, therefore, the clearest proof the world can afford of the eternal truth that there cannot be a great or lasting empire without a great people,

The English conquest of the Mughal empire is only part of the inevitable domination of all Africa and Asia by the European nations, which is only another way of saying that the progressive races are suppliming the conservative ones, just as enternative families are constantly replacing alegny at the families are constantly replacing alegny at the families. Sarkar's Mughal administration of the families of the f

that no people can be great unless it learns to form a compact nation with equal rights and opportunities for all,—a nation the component parts of which are homogeneous, agreeing in all essential points of life and thought, but freely tolerating individual differences in minor points and private life, recognising individual liberty as the basis of communal liberty,—a nation whose administration is solely bent upon promoting national, as opposed to provincial or sectarian interests, and a society which pursues knowledge without fears, without cessation, without bounds. It is only in that full light of goodness and truth that an Indian nationality can grew to the full height of its being." its being."

Professor Sarkar has no doubt pointed out in his work how and to what extent Aurangzibhimself and Muslim society made the fusion of Hindus and Muhanimadans and the consequent birth of an Indian nationality impossible. But he has also shown how, owing tothe condition of Hindu society too, such a consummation became an impossibility. Take. for instance, the following paragraphs among others descriptive of the Hindus, from his

"The Hindus of mediaeval India presented an equally unhappy spectacle. They could not possibly equally unhappy spectacle. They could not possibly form a nation, or even one compact sect. A social solidarity like that of the Muhammadanswas inconceivable among a people divided intocountless mutually exclusive castes, with their rancorous disputes about rights to the sacred thread and the Vedic chant, access to public water supplies, besides touchability, and in Southern India also approachability. And time and prosperity seemed only to aggravate these differences. Caste grows by fission, and the multiplication of new subcastes was in active progress through the operation of internal forces during Muhammadan rule, dividing and weakening Hindu society still further. A Hindu revival like the empire of the Peshwas, instead of uniting them only embittered caste bickerings by intensifying orthodoxy, leading to a stricter repression of the lower castes by the forces of the State, and provoking more wide-spread and organised caste feuds, like those between the different subdivisions of the Deccani Brahmans or between the only two literate and well-to-do castes of Maharashtra, viz., the Brahmans and the Prabhus.

"No enlightened or patriotic priesthood arose to save the Hindu peoples. The separatist tendenty is as strong in their religion as in their society."

"No enlightened or patriotic priesthood arose to save the Hindu peoples. The separatist tendency is as strong in their religion as in their society and, indeed, an organised priesthood or State Church is opposed to the root principles of the Hindu scheme of salvation. Stray sheep running after stray shepherds fall easy victums to the quack and the voluptuary. Even if we pass over the degrading forms of man-worship that marked the religious practices of the Vallabhacharya, Kartabhaja and other sects of genu-adorers or the licentiousness promoted by temple-dancers (despited on muralis) and small prurient esoteric sects, and turn our eyes to the ordinary idol-worship of the millions, we find the priesthood bringing their worshippers down to the lowest intellectual level by holding up to their adoration a god who eats, aleeps, falls ill of fever takes.

regarded does for a week every year) or pursues stations deliances which a Nawab of Oudh might there is that Shah imitate in his own harem. Share was possible only outside the regular Hindu that followed by the masses, i. e., among the massel non-conforming sects, where men were respect to leave all things and follow truth: even there only during the first generators or two after their foundation, before they too many into gross gure-worship."

Sir Gokuldas Kahandas Parekh

By the death of Sir Gokuldas Parekh the country loses one of the stalwarts of the older generation. He led a simple unostentatious life and was noted for his quiet determined character. He was a man of solid attainments, and had made himself master of the land revenue question. It was not a little due to his efforts that ryots in the Bombay Presidency obtained some relief, mough at one time the Government of that province was unwilling to grant any remission of revenue even in times of famine. Sir Gokuldas was also an authority on excise and during the long period that he was a member of the legislative council of his province, he strenuously fought the people's battles egainst the drink and drugs traffic. He was deo well known for his labours in the cause of social reform.

Sir Ibrahim Rahimtoola

Rahimtoola to the presidential chair of the Bombay Legislative Council shows that the country is not so creed-ridden as to make it impossible for a man of tried ability and public apirit to be elected unanimously by men of all sects. This is a welcome sign. Would that public life in the Panjab and Bengal were like that in Bombay in this respect.

The Budgets of Bengal and Bombay

Of the taxes collected in Bengal, eleven across in round numbers are at its disposal. Of the taxes collected in Bombay, fifteen excres in round numbers are at its disposal. Bengal has a population of 47, 592, 462; Bengal has a population of 26, 757, 648. It is inhealth, enlightenment and prosperity of its inhealth, enlightenment and prosperity of its inhealth, enlightenment and prosperity of its inhealth, enlightenment and in the aggregate, much less than Bombay can. In fact, Bengal can spend per head of its population less than half of what Bombay can. Let Bengal is not inferior to Bombay entered. Nor is the total amount of the

revenues collected in Bengal less than that collected in Bombay. There is therefore, no just reason why Bengal should not have enough mouey for the improvement of its health, education, agriculture, industries, etc. We are not advocating the principle of robbing Peter to pay Paul. What we say is that the Central Government should cut down some of its extravagant expenditure and leave to all provinces an equitable share of the revenues collected therein. It is, neither just nor humane that the people of Bengal should die of malaria, Kala-azar, tuberculosis, etc., while crores of revenue raised here are spent in building a new Delhi and in Frontier expeditions, etc., which may be quite necessary, but certainly not more necessary than saving millions of people in Bengah com-preventible death and debilitation, that the spread of education, or than the improvement of agriculture and the establishment of inew, and revival of old, industries.

Production and the Taxation Enquiry

Though owing to the many curious proposals made by some witnesses for bringing more money to the public treasury, the taxation enquiry seems at times to usurp the function of a variety entertainment, it is to be hoped that the main conditions precedent to the raising of the taxable capacity of the people will be steadily kept in view. People can pay more taxes only if they are more prosperous, and they can be more prosperous only if there be greater production. The first thing necessary, therefore, is to ascertain the relative productivity of India, to find out the causes of low production, to take steps to remove those causes, and to bring about conditions which will ensure greater production.

In doing all this the members of the Committee and the witnesses appearing before will receive much help from Professor Dr. Rajani Kanta Das's new book, Production India (Visva-bharati Bookshop, in Cornwallis Street, Calcutta). It is a comparative study in national productivity with special reference to the prosperity material welfare of the people. How the productivity of India has grown within recent years and how it compares at present with that of other countries and affects the presperity of the people, form the subject matter of this study. Resources, Industrial and Productivity are the main heads which the author considers

NOTES 375

Under resources, arable land, forests, fisheries, mines, etc., are dealt with. Under industries he has dealt with forestry, fishing, mining, agriculture, manufacture, transport, banking and commerce. Under productivity, growth, condition, wastage and prosperity are dealt

The book contains 105 tables compiled from various sources many of which are not available in India. In fact, practically all the work was done in the Bibliotheque de la Direction de la Statisque Generale de la France in Paris.

His conclusion is that the fundamental cause of India's poverty is her industrial inefficiency. This must not be mistaken for the alleged inefficiency of individual workers, due, it is said, to our racial inferiority. In his work on "Factory Labour in India" author has refuted the prevalent notion that three factory employees in India are equal to one in Great Britain, on the ground that there does not exist the equality of working conditions for such comparison. In another work of his, "Hindustani Workers on the Pacific Coast", the author produces evidence from American and Canadian employers to show that Indian workers in California and British Columbia are as good as Chinese, Japanese, American and Canadian workers. The inability of India to produce all that it is possible for her to do is due to causes other than racial, etc., which can and ought to be discovered and removed.

Sir Mahomed Yusuf's Marine School.

Under the caption "a remarkable institution", The Bombay Chronicle has published the following note and has thereby drawn public attention to a really very useful insti-

"Within an hour's sail of Bombay is a picturesque "Within an hour's sail of Bombay is a picturesque little island of the name of Novha, a possession of Sir Mahomed Yusuf, the well-known Muslim philanthropist. Modesty is a virtue invented by the ugly, and it is a pity that Sir Mahomed should be content to leave his excellent work unadvertised. He maintains a Marine School on the island where boys are given elementary lessons in navigation and seamanship. Besides the Marine School the visitor will find a number of industrial institutions where boys are taught useful orafts and trained to be will find a number of industrial institutions where boys are taught useful crafts and trained to become efficient units of society. All over the island there is the evidence of method, neatness and discipline and Sir Ibrahim Ruhimtoola who presided over the Prize Distribution spoke on behalf of all the guests when he expressed his pleasant surprise at the efficient management of the whose enterprise. It is a work of benevolence upon which his Mahomed spends a sum of one lakh is

over and above the large capital expenditure home by Sir Mahomed for organising the schools and equipping them with all the paraphernalia of vocational culture. It is to be hoped that the Government will endeavour to help him in his ambition to extend the courses by the grant of a training ship. The work is wholly disinterested in its character and the boys require better scope of scientific preparation enabling them to aspire to all the prizes of a nautical career. To Sir Leslie Wilson, the benefactor ought to be wellknown because Sir Mahomed gave the endowment for the establishment of the Islamus College of Andheri whose-foundation-stone was laid by the Governor of Bombay. We hope the work on Novha Island will be encouraged and that it will be possible for the nautical school to gain wider scope of usefulness-through the good offices of Sir Leshe Wilson."

The Communal Craze.

On the 28th of January last the Governor of the Punjab received addresses of welcome from some public bodies in Lahore, and before proceeding to deal with matters of local interest discussed in the addresses, he indicated that he had one remark to make regarding them.

"I notice", said His Excellency, "that some of these addresses are worded in a somewhat unusual tone of acerbity in regard to the communal matter. This is somewhat astonishing to me since I am not aware of any incident in your recent history such as the outbreak of communal disturbances which would warrant this display of feelings, nor indeed am I aware how far it can be justified on other grounds. Both Hindus and Mahomadans have complained to me of inadequate representation in your local bodies. They cannot both be right. I beg of you to give less thought to these things and to-bend yourselves to the task of improving your own communities within their own sphere, for the real solution of communal differences lies rather in bringing each community to a level with its neighbours in point of intellectual and material advances. than in attempts to obtain political advantages for one section of the public over another. That is a word of friendly warning to all. It is no benefit to the administration of this country to see the great communities disunit d. Our object (and it should be yours also) is to see a common and harmonious advance throughout the province, benefiting all communities alike and working to its general better-ment without distinction of sect or creed."

Recruitment of Sikhs in the Army.

The Hindustan Times of Delhi has published a secret memorandum issued by the Adjutant-General in India regarding the recruitment of Sikhs in the army. According to that memorandum, "the recruitment Sikhs for the Army will be entirely closed in villages which have taken an active part in the Akali movement," and "no Sikh will be admitted to the Army, who has, either wy himself, or through his family, been in any

This is no doubt meant to crush the Akali organisation."
This is no doubt meant to crush the Akali thosement. But from news received from the Funjab up to date it does not appear that the organisation is about to collapse, though the memorandum was issued more than six months ago. The movement will yet take a good deal of crushing, it seems; and the order can only stiffen the back of a community which has survived the terrible persecution of the Mughals and has seen their downfall.

Rajer samay kaji, kaj phuralei paji", so runs a Bengali adage, which means, "one is considered a very useful man so long as you want to get something done by him; but want that thing has been done, the man is dubbed a rascal. The Sikhs stood by the British Government during the Sepoy war; and have fought the battles of the British empire in many quarters of the globe, imping to extend and consolidate it. But now that they have become politically and atherwise self-conscious and therefore self-respecting and self-assertive, the only form which political gratitude can take is to shut them out from military careers.

There are other communities, e g, the Telengas, the Bengalis, which fought for the East India Company, but which subsequently, with the spread of education and growth of patriotism among them, have been classed as

mon-military.

First Separate Railway Budget

The Railway Budget for 1925-26 presented last month by the Commerce and Railway member, is the first separate railway budget.

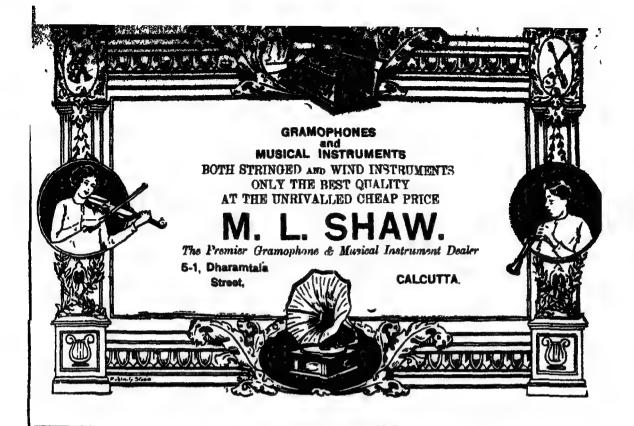

It provides for the construction of over two thousand miles of new lines. As railways have not been an unmixed good in India, we cannot welcome this programme of extension without knowing where the lines will be laid, what will be the alignment, whether they will kill water-ways by competition, whether sufficient care will be taken not to obstruct natural drainage, and so the good which railways have done and the denied. But they have in many a region helped to kill indigenous industries, have made many tracts malarious, and have been the means of rapid spread of some spidemics. So though we must keep pace

with the times by having all the improved means of transport and communication which other countries have, we must guard against the evils noted above.

Sir Charles Innes's observations on the Indianisation of the superior and subordinate railway staff constituted a lame defence of the present state of things. That "it is only in recent years that Indians have joined the gazetted ranks of railway officers in any number" and therefore it would take time for them to rise to high posts, is obvious; but it was not the fault of Indians that they were not from the very beginning given facilities for adequate training and opportunities for joining these superior ranks.

To class Anglo-Indians as Indians and then argue that "to a very large extent the subordinate railway service is already Indianised in that the posts are largely held by Anglo-Indians" is an example of unconscious (?) humour. These men are Indians when it is necessary to consider them so. But when they had to be given reserved accommodation in railways, or to be enlisted as volunteers, etc., they were classed with Europeans.

Sir Charles tried to justify the reduction of 1st and 2nd class fares and the non-reduction of third class fares, on the ground that owing to the enhanced fares there was a decline both in 1st and 2nd class passengers and in earnings, but that, in spite of third class fares, there was increased a progressive increase both in passengers and earnings. But this only shows that many of the upper class passengers travel for pleasure, but that third class passengers travel of necessity and also that increase in upper class fares had compelled many to travel who would not otherwise have done so. The railway administration ought not to take advantage of the necessities of poor men and penalise them therefor. It is no excuse to say that the railways would not be able to cope with the increased traffic if third class fares were reduced. Why are and were not more 3rd class carriages built by extending the present workshops and opening new ones? Instead of opening new lines, the Railway Board ought first to remove the inconveniences of third class passengers in the lines already open, because it is chiefly they who maintain the railways.

BISWA-BIJOY-KAVACH

If you are put into any kind of difficulty and heavily suffering from the influence of angry planets which always, in every respect, stand on your way, and never allow you to do any work as you like, you should at once wear this wonderful Talisman Biswa-Bijoy-Kavach to overpower these evil influences. Wearing it you will at once notice its wonderful effects daily.

This Talisman has unlimited and undaunted power to undo the evil influence of all the planets and without fail to bring you all kinds of success, peace and worldly happiness in life.

Biswa-Bijoy-Kavach is prepared purely, obeying all the rights of Sastras. To have this Talisman prepared singly it costs Rs. 50 but as we prepare many at a time, for the benefit and welfare of the general public, we only charge the bare necessary expenses, which is a nominal sum of Re. 1-5 for the Kavach and postage extra.

We can assure you, with a true faith in heart for this Talisman; wearing it any person of any rank will perceive its wonderful action. This Talisman will give you success in business, Trade, Examination and litigation, cure of all sorts of diseases, Premature death, Remove pecuniary difficulties, bring increment of pay, Honours from Gov ernment. There is no restriction; it can be work by all castes, either Hindu, Musalmans, Christians, Parsi or of any faith.

Price, for single Kavach Re 1-5, postage extra. In taking 3 Kavach as one will be sent free of charge, that is four will be be sent taking value of 3 Kavach as Silver cover Talisman Rs. 2-8, Gold cover Talisman 5-5, Red corals Re. I per pair.

A lew unsolicited testimonials are given below.

- 1. Amrita Lal Mukherjee, [Additional District and Sessions Judge, Midnapur.] writes—This is to certify that the "Biswa-Bijoy-Kabach" of the Jogmaya Asram, Kunda, Deoghur has done me immense good by its use. My family is greatly indebted to it as it has ensured it its health, and success in secular ventures. can safely recommend it to the general public, as I trust similar benefit will accrue to them by its proper use.
- 2. K. C. Chatterjee, M. A. [Prof. Benares Handu University. formerly Extra. Assit. Commissioner and Magistrate, C. P.] writes:—I have great pleasure in certifying the efficacy of the Bishwa-Bijoy Kabach. Myself and my friends have derived great benefit from its use.
- 3. Mr. S. N. Lala, M. B. T. A. I. S. A. (London) F. E. I. (Birmingham), Prof. Scottish Churches College and Calcutta University, writes. "The Biswa-Bijoy Kavach is really a wonderful instrument. I had several occasions to see its divine influence."
- 4. Well-experienced doctor Akshaya Kumar Chatterjee, the medalist, the late medical officer of S.S. Apkar "By using this Talisman I have got unexpected results and herewith I am sending some money for spending it in offering Puja to Goddess."
- 5. The poet Harishchandra Niyogi, the Zaminder of Bagbaxar, the honorary magistrate of Sealdah

- Court, and Commissioner of the Municipality, writes with his own hand—"By R. the Biswa-Bijoy Kabach I have got unexpected result."
- 6. Sj. Jatindra Mohan Mukherjee, M.A., B.L., Vakil, High Court, Calcutta, vorites:—"The person, for whom I brought the Biswa-Bijoy Kabach has got good results from its use. Herewith I send money for worship of the Goddess. Kindly send, per V. P. 3 more Kabaches at your earliest convenience."
- 7. Jogesh Chandra Gupta, the Head Master, Tippera, writes: "I had procured Biswa-Bijos. Cabach for my daughter. Kindly worship the Goddess in the name of my daughter. Herewith: I am sending the usual Puja for the Goddess."
- 8. Sj. Hari Lal Ghose, Mongaldoi, Assem, writes: "I am sending money for the worship of the Goddess in the Yogamaya Assam which. I determined in my mind to offer for a long time, Kindly worship the Goddess with it."
- 9. Adhar Brahmachari, Postmaster, Kamaksya Dham, Kamrupa, Assam, urites: "Having received unexpected result by using your Talusman I am now sending you order for 8 more. I have used many Talismans but none gives so good result. to me as the Biswa-Bijoy Kabach. Kindly send kabach as early as possible."

ENGLAND'S EDUCATIONAL POLICY IN INDIA

BY V. V. OAK, BA. S.T.O. (Ed.) M.A. (Boon.) B.S. (Jour.)

Problems are many and varied but it would be easily conceded that one of the most vital of these is that of the adequate education of her sons and daughters. The appalling illiteracy of India and the backward condition of the masses are well known and constitute a reproach obstructing the

and the packward condition of the masses are well known and constitute a reproach obstructing the path of her becoming a truly progressive country.

The educational policy pursued by the Government of India during the last 100 years is the subject of study in the following pages, in which the author has attempted to draw a realistic picture of the educational position in India compared with the other civilised countries. The graphical illustrations prepared by the author and appearing on pages 22 to 106 form an interesting feature of the work.

Himalayan Remedics

(REGI-TERED)

Wonderful Discovery in the Medical World!!

for some Obstinate and "Incurable' Diseases

Secured from the hidden stores of Great Lamas and Yogls of Tibet Burma and Himalayan Hills, by Mr P C Mukerlee, BCE, MISCE, FTS., Vidvabhusan (late Resident Engineer, Calcutta (orporation) during his tours and travels in the obscure regions of these mysterious lands while Engineer to P W D of Burma and Personal Assistant to the Chief Engineer of Kashmir State.

The fruits of many years' hard researches in the Himalayas and 25 years successful experiments by the founder and 12 emment Physicians of Calcutta and elsewhere are now placed before the public for the tellet of suffering humanity in general

Since 1918 the founder has been practising in Calcutta as a SPECIALIST IN LEPROSY, LEUCODERMA and DIABETES and has cured a good many serious cases successfully

THE HIMALAYAN REMEDIES GUARANTEE CURE OF

I Leprosy, Leucoderma, Gangrenes and all mentable types of Sores, Skin-diseases, and of ulcers within or outside, also sinus and fistula in ano etc

IT Obstruction of urine and all urinary troubles due to Gravels, stone, & lat Renaticolic (b) Gall-stone—No operation or catheter-passing is necessary

III (a) Diabetes of all stages, the Pulmonary Phthisis up to the stage when the patient has not been bed-yilden and reduced to skeleton but has vitality enough to digest our medicines.

Cure is effected by regular and scientific treatment with these unique medicines under the founder, assisted by an able Medical Board who help the founder so far as Dagnosis of any critical case is concerned.

For an experiment we request the sufferer to try any of the following cheap but wonderful medicines—for serious Malaria (Special Preparation) painful Asthma and dreadful Dysentery of all stages Re 1-8 each Scorpion Bite as 8, Extreme Dyspepsia and hopeless Nervous Debility, Rs. 2-8 each Gastric Colic, obstinate Eczema, all eye complaints except cataract as well as fone-pending Rheumatism of all stages. Rs. 2 each

Medicines are Free from any Injurious Substance.

All confidential Letters are to be addressed to Mr. P. C. ROY, we Secretary to the Medical Board.

UNSOLICITED OPINIONS A FEW OUT OF A LARGE NUMBER

LEPROSY CURED Dr. A.P. Bagehr 1 at 0 a Byen. Calcutta, writes (5-7-18) ** You have successfully cured a female relative of mine of her Leprosy. Her case was of 14 years, standing and was tried by most of the well-known Physicians and Kaynajos of Calcutta as well as of other places of India but with no effect. Prior to your treatment she used to suffer from severe attacks of tever. Her sensition of skin was paralyzed in many places and she had sores and swellings all over the body and hually lost three toes ** But under your maryellous treatment for the last 9 months, she has been completely cured of all her ailments.

CURE OF EXTREME DYSPEPSIA Mr. Nilamber Mukern www.bl. cif the late renowned Prime Minister of Kashmir State and Vice-Chairman Cak utta Corporation—writes (4-6-5) *** suffering from a long and confirmed Dyspepsia torpidity of the liver and extreme nervous debility. I did not expect to live long. But now under your excellent statment I find that normal tone has been restored

to the alimentary canal and the peristate action so revived evacuates the nowels can and twice every day and I feel stronger day with the expectancy of a further lease of life.

Major-General A W. Hubbers writes from Daily ching (15-10-15) + I am in old men of 72 your medicine reminds me of my young age (1-32)

Dh. S. K. LAHRI, M. J., WP. S. (17-8-07). — After sufficient trial I have found your. (1) Hamadrikalpa (Nervous Debility). (2) Himadri Sidha and (3) Zerila (colies) to be excelent medicines and undoubtedly far above the knewn specifics for diseases in which your Remedies, ire applicable. I am sure they will do min use good to the part.

Mr. R. Mekherers late Chief Instice of the High Court Kashimi State writes (9.4-15).—The case of Kara-azar (which occurred a my base and was declared as hopeless by all doctors has ten completely cured by your level-ene. Hamilay in Remedies).

Apply with history of your ailments to-

DAVAR'S COLLEGE OF COMMERCE

(ESTABLISHED 25 YEARS)

Celebrates its Silver Jubilee this year under the distinguished patronage of Merchant Princes, leaders of thought and education.

The Institution under the sole direction of its Founder and Principal has done pioneer work in introducing for the First Time in India, Courses in Specialised Banking Speacialised Secretarial Work and Specialised Accountancy as the result of the numerous journeys to Europe and to the Colleges and Universities there.

The fact that a Scholar has been successfully trained in DAVAR'S COLLEGE has always been accepted by businessmen all over India, Burma and Ceylon, as a

hall-mark of perfection.

Asoka

(Carmichael Lectures, 1923.)

BY DR. D. R. BHANDERKAR, M.A., Ph.D., F.A.S.B.

Carmichael Professor of Ancient History and Culture, Calcutta University Demy 8vo, pp. 364..... Rs. 5.

In this book the author has set forth his views about the Buddhist monarch after a careful systematic study for quarter of a century not only of the inscriptions of Asoka but also of the nable translations and notes on these records by distinguished scholars in the field of Ancient story of India. The book consists of eight chapters dealing with the following topics—I Asoka I his early life, II Asoka's empire and administration, III Asoka as a Buddhist, IV Asoka's Dhamma, Asoka as a missionary, VI Social and Rehgious life from Asokan Monuments, VII Asoka's place history, VIII Asoka inscriptions.

Extracts from a letter from M. Senart, the distinguished French savant—

"...... I am grateful to your book beacuse it has brought me a brilliant example of the cnious and passionate skill with which Modern India endeavours to reconstruct its past.......You ended to show by an analysis of the inscriptions what information hitherto unexpected they can ld to a sagacious and penetrating explorer."

lages and Profit-Sharing

With a chapter on Indian conditions

BY R. N. GILCHRIST, MA.

Labour Intelligence Officer, Government of Bengal

Royal 8vo. pp. 430 ... Rs. 7.

This book deals with three subjects. The first part is taken up with a description of the rious systems of wage payment, viz., the time wage, the piece wage, premium bouns systems, and stems of payment connected with Scientific Management. The Second part deals with profit-sharing d co-partnership, and is an exhaustive analysis of the principles underlying them. A large section the book is taken up with the description of individual schemes, and there is also a separate tion dealing with profit-sharing in countries other than the United Kingdom. Finally, in this ction, an attempt is made to appraise profit-sharing and co-partnership as an instrument of industrial are The third part of the book deals with Indian conditions, and is divided into three sections. The first ction is a general discussion on Indian labour conditions, and deals with labour questions in India in a my which no author previously has attempted to do. The second system deals with industrial peace India, and is an authoritative and first-hand account of what has been done in recent years towards thing differences between labour employers and labour. The third section deals with the payment of uses in India with special reference to payment in kind. Tea-garden and colliery labour are dealt the in some detail. Finally there are two appendices, the first of which brings up to date the material ntained in the author's book on conciliation and Arbitration. This part is a comparative study of cent legislation on conciliation and arbitration, and also of trade boards and works councils. The cond appendix gives in extense the recent proposals of the Government of India regarding trade sputes and trade kinions."

RISE OF THE CHRISTIAN POWER IN INDIA

Omplete in 5 Volumes Rs. 25 for the Whole Work:
For Subscribers to "Prabasi" Rs. 18-12.

Postage Extra.

PRESS OPINIONS:

"This history should prove a most useful work, and it should be read by all slike. We hope that it may have a wide sale in Rawland especially at this crisis in the history of the world.

"We are struck by the very fair way in which the whole has been treated by this author, for in the volumes that have come to our hand there has been no word of condemnation for errors or expression of hitterness for suferings imposed. It is a fair history of events, aparing the faults of none and expressing admiration where admiration was due and commending setions when those actions were disinterested and done for love of truth, justice in "Notice" we must again say that this short work is not worthy of these volumes, and we hope that this history will have a wide circulation. It deserves it from the point of view of the well written history but more from the standpoint of the maparitainty which will commend itself to all readers alike and must inevitably carry great weight in placing the subject before those who hold adverse opinions on many points,"—New Reds.

FORWARD SAVE in a LEADING ARTREE:

"Major Basu's book will take the same place in the historical literature of our country which Mr. C. Dutt's famous "Economic History of British India' has done in economic literature. We hope utilise his book in future for discussing problems and dangers against which our author has warned

he Hindu of Madras says:-

"Right through Mr. Basu has based his conclusions upon the unimpeachable records of the rulers emselves and that is the distinguishing merit of the work."

he Amrita Baxar Patrika of Calcutta says:—

"Major B. D. Basu (Retired I. M. S.), who has devoted considerable time and energy in resusciting the true facts with regard to the most instructive period of Indian history, has presented s countrymen with the accounts culled mostly from the records of Englishmen embodied in a ork of five volumes. In the light of our present knowledge, 'these facts appear to us to be as thing short of disclosures."

"Major B. D. Basu has completely succeeded in proving the incorrectness of almost all the favourite cories of the Anglo-Indian hisrians and of those indians who derive inspiration from them id repeat them in their text books."

"It is impossible within the brief space of this paper to draw attention to the many important pics which are discussed in this book, but it may be hoped that Major Resu's book will be idely read by those who want to have a correct view of the circumstances which metamorphosed handful of traders into imperialists."

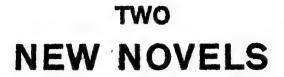

N.B.—This work is one of the books recommended for study by the Allahabed University for M. A. degree examination in the Modern History group.

BY SITA CHATTERJEE

THE

KNIGHT ERRANT

"A story of Bengali life, old and new, in town and country ... is well told in simple and excellent English."

"...... The plot is simple but grand. The authoress has painted very artistically the home-life of an enlightened Bengali family picturesque The English style is delightful and grave, a calm easy flow, and can compare alone with the authoress' own imimitable vernacular style. The English reading public will have another opportunity of having another glimpse of another aspect of Bengal life-modern Hengal life. The Knight Errant will rank with her finest trophies. We wish her still greater success."

—THE LEADER.

—THE LEADER.

THE CAGE OF GOLD

"The Cage of Gold Out of its Calcutta cage this pleasant love tale by a Hindu Lady comes fluttering to our window-sill. A touch of Western tyle lightly marks the story which yet is Indian in atmosphere and heart and is superior to a good many European novels."

The Wisdom of Choosing Wisely

Costly thy habit, As thy purse can buy.

-Shakespeare.

Taus did Polonius, Lord Chamberlain, impress upon his son the need for living within his means,—the wisdom of so choosing his adornments as to keep his expenditure within the limits of his purse. Advice of this nature, though, is more easily proffered than followed, but it is the more easily followed when a wise discrimination plays a leading part in the making of one's choice

TIEREFORE choose wisely; you must spend, but you can save as you spend, if you spend where the greatest value is offered for the least outlay.

Let Us serve You.

D. MANNALAL

Avenue Road, Bangalore City

OF B. G. SAPRE MA.

Professor of History and Recommics. Willington College, Sangli, (S. M. COUNTRY).

The present book gives an account of the forma-on of the East India Company, its territorial reparsion in India, the system of Double Govern-tent under the Company, the Bureaucratic Govern-nent, and finally Responsible Government. It eals exhaustively with the Reforms of 1919. It lso contains adequate treatment of subjects like ndian Defence, Finance, Education, Fiscal Policy, Local Self-Government, Land Revenue Policy. The book also contains in an abridged form the conclidated Government of India Act of 1919.

Price-Rs. 4-0-0. Pages xxviii+457+80. Copies can be had of the author, Willingdon College, Sangli.

EXTRACTS from Opinions and Reviews on Prof. Sapre's "Growth of Indian Constitution and Administration."

"Your book which seems to be a really meritorious production.

Dr. D. R. BHANDARKAR, M.A., D.LITT., President, Board of Studies in History University of Calcutta.

"It seems highly useful, and likely to be of great utility as a work of reference."

Dr. Prof. RUSHBROOK WILLIAMS, N.A.,

Director of Public Information,

Government of India, Simla.

I have read the book with great interest and I congratulated you on the way in which the subject has been treated

DR. SIR CHIMANLAL A. SETALVAD, KT., Vice-Chancellor of the University of Bombay.

"Mr. Sapre is a master of this intricate subject and of the English language. He writes with a clarity and conciseness that are worthy of high praise."

The New Statesman, London Oct. 11, 1924.

"Mr. Sapre has unfolded the story of constitutional evolution in a book which is evidently intended as a text-book for history students and he has done so on the whole sympathetically".

-Times Literary Supplement, London, 18-9-1924

"The Times of India-

Of all Book-Sellers

coders Guide To Will A A To For March, 192

"WELFARE" for March, 1925, is full of very interesting and instructive matter.

First comes an article on "How Electricity is Produced," by Prof. S. R. M. Naidu, F. R.; is illustrated with eight original drawings. In it he explains, among other things, the drawings which Alternating Current machines possess over Direct Current machines.

The second article, on "Our Elementary and Middle School Teachers," has been notice iready in the "Indian Periodicals" section of this Review. In it the writer incidentally call the interpretary of the work turned out by men, who are ill-paid, ill-fed, ill-clothed ill-attended whilst laid up," suggest means for improving their condition, and for obtaining services of our best men for teaching work.

"Collegiate Education in Travancore" is an attractively written article illustrated with

*Collegiate Education in Travancore" is an attractively written article illustrated wit neatly reproduced photographs. It tells us how education, both among men and women made great progress in Travancore and how a University is in sight.

Mr. Doongersee Dharamsee writes on "Manures" in this number with his usual wealth information. He describes all the different kinds of natural and artifical manures and their particular uses, has much to say on the exports of fertilisers to foreign countries, and their particular uses, has much to say on the exports of fertilisers to foreign countries, and their this drain on India's soil fertilisers has not attracted the attention of politicians. Will the Legislative Assembly," he asks, "care to stand against the fetish of free trade and the country from degeneration? There is not a single reason against stopping export the fertilisers, which are of immense value for the enrichment of the soil."

Mr. B. Ramachandra Rao, M.A., L.T., F.R.E.S., continues his Valuable and informing series repers on "The Economics of Leather Trade and Industry" with special reference to Bengal. In this issue he writes on the export trade of raw hides and skins. The series to be continued, and ought to be read generally by all interested in the industries and same received in the industries and business.

Viresalingam of Andhradesa achieved supreme distinction in the spheres of literature social reform. Mr. K. Iswara Dutt, B.A., contributes an enthusiastic article on his career which is sure to inspire others possessed of similar aspirations with the ardent desire to go do like-wise. The article is illustrated with a striking portrait of the "Vidyasagar of South" and a picture of the high school founded by him at Rajamundry.

How Ferocious Beasts are Caught for the Zoo," by Mr. K. P. Appaji Rao, is a stirring second of how wild animals like lions, tigers, zebras, giraffes, buffaloes, antelopes, jaguars, stippopotamuses, elephants, rhinoceroses, crocodiles, etc., are caught. Young and old will it of enthralling interest.

The "A few Words on Child-Welfare" Dr. Sudhansu Kumar Gupta, M.B., writes in detail of the mother on the eve of confinement. (ii) confinement, (iii) care of the new-born (iv) infant-feeding, (v) why a child cries, and gives scientific advice on each head.

Nagore, the Medina of the South," by Mr. R. Veeraraghava Iyengar, is a description of Medican place of pilgrimage near Negapatam in the Madras Presidency. Here stands the somb of Saint Miran Shaib, revered by Hindu Moslem alike. Four pictures add to the stand of the atticle, in which there is an account of a Moslem festival similar to the Hindu the Fatra. The picture of the decorated car is fine. The place "may truly be said to be standing symbol of the Hindu-Moslem unity characteristic of this place."

The Struggle at Vykom" in an inspiring way. By quoting the Upanishads, and by citing the authorities of Dwijendranath Tagore, Rabindranath Tagore, Swami Vivekananda, and Mahatma Gandhi, he drives home the truth that 'Tat

(Continued from previous page)

Readers' Guide to WELFARE' For March, 1925.

tvam asi'—Thou art That—means that God is present in each one of us. "The Divine spirit is within us, even as our own spirit. God is in the 'untouchable', as well as in the caste Hindu. To reject the untouchable is therefore to reject God. This is the tremendous issue, which has to be faced. I would ask those friends here, who are objecting to the presence of these unfortunate people, the 'untouchables', "What! Will you reject God?"

In his article on "Compulsory Military Training in Universities," Mr. C. V. H. Rao. B.A., discusses the pros and cons of such training.

"In Private" is a story by Miss E. M. Megraw from which we learn that children should never be corrected in the presence of others.

In one of the early issues in the first year of WELFARE, Mr. Kedarnath Chatterjee, B.SC. (Lond.), A.R.C.S. (Lond.), wrote about the manufacture of medicines from Indian medicinal plants, etc. In the present issue Mr. V. S. Chinnaswmay, B.A., dwells on the same subject, drawing attention to the export of the raw materials from India in large quantities and suggesting the manufacture of drugs therefrom and carrying on organised research work side by side.

In "Child Culture" Miss Leva E. Bliss shows how truth, originality and beauty appeal to childhood as to the maturer mind "It does not need a creative artist, but it does need an artist soul to awaken these responses in childhood and when awakened, they are among the highest factors in child development."

Mr. L. N. Gubil, gives an account of "A Tour on the West Coast" Calicut, Tellicherry and Cannanore receive his attention. Says he. "Prof. Geddes, the Town-planning expert, was very much struck by the peculiar beauty of the Palghat villages and recommended them as an excellent model for a garden city" The writer pronounces a well-merited enlogium on the natural beauty of Malabar, its historical importance, and the intelligence of its people. But, says he, "unless Malabar cures her social sores and removes the ban of untouchability from her miserable and degraded children, her future is not likely to be anything great or glorious."

After these SIXTEEN articles, we have the "Do You Know?" section, containing News and Information in brief, selected from various periodicals. The present issue contains the following items: Fatigue and its Prevention, New Finish for Cotton Threads, Head Light in Lighted Streets, A New Sugar Substitute, India's Trade with Norway, Leprosy Campaign, Bengal's Views on Foreign Capital for India, Competition in Textiles, Water Hyacinth, and Punjab Agriculture.

In "Our Point of View", there are three Notes by Mr. Ramananda Chatterjee on "What our Rulers cost us", "The Religious Issue in Politics", and "British and Indian Voters", and one Note on "Should we Have Foreign Capital" by Mr. Ashoke Chatterjee.

Altogether "WELFARE" is a good Eight Anna worth.

Sin V. (Ilbert.--A sound piece of work

Sin V. (Ilbert.--Clearly a very useful contribution.

I. B. Keith.--Contains important contributions to
the solution of present difficulties

I' E. Roberts---Vivid and stimulating. You have

put some things extraordinarily well.

Times Interary Supplement 17-2-1922—Praiseworthy freedom from prejudice. States as plainly as possible the alternatives between which India has to choose.

English Historical Review, October, 1922—One of the most vigorous, interesting and original volumes on India. Based on wide reading and inspired as a rule with shrewdness, insight and sympathy.

Conference, August, 1922—Gives a vivid glumpse of the deep-going changes the impact of the West has wrought upon the East Launches his criticism right and left with fearless hand Modern Review, June, 1922—Shows considerable

ability.

Hindusthan Review April, 1922 —An ideal text-book for the student Hindu 10-4-22 —A valuable treatise. New India 10-4-22 —A longfelt need supplied by a really impartial Indian Itana of India, 12-4-22—Based on original sources. All the better for the very candid criticism which

runs all through it Pronee 11-6-22 The text fully supported by

authorities.

2. The Text of the Sakuntala

A PAPER ON---

Price Re. 1-8: 2s. 6d. Abroad.

OPINIONS AND REVIEWS.

In John-Your valuable work. The understanding of the S greatly furthered by your remarks, I think

Di Charpentier - You are on the whole quite right.
Only I feel quite sure you will always have to meet a sturdy opposition from scholars to whom

the letter is every thing and the spirit nothing.

In Sten Kouou -Shown excellent reason for disagreeing from the lamented Pischel—my own thurn on many points. Dr. (i. Morgensteine—Treated a very fascinating question in a happy was. The Lamente Helm in the class in the context.) way Dr. Lannun---Helps us to a clear under-standing of the problems and shows the way to a reasonably good text

Vedue Magazine and Ginukula Samachar 1922 A distinct service to the cause of higher literary criticism. Displays complete mastery of the subject.

Publishers: Messrs THACKER SPINK & CO., Calcutta,

1. Ancient Mid-Indian Ksatriya Tribes, Vol. 1 Price Rs 8. (Prescribed as a Text book for the M.A. students in Ancient Indian History, Calcutta University) Wr. F. E. Pargiter:—I am glad to see the results of your studies in that subject.

II. Some Ksatriya Tribes of Ancient India, Price Rs 10. (Prescribed as a text-book for the M.A. students in Ancient Indian History, Calcutta University)

Le Museon —B. C Law does not ignore anything which interests his subject. —all the historical legendary sources. Very little of useless words. References are numerous, precise and of the most red order. I am very glad to associate myself with the high praises, which A B Keith accords to author. (Reviewed by Prof. L. de la Valce Poussin).

III. The Life and Work of Buddhaghosa, Price Rs. 9 (cloth) Rs 7-8 (paper) (Prescribed as a text-book for the M.A students in Pali, Calcutta University)

THE EXPOSITORY TIMES —Our knowledge of these two great men (Buddhaghosa and Vasuvandhu) considerably advanced by two new works, that of Mr B. U Law upon Buddhaghosa and that of Sicherhatsky, The Central Conception of Buddham. These are of great value to the advanced student I a mere glance at them ought to make it clear to the intelligent lay reader that here is the Buddhist bolasticism concerning itself with psychological and ontological questions quite beyond the range of masses in any Buddhist seet, and indeed capable of being understood by only a few specialists ong the monks. The two commentaries here studied, the Visuddhimagga of Buddhaghosa and the hidharmakosa of Vasuvandhu are indeed great and epock-making works but they have hardly exted the Buddhism of the masses. Scholars would be grateful for these works and for the great mber of other people interested in Buddhism they will at least serve to show that its thinkers, were stematic and profound. All these books are indications of a new and more scientific study of Buddhism 1 remind us how impressive and varied are its forms, and how deep a guif separates its masses from philosophers and even its monks. These reflections are of much more practical consequence than a may seem.

IV Dathavamsa (Edited & Translated) Price Rs 4 (Prescribed as a text-book for the MA students in Pali, ('alcutta University)

To be had from Messrs. MATILAL BANARSI DASS, Sund Methin Street, LAHORE

Englands' Educational Policy in India

By

V V. OAK, B.A. S.T.C. etc., p I to MAIN + 168 Rs. 2 0 0. IDIAS problems are many and varied but it buld be easily conceded that one of the most vital these is that of the adequate education of her ms and daughters. The appalling illiteracy of dia and the backward condition of the masses so as primary education is concerned are well lown and constitute a reproachful ban obstructing e path of her becoming a truly progressive country. The educational policy pursued by the Government of India during the last hundred years is the inject of study in the following pages, in which e author has attempted to draw a realistic picture, the educational position in India as compared ith the other civilised countries of the world. The aphical illustrations prepared by the author and meaning on pages 22 to 106 form an interesting sture of the work and would we believe help used interested in Indian education to form a lifect estimate of India's position in matters in ational. A bold and faithful representation of dia's case has more than ever before become ressary in view of the great interest evinced in dian problems in England and America.

THE MODERN REVIEW

, XXXVII. NO. 4

APRIL, 1925.

WHOLE NO 220

THE PLACE OF SCIENCE

(Farewell Lecture Delivered in Japan)

By RABINDRANATH TAGORE

want to forget the formal conventions of the present-day world and the modern aspects of its people, and to gine myself back in those days when the it of India travelled across distances and its nest in the warm heart of your ple I wish I could realise that spirit it within me and accept your welcome the same manner. Unfortunately I have that genius, Possibly times have changed, sibly you are not ready to welcome an alism that has nothing to do with efficient and, what is called in modern language, or less'

When those pilgrims in ancient days came iring their ideas from one country to ther, they had at the same time a gift of npathy and simplicity of mind which made possible for them to understand the genius

the people among whom they travelled cause they understood this genius, it div opened to them its wealth of beauty, aniversal wealth which every visitor m outside could appreciate.

It is possible that you had no direct inmunication with India, but through Korea China, India's gift reached you. But the total this gift was accepted by it people shows that their genius in harmony with what was brought to also that the manner of offering it to you not at all discordant with your own way of and thought and your self-respect. This he most important thing in the communication of truth.

When some missionaries bring their truth to a strange land, unless they bring it in the form of homage, it is not accepted and should not be. The giver must have the feeling of respect towards him to whom he offers the best that he has. This giving should never be in the spirit of a donor, who has come into touch with some indigent beggar I feel certain that in those ancient days, the messengers of truth did not come with the modern missionary spirit, with the consciousness of sectarian superiority. They came humbly, because bearers of truth should be humble concerning the truth which is immensely greater than themselves

Missionaries from all parts of the world still come to-day, but they rarely have any respect for the people among whom they travel They often malign them and exaggerate their defects, or what they imagine to to be defects. When they come in this spirit of superciliousness, they can never understand, truly, the people whom they desire to help Their task should be to realise the greatness of the human soul and to find the presence of the spirit of man in the innermost shrine of the country which they Their message choose for their mission should be offered in a spirit of sacrifice and service and not in the unctuous manner of doing one's duty.

I feel certain that in those old days there was that spirit. They were simple people and their heart overflowed with the truth that they,

Be like children who instinctively believe in the future. Never give truth a name that implies ridicule and then laugh at it. If you think that it is clever to say that strife and greed are eternally true, and not goodness, you trample under your contempt the very seed of life.

But the seed is there, it is living. What is wrong, is your refusal to irrigate your life with faith. Your land is the land of the rising sun; let it always have the

freshness of the morning light. Never grov tired of truth and languid at heart. In the freshness of light and life will be born your power and a voice which will usher in the future of salvation.

With these words of farewell I set out for home carrying with me beautiful memories of my stay among you and also of something I have realized during my stay which brings me the deepest

satisfaction

THEORIES OF MONEY OLD AND NEW

By BENOY KUMAR SARKAR

T

THEORETICALLY the most important problem in the theory of money is the question of the relation between money and price, the amount of money and the price-schedule, in other words, the quantita-

tive aspect of money

The eternal law is well known that supply and demand determine the prices of all markets—whether of goods and labour or stocks and currencies. This, however, although analyzed by economists in all its details with special reference to the elasticity and rigidity of goods and monies, is not enough. Two more questions remain yet to be attacked. First, how do the goods stand in relation to one another? In other words, what is the theory of price-relation? In the second place, what is absolute price, i.e., how does money stand in relation to all commodities?

An equally important problem in the theory of money is that bearing on price as a function of deferred payment. This however is but an aspect of the larger question of

ioans.

How is debt contracted in gold marks previous to the Great War or in silver talers previous to 1870 to be repaid in Germany to-day? The fall, of the paper-mark compared to the par of 1913 is well known. The value of the gold mark, compared to the silver taler of 1870 had also fallen two-thirds. In German courts of justice the prevailing judgment has been to the effect that the debts

are to be paid back in the currency obtaining on the day of payment. The law of debts does not recognize the changes in the purchasing power or value of the money. In other words loans according to the state or Governmental practice are not "real" but "nominal"

If the loans can be conceded to nominal what then is the unit of value. What then is money. These and other questions are discussed in a volume of about 400 pages entitled Allgemeine Geldlehre (General Principles of Money) by Professor Ernst Wagemann of Berlin (published, 1923,

by H R. Engelmann, Berlin).

The book is essentially a contribution to the analysis of economic concepts. Every term that has been employed in economics since the birth of the science specially in the related fields of money and price has received a critical and constructive treatment at the hands of the author. One is once more led to the conviction that philosophy, and in so far as the science of money has a philosophic bearing, is fundamentally a structure of definitions.

In recent times economics has grown more and more into a discipline in facts and figures. For all practical purposes one need not go beyond the reports of banks and factories, the statistics of prices, wages, interest and discount, or the bulletins on exports and imports in order to master the mechanism of the forces and laws that regulate economic development. • Wagefiann has to his credit

h a descriptive and statistical work, for mple, the one on Chile entitled Wirtschaftsfassung der Republik Chile. But the hor's present work on money like Inflation Detlation by Yves-Guyot and Raffalovich the Societe d'Economic Politique of Paris il the more valuable since it emphasises part that pure theory has always played in still playing in banking currency and letary problems.

II

Several circumstances have contributed to revolution in the attitude of science to problem of money during the last three four decades.

In the first place, as is well known, gether now phenomena have presented msolves before students of money in and ough the tremendous development of notebank accounts

Certain special incidents have also called notice For instance, during the seventies the last century both in Austria and sia, while the silver currency was depreing, the paper money seemed hardly to be cted by the circumstance This curious maly had to be attacked by theorists as a el case.

In the meantime, in sociology, in jurisdence, in general economics as well as in er branches of human science new tendenhave manifested themselves. Their impact the nature of money could hardly be sted with success, says Wagemann

Then came the great war, with its worlde economic readjustments. One has had opportunity to observe on a telescopic hemispheroidal scale the monetary facts relations such as cannot fail to endow science with objectivity and precision, never they may have been needed.

Paper money and inflation, these are the legacies of the war which are patent n to the layman. In addition there has en an interesting problem. During the period, although the production of gold off, the world prices in terms of gold did fail to rise! And this rise has taken to two to three hundred per cent in a Vears.

When one remembers how it took de-es for prices to reach the same heights ler the influence of the constantly reasing production of gold and silver after discovery of America, one wonders if relations between money and economic isactions or between gold and money

have not undergone a thorough transformation in recent years. One is therefore led to ask indeed with Wicksell, Hahn, Wagemann and other theorists if gold can still be conceded the old role as the material for money.

Then there remain the great facts of inter-allied war-debts to America and German payments to the allies reparation theory of money has to tackle these problems independently of their bearing on politics

and general economic development.

One of the latest contributions—theoretical albeit—to the problem is furnished in J.M Keynes' Tract on Monetary Reform, which is being highly appraised by "German Science" (cf Welt-uirtschaftliches Archir, Kiel). The author begins with the hypothesis that gold standard has virtually been abandoned everywhere and establishes the thesis that so far as England is concerned it should be unwise to icturn to the gold standard. In regard to the United States, we are told that for the past two years this country has pretended to maintain a gold standard. In fact, it has established, a dollar standard, and, instead of ensuring that the value of the dollar shall conform to that of gold, it makes provision, at great expense, that the value of gold shall conform to that of the dollar

Anthropological data bearing on economic development as well as historical stat stics of our own times are thus co-operating to inaugurate a transvaluation of values in the interpretation of money For one thing, the majesty of gold and with it the superstition of mankind regarding the metallic basis of money has been profoundly shaken not only among the masses in Central Europe and Soviet Russia, but also among philosophers and money-politicians. The analyses of monetary theories such as we find in Wagemann's treatise will therefore be of extraordinary significance in the understanding of modern culture and the trend of philosophical reconstruction.

In the question of money, says Knapp, human beings are naturally "metallists," i e. they are disposed to identifying money with gold. But the scientist is forced to be a "nominalist" because it is not generally possible to define the "unit of value" as a certain "amount of metal". Thus comes the paradox: Money has validity but no .value.

In all civilized States, the "unit of value" has long grown into something nominal. It

A reduced property was a property or the

is a historically defined idea which belongs as a part to the legal system of the land.

According to German theorists the publication, in 1905 of Die Staatliche Theorie des Geldes (The Political Theory of Money) in which Kuapp makes the above statement constitutes a landmark in the history of monetary theories

Since then, several important publications, e. g. Benedixen's Das Wesen des Geldes (1908, The Nature of Money), Singer's Das Geld als Zeichen (1920, Money as Sign) and others have contributed to develop the

core of Knapp's contentions.

Nominalism as a theory, such as is being propagated in prevailing economic circles in Germany to-day, adumbrates two simple propositions

1. Gold - goods

2. Money - sign of value

In German science, this, however, is not a novelty. Historians can point back even to the philosopher Kant who in 1797 taught that money is but a means to an end and that it has no value in itself. Among specific economists may be cited Adam Mueller in whose Versuch einer neuen Theorie des Geldes (1816, Attempt at a New Theory of Money) occur the concept that a piece of metal begomes a coin not because of its "localisation", i.e., marriage or association with the law of a country In other words, it is, the fiat of the State that dubs metal money "No state, no money."

In the same strain Hufeland had pronounced in Die Lehre som Geld und Geldumlauf (1819, The Theory of Money and Circulation of Money) that money is but goods which have "value ouly for exchange". This value of money as medium of exchange however, does not depend on the price of the metal itself nor on its value as a commodity for consumption but "on a social fact". Oppenheim's Natur des Geldes (1855, Nature of Money), also establishes the same thought that money is independent of its metallic

content.

In all "dignified" volumes such as Roscher' Grundlagen der Nationaloekonomic (1854, Principles of Political Economy) such ideas were treated as mere curios of science. On the other hand, even in socialistic revolutionary economics they formed but the butt of ridicule, for instance, in Karl Marx's Das Kapital (1867).

All the same, the nominalistic tendency

has ever and ever reappeared. Heyn's Papier-waehrung mit Goldreserve fuer den Auslandsverkehr (1894) Paper-money with Goldreserve for Foreign Transactions) and other contributions have been well digested by Knapp And Mark's Das Gold nicht mehr Geld (1897, Gold no longer Money) has not been less suggestive and convincing to the systematizer of the new theory.

17

According to Professor Wagemann the new theory is trying to construct a synthesis out of two conflicting theories, namely symbolism and metallism. In the first place the contention of nominalists that gold is not equivalent to money, but is only goods, has been the idea of the metallists as opposed to that of the symbolists. Secondly, the nominalist theory of money as being nothing but a sign is a cardinal point in the thinking of the symbolists but quite at variance with that of the metallists, according to whom money has an inner value, i.e.

The entire symbolist position may be

thus indicated

money - gold - symbol of value.

Symbolistic tendencies are to be found in Bodin's Les livres de la republique (1568), Locke's Some considerations of the consequences of the lovering of interest and raising the value of money (1691), Law's Memores sur les banques (1705), Just's Staatswilschaft (1758), Stevant's Inquiry into the Principles of Political Economy (1767). These and other writings of the "mercantile" school are the representatives of symbolism

school are the representatives of symbolism Among the "metallists" in money are to be mentioned the entire "classical" school beginning with Adam Smith, Ricaido, Seniol. Mill and including Walker, Jevons Keynes Leroy-Beaulieu, Diehi, Laughlin, Wagner and others. Karl Marx and his followers, as well as to a certain extent the historical and Austrian schools are representatives of metal-

lism

According to metallists the philosophy of money would consist of the two following equations:

money = gold

gold money -goods
But have the nominalists succeeded in overpowering the antitheses? Wagemann thinks that they have not, especially since the "economic theory" of money has not

men placed as yet on a firm basis. To this ask, however, his own studies address themclves, and we are promised a second volume d the present treatise.

In the phenomena of money there are wo concepts. One is the legal, viz, that he State compels obligations to be discharged hough certain media The other concept , economic So far as the legal aspect is oncerned, Wagemann concedes that Knapp an be accepted by everybody. But the conomic aspect of money has been virtually reglected by Knapp And his followers, instead of supplementing him, have only rendered he theory untenable. For instance, when defmann in his Geld and Gold (1916) leclares that money is nothing but a psychoogical abstraction which is even independent of the State and draws its existence olely from the circumstances of exchanges, he theorist bids adieu not only to the noblem of value but also to the whole conjecture of social life.

In mercantile thought, so far a theory of noney is discernible, for instance, in Stuart's Inquiry, money is essentially a symbol. But he picture of mercantilism with which tudents are familiar in Adam Smith's work, ramely that money is identical with wealth s really a *degenerate* form of mercantile hought, says Wagemann. The process of regeneration by which a symbol is taken to e equivalent to the fact, the sign to the

essence, in other words, the "materializing" of a symbol is psychologically quite a normal phenomenon and has played a great part in the early culture history of all nations, as anthropology teaches us The concept that money - wealth is according to Wagemann but part of the same consciousness which produced, for instance, the dogma of transubstantiation, the realism of medicival scholastics, and the doctrine of the State being identified with the person bearing the crown (L'etat c'est mor).

If the materializing of the symbol turned out to be the extreme to which the mercantilists were running, the danger of metallism has lain in the direction in which the theorist is tempted to consider money as a certain lump (in weight) of gold Whenever the metallist thinks of money, he can hardly resist envisaging, first, some solid piece of metal passing from hand to hand, and secondly. something like a tape or a 10d which serves as a unit of measure. For, otherwise he cannot conceive the mechanism by which prices are adjusted.

It must be acknowledged that it is on the theory that the money and currency as well as note banks of all modern States have been founded The theory has played the same role in socio-economic life and political science as the atomic theory in chemistry and the theory of ether in physics But like both these theories, this is only a fiction, says Wagemann, although it has been quite fruitful as a working hypothesis.

"SANNYASI" IN CHINA

I) \BINDRANATH Tagor's play "Sannyasi" (English version of Prakitir Pratisodha') was recently performed in China at the Summer Theatre by the Sansi Tayuanfu chool of Foreign Languages.

The subject-mater of the play is as

· House

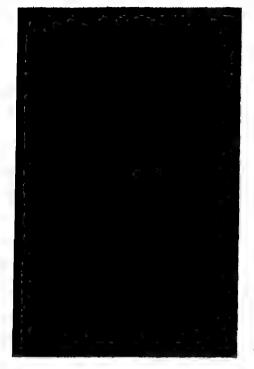

A certain Sannyasi who had renounced world sits outside a cave, contemplating he nature of the Universe, . At one time the odd was wetted with his tears, so cruel it and to him. So he took the oath that he would avenge himself of her, and with that ind in view he took shelter in the darkness d the cave. Now he was free from fear and

desire and his reason was shining clear Master of his own self, he is now exulting over his mastery of the- world too.

In the Second Scene the Sannyasi sits by the roadside watching the crowd and pondering over their conduct. A villager enters the scene with two women The old man says "There are fools who judge men by their outside" To this the first woman replies 'How sad' we have been watching your outside from our infancy. It is just the same all through these years.

Village Elder -- Lake the morning sun First woman ----- Yes, like the morning sun

in its shining boldness

China Shansi Taiyuanfu School of Foreign Languages—Rabindranath Tagore's "Sannyası" No. 25. Behind the stage

With their exit enter three villagers. The first villager has been insulted and he is frothing and fretting for revenge. The others go on whetting his wrath and he bursts out with one of his plans of revenge——"I will drive my ploughshare over his household."

They go out and in come two students disputing with each other the success of their respective professors in a certain debate. The point at issue was whether the subtle was the outcome of the gross or the origin of the

gross. The first student then asks the Sannyasi, "which is the original, the subtle or the gross." Sannyasi answers—"Neither." This is helpful to the self-complacence of the second student and he accordingly says: "Neither, well, that sounds satisfactory."

They depart and two flower girls make their appearance, singing. They are pining for their lovers and regretting that the garlands are not ready. A wayfarer who is intimate with them remarks:—

Why such regret, my darilngs? When the garlands are ready, the necks will not be wanting.

After some other jokes they go out of the stage and

in comes an old beggar abegging. May God prosper you" he says in the act of begging. A soldier follows shortly and rebukes the beggar thus:—

Move away. Don't you see the Minister's son is coming?

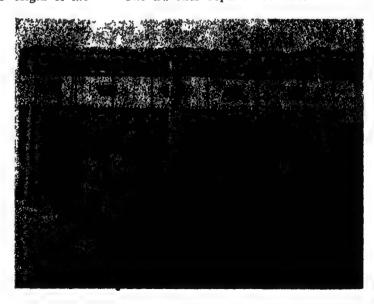

The Sannyasi watches these sights of common life and reflects:

Can I ever again shrink back into the smallness of these creatures and become one of them? No, I am free

At this point, enters the girl Vasanti daughter of out casted Raghu. Her very touch is pollution to other people After meeting with rebuffs from common people she sees the

Sannyasi. When about to approach him, she is met by a village woman who upbraids her for having touched her cloth-end. The grigently protests, "I assureyou, your cloth-end did not touch me" While engaged in conversation about the ways of the world, ther are met by a traveller who wants some shelter Vasanti offers to take him to her hut, bu when he comes to know that she is Raghu daughter, he declines the offer thus:—

"God bless you, child, but I cannot stay."
The traveller departs but some men com

China Shanzi Taiyuanfu School of Fereigh Languages—Rabindranath Tagore's "Sannyasi" No. 26. The Summer Theatre

bearing some one on a bed. Binde the eaver was sleeping as one dead and by way f fun these people were taking him away as

to the burning ground. Binde wakes up pent Upon this he is told to keep quiet like Il decent dead people. They still pretend not believe him. At this Binde says "I swear your beard, my brother, I am as alive s any of you."

The Sannvasi was watching all these scenes rom common life. The gul in the meantime ad fallen asleep, with her arm beneath her ead The Sannvasi thinks of fleeing from her n that condition, but desists from doing so, hinking it would be an act of cowardice, and he gul also wakes up with the apprehension Lat she has been deserted already

Then enters a young woman, followed by nea The woman protests that they should not speak to her of love, because men have icarts of stone. One of the men then asks he others..-

'Let me expl in it to you. She said, we nen have hearts of stone, didn't she? Well, said in answer, if our hearts were truly of tone, how could Cupid's darts damage them? ron understand?"

The rest of the Scene is occupied with the conversation between the Sannyasi and the rul The latter tries to attract the mind of he former to the beauties of the world She monts to a creeper and says

"Father, this creeper trailing on the grass, seking some tree to twine itself round is ny Creeper try "

Met with these blandishments of beauty, he Sannyası cries out .-

"No, no, the beautiful is mere phantasy." Touring the creeper he rises up and consinced that he has not been able to rise above he appeal to the senses, he suddenly runs way from there, leaving the girl alone

The next scene reveals the Sannyasi, sitthe upon a boulder in a mountain path. A and of shepherd girls passes by singing .-

The music comes from across the dark the and calls me.

The beauty of the evening touches his in id and he begins to think of the little girl it is whom he has fled away. Another girl it lattered clothes enters the stage. Her litter gathers sticks from the forest and she ind no mother. She hastens to meet her father in search of whom she came there.

The Sannyasi, whose mind has now begun to respond to the call of earthly love and affection says to her:-

"Let me give you my kiss of blessing before you go."

After her departure, a mother enters the scene with two children, remonstrating with them for not having grown as fat as those of her neighbour. The Sannyasi becomes interested in her relations and how she spends her days. In reponse to one such question of his, the mother replies .-

My man goes to the field, and I have my

house to look after

They go away after having taken the blessings of the Sannyasi and are followed by two men friends to each other who are about to part after having gone some distance away from their home. One of them says to the other —

"Can you see that faint glimmer of the water in the dark ?"

The light of their own homes is burning there and they take farewell of that last glimpse of light, remarking:-

"That light is the last farewell look of our past days upon their parting guest."

All these tender scenes from life have their effect on the mind of the Sannyasi and stir memories of the little girl from whom he tore himself away

The last scene shows the Sannyasi in the village path. He has now come back to the world which he once renounced. The girl whom he had deserted appears to him as the embodiment of the world and he goes about seeking her. He meets a village elder and asks the latter if he knows where Raghu's daughter is. The elder replies .-

"She has left the village, and we are glad," and then moves on. A crowd of villagers enters with their prattle of the prospective marriage of the king's son. The Sannyasi asks them also about Raghu's daughter. They cannot tell where she has gone and one of them jocosely remarks -

"But we are sure that she is not the

bride for our prince.

A woman enters last with his son who the blessings She wants sick. child the the Sannyasi by throwing at his feet, and is told that he is no longer a Sannyasi and does not like to be mocked with such salutation. He says that he is seeking his lest world back. He

asks her if he knows Raghu's daughter. The woman replies, "Raghu's daughter? She is dead."

But the Sannyasi refuses to believe that she is dead. Her death would be death to all and she can never be dead.

ANGLO-FRENCH RIVALRY IN SOUTH-EAST ASIA

By TARAKNATH DAS, M.A., PH.D.

I CHINA

N all the intricacies of international relations between Western nations and the Orient during the nineteenth century, two broad eatures become at once manifest. Suropean nations on general principle coperated amongst themselves against the)mental nations, particularly in China. to nforce their demands to secure commercial nd other privileges. This might be termed s the Principle of European Concert against he Orient The other mode of operation is ather complicated. The European nations, although agreeing to assert their supramacy wer the people of the Orient at times, gurrelled imongst themselves, because of mutual ealousy and other reasons. This policy may 10 termed as Rivalry among the European Vations on Oriental Questions To defeat heir rivals, the Western powers often sided with the Oriental rulers, but this co-operaion has been invariably utilised to promote heir own interest.

Many instances could be offered to verify he application of the theory of European Concert in the affairs of the Orient, partiularly China. The Opium War against China probably the most indefensible act that has happened in the history of international norality*. But it is a fact that not even

* "Onum was introduced into China in the airteenth century by the Arabs, but its use was onfined exclusively to medicinal purposes, as in onined exclusively to medicinal purposes, as in lost other countries, and when the European ships exan to visit the East, it had no importance as serchandise. As late as 1773, when the Portuguese vere supplanted in the supremacy of the narket by the English, the importation of the rug had never exceeded 200 chests annually. As result of the victory of Clive at Plassy, the ontain East India Company secured exclusive mylege of opium cultivation. Three years after he East India Company obtained this monopoly, is importation to China increased fivefold, and in 1790 it had mounted up to 4000 chests or twenty-orient. Houghton Miffin (N. Y.), 1903, pages 64-65. As early as 1800 the Chinese Government tried of stop the curse of opium traffic. "In 1870, the limit step was taken and the Emperor Kianking studies of pount from abroad, and cultivation of poppy at one European Government on friendly terms

home" (Morse: International Relations of the Chinese Empire, Vol. I., Page 175). For the first 20 years of the prohibition. no attention was paid to the edict (Ibid, page 177). "The supply came exclusively from India and every chest bore upon it the stamp of the East India Company, as its sale in India was a Government monopoly. The trade was encouraged by the Company, regardless of the fact that it had been made unlawful by imperial edict, and British ships were mainly used in its transportation, although those of other nationalities were to a limited extent engaged in it. Between 1830 to 1830, the importation to China had risen to 17,000 chests, and smuggling was conducted along the coast from Tientsm to Hianan." (Fourtation had become so open and so notorious that the opium, which had in previous years been smuggled into the province from Lintin, at the mouth of the river, was now being brought into the foreign factories, and its introduction effected with the knowledge of the officials." (Ibid., page 67-68) China objected to this contraband trade (Encyclopadaia Britannia, Vol. 20, 1911, page 130) and it resulted in an Opium War, waged by the British Government without declaration of war and in violation of International Law. "In the opening up of China to Repopeum merchants and missionaries an important stride was made in 1840 when the so-called Opium War was waged by Great Britain against China. It grow out of a quarrel between the Chinese Government, which had prohibited the importation of opium, and the British traders at Canton, who insisted on smuggling opium from India into China." (Hayes, Carlton. W: Political and Social History of Europe, Vol. 2, pages 562-564) And after the war for him to the British (Vide Montgonery Martin's Obium policy has done more harm to China than anything the other powers have done to her pecause it has degenerated the manhood and womanhood of the great people. Prof. Ross of the University of Wisconsin, holds that over \$4,000,000,000 worth of opium has been said by the Brit home" (Morse: International Relations of the Chinese

with China sided with her or gave her moral

support*

The Opium War (1840-42) was really a stepping stone towards further penetration in China by the Western powers; and the successful Arrow War. of 1856 which followed in its wake helped the European nations to realise that they could extract valuable concessions from China. In fact, it is after the Gnium War that the concessions of extraterritoriality were extracted from China. And undoubtedly there was a concerted European action in this matter. The British success in acquiring Hongkong and a large indemnity as a result of the Opium War, really spurred the French and the Spaniards to attack and annex Indo-China on the pretext of punishing the people for their attitude against the missionaries. Prof. Gibbon writes:

"Until the Far East became commercially attractive to the French and they saw the British deriving

on the consumption of foreign and native opium, that the value of the land given over to the production of native opium, were it plauted with wheat or other useful crops, would yield to the Chinese people an annual return in the neighbourhood of \$100.000,000; that the average earning capanood of \$100.000,000; that the average earning capacity of the millions who were addicted to the habit of opium smoking was reduced to one-quarter, resulting in an annual loss in productive power of nearly \$300,000,000, or a total loss to China of about \$550, 000,000. In this calculation, no account is taken of the capital loss involved?

Hearings before the Committee on Foreign Affairs, House of Representatives, Sixty-Seventh Congress. Fourth Session on the Resolutions H. J. Res. 430 and H. J. Res. 453. Washington Govt. Printing Office 1923, page 84.

* Of course, the opinion of America was opposed

to Opium trade.
The attitude of the American people had been well expressed by Caleb Cushing in his speech regarding the situation in the House of Representatives, March 16, 1840. He condemned the British policy in the following unmistakable terms: "But Ged forbid that I should entertain the idea of co-operating with the British Government in the purecose, if purpose it has, of upholding the base cupi-dity and violence and high-handed infraction of all The York Macmillan, 1923, page 104-105.

The York Macmillan, 1923, page 104-105.

The man like John Oning Adams and others.

New York Macmilian, 1923, page 104-105.

But men like John Quincy Adams and others held that Britain was fighting on behalf of all Western powers to force China to recognise the equality of Western nations before China and renounce "Kow Tow". The Opium trade was merely kan incident, (Ibid., p. 107) So far as the efficial action of the United States was concerned, the did not take any positive stand in favour of China against Great Britain.

advantages from the possession of Hongkong, the anti-Christian attitude of the Coachin-Chinese did not trouble Paris...... In 1858, when the French combined with the British against China, a Franco-Spanish fleet captured the Port of Tourane, In 1858 the French seized Saigon, opposed by the Anamese, war followed with their country; and in 1862 Anam concluded a treaty with France and Spain, recognizing the cession of three provinces of Coachin China to France, promised security to French and Spanish missionaries, and agreed to pay an indemnity to the two powers...... In 1863, Cambodia accepted the protectorate of France, and in 1867 the other provinces of Coachin China left in 1867 the other provinces of Coachin China left to Anam by the Treaty of 1862 were annexed."

In fact, Great Britain was the staunchest supporter of French aggression in China during this period and the two nations cooperated in this attempt at extracting various concessions from China. We find that availing herself of the co-operation with Great Britain in the Crimean war (1854-1856) which had just drawn to its close at that time she (France) proposed to Great Britain that the two Allies should continue their co-operation and make war in common on China, to which the British readily assented. primary motive of the French was to protect Catholic missionaries in China; that of Great Britain to obtain treaty revision." At this time, the unfortunate Lorcha-Arrow incident occurred and the two powers declared war or China

"The war would have commenced earlier, had not the Indian Mutiny intervened on May 13, 1857 which necessitated the temporary diversion of British land forces. The naval warfare, however, began in the summer of 1857. The Allies won the war. As a consequence, Great Br tun concluded the treaty of Tienssin, June 26, 1858; Franco June 37; Russia on June 13: and the United States of June 18 These four treaties were, in general approximately the same and because of the most approximately the same, and because of the most favored nation clause, the privileges conceded to one were extended to all."

* Gibbons, Herbert Adams: An Introduction World Politics, N. Y. Century Co. 1922, page 60. † Bau, M. J. Foreign Relations of China (New York City. Fleming H. Revell Co.,) Revised and Enlarged Edition. 1922, pages 11-12.

It is very interesting to note that very shortly after the conclusion of the Crimean War, Russi Supported Britain against China. "The efforts of the English Ministers to pave the way for a political understanding with Russia, have found shape during the (Grand Duke Constantine's) visit in 1850 in some remarkable declarations. Practically however, it is only on the Chinese question that this revival of mutual confidence has hitherto made itself manifest. England has communicated Lore Eligin's instructions to the Cabinet of St. Peters burg, and accompanied the communication of the with the request to support the mission at Peking The Russian Cabinet has sent a reply counted i triendly terms of thanks. They will most withing

In 1860, the Anglo-French forces took king and burnt the Summer Palace. here was no opposition to this by any propean power, because others were busy carrying out the policy of dismemberment other Asiatic nations in India, Turkey, ersia and China. Further signs of European ncert in China are evident when we find at after the Sino-Japanese War (1895), the propean nations did not allow victorious pan to take any continental possessions of una. But immediately after this, they emselves started to partition China by tablishing spheres of influence and leasing rritories. Further evidence of concerted tion of European powers against China can found in the way they carried on the ppression of the Boxer Uprising (I am not holding the Boxer Uprising) with abominae excesses; there was no protest from any e of the nations. On the other hand, they, concert, agreed to impose an exhorbitant demnity and exacted control of maritime istoms as guarantee.*

The greed and rivalries of powers innding Japan divided China into so many heres of influence. After the Sino-Japanese ur. France, Russia and Germany championed e cause of China against Japan and forced e latter to give up the Latung peninsula ded to her by China by the first treaty of umonoseki. It was really a combination ie to rivalry of one group of powers against e other, not only to acquire a dominat-g influence over China, but to secure furer territories ousting the latter. Japan tried secure Anglo-American support against Franco-Russian-German combination ainst her; but England and America, though posed to Franco-Russian-German policy in nna, did not extend any aid to Japan. It av be said that although Great Britain and merica preferred the policy of opendoor in

pport the efforts of England in favour of European de and their fellow-Christians.....

China they did not oppose the doctrine of spheres of influence.*

We have noted that at the middle of the nineteenth century there was actual co-operation between France and Great Britain against China. But we are soon to discover and Great Britain that there existed a strong rivalry between France and Great Britain in Eastern Asia during the latter part of the nineteenth century. The germ of this rivalry lay the greed of the two nations to get as much territory as possible under their control. But the actual conflict of interest did not originate suddenly in Asia. France and Great Britain joined with the heathen and "unspeakable Turks" against Russia in the Crimean War † It was because of the expansionist policy of France under Napoleon III and the British efforts to check it that a new rivalry began. The most significant incident that brought about the climax of the Anglo-French rivalry in world politics after the middle of the nineteenth century was the French attempt to build the Suez Canal. It was opened in 1869. And through the clever manipulation of British statesmanship, the French-built canal was brought under British control in 1875 through the purchase of the Khedive's shares of stock. The reflex of the Anglo-French rivalry spread

* Tomimas, Shutaro: The Open Door Policy and the Territorial Integrity of China (New York. A. G. Seler), 1919, pages 47-49.

Palmerston's Foreign Policy regarding the Crimean war can be summed up as follows:—It would be a mistake, however, to count Palmerston among the blind enemies of Russia. He was now nearly seventy years old, and was anxious to become at length Prime Minister, and during his life-time, if possible, to have peace in the East. His efforts, of course, did not go to the length of flunching on a war of extermination against Russia. He merely hoped with Napoleon's assistance, to curb Russian ambition for fifty years, as he said, meaning in reality for his own life-time. For the independence of Turkey he cared nothing, only seemed to him advisable, especially as there was then no Suez Canal, to have a sentry on the Bosphothen no Suez Canal, to have a sentry on the Bospho-rus who could guard that passage in the interests

rus who could guard that passage in the interests of England"

We find the European Concert active even ring the World War. When the Allied Powers ere anxious to lead china to War against Gerany, they made an agreement with Japan proseng her the German rights in Shantung seibly avoid establishing asprecedent of retroces n of the leaded territories to China. n of the leased territories to China.

all over the world and particularly wherever they had contiguous colonial empires; since hen, any efforts at colonial expansion by France was looked upon with suspicion by the British and vice versa.*

The Anglo-French rivalry in the eighties of the nineteenth century was so acute that Lord Salisbury would not have been sorry at all to see another Franco-German War. anding of course in favor of Germany. Salisbury in a reply to a letter to Lord Lyons, who was at that time British Ambasandor at Paris, wrote on July 20, 1887:—

"I am afraid the temper of the French will not make the settlement of the Egyptian Question nore easy. I do not know how we are to devise a middle term that will satisfy them. We cannot leave the Khedive to take his chance of foreign attack or native riot. The French refuse to let us attack or native riot. attack or native riot. The French refuse to let us exercise the necessary power of defence, unless we do it by continuing our military occupation. I see nothing for it, but to sit still and drift awhile, a little further on in the history of Europe the conditions may be changed, and we may be able to get some agreement arrived at which will justify evacuation. Our relations with France are not pleasant at present. There are five or six different places where we are at odds: 1. She has destroyed the Convention at Constantinople. 2. She will allow no Press law to pass. 3. She is trying to back out of the arrangement on the Somali Cast. 4. She still occupies the New Hebrides. 5. She destroys our fishing tackles, etc., 6. She is trying to elbow us out of at least two unpronounceable places on the West at least two unpronounceable places on the West Coast of Africa. Can you wonder that there is, to my eyes, a silver lining even to the great black cloud of a Franco-German War?"

The significance of the conflict of colonial empires of Great Britain and France in .- the Far East at this period can be fully realised when we find that during the period of 1862 to 1885 through aggression and force of arms France acquired from China sovereignty over Coachin-China and established protectorate over Cambodia and Anam including Tonkin, comprising the entire eastern half of the Indo-Chinese peninsula. The British Government on the other hand after completing the conquest of India marched eastward to destroy the sovereignty of South Western China

with all the persistency of British expansi Burma was annexed completely step by a as a counter-measure against French exp. sion in the Far East.*

It seems certain that altho, the Fran Russian secret alliance which came into ex tence about 1892 was directed against 6 many, yet it had a decided bearing on Fran Russian policy against Great Britain. 1 was so because France and Russia bar common interest against Great Brite France was humiliated in the affairs Egypt. She had always regarded that coun as a dependency, and could not forget t the Suez Canal had been constructed w French capital in the teeth of English oppo tion. An attempt at dual control was d troyed by the bombardment of Alexand and the suppression of Arabi Pasha's rebelli (1882). Thenceforward England ruled supre in Egypt; and her rival smarted under check which her own want of resolution b producedt.

Russia was in need of an assurance th there would not occur another combinati against her led by Great Britain or Germa as it was the case during the Crimean W England for a century had stood in the w of Russia realizing her traditional wa water policy.

"She it was who had prevented Russia frenjoying the fruits of her victory over Turkey the war of 1878. She held the key to the Pers Gulf and stopped her progress southwards Central Asia. France had similar grievances again her, not only in Asia, but in the Levant and Egy Russia and France, in short, had a common enem Hence, their reapproachment.

The British attitude against the France Russian Alliance was so acute that she w willing to extend support to the Trip Alliance.

"The New Triple Alliance received moral supp from England, owing to her rivalry with Rus and France in the East, and the two powers who it appeared to menace instructively drew clost together. Their union was cemented by financ considerations which weigh as heavily with Stal as with individuals."**

Anglo-French relations during the perio of the conclusion of the Dual Alliance between

^{*} One of the principal characteristics of the givalries of colonial imperialisms is that, should there arise a question of dispute in one part of the world, it spreads in other parts of the world in the satagonists often trying to take advantage of the world following the one another in any part of the world, following the

maxim "every means is fair in case of war".

^{**} Skrine, Francis Henry: The Responsion Russia (1815-1900), p. 29.

France and Russia and the Anglo-French Entente were tense on various occasions. One of the causes of these tensions is the vigorous fort of the Third Republic to establish a ast colonial empire. This effort found definite xpressions in South-Eastern Asia. France ot only challenged British supremacy in outh China, but in Upper Burma and Siam. the French twice before tried to found an impire oversea to rival that of Great Britain once in India and once in Canada. Indochina represents the third attempt.* These wo nations were on the verge of war, because Great Britain did not like the French ncroachment in South Eastern Asia, which night eventually be a menace to India.†

The attitude of many French statesmen of weight, at that time, was that it was in Asia once more where would be decided the destines of the world. In Asia would be founded great empires. Whoever succeeded In making his voice heeded in the Far East would be able also to speak in dominating accents to Europe "Be Asiatic—there has the future."\$

This attitude of the French statesmen was in direct conflict with British interestin the Far East.

"In 1893 out of the 3340 vessels that passed hrough the Suez Canal, no fewer than 2400 were 3ritish, while the next on the list came the Germans with 270, the French with 190, and the Dutch with 80. This gives an idea of the extent to which here existed British ascendency in Eastern waters. here existed British ascendency in Eastern waters. daintenance of this supremacy was vital, not nerely for the sake of our Empire, but for the matenance of the British people. It was only in he East, and especially in the Far East, that the british exerted to keep and to create open markets or her manufactures. So British feeling was that Every port, every town and every village that easses into French or Russian hands, is an outlet out to Manchester, Bradford or Bombay."**

The spirit of Anglo-French rivalry grew litter when the French, after the annexation of Tongking and the establishment of a Protectorate over Anam and the signing of be Franco-Chinese Treaty of Tiensin in June 1885, imposed differential duties in favor

of France and against English goods.* The British Government saw in the French action of differential treatment to British entering by land route and also in securing railroad concessions monopolistic measures aimed to hurt British interests. The British Government started to counteract the situation by demanding from China counter-concessions to be granted to England. She thus secured a series of concessions in the regions near by. Great Britain started her new march towards South Eastern China by annexation of Burma, which was confirmed by the so-called O'Connor Convention of July

24, 1886.
"By the article II, China agreed that in all matters whatever appertanting to the authority and rule which England is exercising in Burma, Eng-land shall be free to do whatever she deems fit and proper."+

In 1890 Great Britain annexed Sikkim.

which was a subtributary to China.

On March 1, 1894 Great Britain signed the Anglo-Chinese Treaty, which fixed the boundary between Burma and China, transferring to the latter the territory east of the Mekong River. Great Britain specially stipulated that the territory turned over to China should remain under Chinese sovereignty. This measure was adopted by Great Britain because of the French aggressions in Siam and the signing of the Franco-Siamese treaty in 1893 by which France extended her frontier to the Mekong. The British plan failed because on June 20, 1895 China signed a treaty with France by which the territory turned over by Great Britain was acquired by France with special mining rights and concessions for building railways in the Kiangsi and Yunan provinces. Great Britain potested against this. However, she instead of holding to the principle of "no special privilege for any power in China" demanded special concessions for herself as a matter of compensation, thus introducing the abominable doctrine of "sphere of influence".

SALAN SALAN MANAGEMENT AND A PROPERTY WAS AND THE PARTY OF THE PARTY O In 1896 France and England by the conrenting of London agreed to respect the in-dependence of the valley of Menam and of Bangkok, the capital of Siam. This did not stop Anglo-French rivalry in this region, but both these powers did their best to increase their territory at the expense of others, especially over Yunan which, as the only route to the Upper Yangtze, must be kept open to both."

Franco-British rivalry in South-Eastern Asia, particularly China, became one of the doctrine of "sphere of influence" in China. The Russian march from the North and the German occupation of Kiaochao later merely accentuated the movement, which was already in full 'swing in South-Eastern Asia The meaning of "sphere of influence" is not so simple. Its establishment meant a step towards dismemberment and destruction of terriborial integrity of the State upon which it is mosed with a benevolent motive.

*Stuart, Graham.: French Foreign Tew York, Century Co. 1921, page 15. Policy,

22. (a) Lord Curzon in the Romanes Lecture on Frontiers" in 1907 has defined the "sphere of affuence" as follows:—

"A sphere of influence is a less developed form f protectorate, but it is more developed than a sphere of interest. It implies a stage at which no atterior Power but one may assert itself in he territory so described, but in which the degree f responsibilty assumed by the latter may vary reatly with the needs or temptations of the case. he native Government as a rule is left undisturbed: rdeed, its unabated sovereignty sometimes is specically reaffirmed, but commercial exploitation ad political influence are regarded as the peculiar cht of the interested Power."

· }, , .

e to capture the Chinese market, they led their attention to Tongking, in which on it seemed possible that the Red River lid form the easiest means of access to trade of Yunan as well as that of the ms and Laos. Similar consideration would m to have been at the bottom of the tish policy in the Far East.

Whatever happens, we are told, Great Britain it have possession of the trade of the Yangtzeng and if China is to be divided into spheres of nence, this valley must be ear-marked as British. V. of course, the Yangtse is one of the most allous regions in the world; but why should at Britain have laid any special claim to its merce on that account? It was in great asure because the recent acquisition in Burma I brought her in close proximity with the upper ters of that river, and because it might be hoped connect Rangoon on the lower Irrawady with distant Shanghai by a continuous water commication. A Railway was earnestly advocated in Burma to Yunan, and a line was actually

commenced by way of Konloon on the Salween River. On the other hand (in 1901) M. Doumer obtained the sanction of his Government to carrying the French line from Tonking into China. But there remains yet another possible means of access available into these provinces, over and above the regular Chinese lines of communication from Canton by the Yangtze, and that is the rests through the Laos and Shan States from Bangkok and Menam and Meping."*

There is not the least doubt that the question of control of South Chinese trade and trade-routes by land, rivers and seas was one of the principal causes of the friction between France and England. This rivalry continued until the Anglo-French Entente came into existence because of the mutual fear of Germany. The Asian people, particularly China, suffered from both European concert as well as European rivalry. (To be concluded).

CHEMICAL RESEARCH IN INDIAN UNIVERSITIES

BY PROFESSOR BAWA KARTAR SINGH, M.A., (CANTAB), D.N., I.E.S.

INCE the outbreak of the Great War, the need for Research in chemical science is being greatly felt, and it is now held that it is the duty the University Colleges not only to instruct men is various subjects of study but also to imbue them is the enthusiasm and initiative which only a aning in research can impart. In other words, is the first duty of a University to advance nowledge, its second duty to impart it. This has sen fully realised by the British Universities, and even the old conservative University of Camridge has found itself compelled to recognise this spect of its functions and has, therefore, established numerous institutes for research and postraduate studies, and instituted degrees of Ph. D. [919) and of M. Litt, and M. Sc. (1920). These emarkable changes, be it noted, have been introduced during a period of acute financial stress.

The Universities of India, however, with a few Xeentons do not seem to have done anything to-

The Universities of India, however, with a few xceptions do not seem to have done anything towards the development of research. This is borne in the second comment of research. This is borne in the second commissioner with the Government of India, in his written evidence before the Chemical Services Committee, stated among other things that a College Professor has often hardly any time for essarch, and the chief Professors, who may be styled University Professors will be largely in the same position." In reviewing this evidence, Professor J. F. Thorpe, F. R. S., of the Imperial College if Science and Technology, London, says, "these statements with the second statements with the second statements with the second second statements with the second se

of the fact that hitherto real University work in India has been almost non-existent, and it is regretable that such a state of affairs should be acquiesced in by those in charge of the educational policy of the country The Professors of Chemistry would have to be relieved of some of their routine work and could then devote an appreciable amount of time to train their senior students in methods of rescarch." [Report of the Chemical Service, Committee, 1920, pp. 33-34].

their routine work and could then devote an appreciable amount of time to train their senior students in methods of rescarch." [Report of the Chemical Service, Committee, 1920, pp. 33-34].

In a paper "Chemical Research in India" read on the 2nd May, 1924, before the Royal Society of Arts, London, Professor Thorpe further deals with this aspect of the subject, and adds "it is significant that no chemist in India holds the Fellowship of the Royal Society. As a matter of fact, the amount of new chemical knowledge emanating from India is exceedingly small, and out of all proportion to the number of University teachers and students, and the size and equipment of University Chemical laboratories." This indictment from a great chemical authority in England deserves serious consideration both by the educational authorities and the teachers of Chemistry in this country. The need for reorganisation, is, therefore, urgent. It is true that certain facilities in this direction have been provided by the Universities of Calcutta and Dacos and the Indian Institute of Science, Bangalore, but the majority of other Universities are still lamentably behind time, while cour own University of Patna has done nothing as yet in this respect.

to be alive to the need for research and post-practicate teaching, and it is hoped that when the Central University at Patna is established, the authorities will remove this reproach, so far as the Patna Centre is concerned.

The case of affiliated Colleges outside Patna needs separate treatment. It is not possible to develop them into Universities in the near future, develop them into Universities in the near future, but to bring them up to modern requirements in respect of chemical teaching, it is imperative that they should be properly equipped with apparatus and reference books, and provided with research schelarships in order to encourage the intensive stady of some branches of Chemistry, so that the teachers in such Colleges may keep up and develop the spirit of research, and may not lose touch with a growing science like that of Chemistry.

The prosecution of research by teachers at the Central University and in affiliated Colleges outside Patra, will favourably react on their teaching, and

the association with them of advanced students by the institution of research scholarships will also furnish the province with a band of trained chemfurnish the province with a band or trained chemists to be employed later on as successful teachers and investigators in our Colleges, or in factories based on chemical knowledge. Intellectually India will occupy a higher position in the estimation of the chemical world, and at the same time a large number of trained chemists will be available to develop her natural resources, as the result of the ground take her place in the front rank which she would take her place in the front rank of Industrial Communities and would benefit by all the advantages that it implies.

1. 44.

It is therefore, appealed to the authorities incharge of the education of the province as well as to the members of the Legislative Council to interest themselves in the advancement of chemical learning in the province with which the well-being and prosperity of the country is so indissolubly

THE DACCA MUSLIN INDUSTRY*

By J. C SINHA, W. A.

Head of the Department of Economics, Dacca University.

THE subject of this paper is the old mushin industry of Dacca and its neighbourhood. I shall not deal in this article with the muslins produced here with British yarn. Comparatively speaking, these are coarser stuffs and their problems are somewhat different. Though well known. rether difficult to define scientifically. The distinction between it and ordinary cotton goods called 'calico', has never been accurately stated. The difference between the two is a matter of degree only as regards the fineness of texture. One writer naively defines muslin as fine calico and calico as coarse muslin. The etymology of the word does not help us in this matter. 'Muslin', as is well known, is derived from Mosul, a town in Mesopotamis where cloths of gold and silver were called Mosolins. The term had therefore originally a quite different meaning from what it has now.

The industry at Dacca came into prominence when this town became the capital of Bengal at the beginning of the seventeenth

century. Before this period Dacca does not appear to have been a place of any political or commercial importance and naturally we do not come across any reference to the muslin industry of this place prior to the reign of Jehangir. But the muslin of Eastern Bengal in general, dates from remote antiquity, at least two thousand years from to-day. The earliest apparent reference is in Kautilya's Arthasastra which alludes to the fine cotton fabrics of Vanga or Eastern Bengal. The muslin called Gangitiki in the Pervpluss of the Erythrocan Sea, an anonymous publication of the 1st century A.D. most probably came from East Bengal. Sulaiman, the Arab traveller who visited India in the ninth century, seems also to refer to the fine muslins of Eastern Bengal when he remarks that "cotton fabrics made in the hingdom of Rahmi (which has been identified with East Bengal) are so fine and delicate that a dress made of it, may pass through a signet ring". In Marco Polo's days (A. D. 1294-95), the chief centres of cotton weaving in India were Gujerat, Cambay, Telingana, Malabar and Bengal. Ralph Fitch the Binglish traveller who visited India three containes

^{*} A public lecture delivered at the Dacca University on February 26, 1925.

er (1583) describes Sonargaon, which about 13 miles south-east from Dacca "as own where there is the best and est cloth made in all India". About the me time, Abul Fazl writes "the Sarkar of nargaon produces a species of muslin very

e and in great quantity".*

But the muslins of this part of Bengal d not yet attained the world-wide celebrity nich they later on enjoyed. Their subsetent development was mainly due to the tronage of the Imperial and Vice-regal purts and the increased demand for them the European traders. When Tavernier sited Dacca in 1666, both the Dutch and e Fnglish had factories there. The French ade with Dacca began sixty years later. he English first exported the Dacca muslins England about the year 1666 and by the ear 1675 the fashion of wearing these fine uffs, whether the costlier fabrics of Dacca r the cheaper muslins from other parts of the ountry became pretty general in England. Ve learn from the Draries of Streynsham laster (1675-1680) that bosides Dacca, muslin as produced at that time at Santipur, Maldah ad Hughli. But this industry was not onfined to the province of Bengal alone. wen at the beginning of the seventeenth century, very fine cotton goods were produced at Agra, at Sironj in Malwa, at Broach, Baroda and Navsari in Gujerat †

But the finest and best muslins were certainly produced at Dacca which received such poetic names as ab-i-rawan or running water (because if placed in a stream it could scarcely be seen), baft hawa or woven air (because if thrown in the air it would flaat like a cloud) and shab-nam or evening dew which took its name from the fact that when pread on the ground it could scarcely be distinguished from the dew on the grass. If Homer's description of Vulcan's net could be

suitably applied to any fine fabric made by poor mortals, it was applicable only to the Dacca-muslin.

"Whose texture even the search of gods deceives, Thin as the filmy threads the spider weaves."

Wonderful stories have been recorded about the extreme fineness, transparency and great beauty of these cotton stuffs.

"The Hindoos" writes Rolts (in his Considerations on India Affairs, 1772 A. D.) "amuse us with two stories, as instances of the fineness of this muslin i.e. ab-i-rawan. One, that Emperor Aurangzeb was angry with his daughter for showing her skin through her clothes whereupon the young princess remonstrated in her justification that she had seven jamahs or suits on; and another, that in Nabob Allaverdy Khawn's time a weaver was chastised and turned out of the city of Dacca for his neglect, in not preventing his cow from eating up a piece of abrooan which he had spread and carelessly left on the ground."

What were the causes of this excellence of the Dacca muslins? According to some writers, it was due to the superior quality of the Dacca cotton. The opinions recorded about the habitat, special qualities and even the vernacular name of this cotton are conflicting. Some writers like Sir Charles D'oyly, have remarked that muslin cotton grew on the low lands subject to annual inundation. But the majority of writers are of opinion that the land selected for this cotton was "high and dry".

With regard to the tract where it grew there is also difference of opinion. Mr. Bebt the East India Company's Commercial Resident at Dacca says that the finest wasted grown to the north and east of Dacca and that the cotton grown to the south considered inferior. Mr. Taylor, the angle of the Topography and Statistics of Daca also writes that

"The northern division of the district production of it bordering upon the Mexna and Berham pooter, in Sunergong, Capassia, Toke and Jungle baree in which this article was chiefly cultivate in former times."

But in his paper, "On the Supply of Cotton from British India (1827)," Mr George Tucker remarks that the favourity site of the muslin cotton "seems to be the high banks of the Ganges and its tributary streams". In the midst of such conflicting

[†] Prof J. N. Sarkar's Industries in Mughal India, Modern Review, June 1922.

S Lest the above description be treated as mere oriental hyperbole, I would like to point out that early in January 1925, I saw a piece of genuine Dacca muslin in the house of Messrs Nitaicharan Shyambandu Basak of Nawabpur, Dacca. This piece was made about fifty years ago. Its dimensions are 10 yds. by 1 yd. and its weight 7th tolas only. The present owner of this muslin told me that it would pass through a ring and if spread on a green grass field early in the morning when the dew had not dried up, it would scarcely be visible. The piece is so fine and transparent that I believe what he said is true.

^{*} Homer's Odyssey, translated by Alexande Pope, Book viii, p. 123.

[†] Roughly speaking, the north and the east c Dages constitute its high lands.

The name 'Capassia' probably suggests the

evidence it is difficult to point out the exact region where the muslin cotton grew, but in any case it was certain that it was entirely

the produce of the Dacca district.

Even the vernacular name of this cotton is well-nigh forgotten. Mr. George Tucker and a host of other writers have spoken of the finest of Dacca cotton as bairati kapas, but Mr. Bebb calls it photee. Mr Krishna Kumar Basak, now an old man of eighty, of Lalchand Mukim's Lane, Nawabpur, Dacca, who himself wove muslin in his younger days told me that photee was the name of muslin cotton.*

The views held about the special qualities of this cotton are less contradictory. Dr. Rexburgh in his Flora Indica gives a graphic description. The plant which produced this cotton differed, according to him, from the common cotton plant of Bengal in the following particulars:

Tirstly, in its being more erect with fewer branches and the lobes of the leaves more

pranches and the lobes of the leaves more pointed;
Secondly, in the whole plant being tinged of reddish colour, even the petioles and nerves of the leaves and being less pubescent;
Thirdly, in having the peduncles which support the flowers longer, and the exterior margin of the petals tinged with red;
Fourthly, in the staple of the cotton being langer, much finer and softer."

We learn further from the letter of the Commercial Resident of Dacca dated the 30th November, 1800 that this cotton plant ... was an annual one and that two crops were raised, one in April-May and the other in September-October. The former yielded the finest produce. The seeds of the cotton were kept with the wool on them during the rainy season and in order to preserve them from damp, they were put into an earthen jar, smeared inside with ghee or oil. This vessel, with its mouth closed up, was generally hung from the roof over the spot where the fire was kindled. All authoritative evidences is against the view that the Dacca cotton was a long-stapled

tree cotton.* In fact, all the early writers like Buchanan-Hamilton, Bebb, Tucker, Rox. burgh and Taylor allude to the muslin cotton as a short-stapled annual plant. One of its special characteristics was that the wool adhered "most tenaciously to the It was thus quite a distinct variety from deva kapas, in the case of which the seeds are naked and not covered with lint,+

Wherein lay the superiority of the Dacca cotton? As might be expected, its staple was in fact longer and its fibre more fine and silky than that of any other variety of Indian cotton. But it was certainly inferior to American cotton as regards the length of the staple and the fineness of fibre. The staple of the Sea Island cotton has more than double the length of the best Dacca cotton and the filaments of the latter were considerably thicker. The shortness of the staple of the Dacca cotton, though quite suitable for spinning the most delicate handspun yarn, was unsuitable for spinning. The Dacca spinners, on the other hand, failed to spin yarn out of the best American cottôn. In 1811, the Conmercial Resident sent a certain quantity of the Sea Island cotton to the different manufacturing stations connected with the Dacca factory. But the spinners could not work it into thread and claimed that the local fibre was superior for that purpose. This to have been due to the greater elasticity of the fibres of the Dacca cotton, which was capable of receiving more twists or turns in the process of spinning than the American cotton. One special quality attributed to the Dacca cotton by Mr. Bebb was that the thread made from it, did not swell after bleaching. But this was due more to the quality of the water used in bleaching, rather than to any special property of the cotton The yarn spun at Dumroy 8 which was reported by Mr. Bebb in 1788 to swell very much, was, in Taylor's days, found to swell the least, if bleached at Dacca, "but the reverse, if the water of Dumroy" was used in the process.

In fact, the excellence of the Dacoa

^{*}I am indebted for my introduction to this old man to Mr. Radha Gobinda Basak, Lecturer in Sanskrit, Dacca University, who has kindly helped me in my enquiry into this industry.

[†] I showed Mr. K. K. Basak a coloured pic-cture of the Dacca cotton plant as given in Watt's Wild and Cultivated Cotton Plants of the World. This is a photographic reproduction of the Kew Gardens copy of Roxburgh's original illustration. Mr. Basak told me that it was a true picture of the photes cotton plant.

^{*} The term "long staple" is here used in the sense of having the measurement of more than % the of an inch.

t For this information I am indebted to Mr. Dwijadas Dutt of "the Government Agricultural Farm at Manipur, Dacca.

S Dumroy to the present village of Discursia about 20 miles to the north-west of Discursin the Manickgunj subdivision of this district. A COL

dins was due not so much to the special lities of the cotton used as to the superior l in spinning and weaving. The process spinning was somewhat different from that lowed in the case of ordinary handspun ead. In the case of cotton to be spun o muslin yarn, the dallun cathee and not 3 cherkee or gin, was used for separating e seeds from the wool. The former instruant was simply an iron rod rolled upon a t wooden board. It was said to injure e fibre less than the gin. The next step as to tease the cotton with a small bamboo w with a string made of catgut or mooga Ik The cotton used for the finest thread, as carded with the dried jaw-bone of the bal fish before it was teased. After these rocesses of carding and teasing, the cotton as spread upon the smooth surface of the ried skin of Cheetul or Cuchia fish and olled up into a small cylindrical case. This 788 held in hand during the process of pinning.*

Coarser yarns were spun on the spining wheel or Charka as they are done now, out fine yarns from 100 counts† and above, vere spun on the lukua or spindle. uhua was not thicker than a stout needle, rom ten to fourteen inches in length. There was attached near its lower point, a small ball of unbaked clay to give it suffiment weight in turning. A certain degree of noisture, combined with a temperature of about 82 degrees, was the condition of the atmosphere best suited for the carrying on of this operation. The spinners generally worked from early dawn to 9 or 10 o'clock in the morning and from 3 or 4 o'clock in the afternoon till half an hour before sunset. The finest yarn was spun early in the morning before the rising sun dissipated the dew on the grass. When the air was unusually dry, it was spun over a shallow vessel of water. The evaporation from the water imported the necessary moisture to the cotton to enable the spinner to form it into thread.

charka only a year ago.

§ Forbes Watson—The Testile Manufactures and the Costumes of the People of India (London, 1866).

The spinning of the finest yarn required such a delicacy of touch that it was confined to the women* of a few families of Dacca and its neighbourhood. These female spinners had acquired skill thaough the hereditary continuance of this particular occupation for generations. About fifty Vears finest thread was made at Dhamrai. TMr. Wise wrote in 1883 that the few katanis or female spinners of muslin yarn in East Bengal, were to be found at that time only at Dhamrai. Fifteen years later, Mr. N. N. Banerjea remarked in his Monograph on the Cotton Fabrics of Bengal, "it is reported, though not with certainty that there are only two persons at Dhamrai still living who can spin fine thread which was formerly used in the manufacture of muslins." I have made recent enquiries and it appears that the generation of women who spun the yarn of the finest fabrics has passed away.

About the fineness of the Dacca yarn, it is sufficient to say that a skein measured in the presence of Mr. Taylor in 1846 was upwards of 250 miles to the pound of cotton, t, e., the yarn was of more than 520 counts. Even as late as 1883, as reported by Mr. Wise, 1 rate or 2 grains of the finest thread spun at Dhamrai measured 70 yards. Thus the yarn was of 290 counts. It may be observed that the yarn used in an ordinary dhootie of 5 yds. × 44 inches, manufactured in the Bombay mills, the retail price of which would now be about Rs. 2-8 as is, from 20 to 24 counts only. Dacca yarn was at least 20 to 25 times finer.

It is often believed that our handspin yarn was finer than any ever produced by

١

^{*} James Taylor—A Sketch of the Topography and Statistics of Dacca (Calcutta, 1840), p. 167.

† Counts denote the fineness of the yarn. One hundred counts means that 100 hanks of \$40 yards of yarn are equal to 1 lb. avoirdupois s. c., 7000 grains troy in weight. Therefore the higher the counts, the finer was the yarn. According to Taylor, yarn about 30's was spun on tukus. This is evidently a mistake. As Mr. K. K. Basak told me, the yarn spun with tukus was not below 100's. I myself saw yarn of about 50's, spun with charks only a year ago.

^{*} According to Taylor, the finest thread was spun by women under thirty years of age. But Mr. K. Basak told me that fifty years ago when women was often the finest. In his opinion, elderly women sometimes failed to spin very fine yarn, not because their fingers had not sufficient yarn, not because their eyesight was defective. Good eye-sight, he said, was as important as the delicacy of touch. This is also the view of another gentleman connected with the cloth trade of this town. This point is noted by Taylor also who remarks "at 40 their sight is generally impaired." and they are incapable of spinning very fine thread."
The modern Bengali girl, with her defective eyesight, can therefore never hope to spin muslin

[†] See footnote ante.

[§] I have arrived at the number of counts from the following calculation: x hanks of 840 yds. each .

=1 alb. in weight =250 × 1760 yds. . x = 523 . the

number of counts is 523.

machinery even in England. This however is controverted by many who base their objection merely on the number of counts. The finest Dacca yarn did not exceed 550 counts but the machine-spun yarn of a piece of powerloom-woven muslin which was exhibited in the International Exhibition of 1862, was stated to have been of 700 counts manufacturer of this piece however admitted that his yarn "was too imperfect for any purpose, except to fix the limits of fineness at which" machine-spun yarn could be woven by the power-loom. Regarding another such specimen of machine-made muslin of 440 counts, Forbes Watson remarked that a comparison of this with a piece of Dacca muslin of which the yarn was calculated to have been of 406 counts only, it was clear, though it may sound paradoxical, that the Dacca piece was finer. The average diameter of the yarn of the former piece was 00222 inch while that of the latter was .001526 part of an inch. This must have been due to the fact that the Dacca threads spun by hand, received more twists in the process of spinning and was more compressed than machine-spun yarn. The greater number of twists received per unch of yarn explains also the superior durability of the Dacca muslins.

It has also been said by many writers that handspun yarn had another special quality, viz., that it became stronger and finer after bleaching, whereas the reverse was the case with regard to machine-made yarn. But the latter had two advantages. It was cheaper and of more uniform thickness The lack of uniformity of thickness of the handspun thread was however not wholly a disadvantage as the transparency of the Dacca muslins was ascribed to this factor. In fact, the real disadvantage of the handspun yarn was that it was so costly and involved so much trouble in procuring the thread of a certain quality. Taylor writes that two-thirds of the time occupied in preparing fine muslins, were spent in searching for suitable thread in the different marts of the district. Considering the time and skill required in spinning very fine yarn, it is but natural that it was so costly. According to Taylor,* the maximum quantity of very fine yarn which a spinner could make in one month, devoting the whole

morning to the spindle, was only 1/2 a tola or 90 grains (troy). This gives a daily output of 3 grains only. In spite of the rude appliances used, this infinite patience taken and the delicacy of touch were the real causes of the excellence of the Dacca yarn which machine-spun thread has failed to attain even to this day with the same

the second of th

quality of raw material.

The same causes were responsible, in addition to the fine quality of the yarn used, for the fame of the "wind-woven" fabrics of to what is generally Contrary supposed, the actual processes of weaving the Dacca muslins and the appliances used were much the same as those used in the case of the fine handloom products of to-day In the manufacture of fine muslins, the shuttle used was however considerably lighter Not far off from the Nawabpur Road in this town, I found the weavers carrying of practically all the processes of weaving described by Taylor more than seventy year ago It is not therefore necessary to describe all these processes There is only one poin that deserves mention, viz., that a certain degree of atmospheric moisture was necessary for weaving fine muslins When it rained heavily and the air was very moist, a slow fire was kept under the loom. In very dry and hot weather, it was sometimes necessary during the operation of weaving, to place beneath the extended yarns of the warp n the loom, a few shallow vessels of water. The evaporation imparted the necessary moisture to the yarn and prevented them from breaking This practice gave rise to the erroneou notion that the Dacca muslin was sometime woven under water.

The time required for weaving a piece of muslin of the usual dimensions of 20 yard ×1 yard necessarily depended on the qualit of the fabric and the skill of the weave This skill was due partly to natural aptitud and hereditary instruction and partly t specialisation of work. There were at leas eighteen chief varieties of plain and figure muslins. The weavers of different manufac turing stations of the Dacca district confine themselves to certain kinds of these fabric

^{*} A Description and Historical Account of the Cotton Manufacture of Dacca in Bengal by a Former Resident of Dacca. (London, 1851) u.c. h. 3. From internal evidence it is clear that this book was written by Mr. James Taylor, the author of the Topography and Statistics of Dacca.

^{*} Mr. K. K. Basak's estimate is much lower Fifty years ago, a female spinner working to hours in the morning and one hour in the after non, could, in his opinion, spin only 3 annas 33% grains of yarn every month, i.e., 1 grain yarn per day.

[†] I am indebted for this information to Mr. K. Basak. So far as I know, this fact is not mention by Taylor or any other writer.

1 spite of the economy caused by such calisation and division of labour, the calisation and reaving of very fine muslins took many nonths. In Taylor's days a half piece (i.e. 0 yards × 1 yard) of the finest variety of nuslin, weighing about 4 1/2 ounces or 2000 rains (troy) could not be woven in less than ve months. We have already seen that the mantity of the finest Dacca yarn which ould be spun in a day by one person, was hiee grains only. It took therefore about no years for one person to spin the required uantity A half piece thus represented at east 21/2 years' labour of one person!

a free for

It is therefore not at all surprising that the rice of mulmul khas, the generic name of the mest of Dacca muslins, was at the rate of lupees 10 per square yard in the sixties of the ast century.* But Rupees 10 of those days equivalent to at least Rs 30 of to-day he general index number of Indian prices which was only 90 in 1861 rose to 281 in 1926 Taylor writes that in Jehangir's days he price of a piece of ab-v-rawan, measuring 10 cubits × 2 cubits and weighing only 5 siccas or 900 grains, was Rupees 400, while the amdanee or figured muslin which has aptly seen called the chef-d'anvre of the Indian veaver, manufactured for Emperor Aurangeb cost Rupees 250. Even as late as 1776, he best jamdanee manufactured at Dacca lost Rupees 450 per piece. The purchasing ower of the rupee in those days was much ugher than at the present time. These price juotations will therefore show that the Dacca muslin which attained celebrity throughout the civilised world was a highly artistic product—an article of luxury which met the demands of kings and nobles and not of ordinary customers.

It is but natural that at a place where the art of weaving attained such a high standard the subsidiary industry of bleaching should also make a remarkable progress. Complaint against the present race of Indian dhobies is now almost universal. The American humourist defines the *dhobi* "as a person who breaks stones with shirts". Lest their costly dresses be spoiled by the *dhobi*, our fashionable aristocrats sometimes send their clothes to Europe for washing. But the art of bleaching reached a state of perfection in the different cloth-weaving centres of India, especially of East Bengal at a time when it was in quite a backward condition in Europe. Even as late as the middle of the eighteenth century,

. .

this art was so little understood in Great Britain that nearly all the linens manufactured there, were sent to Holland for bleaching. This bleaching process was an elaborate one and took from six to eight months! It was the discovery of chlorine in 1774 which revolutionized the bleaching industry of Europe.

But at least two centuries before this date Eastern Bengal was famous for its successful bleaching of cotton goods. Catarsoonda in Sonargong is mentioned by Abul Fazl for the bleaching properties of its water A · similar property was attributed, in Taylor's days, to the water in the neighbourhood of Dacca from Narinda to Tezgong. But the superior quality of bleaching for which this town became famous, was due not merely to the special properties of the water but also to the good quality of the soap* used and to the skill of the dhobe In fact man and nature combined to contribute to progress of Dacca muslin and all the subsidiary industries dependent on it.

What was the real cause of the decline of this fine industry? It is sometimes suggested that the tariff policy followed in England during the eighteenth and the beginning of the nineteenth century was responsible for its decline. The common belief that the Dacca muslins were prohibited altogether from the English market by certain Acts of the British Parliament is not strictly accurate The Act of 1700 prohibited the import of Indian silk manufactures and certain kinds of calicoes for home consumption in England. Though this Act was not directed against finer fabrics, certain classes of Dacca muslins appear to have been prohibited by this Act, for, as we have already said, there was no well-defined line, dividing fine calicoes from coarse muslins. Another Act passed by the British Legislature twenty years later, prohibited the use of printed calicoes in England, whether printed in England or elsewhere. The import of certain kinds of Indian muslins which were not prohibited, was subjected to a 15 p. c. duty—a duty which was further raised during the war with France till it reached 44 p. c. in 1813. These import duties and prohibitions no doubt affected the sale of Dacca muslins in England. It must however be borne in mind that England was

^{*} Forbes Watson-op cit p. 75.

^{*} Even at the present time, the soap manufactured at Dacca, called mite sarum, is the best of its kind. Formerly the Dacca soap was an article of export to different parts of India, Busson Jedda etc.

certainly a far less important market than the Indian home market

As Taylor writes in his Descriptive and Historical Account of the Cotton Manufactures of Dacca, the finest muslins.

"formed but a small portion of the goods former-after that date generally about one hundred and fifty half pieces, at the rate of Rupes 100 per whole piece, were included in the investment Occasionally a few pieces of the finest sort found their way to Englandbut the quantity thus exported, appears to have been inconsiderable." Thus the tariff policy of England cannot be regarded as the main cause of the decline of the Dacca

There is a wide-spread belief that the decline of this industry was due to the cutting off of the weavers' thumbs by the English East India Company. The following dialogue was reported in a certain Madras daily paper on the 30th of January, 1922, as occurring in a village in the district of Guntur. Those who took part, are said to have been a Deputy Inspector General of Police, a District Superintendent of Police and S, a Congress volun-

D. I. G. "Where did you get the cloths you have been wearing? Are they not rough?
S. They were woven with the charka-yarn pro-

duced in our village.

D. I. G. These clothes are not good. The foreign cloth is good and light. Is it not?

S. Our clothes also would have been good and light, had it not been for your people, who cut off

the thumbs of our weavers.

D. I. G. Where have our people done that 'S. At Dacca.

D. I. G. (Turning towards the District Superintendent) Is it true?

D. I. G. (Turning towards the District Superintendent) Is it true?

S. P. It is so written in history. It is true"

Some of the old weavers and persons connected with the present muslin trade of Dacca and some of my own students in this University firmly believe this story of the weavers' thumb to be true. The latter told me that they saw a pictorial representation of this incident in an Exhibition held here a few years ago. But I have searched in vain for any evidence in support of this view. In the early records of the English East India Company and all the publications of this period which I have been able to consult, there is nothing to substantiate it. Of course, this negative evidence, coming from what may be regarded as an interested quarter, is not of any great value. But I cannot believe the story, on the simple ground that it was against the economic interest of the East

India Company to maim the weavers of this country. The sins of the Company against the weavers might have been many, but they were certainly not so foolish as to kill the goose that laid the golden eggs for them.

In their letter dated the 1st March, 1783. the Court of Directors, referring to the newly-started muslin production at Manchester observed:

"We doubt not therefore that you will exer yourselves to the utmost in causing the manufac turers at Bengal to pay every attention not only to an improvement of the fabric of muslins but alot a reduction of the prices as on both the on and the other will depend very much our future success in this article.

This instruction was repeated in subse quent commercial letters of the Court of Directors. In the light of this evidence it is not at all probable that the Company cut of the weavers' thumbs. This story appears to have arisen out of a passage in Bolts' Const derations on India Affairs, quoted in Dutt's Economic History that the winders of raw silk cut off their thumbs to prevent their being forced to wind silk.

It is true that during the early days of the East India Company there was consider able oppression on the weavers in Bengal But this oppression was due not to any desire to crush the indigenous cotton indutry but to the Company's anxiety to purchase the largest amount of Indian handloom products at the cheapest price. A natural conse quence of this was the advance of money to the weavers by the Company's gomastahs and the exercise of the right of pre-emption with regard to the purchase of Indian cottor goods. Bolts describes at great length the oppression of the Company's gomastabs,

"who arbitrarily decided the quantity of good each weaver was to deliver, the prices he was to receive, while his name being on a register, he was no permitted to work for any one but his own gomastah. When the annual supply was ready, the Jachandar or appraiser fixed the price of the good but the rascality was beyond imagination and prices were often 15 p. c. to 40 p. c. below the market price."

Bolts, is spite of his grudget against the

* Extracts from the Commercial letters from the Court of Directors, (1765-1796) Vol. I. p. 211 (pre served in the Bengal Secretariat Record Room).

† William Bolts, a junior servant of the English East India Company arrived in Bengal in 1760 and resigned the Company's service in 1766. Within these six years, he amassed a considerable fortune by taking part induty-free inland trade. In 1768 he was deported to England by the English authorities in Bengal. Four years later he published his Considerations on India Affairs which forms a par of his campaign against the East India Company.

nglish East India Company, does not seem have exaggerated the true state of things, ecause his statement is corroborated by ther contemporary writers including Governor regist. Instances of such oppression are pentioned also in the records of the English last India Company.* The incident that courred at Dacca in 1767, quoted by Mr. VISO in his Notes on the Races, Castes and vades of Eastern Bengal, gives a vivid idea f the state of things.

r - min

"M1 Thomas Kelsall, Chief of Dacca, being inrmed that a certain weaver was suspected of ding muslins to the French Factory, ordered him he served but he found shelter with the Frenchis relatives, however were imprisoned and beaten id their houses pillaged. Upon this the weaver we himself up to the Diwan who ordered him to tlogged, after which be was confined in the storged, after which be was commed in the ctory for eleven days during which time the eans fleecedhim. By Mr. Kelsall's order his head as shaved his face blackened with lime and ink in deing mounted on an oxt, he was paraded nough Nawabpur. After three more days the censed was forwarded to the Nawab for trial who nding no fault, discharged him."

It is not therefore denied that there was ppression on the weavers during the early ays of John Company, but the writings of ernier and Abbe Raynal prove that the ondition of some of the best weavers of the ountry was no better than that of slaves wen in pre-British times. The Abbe, a French nan who cannot be accused of any bias owards the English Company, remarks.

"It was a misfortune to them (the Dacca weavers) o appear too dexterous because they were then areed to work only for the Government which aid them ill and kept them in a sort of captivity."

It must however be admitted that the ppression on the weavers in pre-British imes was never so wide-spread and sysematic as under early British rule But he fact that the decline of the Dacca indusry began since the death of Emperor Amangzib shows that the oppression on the weavers during the Company's rule was but minor cause of this decline.

Was the decay of our industry then due o the Industrial Revolution in England luring the latter half of the eighteenth entury? Crompton's mule was invented in England in 1779 and by the year 1824, British yarn was first imported into Dacca district. Taylor gives a comparative statement* of the prices of handspun and English yarn from 30 to 200 counts and shows that the English thread was not only far cheaper but was also preferred "on account of its uniform size and the facility of obtaining any quantity of a particular quality" that was wanted. But comparatively speaking, these were coarser yarns. About the middle of the last century, as noted by Taylor in his Descriptive and Historical Account of the Cotton Manufactures of Dacca, the price of the finest handspun yarn of this town was Rupees 8 per tola, i.e. £31-2s. per lb. (avoir) at the prevailing exchange rate of 2 shillings per rupee The cost of 1 lb. of machine-spun varn of 700's, manufactured by Messrs. Holdsworth & Co, of Manchester at that time was only £3 less. But the apparently higher cost of the Dacca yarn was more than compensated by its special advantages which

have already been stated.

Even to-day the finest muslin and yarn of the Dacca standard cannot be economically produced in England by machinery In his letter dated the 30th October, 1924, Mr. B. Mouat Jones, the Principal of the College of Manchester, writes Technology, that "the finest counts spun at present in England is 420 Yarn finer can be produced, but there is no market for it Even 420's is not a commercial production in the ordinary sense The amount made is small." Mr. Jones further adds "the finest counts from which muslin is manufactured in England commercially, are about 180's twist+ and 220's weft." It should also be noted that mechanical weaving of yarns higher than the above counts, is difficult. Very fine yarn cannot stand the strain of machine-weaving and snap too often in the process. The difficulty may of course be avoided in future by further perfections of mechanical weaving. But the real difficulty is economic. Machine production does not pay unless it is carried on in a large scale But very fine Dacca muslin was always made to order, chiefly for persons of rank and wealth in India It was a highly artistic product, catering to a very limited demand. To say that the finer type of Dacca muslins has been killed by machine competition is as incorrect as to say that the famous Cashmere shawl industry has been. ruined by cheap German stuffs or that photography has ruined oil-painting.

^{*} For example, in the Extract of Consultations lated the 12th April 1778 in the Commercial etters (1765-1796) Vol L, of the Bengal Secretariat

[†] This is evidently a mistake. On such occasions the culprit was mounted not on an ox but on an

^{*} Taylor's Topography p 171. t i.e warp yarn.

It is true that there were many subsidiary causes, both external and internal, which affected adversely the muslin industry of Dacca. The British tariffs of the eighteenth and the first quarter of the nineteenth century, the outbreak of the French Revolution, the Milan and Berlin decrees of Napoleon, the Industrial Revolution in England, the general insecurity of this country after the death of Aurangzib, the oppression on the weavers and monopolistic control under early British rule, the Great Famine of 1770, the artificial encouragement of English manufactures by low import duties with the right of entrance to the furthest part of India free from any transit duty and the heavy transit duty on Indian manufactures with no drawback of such duty on their export—all these factors have been partly responsible for the decline of the muslin industry. But the real cause at work, especially in the case of the finest fabrics of Dacca, was the lack of patronage of the imperial and vice-regal courts. With the advent of British rule this patronage came to an end and the muslin industry naturally declined

The foregoing discussion affords an answer to the question whether it is now possible to revive this industry So far as can be known from local enquiry, the cotton plant out of which the muslin yarn was spun is no longer cultivated in any part of this district. But two stray plants corresponding to the description and drawing of Dr. Boxburgh, have been recently discovered by to the description and drawing the Agricultural Department of the Government of Bengal in Rangpur and Mymensing districts. This variety is now being reared in the Agricultural Farm at Manipur, Dacca under the supervision of Mr. Dwnadas Dutt Mr. Dutt was kind enough to show me the plants and explain their peculiarities. This raises some hope that it may still be possible to revive the cultivation of muslin cotton in Bengal if there arises a demand for it.

But, as has already been said, the

excellence of the Dacca muslins was not so much to the quality of the c used as to the skill in spinning and wea With regard to hand-spinning, it has said that the old race of katanis or fe spinners has passed away and the sk weavers of Dacca who actually prod muslins in olden times, are fast dying But I have been assured that if a der arises, the finest fabrics of the old days again be produced here.

In fact, if the demand revives and tinues, it will not be very difficult to a new race of spinners and weavers. the real trouble is that the demand for costly stuffs is not likely to revive. local gentleman who still carries on a trade in Kasida or embroideries tolc unless we have again the Badshah and Nawab, there is no future for the indi Nothing is impossible under the sun, bu can hardly be expected that Viceroys Governors of the present day would themselves in the famous Dacca fa Not until this happens, will our aristocrac velling in furs and broadcloth in this climate. take any interest in art industry

The poet has no doubt referred t

periodical recurrence of fashion.

"Fashion in all our gesterings Fashions in our attyre, Which (as the wyse have thought) do cum And goe in the circled gyre."

But I may be pardoned if I ent little hope that this exquisite work of once the pride of our people, the admir of our friends and the despair of imi which made the name of this small pr cial town known in the remotest corne the civilised world, will ever again its ancient glory.

MEMOIRS OF OLD DELHI

By C. F. ANDREWS

CHAPTER V

The Advent of Liberalism

F we wish to understand what was happening in India in the years succeeding the Mutiny, we have to divert our attention for host time from India to England and to study e events that were taking place there in the litical world. For on this change in the iglish situation a very great deal depended India itself.

England had passed through a very ubled and stormy time during the critical ars from 1850 to 1860. The earlier enusiasm, which had been aroused by the issing of the Reform Acts, twenty years rlier, had been subsiding, and some of the oist of the old abuses had crept back into e administration. The Crimean War of 54, which preceded the Indian Mutiny by ree years, is now regarded by historians as owing the mismanagement of public affairs; it clearly ought never to have been fought all Even at the very time, the sober nd of England soon began to realise that me one had blundered'. The later revelany of gross incompetency in hospital and dical matters, which came to light through ss Florence Nightingale's report, had a furr salutary effect upon English public opiin In the same way the Indian Mutiny elf, which took the English people entireby surprise, gave a severe shock to stolid itish complacency. It was realised that w in India, as before in the Crimea, some) had blundered?

Thus England herself was at last in a astened mood and prepared for a drastic orm in the home administration, and a ingo in Indian policy. Therefore, as the nury advanced, the Liberals came more I more into power, and the last thirty its of the century migh well be called the adstonian Age' in British political life.

It would be hard to overestimate the insince and weight that the name of Mr. id-tone carried among Indians who had inkly accepted the new learning. Perhaps would even be true to say that no Englishn's name before or since had ever exer-

cised such an attraction for the cultured classes in India. When I first arrived in India in March 1904, I found in the North the whole educated community maintaining its unshaken faith in the supreme greatness of all Mr. Gladstone's political ideals. The Boer War, which had just been fought, had been instinctively condemned and disliked; but they could point to it as an entire reversal of the Gladstonian policy, and they could show that Gladstone himself. at the end of his great career as a statesman, had thrown aside every other interest in order to seek to obtain Home Rule for Ireland, and had even sacrificed his party unity in order to gain his end. They could say with force, that Gladstone believed in human liberty and practised as a politician what he professed. There was clearly much truth in all this; and educated India was right in its main contention. At the same time there was exaggeration in the lines with which they drew the picture of Mr. Gladstone's liberal achievements.

It must be remembered that moral idealism in politics, whenever it has been practised has always held the Indian mind and delighted the Indian heart. To hear Munshi Zaka Ullah talk about Mr. Gladstone, and to watch the chorus of approval with which. his words were received, evening by evening, in the Library at Delhi, was one of the things that taught me most concerning the mind and thought of that generation which had grown old since the Mutiny and recovered to the full its fundamental belief in the goodwill of Great Britain. The moral supremacy of Gladstone, his goodness as a man, his religious character, his pure Christian life, had wrought this transformation. If he had been'a mere politician, however clever and able, he could not possibly have effected what he did. With Munshi Zaka Ullah, especially it was the moral values that told. Mr. Gladstone was a man of God. That was worth all the rest put together.

One other extremely important factor, that held fast the imagination of these Indian idealists, was the vivid picture continually held up before their eyes of the virtues of ...

Queen Victoria, the Good. We know now. that, just as in the case of Mr. Gladstone, so here too the picture was overdrawn. For Queen Victoria's moral goodness, geniune as it was, had a narrowness about it that was painfully evident to those who knew her best and came in closest contact with her But she too had a devoutly religious character, and a firm trust in God's guidance of human events, and she was quite fearless and open in speaking about it She also possessed, as a woman, those domestic virtues, which India prizes most highly of all She had been entirely devoted to her husband and had kept a life-long widowhood in his remembrance All this made her great in the estimation of a man like Zaka Üllah In his book describing the history of her reign, he records all this at great length

But there was something or more. It was believed all over India, that Queen Victoria, the Good, had been responsible, most of all, for the prevention of further bloodshed after the Mutiny was over and that she herself had sent out her own royal command to Lord Canning, her Vice-regent, to that effect. She was also given the credit for the actual drafting of that truly remarkable and memorable 'Queen's Proclamation' of 1858, which announced for the first time in words, that were un-mistakably plain, and were given under the Royal Seal, that complete religious neutrality and racial equality were the principles on which her Indian Empire was founded. There has never been signed and sealed a more important document than that in the history of British rule in India: and leaders of Indian thought, like Munshi Zaka Ullah, were right in laying stress upon it and calling it the Magna Charta of Indian free-

Tennyson, by his poetry, did much to strengthen this idea of the immaculate virtue of the English Queen. His allusions to her, scattered throughout his poems, were learnt off by heart and quoted on all occasions. This was specially true of the lines at the beginning of the Idylls of the King.

Of all the Victorian poets, Tennyson was by far the most popular in India last century. Queen Victoria's name, owing in part to this poetic representation of liberal goodness, became gradually ranked by Zaka Ullah side by side with those of King Asoka and Akbar the Great. This became an axiom of all his historical thinking. He was never tired of referring to it in his writings and in his conversation. All this was a

very strange interpretation of history to me when I came out fresh from England. For Asoka and Akbar lived and died in this country, and themselves were the authors and originators of their own policies, while the very title, Empress of India, was recognised in England to have been little more than a clever device of Disraeli, who knew how to flatter as a statesman and when to do it, and how to impose upon the weakness of an elderly amiable Queen in a way that would give him influence over her.

Lord Ripon, in India itself, as the century advanced, was the figure round whose head the halo of British Liberalism was placed He completed on the spot to the Indian mind of that older generation the ideal set forward by the twin names of Queen Victoria and Mr Gladstone For it needs to be carefully understood, when dealing with India of the last century, that the perfect Liberalism of Queen Victoria was taken for granted Idealists, like Zaka Ullah, little realised what a downright Tory

in many things the old Queen was, and how

much she disliked Gladstone!

Lord Ripon, was known in India to be a deeply religious man who at a great cost had remained faithful and true to his conscience and his religion. It was remembered that he never began the day's work without being present at divine worship were everywhere current concerning his complete devotion to religion. His private life was known to be in keeping with his religious faith Added to all this, which was rightly important in Indian eyes, Lord Ripon had made himself supremely unpopular as Vicerry of India, among his own English people, because he had openly taken the Indian side in his great struggle over the Ilbert Bill to uphold the ideal of the Queen's Proclamation and to maintain strict equality before the law of the land between Indian and European. This had been the one fact in his vicerovalty which had profoundly stirred the Indian imagination, and he was duly and worthily respected for it. No Viceroy either before or since, had ever had such an impressive farewell from Indians themselves, on leaving the shores of India, as Lord Ripon.

If things in India towards the close of the last century are to be seen in their proper focus, there is one further point of importance to be noticed. Herbert Spencer, as a philosopher and a man of science combined, maintained among educated Indians

n simost undivided rule as the exponent f the special Nineteenth Century scientific heory of the universe called Evolution. the one word 'evolution' seemed to sum up or them, at that time, the whole trend of modern science and to explain both the brigin of the world and the history of mankind. While there was an undoubted ruth in all this, nevertheless, far more ciedit was given to Herbert Spencer's exposition of it than the facts deserved Here again, as with Gladstonian Liberalism. and the character of Queen Viotoria, exaggerated views were held. I was startled to find at Delhi, how entirely men's minds had become absorbed and obsessed by Herbert Spencer's doctrines, and what implicit faith was placed in them, as though they were infallible

It was not till I came down to Bengal, in 1906, that I tound those who were frankly critical of Spencer and Gladstone alike, and had thrown off once and for all the yoke of humble tutelage to shifting English political and philosophical ideas. There was something refreshing in this after the atmosphere of unreality at Delhi. For leaders there would have to face the truth of things sooner or later. That was apparent to me from the first.

Nevertheless, if we are apt to-day to feel surprised at the meek acceptance, on the part of educated people in the North of India, of this moral and spiritual domination from a distant country like England, when, at the very time, whole regions of thought were lying unexplored in their own books and at their own doors, we must remember how strangely new the Western learning was, and how altogether fascinating and absorbing must have been the scientific side of it at the outset. For it brought the imagination of those, who thus studied it for the first tine and watched the verification of its experiments, almost completely under its sway. Educated Indians, in this respect, did not stand alone. There were those in England, and in Europe and America, also, who submitted without question to its dictations. The psychology of the times demanded it. But in India things went deeper, because of her political subjection.

Tel to prove the point that I would make and show that their acceptance of Herbert Spencer's doctrine was not primarly due to any special slave mentality in India, we have only to look at Japan during the same period. In spite of all her pride in her own

national traditions and her own stoutly upheld and cherished independence, she was at one time as completely under the sway of Herbert Spencer as ever India was. Nor did educated Japan throw off the yoks of Spencer's system of philosophy at a much earlier date than educated India. Indeed, when the change of thought came about, the decline and fall of the evolutionary theory, with its one supreme dogma of 'survival of the fittest', was as much a world phenomenon as its triumphant rise to power in previous years. The only difference has been that educated Indians who had learnt the doctrine somewhat late, have clung to it longer.

When, therefore, it is fully realised that Munshi Zaka Ullah was essentially a man of thought rather than a man of action; that he lived in the world of ideas rather than in the world of practical affairs, then it does not appear difficult to understand how the strain caused by the horror of what he witnessed with his own eyes at the close of the Mutiny, gradually became less and less acute and at length passed entirely from his conscious, waking thoughts in that new atmosphere of Liberalism which Gladstone and Lord Ripon represented to his own mind.

All this was made easier still for him owing to one noticeable trait in his own character which comes up before us again and again as we study carefully his life. Zaka Ullah, as I have tried to explain, was to the very depth of his being a hero-worshipper, whose spiritual nature always depended on having some personality to serve with devotion He could hardly any more exist without an atmosphere of lovalty to some person about him than a fish without water, or a man can breathe without air. The parallel I have drawn is scarcely too strong; and even if a slight exaggeration is there, the fact remains. His nature craved for some rerson to idealise and he found what he needed in the Liberal School of English political life.

I shall write more fully on this subject when I record some of his conversations in a later chapter and there may be some repetition; but Queen Victoria, William Gladstone, Lord Ripon—these filled the vacant spaces of his mind and formed a gallery of portraits, corresponding to that ideal vision of the new Western learning, which had inspired him in his younger days. I would emphasise also the fact, that most of the

educated Indians of that time, who had received a similar education, thought in a

similar manner.

It is probably true to say, that his personal devotion to Sir Syed Ahmed Khan helped him most of all towards the new perspective. For personal loyalty to Sir Syed Ahmed Khan necessarily involved personal loyalty to the British Liberals; because Sir Syed Ahmed had based all his hopes upon them. As a practical man, he had stood out in the field of action, just as Zaka Ullah had done in the field of thought He had definitely offered the right hand of friendship to the British Liberals and had asked them to help him in the College which he had founded for Muhammadan students at Aligarh. Thus had begun what was called among Musalmans the Aligarh Movement; Zaka Ullah and Nazir Ahmed were both alike drawn into it from the very first. It was in connection with this new Institution at Aligarh that new loyalties began to be built up in Zaka Ullah's mind and heart As the years went by, he was able to give them full scope, even in the midst of all his official and literary work For everyone of these things pointed manifestly to one end, namely, the encouragement of the new Western learning in the North of India by every means in his power.

The Education Department of the Government of India was at that time in its early stages of development. Men of high character had come out from England to take part in the work. The place given to celebrated Indian scholars was also one of freedom and responsibility. There is no sign in his letters or correspondence that Zaka Ullah found the ties of Government Service irksome at that time In Allahabad, as a Professor, he built up a reputation for learning and scholarship on the one hand and for sympathy and affection for his stu-

dents on the other. This made the parallel between his position and that of Maulvi Iman Baksh at Delhi in earlier years, which was often drawn, very close indeed. He had the same gift of inspiration; and year by year the students rallied round him and sought his moral and spiritual guidance as well as his intellectual help. He was their true friend, and devoted himself untiringly to their service whenever they needed his and They knew they could at all times look to him for counsel and advice

At the same time, whenever he was free from lecture work in the College, the work of translation and the preparation of new Urdu text-books in science and mathematics which he had already taken up, occupied the greater part of his leisure. It was only on Sundays, which he kept entirely apart, that he was able to offer himself unreservedly to the students, as he fully wished to do He was given, at the College, a professorship in Vernacular and Oriental Literature; and this made his work of Urdu text-book publication in direct line with his work as a professor He had also to take classes in Arabic and Persian, and not infrequently in Science and Mathematics, owing to the smallness of the staff

As his young family grew up around him at Allahabad, his old cheerfulness and brightness returned. He was known among his intimate friends almost as much for his wit and good humour as for his scholarship and learning. But he remained shy and bashful in public, nervous to a degree and retiring In private life, however, in the bosom of his own family, he was as happy and talkative as a child. His circle of friends increased and the years went quietly past until he retired, in 1887, in order to give up the whole of his time to his literary work.

(To be continued.)

"CHRISTIAN MISSION AND ORIENTAL CIVILIZATIONS".

(A REVIEW)

N the foreword, Dr Robert E. Park says that from the point of view here suggested, foreign missions, even for the layman, assume mortance equal to that of foreign trade or foreign onties." It is a fact well known to the natives Asla and Africa that the Bible is only the pre-usor of the merchant and the gunboat. The esent volume, big as it is, is to be followed by other bearing more directly on pro-missionary operandism. Here in this volume, intended with for the lay reader, "anti-missionary and untal reactions" have been noticed in some detail. r which the author speaks applogetically in the searce Mr. Paul, the South Indian Nationalist hristian, has been mentioned once or twice. Dr. iomaras wamy's denunciations of missionary meods have been quoted from, and Pandii Dava-ind's biography and Dr Farquhar's book on Modern eligions Movements in India have also been drawn pon It cannot, however, be said that the author as been betrayed into any sympathy for whatever uth there may be in anti-missionary criticisms. even for the nationalist movement within the nurch itself. A retired member of the Indian Civil ervice, Mr. Harcourt, in a very recent book pubhed by Messrs Longmans, has said: "One danger e Indian Christian church has certainly escaped 18 not anti-nationalThere could be no ture before a National Church in India which was nere feeble annexe or reflex of the church of the tropean." This point of view has evidently escaped the author, who writes his book mainly for the intellectual classes as a highly technical piece of sociological research, somewhat on the lines of William James's well-known work The Varieties of Religious Experience. The author's object seems to be to classify scientifically all the cultural reactions evoked by the various kinds of missionary activity, with a view to discover the most successful means of meeting and overcoming all hostile responses. The feelings and emotions of the neophyte the catacumen, the enquirer, the backshder, the sincere convert, the pseudo-convert, &c. have all been described in their own language, with a view to bring out the salient features in each case for missionary use in Asia and Africa. The revivalist and reform movements among the Japanese, Chinese and Indians, in which missionary Chinese and Indians, in which improved methods have been largely copied, have also been aspect of touched upon and in short, no aspect of missionary endeavour bearing on the success of Christian missions has been left untapped. One cannot but admire the wide reading of the author on the subject of his choice—not a very interesting or profitable field of study—and his arduous labours in the cause of missionary propagandism. Dr. Price knows that to achieve greater auccess, in the face of defensive and self-protective organizations

among Oriental creeds and religions, and the awakening of race consciousness and of a patriotic desire for culture-conservation among the Eastern nations, and a wider appreciation of the value of such conservation proceeding pare passe with a more intimate acquaintance with the serious defects of Christianity as a historical religion due to the progress of western education, the old methods of proselytization which are rapidly growing obsolete, must be abandoned and it is necessary to turn over a new chapter and devise fresh ways and means, and subtler, more intellectual and refined, and more insidious processes of conversion have to be called into requisition. It behaves Hindu missions to take note of this new development of the missionary method of attack, and forge new weapons for self-protection. The Mahomedan needs no warning. The author himself admits that "Islam is the one religion now existing which explicitly rejects Christianity." Besides, the numerone extracts from the Moslem World and the Islamic Review of Religions show that it is quite capable of taking care of itself, and even of carrying the war into the enemy's camp. Hinduism, not being a proselytizing religion, and not possessing the coherence and solidarity conferred on other religions by a rigid creed, is more defenceless, though it is more adapted to every stage of human development, including the highest that the philosophic imagination can attain. True, proselytization has not altogether been unknown to Hinduigm in the past. Besides the slow cultural process of Hinduizpast. Besides the slow cultural process of Hinduization among aboriginal races of which Lyall, Hunter and others have written, and the power of absorption revealed in earlier times in the case of Scythians and Huns, instances of wholesale conversions, like those inaugurated by the Great Sankara Acharya, are on record, and the Suddhimovement started by the Arya Samaj is nothing but its modern analogue. The mere numerical increase in the following of any religion has of course nothing to recommend it, if it is not accompanied by a change of heart and if that change panied by a change of heart and if that change is not for the better. To those Hindus who are convinced of the moral superiority of Christianity we have nothing to say. But we feel convinced that the vast majority of Hindus who have become Christians have changed their religion without an : dequate appreciation and understanding of the merits of either religion, and it is to people in this frame of mind that the Hindu Dharmasabhas and similar associations and Samajes may profitably address themselves. But to retain such doubting souls within the fold of the ancestral religion the Hindu religious organizations must liberalise themselves much more than they have intherto done with the exception of the Brahmo Sanaj and the possible exception of the Brahmo Sanaj to Hindusm (of which it is an offshoot, culturally, racially, historically, and ship an ally and philosophically) is simply mealculable. As Sir Roper Lethbridge has said. "When many a Hindu mind had been cleared of the superstitions

^{*} Christian Missions and Oriental Civilleations — A Study in Culture Contact: By Maurice T. Price, D. Sanghai, China, 1924, 472 578. G. A. Natesan & Co. Madras.

of ages, and prepared to receive the seed of the Grospel, in came Keshab, dispossessed the Christian missionary of the soil he had fitted for cultivation, and used it for his own purposes." But the more aggressive Arya Samaj has been the most successful in its propagandist efforts. A similarity of sentiments and ideals between philosophic Hindus, especially of the Vaishnavite persuasion, and Christians, particularly of the Roman Catholic Church, can easily be detected, and even some analogy between their ritualistic practices may be said to exist. The human mind is too complex and too profound to permit of being contined within the bounds of a simple creed to suit all soits in the bounds of a simple creed to suit all soits and conditions of men Religion is essentially a thing between man and his Maker, and every man worth the name has to come to some soit of a workable solution of the ultimate problems that press on him. People with a lackground of philosophic culture, like the Hindus and modern Europeans, can never be satisfied with a theory of religion which treats the eternal mystery as solved rengion which treats the eternal mystery as solved for ever, thus stifling human thought and endeavour for self-realization. They cannot, as other simpler, and for that very reason, more vigorous and unified peoples, treat it as a closed question, settled for them hundreds of years ago. Consequently, in spite of all that Christian missionaries may say to the contrary. Christianity is ceasing to be a higher creed in Europe and America, but as popular Hundusmin. contrary, Christianity is ceasing to be a living creed in Europe and America, just as popular Hinduism is ceasing to be so among the educated classes of Hindus. But as in the one case, so in the other, the cultural traditions of the religion are a vital force, and persist in all their strength in spite of the decay of orthodox faith. It is this cultural tie and not caste, as Dr. Price repeatedly suggests on the strength of missionary reports, which is the greatest obstacle to the spread of Christianity among the Hindus. The Mussalmans have no caste and yet admittedly Christianity has not succeeded in making any impression on them, whereas the mass-movements where the greatest triumphs of Indian missionaries are to be counted and the conversions from the depressed classes, the chosen field of ordinary missionary endeavour, have chosen field of ordinary missionary endeavour, have both been helped and not hindered by the exist-

both been helped and not hindered by the existence of the caste system among the Hindus

How effective and successful these mass-movements have been, and what an amount of missionary zeal they evoke, will appear from the following extract: "In considering mass-movement we must keep in mind at least these phases of the problem: (1) We are talking in terms of thousands. For example, in 1895 the converts in the Punjab India according to Robinson numbered 4,000; in 1901, 37,000; in 1911, 163,000. Mass-movements are continuing in various fields at the present time in the same way (2) These masses of people usually belong to the simpler culture groups, the lower classes, the poor, the oppressed, and the ostracised... The so-called mass-movements in different parts of India are resulting each year in turning a multitude of the outcastes each year in turning a multitude of the outcastes and of the members of the lower castes towards the Christian fold. The readiness of these oppressed masses to receive the Gospel and to accept Reprism is indeed impressive."...The Bishop of Madras...gives his counsel in the following words: "A mass-movement is an open door, and the church should press through it with all her mightwhen a mass movement has been once begun, it should be kept going. It creates a feeling of

unrest through the whole district that should be kept alive and never allowed to flag. When once

men's hearts begin to be stirred over a large area, then is the time vigorously to preach the Gospel to all classes in every village."

Among the high-caste Hindus, however, the missionary reports are unanimous that the results obtained are meagre. Their "culture heritage" is obtained are meagre. Their "culture heritage" is said to be the factor preventing their conversion. Here, if there is to be any conversion at all, no mass-movement can be expected, but "the individual must break away, must burst out tearing, as it were, the living tissue that binds him to his kin and sect." From the facts gathered together by the author, "the hypothesis is warranted that the response tends to be unfavourable to be indifference or opposition, when the individual concerned is an intimate member of a group with highly developed and complex culture. By complex culture groups we mean, in the light of the cases we have examined, those having the following features or culture. those having the following features or culture traits (I) a history, traditional and usually written, covering generations or centuries, (2) special rites or at least doctrines, customs, and taboos, growing out of this history and now consciously ascribed to it, (3) a sacred book or books; (4) a sense of group prestige that has survived conflict with a ther cultures. (5) and repully an appropriation with other cultures. (5) and usually an organization of leadership (outside of the immediate family) for preserving and passing on the culture and tradition.

Apart from hill-tribes and outcastes, who are more susceptible to Christianity, there are the abnore susceptible to Christianity, trefe are the abject poor and the illiterate among whom the complex culture characteristics have as the author truly says, little scope to develop themselves. They hardly feel "that they are the honoured custodians of a great tradition, that they have a prestige to maintain that has survived conflict, that prestige to maintain that has survived conflict, that they have a share in the organization for preserving or passing on their culture". The struggle which is now going on among the different castes of Hindus to gain a higher status, even to find a Hinduism which does not include Brahmanism, has not escaped the notice of the author. The 'philosophically buttressed' Buddhism of Japan or Hinduism of India has, according to the author, adopted or developed a new technique to meet the new situation, and so the exotic propagandist is less likely to be successful day by day. to be successful day by day.

behind certain mass movements toward Christianity—and they are of significant proportions. The
threat or torture of famine has been a very real
force in turning non-Christians toward the propagandists......The need of food compels non-Christians to make an initial approaching response to
missionaries". (2) "..... the healing of the sick
is often the means of leading to Christianity the
otherwise inaccessible heathen." "To the most
obstinate communities, the closed field, the medical
missionary is sert. In relieving pain, the doctor
arouses as a secondary tendency a direct confidence

uch overcomes suspicion and hatred.....the t, and often the only way by which a success-appeal can be made is by means of medical isions." "Western medical knowledge, applied the missionary physicians, has become the st dependable means of starting that series of ctions on the part of non-Christians (seeking dical and, having the satisfaction of substantial dical aid, being stirred to personal gratitude, refore becoming susceptible to the missionary's mpt to ingrapate himself, &c.) which ultimateweaken prejudice and opposition against missions every land." (3) Mission schools, especially ools for girls, and technical schools affording httes to Christian converts for vocational ning * (4) Love, ie, the desire to marry one niging to the Christian faith. (5) The desire for nomic or social advantage, the wish to prosper. But as already mentioned, the harvest time of 1st as already interiorded, the higher classes of findus and also among the Japanese and the burness as over as the author frankly admits. The thinese lady who said— You foreigners come with opium in one hand and Jesus in the other in 75) expressed the common attitude now prewaling among the higher classes of Asiatics to-wards Christian missions. "The educated Indian pow regards himself as a full-grown man, the equal in every respect of the cultured European. not to be set aside as an Asiatic, or as a member of a dark race," Consequently he resents the missionary's foolish concert as if he alone possessed a ticket to heaven. Islam everywhere has raised in adamentine wall against Christianity, and to try o explain this hostility by racial antipathy and say that "the conflicts of fourteen centuries have pened a blood-stained chasm between Moslems and Christians which very few Moslems have ever rossed", or allege that "it sanctions polygamy and universe no more leaves that ind imposes no moral or spiritual obligations that me imposes no moral or spiritual configations that re unwelcome to the unregenerate heart", is not o tell the whole truth. Some of the hardest and nost unanswerable attacks against Christianity lave been delivered by Moslem propagandist organizations. They have exposed the hollowness of his professions of his professions of his professions. 's professions of human brotherhood, its pious rauds such as charms, incantations, exorcisms and uracles, its blood-curdling penalties, its gross olytheism, its puerile myths and legends, the nparalleled brutality of its religious wars, its burning the whole struggle [for the emancipation of the slave of the control of the slave of the the slave I, the Church always ranged herself in the side of privilege and despotsm. She posed every movement of the worker for liberty action and freedom of conscience Now she

India is poorfor those who desire English India is poorfor those who desire English Incation for girls, it is still generally a case of it mission school, or nothing. The mission school subsidised by the contributions of the supporters missions all over the world, and can afford to fer the English education at less than cost price, he bribe is then accepted. Not till India refuses he thus pauperised by those whose aim is the estruction of her faiths, can she be free."

(Coomarswamy).

(Coomarswamy).

claims to have accomplished them. She opposed every discovery of science and every theory. Now she claims them as her own." Baron Tsuzuki of Japan rightly says: "the higher and educated classes Japan rightly says: the nighter and educated classes are not prone and receptive to the miraculous and supernatural. How can it be otherwise when Western missionaries preach us blind acceptance of all the miracles contained in the Bible, while Western teachers and professors teach us the supremacy of reason "" Dr. Price recognises this, and says. "Of late the historical derivation of the Rible and the results of higher and toyting." of the Bible, and the results of higher and textual criticism have been employed to weaken Christian influence. The periodicals of the non-christian religions are active and aggressive in publishing papers showing supposed (?) mistakes in the Bible and the conclusions of destructive criticism." One of these periodicals being this magazine, the author quotes the following exquisite myth about it "The Modern Review, perhaps the best and most represen-Modern Review, perhaps the best and most representative of the monthlies at present, frequently contains a good deal of bombast, the youthful graduates who speak and write on Hinduism have usually far too much of Vivekananda's swagger about them.' The articles on Swami Vivekananda in the May and June numbers of 1919 of this magazine are enough refutation of the charge brought against it, if any refutation were needed in the case of a magazine edited by a professed member of the Brahmo Samai, though the editor has never hesitated to defend all that is best in every religion, Hinduism included.

This brings us to the last aspect of missionary methods with which we propose to deal. As Dr. Coomaraswamy says: "The use of physical force is methods with which we proposed in Coomaraswamy says: "The use of physical force is now indeed rejected but all that money, social influence, educational bribery, and misrepresentation can effect, is treated as legitimate. With all this often combined great devotion and sincerity of purpose, the combination is dangerous in the extreme. There is no part of the Christian code of ethics more consistently ignored in missionary circles than the commandment, "Thou shalt not meighbour". The circles than the commandment, "Thou shalt not bear false witness against thy neighbour". The missionary is constitutionally incapable of realising the spiritual life of other peoples, and slander and misre-presentation are his usual stock-in-trade. He is guilty, in the words of the same learned writer of a relentless and systematic campaign of villification of all things Indian. I do not mean to say that the missionary qui'e deliberately falsifies the facts, on the contrary, he deceives himself as well as others. Thus he blackens India's name in all good faith, if one may call it so, and with the best intentions." Again. "it is a debated question whether there has ever been serious religious persecution in India; it is certain that it has been the regular practice of Buddhist, Hindu, and some Muhammadan rulers, not merely to tolerate, but to support all sects alike Such tolerance the missionary uses to spread his own intolerance."

The get-up, printing, and binding of the book leave nothing to be desired. The book is almost totally free from printing mistakes. In all these respects, it seems, Sanghai can well teach a lesson.

to the metropolis of India

A MONUMENTAL WORK ON CENTRAL ASIAN ART

By PROFESSOR M. WINTERNITZ

URING the last thirty years the investigation of Central Asian antiquities has gradually become an important branch of Oriental studies. Proneer work had been done by Dr. Sven Hedin (1894 to 1896), and in the following years by some Russian and Finnish travellers. But it was not until 1900-1 that Dr. M. A. (now Sir Aurel) Stein undertook his first great archaeological and geographical expedition to the Southern and South-Western part of Eastern Turkistan, which brought to light the most astounding discoveries of monuments and documents, of an ancient civilisation that had been buried in the sands for centuries. A paper read by Dr. Stein at the international Congress of Orientalists, held at Hamburg in 1902, on the extraordinary results achieved by his expedition which shed a flood of light on the history of Asia, gave the impulse to carrying out the scheme, conceived already in 1899, of a German expedition to the North-Eastern part of Eastern Turkistan, the oasis of Turfan, to be sent out by the Ethnological Museum in Berlin. This first expedition was undertaken by Prof. A Gruenwedel and Dr. G Huth in 1902-3, and was followed by a second expedition of Dr. von Le Coq in 1904-5, a third one by Prof. Gruenwedel and Dr. v Le Coq in 1905-7, and a tourth one again by Dr. v. Le Cog in 1913-14. All these expeditions were also accompanied by the technical assistant of the Museum Mr Bartus.

The results of these Prussian Turfan expeditions were no less startling than those of Sir Aurel Stein's expeditions to Kashgar and Khotan. Numerous fragments of manuscripts were found, and quite a number of new scripts and new languages were discovered. The Tokharian had to be added to the group of Indo-Luropean languages, and more and more Eastern Turkistan was found to have been during the first eight centuries A. D., an important centre of culture in which Iranian, Indian, Turkish and Chinese tribes, and Buddhists, Nestorian Christians Manichaeans came into close contact with one another, and left traces of a strangely mixed civilisation. Numerous remnants of Buddhist monuments, temples, monasteries

with wall-paintings, terracottas, stucco-statu etc., discovered by the leaders of the Germ expeditions, bear witness of the time (t A D), when Hsuean Tsang, on his way India, came to Khocho, the capital of mode Turfan, and found there numbers of Buddh monasteries with many thousands of mon And along with the fragments of Buddh documents and the remnants of Buddh monuments there were also found fragmen of Manichaean books and book-rolls with fi miniatures, and remnants of Manichaean wa paintings and pictures painted on silk.

All these remnants of ancient Asian ci ture were doomed to decay and destructive when Prof Gruenwedel, the late Dr Hu and Dr v Le Coq came to save what st could be saved of these treasures. No these invaluable treasures are preserved the Ethnological Museum at Berlin, as many scholars are at work in decipherin the literary documents and in preservit reproducing and describing the monuments

The results of these labours are ben published under the title "Eigebnisse d preussischen Turfan-Expeditioner Kgl. (Results of the Royal Prussian Expeditions), and the latest of these publ cations is the monumental work by A. 16 Le Coq who had taken part in the thin last expeditions, on "Buddhist late-antiquart in Central Asia". (The full title is give in the note below)* The work consists. four parts, containing a large number of plates and learned introductions with full descriptions of the works of art, reproduced on the plates.

The first part is devoted to the Plastic Art, and contains 45 plates, of which 10 are in coloured heliotype. The art of eastern

Austan is called "buddhistische spaetanthat is, "buddhist late-antique art" author, because it is based on the whase of ancient Greek art. As it understand this mpossible to hout being somewhat familiar . Graeco-Buddhist art of Gandhara. the that has profixed to the specimens of istic art from Turkistan 17 plates showing ne specimens of Gandharan art from the ilm Museum. Gandhara was an Indian mily until the 10th or 11th century A D. en it became Iranian through the Mohamdan conquest and the Afghan invasion. conturies Gandhara was the very thresld of India and a centre of intellectual life Northern India In the last half of the cond century B C, Buddhism made great igness among the Hellenic and Hellenised jabitants of Gandhara And when, about 0 B C., Greek rule in Bactria had to e way to that of the Indo-Seythians, the ter adopted the culture of their subjects us it is that in the first century A D, we d a peculiar religious art which shows ery trace of Hellenic influence, and yet is noughly Buddhist and filled with Indian nit Look, for instance, at the wonderful age of Bodhisattva Avalokitesvara the Plate 3 it reminds us at once of many a eek statue, and yet as we look at the head using in a musing position against the hand, aim being supported by the knee, and the expression of the quite Indian face, haute recalls all the legends of the great tour who has firmly resolved to make r sourows of all creatures his own, and not wach Buddhahood until all beings in the uld are saved

this Graeco-Buddhist art of Gandhara which threek as well as Indian, has become the andation of the religious art of all Buddhist flows of Asia, including China and Japan dit is this very Central Asian Art, resented by so many beautiful specimens in volume, that forms the bridge from the of Gandhara to that of Eastern Asia

Most of the figures and heads found in itan are not sculptures, but products of modelling process For, as there was no elable stone, the material chiefly employed stucco or clay. Images of gods were rally made of clay. Much has been hoved, and there is danger that more of certain figures may succumb to the moment climate. Hence Dr. v. Le Coq is imposented as many figures as possible coloured heliotype. Special attention may

be drawn to the finely painted Bodhisattva heads (Plate 20), the beautiful Devata figures (Pl. 30 and 31), the fine Buddha heads and statues of wood (Pl. 42-44), and the richly decorated vessel made of red clay from Khotan.

The second part contains the Manichaean miniatures (11 illustrations and maps in the text, 10 heliotype plates, 6 of them in finest facsimile colour heliotype). In the introduction to this volume, the author gives a short account of Manichaeism, its teaching, its history, and of the life of Mani, the founder of this religion.

Manichaeism was founded by the Persian Mani about the middle of the third century A D It is a syncretistic religion with Zoroastrian, Christian, and Buddhist elements. and an admixture of popular Babylonian religion This syncretism was the reason for its spread in the East and in the West, but also the reason for much persecution from rival sects. Mani himself suffered the martyr's death, he was crucified (about 273 A. D) by order of the Persian King Bahram But Manichaean missionaries came to West and East Itan, Western and Eastern Turkistan, and as far as N W India, in later times also to China where we find Manichaean settlements in the 7th and 8th centuries About 2000 very small fragments of Manichaean manuscripts were found in Turfan Among these are two fragments of the legend of Barlaam and Joasaph, from which Dr v Le Coq concludes that it was the Manichaeans, and not the Christians, who brought the Buddha legend to Europe and transformed it into the legend of Bailaam and Joasaph, which indeed afterwards became a famous Christian legend The Manichaean fragments: of manuscripts are written in Iranian and in Turkish dialects. The former may belong to the 6th and 7th, the latter to the 8th and 9th centuries, when the Turkish Uighurs who had been converted to Manichaeism, ruled in Eastern Turkistan

Mani, however, was not only the founder of a religion, but also a great artist. He was fond of music and painting. And among the Persians he is best known, not as a religious man or a heretic, but as "Mani the Painter". He is said to have himself decorated temples with wall-paintings, and painted the miniatures for the book, containing his gospel, called Artang. Mani also invented a peculiar script, derived from Persian and Syrian, for his books. The writing of religious books was practised by the Mani-

chaeans as a fine art, the books had also artistic bindings, and were above all richly decorated with miniatures. Dr v Le Coq ascribes these Manichaean miniatures to great importance for the whole history of Asiatic art. It goes back to a Persian (Sassanian) school of painting which shows a mixture of Persian and late antique elements in its style. It was, however, also influenced by the Gandharan art of painting Some historians believe that Mani himself received his training in the ait of painting in the country of Bamiyan which is close to Gandhara. When in later times the Uighurs were superseded by the Mongols, these inherited the miniature painting which through them came to China Afterwards Mongol rulers again transferred it from China to Persia. Thus this art wandered from West to East and again from East to West Most probably, this Manichaean miniature painting is also the torerunner of the neo-Persian (Islamic) miniature painting Red, blue, and vellow are the most frequent colours used in our fragments, green also occurs frequently enough These are the same colours that prevail in the Indo-Persian school of the Moghul times

The Manichaean fragments are chiefly found in the ruins of Khocho. Most of them are very small tragments, poor remnants of what once must have been masterpieces of On Plate 1 a fragment of a wall-painting with the supposed portrait of Mani is reproduced which has the appearance of being enlarged from a miniature Interesting is also an illuminated book-roll reproduced on Plate 5, which is found among the Manichaean manuscript, but may be Buddbist (Under the Uighur rulers, Buddhists, Chrisand Manichaeans lived peacefully together, sometimes even using the same temples). The same plate shows fragments of an illuminated book-roll, of which happily two charming female heads are preserved Plate 6 reproduces fragments of a splendidly illuminated title page of Manichaean text, two fragments of a book-roll and of a book in Indian pothi form that may be Buddhist, and a fragment of the miniature of a Buddha, the subject being Buddhist, but the representation Manichaean The largest fragments are found on Plates 8a and 8b One of them shows a group consisting of what seem to be a Manichaean high priest in white robe, an Uighar king and nobles But strangely enough we see in the front part of the picture a group of Hindu gods, the first of

them being Ganesa, the second a god va boar's head (Vishnu's boar incarnation while the third has the appearance of Brahmin.

Parts III and IV belong to the same grow being both devoted to the uall-paintings ! third part contains (on 16 heliotype plat and 11 plates in finest coloured facsimi heliotype) a collection of small fragments wall-paintings, selected for their artist value or on account of their importance t the history of art The introduction (with number of illustrations in the text) treats the technique of the paintings and of t places where they were found These places a rums of temples, many of them cave-temple As in India, so in Eastern Turkistan al Buddhist temples are generally found in or of-the-way places, removed from the bust of the world, with a beautiful, often romant scenery, in places near rivers, rocks at glens with torrents coming down during t rains or snow-breaks The wall-paintings Buddhist temples show a gre variety of styles which, however, all back to a style of painting that agreed e actly with that of the Gandhara Sculpture From this style sprang the variations through which Buddhist art of painting passed on i way through Turkistan to China and Japa under continued new Indian and Persa influences

Thus Plate 5 reproduces pictures dragons painted on the door-vaults of a cay temple These dragons have their prototyp in Gandhara art, and the Chinese diagon derives its origin from them. On Plates 6 and 7 we find reproductions of interesting remnants of paintings from the walls of the same cave-temple. These walls were decorated with a complete series of pictures illustrating the life of the Buddha Unfortunately the paintings are much damaged, and some of them have been entirely destroyed. Scenes from the life of the Buddha are also represented on Plates 8, 9 and 10 The painting reproduced on the coloured Plate 8 shows the contest in the disc of the sword between the Bodhisattva and two Sakya youths. One of the finest and bost preserved pictures is that reproduced on Plate 12, representing the Parinirvana of the Buddha Plate 14 givi- a reproduction of one of those paintings which are generally found in the cells of the emples, representing the pious founder of he temple and their tamilies This painting from Bazaklık near Murtug represents the Uighur princes who founded the temple.

their families: three rows of women rows of men, some d laces showing distinctly Easterne Plate 17 shows the features time matkable figure of an aged Uighur men painted on a temple flag in beautiful plants Plate 21 is a cloured reproduction two sitting Buddhas with nimbus in autiful midescent colours, the face of the ne Buddha is damaged, but that of the hol is of charming expression Plate 22 nows a dragon in a lake in splendid colours lite 23 is an interesting scene from ill-painting in a small temple of Bazaklik presenting two women feeding cows. If 101 Grunwedel is right, this painting cant to illustrate the legend of Sujata who, ixious to offer to the Buddha some partidarly good milk, feeds (together with her ant Purna) 500 cows with the milk of 250 with the milk of 500 cows and so a and finally 8 cows with the milk of 16 iss, thus obtaining thick and sweet milk i the gift offered to the Buddha Plates and 25 are reproductions of fragments of door painted al fre co, the floor representing lake with beautiful lotuses and other mers, geese, snakes, dragons, etc., and (on (25) a fine picture of a winged water-stag Part IV, the Atlas of Wall-Paratings, is a attoho et 20 large-sized plates of producons every one of which shows how beautiful conginals must have been, before they The descriptions are given ere damaged a s parate fascicle

One of the finest paintings is reproduced Plate 6 from the Stupa wall in the hist ounder of the Maya cave-temple in Qual represents the distribution of the relies of Buddha, and is comparatively corred. We see princes riding on horses, of them on an elephant. Some of the 's are wonderfully expressive. Dr. v. Le makes it probable that the aimour, londs and quivers with which the princes 1 represented, are of Sassanian origin. A atming picture is that reproduced on Plate d a god (painted in white) and a female udharva (painted black-skinned), both in acful positions, the Gandharva playing on musical instrument Cerlings are cerally decorated with mountain sceneries. as floors generally are represented as Plates 13 and 14 show such mountain (10) 108 with Stupas, Buddhas and other A fresco-floor on Plate 16 again ints a lake with flowers of all kinds, swimming in it, and playing boys

An interesting painting, showing grisly pictures from hell, is reproduced on Plate 19

In a concluding note of the Introduction to Part III, Dr v Le Cog states his views about the ethnographical conditions and historical relations between East and West in Eastern Turkistan, at the time of the introduction of Buddhism and later. Eastern Turkistan was not an Indian country, as the name "Serindia", chosen by Sir Aurel Stein, would suggest Iranian peoples were settled in the towns and as peasants in the villages of the oases of the West But the ruling class in the oasis of khotan was Indian, perhaps mixed with Tibeto-Burman tubes The Tokharians were in earlier times, down to about the middle of the 5th century, settled in the cases of Kuchai, Kara-shahr and Turfan The Turkish Lighurs conquered the land in the middle of the 8th century Buddhist antique art came from Gandhara and the Punjab across Kashmii and the Pamir to Khotan, from Iranian countries across the Pathii and Mai to Yarkand and Kashgar, the one being a more Indian, the other a more framian variation of the same. The two streams of art met in Eastern Turkistan and gave use to that art which fertilized the artistic capacities of China and caused the splendid development of Chinese art under the Lang dynasty It seems, if Dr v Le Coq is right, that there was no high art in China before the Chinese came into contact with the Graeco-Buddhist art of Eastern Turkistan For though the Chinese juled in Eastern Turkistan, alreal: under the Han dynasty, neither sculpture nor painting of Eastern Turkistan shows any trace of Chinese influence in those early times before the beginning of the rule of the It remains to be seen whether Tang dynasty the experts on Chinese art will agree with these conclusions. Certainly do not all historians of art agree with our author in giving such prominence to the Hellenic influence, and are inclined to credit the artists of ancient India and the Far East with more originality

However that may be, this much is certain that the art of Eastern Turkistan is of immense importance for the whole history of Oriental art, unfortunately only remiants and runs of this art have been left. But we have to be thunkful to those courageous proneers to whom we owe not only the discovery, but also the preservation even of these remnants. There is little hope for the preservation of those monuments and documents which have not yet been secured by

excavations, and saved from utter destruction. For the present population of Eastern Turkistan, Mohammedan Turks under Chinese rule, do everything to destroy what may still be left of Buddhist monuments, partly from motives of superstition and religious fanaticism, partly from utilitarian motives on the part of professional diggers for treasures (gold, bronze, and timber), and even of peasants who have found the plaster of the painted walls of ancient temples to be the best manure exhausted fields, And still greater damage than has been done and is being done by the hand of man, was and is caused by the frequent earthquakes in those parts of the world

We have all the more reason to be thank ful to Dr. von Le Coq for the trouble he ha taken in selecting, reproducing and describing these rare remnants of ancient art, and to the publishers who have spared no cos. In bringing out this monumental work. In an important collection of materials for students of the history of Oriental art, but also the general educated public will be interested to see from these remnants of Central Asian art,—in which Greeks, Irani in Indians, Turks and Chinese have had some share in one way or other,—how thin the walls are that separate the nations of the world in the realm of the spirit.

ABRAHAM LINCOLN AS A PUBLIC SPEAKER

By Dr. SUDHINDRA BOSE

Lecturer in Political Science, State University of Iowa

JUST sixty-two years ago on this fourth week of September, Abraham Lincoln signed the Emancipation Proclamation, the document which set the African slaves free in America

This famous document is but a reflection of the political philosophy contained documents still more famous the Declaration Independence and of the Federal Constitution In the early period of the controversy between England and the American colonies, there was little opposition in America to the monarchical principle of government There was no thought of human equality. Slavery was justified as "God's punishment for sin and the right of Christians to rule over heathen peoples.

There were men who believed that government was from God, and that kings ruled by divine right To the American Loyalists, like some of the Moderates of India of today, the right of revolution was a "damnable doctrine, derived from Lucifer, the father of rebellion." The monarchs were a species of awe-inspiring little deities Whatever they said was taken for gospel—more or less, and mostly more. Gradually the monarchical ideas began to fade away. With the

progress of the War of Independence, then grew a strong republican sentiment. It was Stimulated specially by such works of Thomas Paine as Common Sense, The America Crisis, and The Rights of Man* He assaile the hereditary monarchy and the privilege. nobility. He laughed away the divine right of kings, and said that "one honest man was worth more than all the crowned ruffians that ever lived" As a result of government for self, instead of self-government, the aristociacy are not the farmers who work the land, and raise the produce, but are the mere consumers of the rent, and when compared with the active world are the drones, a seraglio of males" who live for lazy self-enjoyment "The aristocracy according to Edmund Burke, the worshipper of the old and traditional, "a the Corinthian capital of political society

^{*} Napoleon told Thomas Paine "That a status of gold ought to be erected to him in every attent the universe" He also assured that he always slept with a copy of *The Rights of Man* under his pillow.

It was Thomas Paine who first used the words

[†] Even though his views on India showed a streak of liberalism. Burke was essentially a Test

bitterly attacked the pompous generaprions of Burke. The base is still wanting, or oil out Thomas Paine, "and whenever a later chuse to act a Samson, not blind, but hold down will go the temple of Dagon, he tods and the Philistines." Even after his "hirteen States had become independent 1783; and the federal government was estabishe (1789), slavery was not considered

The Heroic Statue of Lincoln 20 ft High and Weighing 175 Tons, in the Lincoln Memorial at Washington

no impatible with the republican doctrine of natural equality. It was left for the Civil War (1861-1865) to make the slaves "forever ino." To President Lincoln belongs the coult of cleansing the Republic of the stain slavery

In Lincoln's Emancipation Proclamation.

too liberal America saw a new democracy

Foday Lincoln is remembered as an emanci
ton, a statesman, a speaker, a savior of his

ontry. He is indeed the god of American

tolatry

To be sure Washington is a large figure in

I the difference between Toryism and Liberalism will stated in Gladstone's motto at the entrince laboral Club; "The Principle of Toryism is of the people, qualified by fear, The pie of Liberalism is trust of the people qualiproduce."

American history Without him, there might not have been a United States. George Washington of the eighteenth century was not however, a typical American. "He was essentially", chronicles a historian, English gentleman. All his tastes, all his traditions and many of his associates and friendships ran back to the mother country America might have imported her Washington, full grown, from the old country She had to grow her own Lincoln. Lincoln is the representative and typical American the best embodiment of those ideals which are close to the heart of America typical', wrote Lord Bryce in an introduction to Specihes and Letters of Alnaham Lincoln. "in the fact that he sprang from the masses of the people, that he remained through his whole career a man of the people, that his chief desire was to be in accord with the beliefs and wishes of the people, that he never failed to trust in the people and to rely on their support." Lincoln is not only the typical and first American, but he is also one of the dozen permanently great figures of world history. He spoke not only for thes pecies American, but the genus man

Although Abraham Lincoln has been dead only a little over half a centure, he has already become an American tradition, a symbol of simple, big-hearted greatness As a visible proof of this, witness the vast output of Lincoln literature. It is sufficient of itself to constitute an excellent small library There have been written so far 4,000 volumes on this peciless American, and dozens of new Lincoln books are coming out of the press almost every year. Doubtless a few of his biographies are dull and hackneyed. but the new book on Lincoln by Dr Dodge is a work of very high and lasting ment* It is the only work at present which makes a searching and exhaustive study of all the speeches and writings of America's noblest citizen One rises from a reading of the volume with a great lift of the heart. Di Dodge has made the present and future students of Lincoln his debtors.

It is more than difficult for me to write a review of this book, because I took a course in Shakespeare with Professor Daniel Kilham Dodge, then the head of the English Department at the University of Illinois I am

^{*} Abraham Lincoln - Master of Words By Daniel Kilham Dodge, D. Appleton and Company New York and London, \$1.50.

afraid that my heart-felt gratitude and respect to the kindly, inspiring, and keen-minded teacher whose riches of thought I was privileged to share, would sway my judgment Nevertheless it is only fair to state the fact Morcover, this article does not presume to be a critical study of the delightful little

volume of Dr. Dodge

The story of Abraham Lincoln, who reached from the humblest log-cabin to the highest place in the gift of his countrymen, is extraordinary D. Dodge in the very opening chapter of the book makes some contrasts between Abrah im Lincoln and William Ewart Gladstone, both born in the same year, 1809 Gladstone the sen of a wealthy Liverpool merchant, attended the aristocratic Eton and Oxford and entered the British Parliament the same year in which Lincoln began his political career in the State of Illinois Lincoln's early life may be condensed into a single phrase of Gray's "The short and simple annals of the ElegyAbraham Lincoln was the son of a carpenter and a farmer. Illiterate and thriftless. While Gladstone was living in his father's luxurious mansion and classies, Lincoln was paying his way as a poor man, or navigating a flat-bottomed boat in the Mississippi All of Abraham's schooling combined would hardly make up more than a vear

Gladstone, the true blue bourgeois, won fame in his day not only as an orator, a statesman and a practitioner in the arts of Parliament, but also as a scholar With all the advantages that came from buth, wealth and education, he did not however, succeed in leaving a single piece of writing which has found a place in the world's literature. What of his speeches? Yes there are a few But, asks an English critic, "Who ever reads Gladstone's speeches?" They leave us cold. In Mr Gladstone's case it is quite a demonstrable fact that popularity is not immortality. He is, already, close to the cinderpath

that leads into oblivion

Lincoln, brought up on the edge of civilization with few books and fewer schools, never pretended to be a scholar. He never went to a college. Yet his life was deeply intellectual, and he is now conceded a place by the literary judgment of the world among the supreme masters of English prose style. Today his letter of condolence to Mrs. Bryby who lost five sons fighting for the Union, and his Gettysburg. Address are recognized as the finest specimens of the purest English.

While only a quarter of a century after h death, the writings and orations of Gladstor are all but forgotten, the works of Line are so pregnant with life that sixty years change in the mind and world have he robbed them of all their vitality, the virging of thought, even when they may lack finish technique. There is to be found at the moment on the walls of one of the colleg of Gladstone's own Oxford University to Lincoln letter to Bixby, which is the best model for its kind ever written in the English language.

The question is immediately suggested How could Lincoln, the comparatively un lettered country lawyer who came of roug ignorant, povery stricken stock, produthese classics of English language? Bo Professor Dodge and Professor (Abraham Limotn-A Universal Man) belie in the genius of Lincoln as the explanation of his achievements. Others, ascribe his su cess to industry which, like his infallil humor, never ran out. There are still other who maintain that the success of Lancoln w due to his strong ambition, character, dvi mic quality, the urgency of a message that he must convey All this may be true, but it seems to me that his power consisted largely in his enthusiasm to humanity. His soul vibrated in tune with the highest ideals of human betterment. He had an unusual stock of sympathy, which the late Professor G Stanley Hall rarely described in his icrecently published "Life and Confessions of " Psychologist" as "the power to feel with and for others". After all, Lincoln was a genius That is all we know, all we can know

The book before me is the most original biography of Lincton Original it is, undoubtedly, in many respects But it is not a biography in the ordinary sense of the term Dr Dodge calls it Master of Words. It presupposes a good deal of knowledge of the life and works of Lincoln. It gives only so much of his life, in a casual way, that it furnishes a background for Lincton as a man of letters and as an effective speaker.

"With words we govern men', said Diraeli And Lincoln swaved his audience by the masterly use of words. He knew how to array "the best words in their best order as Coleridge put it in another connection. But Lincoln was not a mere juggler of words. He never spoke just for the sake of speaking. He set before him higher standards in public speaking. Lincoln's beau ideal of an orater is to be found in the memorial

The Home of Abraham Lincoln at Springheld, Illinois - It is One of the Shrines of American Patriotism

ngy he delivered upon Henry Clay, a d American statesman Listen

At Clay's predominant sentiment, from first t was a deep devotion to the cause of human ty—a strong sympathy with the oppressed where and an aident wish for their elevation is him this was a primary and all-controlling ion. Subsidiary to this was the conduct of his leftle. He loved his country partly because as his own country, and mostly because it was a country, and be burned with a zeal for its inclined, prosperity and glory because he saw the the advancement, prosperity, and glory of an liberty, human right and human nature.

What Laucoln said in this oration on Clay, might have truthfully said of himself

Many of the latter-day orators, lacking in oth of thought, get on by purely adventius aids a sleek appearance, a musical ter, a power of dramatic gesture, and a gh-falutin' language. Lancoln possessed very at of these aids. His manners were plain is figure was tall, awkard, and ungainly to movements", describes the English pubist Lord Charnwood, "when he began to hak tather added to its ungainliness, and, ough to a trained actor his elocution emed perfect, his voice when he first open-I his mouth surprised and jarred upon his careis with a harsh note of curiously high the But it was the sort of oddity that thests attention, and people's attention once might, was apt to be held by the man's ansparent carnestness. Soon, as he lost ught of himself in his subject, his voice ad manner changed, deeper notes, of which friends record the beauty, rang out, the al eves kindled, and the tall, gaunt figure the strange gesture of the long, uplifted are acquired even a certain majesty" To the admary stranger, Lincoln might appear at first as "a very odd fish", but his hearers were impressed by the force of his personality, the soundness of his reasoning, and the irresistible honesty of his motives. He had that homely which comes from the knowledge of all froms of life and all shades of Character. Lancoln, more than any other orator of his time, scored his points by a happy combination of humor, classic re straint, and plain horse-sense

He avoided as a rule "purple patches", artificial decorations Classic quotation was in the language of Dr Johnson, "the

parole of literary men all over the world"
It might have been so in the British world of Pitt, Fox, Sheridan and Burke; but the tradition of Latin and Greek quotations passed away with Mr. teladistone. In vain will a student search through the speeches of Lincoln for classical quotations, similes, and tags. Simple in his life, he used the plain home-spun language of the plain people. Yet what can surpass the sheer beauty of the closing words of his Frist Inaugural Address.

"I am loath to close. We are not enemies but triends. We must not be enemies. Though passion may have strained at must not break our bonds of affection. The invita cords of memory stretching from every lattleheld and patriot grave to every fixing heart and hearthstone all over this broad land, will yet swell the chorus of the Union when again touched as surely they will be by the better angels of our nature."

Lincoln, as has already been hinted, had a fine feeling for style, but its stiength lay in aptness, simplicity, and directness of language. For purity of diction the following sentences from the Second Inaugural Address are well worth memorizing.

"Fondly do we hope—tervently do we pray—that this mighty scounge of war may speedily pass away. Yet if tool wills that it continue until all the wealth piled by the bondman's two hundred and lifty years of unrequited toil shall be sunk and until every drop of blood drawn with the lash shall be pild by another drawn with the sword as was said three thousand ye us ago so it must be said. The Judgments of the Lord are true and infliteous altogether.

with malice toward none with charts for all with numbers in the right as God gives us to see the right, let us strive on to finish the work we are in to bind up the nation's wounds to care for him who shall have borne the battle, and, for his widow, and his orphan to do all which may

achieve and cherish a just and lasting peace among ourselves, and with all nations.

The most famous speech of Lincoln is the short address at the dedication of the National Cemetery at Gettysburg, which took about two minutes to deliver. "The English about two minutes to deliver. language", observes Dr Dodge, "had never before contained an address that to such a degree combined the qualities of beauty and brevity." The speech is a perfect gem. There is not in it the least touch of rhetoric It calmly states certain truths and principles in phrases so strong and simple and vivid that they instantly grip one's imagination. There is perhaps nothing like it in the whole range of English and American oratory To appreciate Lincoln as the supreme master of the magic of words, one need only read the following extract from the immortal Gettysburg Address

"The world will little note nor long remember what we say here, but it can never forget what they [the brave dead] did here. It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us, that from this honoured dead we take increased devotion to that cause for which they gave the last full measure of devotion, that we here highly resolve that these dead shall not have died in vain that this nation under God, shall have a new birth of freedom and that government of the people by the people, and to the people shall not perish from the earth."

The Gettysburg Address, at any rate, is not likely to perish from the earth as long as English is spoken in any quarter of the globe Lincoln hore his greatness with true unaffectedness. Even his greatest uttera have no trace of self-laudation or self-ric eousness. If anything, he seemed to lack times, sufficient self-appreciation. never timid in the face of a great issue. often got into the valleys of discouragena The egocentrism of Napoleon, the exal self-feeling of Roosevelt, or the megoloma of the imperial little man Curzon and last grotesque Kaiser formed no part of mental equipment. With all the inner u that there was in Lincoln, he kept his well under control He dreamt dreams . saw visions like many a great m but with the innate modesty, which is standard com in the realm of high so resolutely translated his doctrine political democracy into action. He noted, like St Francis of Assisi or Mahatma Gandhi of India for his mighty gentleness

Lincoln was the foremost prophet of democracy in America * With him orators was only a means and not an end. He used his talents for the welfare of all. The central idea in all his writings and speeches was the equality of men. Social service, in the truest sense, was the warp and woof of his spiritual fabric.

Dr Dodge with his extensive learning makes a very interesting and reliable guide in the study of the Lincoln saga. His book as an interpreter of Lincoln the speaker is of exceeding value.

CASTE PREJUDICE

By C. F. ANDREWS

IT is important, from time to time, in India, to get a vivid mental picture of the caste prejudice, which lies behind the white man's attitude towards the other races in Africa I shall deal with the same caste prejudice in India itself between high caste and low caste later on.

I have already told, on another occasion, the story of the indignation, which once I

unconsciously aroused among my own fellew-countrymen, on board the S. S. Clement Hell while crossing Lake Victoria Nyanza. They saw me take the baby of a Sikh non-commissioned officer in my arms in order to nurse it. Quite unknowingly and to law great amazement, I had committed a serious offence, according to their code of racial ethics. For one of the officers in Government employ

by Sudhindra Bose in *The Modern Review*, January 1921, pp. 1-8.

n Kenya Colony, who was on the same noat, came up to me and said: "When we, white men, saw you take that black man's may in your arms, we felt inclined to nurder you and pitch you into the Lake fluit kind of thing is not done in our country!" This remark of his was a libel in my countrymen in Kenya as a whole; not there can be no doubt, that there are many who hold this Government official's lows,—though not, I hope, in such an itterly repulsive form.

Quite recently, I have come across an whibition of the same 'caste' mentality in he columns of the East African Standard, thich is the leading European paper in denya and Uganda. The incident, that aised the storm of indignation, in this case, vas an act of justice. A white man, who cas arrested as a crimmal, was led through he streets of Nairobi handcuffed in the same vay as other prisoners. The first two passages which follow are from leading nublished two successive articles on lays after this event. The two further from the correspondence Atracts are columns of the same paper. The first ediorial, which I have slightly abbreviated, reads as follows .--

The people of Nairobi, who had occasion to pass along tiovernment. Road about one o'clock yesterday afternoon, were amazed to see the degrading and unnecessary exhibition of a young European being led along the birsy thoroughfare handcuffed in charge of a Police Constable. Members of the white community turned their heads from the inusual spectacle shocked and disgusted hundreds of natives stared curiously, no doubt tremendously impressed by the even-handedness of justice in heavy. We are unaware of the reasons why it was not considered possible to convey this young man to his destination in a ricksha or by a route and at a time which would not have entailed a public exhibition which was in no sense a credit to the Department of the Government concerned. We imagine that the Administration, in all branches, ought to be sufficiently aware of the delicate racial balance preserved in the country and of the necessity of giving official assistance to the non-official population in the preservation of the high prestige of the white community which is so essential, if Western civilisation is to be applied as an educative influence among African peoples.

The second editorial appeared on the next day in the following terms.—

A correspondent writing in the Standard to-day voices what we believe to be the indignation shared by the general public aroused by the degrading spectacle of as handcuffed white man which was denounced by us on Tuesday. On enquiry, we discover that there is no provision made in the Estimate for defraying the expense

of transporting prisoners between the Court, the Police Headquarters and the Gaol and that the Government system of keeping accounts does not respond to humane instincts. Our principal objection has been, not to the use of handcuffs, which may conceivably be quite necessary in certain cases, but to the unfortunate hourand place at which the meddent occurred. But it is a regrettable fact that the official Financial Instructions, which dictate the monetary activities of Departments of the Kenya Government, were not drawn up by men who, even if they visualised the possibility of a regrettable scene such as that recorded, would perhaps understand the delicate feelings of a white community in a native country. As it seems impossible for the Police Department to find a means, within the four corners of Treasury regulations, to provide the small sum necessary to avoid a repetition of a regrettable incident, the East African Standard has great pleasure in offering to defray the cost of transport in the future. We do so, not because we desire personal reward from a "gesture," but because we believe that the provision of the money is necessary until the Legislative Council is able to convince the Treasury that voluntary official action is essential and that common sense is a greater quality than strict adherence to red tape.

The correspondent, referred to in the above editorial, thus lets loose his feelings of indignation and horror —

Sir,—It is with feelings of complete disgust and horror that I have read your article entitled, "An Unnecessary Exhibition, in your issue of to-day a date.

Words fail me to express what I think of the police official, who gave the order to lead a white man along Government Road, in full daylight, handcuffed

I do not think that this matter should be allowed to pass unnoticed. The official responsible for this more than lamentable blunder should not go unpunished I suggest that he should, at the very least, be severely censured and removed to a district where white men are scarce.

I hope that this letter may catch the eye of the public-spirited member for my district and that he will bring it up at the next meeting of the Legislative Council.

I cannot conceive that the Chief of Police in Nairobi, who, I feel sure, must be a man of the world and not an ignorant infant can allow this disgusting exhibition to go unchastical

disgusting exhibition to go unchastised

I can think of no crime which justifies this wanton attack on the prestige of the white man Carlyle once said that the world was full of fools. I agree with him. I would add that it is full of dangerous fools, and I look to our members on the Council to do their best to protect us.

The final quotation is from a letter addressed to the Commissioner of the Police by the Editor of the East African standard —

Sir,—I understand from our conversation of this afternoon, that no provision is made in the Estimates for the conveyance of persons in custody between the Police Heardquarters, or the Prison, and the Supreme Court. In order to rectify this deficiency to some extent and prevent the recurrence of such a spectacle as was seen in

the main street of Nairobi on Monday afternoon, the East African Standard undertakes to defray the expense of transporting handcuffed European expense of transporting handcuffed European prisoners by motor car between these places whenever such necessity exists.

On receipt of information from you or from the Superintendent that such expense has been incurred, we shall have much pleasure in meeting it at

once.

As the East African Standard is the leading newspaper of the Colony, this point of view may be taken as not untypical of the mental-

ity of the Colony itself
I am inclined to put side by side with it, without any further comment, the following report from the Madras Presidency, which is dated almost at the same time as the above occurrence in Nairobi -

Kumbakonam, Jan 29.—As regards the death that took place on the 26th instant, the Sub-Magistrate of Tiruvadamaruthur, who was camping at Twili, issued an order to the effect that the corpse must be carried only through the route chalked out in his original order under Section 144, Criminal Procedure Code According to the order of the out in his original order under Section 144, Criminal Procedure Code. According to the orders of the Magistrate, the corpse (Adi-Dravida) had to be carried through the easte non-Biahmin and Brahmin streets. Besides, there were temples belonging to the caste Hindu community all along the prescribed route. The caste-Hindus entered an emphatic protest against the action of the Magistrate By this time one Pakkin Padayachi, a small Mirasdar of the village, was arrested under Sec. 107, Criminal Procedure Code, when he went to the Police Station to present a petition objecting to the route prescribed by the Magistrate The Magistrate, realising that the situation was getting very secons. realising that the situation was getting very serious, cancelled the order promulgated that morning and issued another order chalking out a third route

this time. Then the Magistrate arrested two on caste-Hindus by name Gopala Pillai and Ramaswan Padayachi under Section 107, Criminal Process

The arrested persons were taken into Poly custody immediately; and this morning they we taken to Kumbakonain. Very rich and influent Mirasdars have come here to move for bail bed Mr. J. Green, I. C S., Sub-Divisional Magista It may be interesting to note here that all them persons arrested are plaintiffs in the civil a pending before the local District Munsiff's Court

It is the general talk in the village that he it not been for the timely arrival of Congressivers on the scene and their advice to people to be non-violent, the entire situation would have

taken a bad turn.

I have been wondering to myself all a while which is worse,—the account I has given of the incident on Lake Victoria Nyam together with the indignation expressed i Nairobi over a white criminal taken along the street handcuffed; or the horror of the cast community in South India, because the des body of a fellow human being was cause along the centre of certain Brahmin and non-Brahmin 'caste' streets The only oping I have reached is, that the one is just a bad as the other, and there is not a pint choose between them. The white race I Africa is going headlong down the same precipitous descent that some of the men educated classes of India went down, to then own ruin, centuites ago History repeat itself, and the law of Karma is infallable exact.

BRITISH WORLD POLITICS OF TO-DAY AND INDIA

BY DR. TARAKNATH DAS, M. A, PH. D.

THE New York Evening Post, in an editorial entitled, "A Snub for John Bull", published in the issue of January 22,1925, makes the following observations, which are worthy of consideration of every Indian statesman:-

"It has been officially admitted that the British Imperial Council will not meet the consider and pass upon the Geneva protocol. For the first time in history the British Dominions have declined to meet the Central Government for intimate discussion of

problems vital to the Empire.

"This is the latest of a series of incidents in the progressive weakening of the ties that have until

recently bound so closely the British Commonwealth The Dominions have come to regard Great Brital more in the light of an exclusively European Power and less as the head of the Empire. They have made a gesture which cannot help having a important bearing on future developments. The have not actually relegated the Old World to the Limbo of worn-outthings, and Great Britain along with the rest, but they have indicated in a mistakable terms that they have broken with the past and will to make your assume decisive colleges. past and will from now on assume decisive con mand of their destiny.

"By the same tolen, they are beginning to loo more and more towards the United States for leadership. This idea is undountedly growing. It is scarcely thinkable, for instance, that the British

ions would have vetoed a proposal from the States for the discussion of the protocol or her topic.

far as the Geneva protocol is concerned, the of the British Dominions is not final. But of them rejects it, the London Government eject it; and if the London Government does League of Nations cannot go on with the

ne responsibility of the British Government, er, would not end with a mere rejection of tempt to outlaw war and further disarmament. The principal purposes of the protocol was if the pledge made by Ramsay MacDonald to France with security against further sion. This pledge still stands, and Great must find a substitute satisfactory to the The point is that the British Dominions ling for the London Government to bind a guranteeing French Security, but are not to be bound themselves.

taking that stand the British Dominions are clining the position assumed by the United. Though members of the British Empire of the League of Nations, they are coming more more to believe that political entanglements in pe will mean perils and pit-falls in the future."

'n short, the self-governing Dominions in the British Empire are not meekly wing the British Government's dictations. Downing Street, but they are asserting independence in the field of practical ics and even forcing the British Governto adopt a certain course in matters of ign Affairs of the Empire.

n part, as it is in the present, the most ortain features of British Foreign Policy being determined in terms of preservation ritish supremacy in India and thus in Africa, and Australasia; yet the people idia have nothing to say about the forpolicy and defence of their country and ems that Indian leaders are indifferent t formulating a foreign policy which be for the best interests of India and est of the world.

merica is the greatest political, naval, muc and industrial rival of the British ire. Should the British Empire come to sh with America today, she might lose very existence. So British statesmen, Liberals, and Laborites. are all d to make all necessary conto America to avoid any ict with her and are anxious to secure rican support to destory some other (of Britain). All political parties of in agree that France is Britain's rival urope and Africa, Russia is the potential of Britain in Asia and Europe, Japan is Treatest menace to British domination of With this agreement they follow different tactics to gain their goal of elimination of rivals of Britain.

It is quite clear now that the Tory government of Britain, after the advent of the Baldwin administration in November 1924 has adopted new tactics to further British interests in world affairs. Until the fall of the Labor government, headed by Mr. J. Ramsay MacDonald. Great Britain followed policy of aiding Germany against France. In fact the policy of bringing about isolation of France in world politics was the question of the greatest importance for Great Britain. After all sorts of efforts for five years (1919) -1924) British statesmen became convinced that this policy was impracticable, because of the cordial Franco-American relations and France's successful diplomacy with Poland Czecho-Slovakia, Kumania and other European The British government felt that American financiers could not be a party to the destruction of France, because of the economic interests involved in French securi-They also found that some of the Balkan States would not only aid France but might become factors to bring about closer relations between France and Russia

It was also apparent that France was being forced by the British attitude to make an economic entente with Germany. The most distressing of all things to the British statesmen was the French move for bringing about a Franco-Japanese understanding on the basis of territorial integrity of these two nations in the Orient Of course, on the surface, this understanding was being furthered on an economic and commercial basis. It will not It will not be easy for Britain and her Dominions to overcome the Franco-Japanese fleets and their submarines in the Mediterranean and the Indian and Pacific oceans, and the Franco-Japanese air fleets in Asia and Europe and their armies, aided by France's other allies, including a possible ally of Turkey. British statesmen feel that a Franco-Japanese accord may even become a starting point of a Franco-Japanese-Russo-German understanding against Britain This may seem fantastic to many novices in international politics, but it must not be forgotten that it was a Tory government in Britain which, to save her from an impending isolation, concluded the Anglo-Japanese Alliance, then Anglo-Franch Entente and later on, the Liberal government formed the Anglo-Bussian entente and thereby isolated Germany, which led to the destruction of the

It is a fact that, with respect to the con-

tinuance of British dominance of Asia, politically as well as economically Japan is a greater rival and a more powerful possible enemy of Great Britain than France or Russia. If an anti-French policy results in a Franco-Japanese accord, that will not be to the best interests of Britain. It was also felt by British statesmen that by pursuing an anti-Japanese policy, Britain would secure a very decided support of Australia, New Zealand, Canada, South-Africa and possibly the United States of America These facts induced the Tory government to give up the policy of concentrating against France. It decided that the removal of a possible Japanese menace should be the immediate objective of British Imperial foreign policy. The best evidence of this is the change of attitude seen in the resumption of the building of the Singapore Naval Base, the efforts of British statesmen to have a Franco-British understanding, and the opposition of the British Empire to the Geneva protocol for outlawry of all wars.

The situation created by the assassmation of Sirdar Sir Lee Stack, in Egypt, the defeat of the Spaniards in Morocco, and increasing unrest among the people of North Africa in general, led Mr. Chamberlain, the British Foreign Minister, to strive for a cordial understanding between Britain, France, Italy and possibly with Spain on the basis of "status quo" and negotiations of mutual interests in North Africa and the Mediterranean region. To prove the sincere desire of the British government to co-operate willingly with France, the former has refused to withdraw its forces from Cologne on January 10th, 1925, and has adopted a less cordial attitude towards both Germany and Russia.

At the time of writing this article we find that Britain is maintaining the friendliest, relations with America (whose grand fleet, the greatest Armada in the history of the Pacific, will soon visit Australian waters and even Singapore) and leading a movement for Anglo-French-Italian Entente in Europe. The real motive of this policy is to settle all outstanding problems in Europe by a powerful combination favorable to Britain, so that all of her energies can be devoted to strengthening her position in Asia, if necessary by coercing Japan, China and India, and holding a firm grip on North Africa and the Suez Canal, to maintain undisputed supremacy in North Africa and all South Asia from the Suez Canal to Hongkong.

It is evident now that the very center of gravity of the future of international politics has been shifted to the Far-East Japan is the vital center and the possible target of British opposition, from the powerful naval base at Singapore and aided by all the other nations which would combine with Great Britain to further their interests In this move of Great Britain against Japan, we find the Dutch as a willing cat's paw, Russia, China and India will play a great role in this drama of international politics in the Orient.

The British policy of an Anglo-French-Italian Entente at the present moment is decidedly against the interest of Russia and Germany. Germany and Russia are already bound by the treaty of Rapolla, not to ally themselves with any nation opposed to any one of them It is of great importance that Germany and Russia are the powers which have given up extra-territorial jurisdiction in China and signed commercial treaties on the basis of reciprocity There is already a bond of community of interest between Germany, Russia and China It is evident to close observers of world politics that since the conclusion of the Washington Conference Japan is doing her best to be on cordial terms with China and Russia Japan has not only given up Shantung and retired from Siberia, but she has been fighting for China in the League of Nations on various occasions, particularly during the International Opium Conference. Far-sighted Chinese and Russian statesmen also realize that destruction of Japan would mean such an up-setting of the balance of power that their own interests will be seriously hampered This very feeling is possibly the real reason of the successful outcome of the Russo-Japanese negotiation which have resulted in the recognition of Soviet Russia by Japan and a Russo-Japanese treaty signed by M. Karakahan and M. Oshizawa at Peking on the 20th January 1925.

Britain is marshalling all her forces against Japan; and Japan, in self-defense, is trying to form such understandings with other nations as will strengthen her position, economically, politically and strategically. We see that if Great Britain continues her anti-Japanese policy and there be not any sudden change in world politics, then a German-Russian-Chinese-Japanese understanding is a possibility. In case of a clash between Japan and Britain, the first thing for Japanese safety would be to see that America be not

o against her and in favour of Britain. condly, it is imperative for Japan's very istence that China and Russia remain as r fixeds, if not allies. It must be rembered that Russia cannot ally herself ectively with Japan unless her Western inter he safe from German attacks and r Southern frontiers be free from attacks Indian soldiers under Great Britain. In a can never feel secure to aid Japan iless she knows that she would not be a victim Russian attack from the North-West and ritish (Indian) attack from South-West.

It is the opinion of some experts that reat Britain cannot fight Japan single-handsuccessfully, and it is said that she is ying to bring about American hostility Japan. If Japan secured Russian, muese, and German support to oppose nitam, the very existence of the British inpure would depend upon the aid all co-operation of India. In the possible me-up of the Powers in which Japan, China, ussia and Germany, or at least Japan, hma and Russia, would be on one side and ritain and her Allies on the hat should be the stand of India for her own iterests and for the cause of world peace?

In answer to this question, the thing that would be carefully considered, 15, what would the outcome of the possible destruction or appling of Japan by Britain, through adian support? Would India be benefited by If the answer is in the negative, is it estible that India would support Britain such a conflict? What then should be a immediate policy of Indian statesmen? It not desirable, that for the good of Britain and India, every Indian should stand against any auti-Japanese move and take

vigorous steps to bring about Indo-Japanese solidarity backed by Chinese support?

We do not know if the Indian people are conscious of the fact that at least some British statesmen think that India is at the parting of the ways. They think that if the British policy towards India be not changed in the near future, she may become an eternal enemy of Britain and a friend of Japan. To substantiate this point we quote the following extract from the speech of the Hon. Mr. Scurr (Labor M. P.) delivered in the House of Commons on December 19th, 1924, during the course of the debate on "Bengal Arrests". He said:—

"In 1866 it was impossible to give to Ireland a very minor kind of Constitution which would have been accepted by the people That policy was rejected, and a policy of repression, of special legislation, and of spies was resorted to, and the result has been the tragedy that has taken place there. I do not want this tragedy to arise in India There are two other Asiatic Powers, one of which has, in the past, been friendly towards us, that have been showing a sign of a change of policy. We do not want that Asiatic revival, in a sense of being in contrast to a European revival or to have conflict between the Asiatics and Europeans. India at the present time stands at the cross-reads. Are we to follow a policy which shall make her our friend right down, through the centuries? On the other hand, to continue the policy of repression means that she will go from us and will be our enemy."

Has India a foreign policy of her own? Has not the time come for India to formulate a far-leaching foreign policy which will induce Britain and other Powers to preserve peace in the Orient and at the same time result in securing the status of a real Sovereign Power for herself?

New York City January 23, 1925.

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed. Assamese, Bengali, English, Gujarati, Hindi, Kamuese, Midayalam, Marathi, Nepali, Oriya, Punjahi, Sindhi, Tamil, Telugu and Urdu. Sidelights on the Crisis in India: being the attens of an Indian civilian and some replies of in Indian friend: Longmans, Green and Co. 38-6d, 1924, pp. 118.

The Indian Civilian is Mrv H. Harsourt, I. C. S., who has seen more than 25 years of service in the

Punjah, and the Indian friend, who is not named is a Hindu barrater of the Punjah High Court, Generally speaking, the replies of the Indian barrister, who, as Mr Harccurt tells us, is a busy lawyer and has little lessure, are more instructive and informing than the letters themselves, and it were much to be wished that the replies had been fuller.

The book begins with the subject of administration of justice. "In criminal cases between Europeans and Indians justice is the exception and injustice is the rule" "The employment of European judges... is now a mere anachronism, and leads to avoidable waste of public money." These are of course the views of the Indian barrister, and all subsequent quotations, where not specifically mentioned, are from the same source. According to Mr. Harcourt, though Mahomedans recognise Christians as 'people of the book.' the two faths are very distinct, and 'anything like fraternization is quite impractical.'

Challenged to give a definition of Hinduism, Mr. Harcourt's friend says "I cannot define Hinduism. I might as well attempt to confine the whole contents of the Ganges into a jug. Hinduism is not one religion, not one creed, not one saith. It is a jumble of all the religions, all the reeds and all the faiths of Indian origin that have swept the land through the course of ages Furher, Hinduism covers all the stages through which eligious instinct has passed and philosophic hought has travelled, developed and advanced. Nor s this all. Hinduism is not confined to religion in the ordinary acceptation of the word. It also brings mder its sheltering wings all the religious, semi-eligious, and social practices and observances of he Hindu race . Hinduism is incapable of a precise r even a workable definition, for the reasons tated above. Polytheism, monotheism, pantheism, and atheism have all flourished under the ausicies and in the name of Hinduism, not necessarily t different times, and still form an integral part of ecognised Hinduisin Demon-worship, hero-worship, ncestor-worship, worship of animate and manimate treets, worship of natural forces, and worship of rod have all been woven into the web of Hinduism.

In fact, Hinduism caters for every taste, every
rade of life and every stage of religious and intelectual development. This at once constitutes the
ane and beauty of Hinduism It is hediously
ague, terribly repelling, surprisingly comprehenive, and delightfully elastic. This very feature
onstitutes both the strength and weakness of
linduism. It has laid Hinduism open to attack on
very side and yet enables it to withstand successilly the inreads of every hostile force. From the
urest to the vilest form of worship, and from
the sublimest heights of philosophic thought to
the meanest and crudest phases of intellectual and tod have all been woven into the web of Hinduism. to meanest and crudest phases of intellectual and sligious developments, all the stages are provided m. What else can humanity need or desire. Though am not an orthodox Hindu, believing in all or ay of the superstitions or lower forms of worship ill recognised, or at least not specifically and sfinitely discarded, by Hinduism, I cannot fail perceive some utility even in this absurd triety of faith and worship So long as the human we subsists, there must be disparity of intellect ad vastly varying development of thought between e different sections of the race and between the better that men possessing crude intellect should proach the unknown through the known and orship the invisible through the visible, than that ey should scoff and peer at the idea of godhead, ovided of course that they have a sincere faith their mode of worship."

The following first-hand account of the Sikh ovement from the Punjab parrister will prove inresting and instructive to Hindus all over the

rest of India;—"As the persecuting hand of the Moslem Kings became enteebled, the Sikhs relapsed into a mere sect of Hinduism. But the urban Hindus looked on the Sikhs, who came almost exclusivly from the illiterate and ignorant peasant class, with lofty disdain, and usurped the share of the Sikhs in official patronage. Moreover, the lack of any literary or scholarly attainments on the of any literary or scholarly attainments on the part of their first Guru was made the subject of reproach by another rising sect of the Hindus, namely the Arya Samai, and a few customs peculiar to Sikhism were indiculed by the educated section of the Hindu community. This gave rise to a separatist movement among the more intolligent and better educated Sikhs. The Government, always keen, like any other foreign Government, to emphasise and exploit such differences, encouraged the separatist movement and patronised encouraged the separatist movement and patronised every organisation that sailed under a distinct Sikh flag, with separatist aims and propaganda. Of all the Hindu sects, the Sikhs are most sensitive to religious impulse, are most enterprising, most energetic and most virile. With a lavish patronage on the part of Government and munificent support by Sikh rulers, induced or influenced by Government example, the Sikhs advanced by rapid strides in education, organisation and power. The cleavage between Hindus and Sikhs became complete, but so did the general organisation of the cleavage between Hindus and Sikhs became complete, but so did the general organisation of the Sikhs, which is now equally a menace to the Mahants and the Government a just retribution for the selfishness of the Hindus and the unworthy policy of Government That the Sikhs are only a reformed sect of Hindusm, just as Protestants are a sect of Christianity, is beyond all doubt. They have been held to be so by the Privy Council. They are cthically of the same stock. They observe the same social customs, are governed by the same laws of inheritance, and continue to interlive and intermarry with the Hindus. In the same tamily and under the same root you will find the father a Hindu and his sons equally divided between Hinduism and Sikhism. Further, in spite of the pernicious efforts of Mr. Macanlite, in his translation and commentary of the Holy Granth, the Sikhs have the same respect for the cow as the Hindus. "I call to mind the slaughter of an ox on board the deck of an Austrian Liyod vessel on my second voyage from home, and the absolute look of horror on the faces of some Sikh absolute lock of horror on the faces of some Sikh passengers who witnessed the scene"—Mr. Harcourt.] I have no doubt that the Sikhs, while their faith, like the Arya Samaj, Brahmo Samaj, Deva Samaj and a host of other Hindu sects, will continue to be a powerful limb of the Hindu community."

Further on, Mr. Harcourt's friend writes; "The surprising elacticity and adaptability of Hinduism which have stood it in such good stead in the past are asserting themselves once again. Hinduism has carefully taken stock of the present situation, has realised its danger and hit upon Suddhi. This new movement not only aims at the removal of the present disabilities of the depressed classes, but has launched on a campaign of purifying Hindu converts to Christianity or Islam. This is proselytizing which has been unknown to Hinduism since the days of Sankara Acharya. It is only history repeating itself."

His views on Mohammadatism deserve quotation.
I believe that Mahomedanism has a stronger hold

on its followers than Hinduism. The allegiance which is exacted by Islam is distinctly stricter and though it sometimes results in narrow-mindedness and bigotry, yet it makes for greater cohesion and fellow-feeling among the believers. I am not an admirer of Islam taken as a whole. No rationalist accustomed to see guidance in reason and to subject all religious faiths and everything that is pie-ented in the name of religion to strict intellectual processes can be But there are some aspects of Islam which have my cordial appreciation. The strict monotheism preached by Islam is highly commendable, while its uncompromising hostility to idolatory is very instructive. But even more than these two striking teatures of Islam the absolute equality of man taught and enforced by it really inspiring. The spirit of true, real, and mactical democracy is to be found among Mahomedins alone."

To Mr Harcourt's correspondent the personality of Mahatma Gandhi is sacred, and he represents an almost perfect character. But the sanctity which the Mahatma attaches to the spinning wheel is to him a puzzle and an economic absurdity. The following extract sums up his position with regard to the non-co-operation movement. "As a matter of intellectual and theoretical belief. I hold that every subject race has a right of rebellion under certain circumstances. These encumstances are three in number. Firstly, all hope of justice from the toreign Government must have ceased. Secondly, in the event of a conflict with the ruling race we must have at least equal chances of success. Thirdly, when we have fought out the ruling race we constitute with the ruling race we must have at least equal chances of success. Thirdly, when we have fought out the ruling race successfully, we must be in a position to maintain internal order and to ward off external aggression. When, and not until, these three conditions are fulfilled we have a right to rebel against the domination of a foreign Government. I refused to a cept the gospel of Mahatma Gandhi because I realised clerify enough that these conditions had not been fulfilled."

Vir Harcourt's opinion of Hindu women leaves nothing to be Mesired. He says "Then there is the question of the marriage tie. I shall say at once that I am convinced from experience that in this matter the standard among Hindus is far in alvance of that which prevails among Mohammadans, and naturally, considering that Hindus look upon marriage as possessing a sacramental character. The days of 'sati' are gone, but the fidelity of the Hindu wife remains. Divorce is machically unknown among Hindus. This is all the more extraordinary considering that the principal parties have nothing to do with the selection. I blush to write it, but there are many nominally Christian homes where a standard prevails below that of Hindus in this matter."

To Mr. Harcourt's question: "Is it possible that our success (for success it is, though tempered at times by episodes of fulure) can all be explained by chicanery and brute force or does something better and deoper and more providential he behind it?" His Indian friend's answer is: "The history of the rise and growth of the British power in India is a very apt illustration of the truth of this doctrine [survival of the fittest]. I am not propared to explain the phenomenon of the British Eminuse in India by the uncomplimentary theory of a strange combination of good luck and fraud'. For a true explanation of this phenomenon we must look deeper into the character and moral

qualities of the nation which built up this power. Chance and good luck do play a part in human affairs and fraud is not unknown to the acquisition of political power in any age or crime, and though these explanations may be suggested by jealousy malice or envy, the real clue will almost always be found in the grit, perseverance, character, moral fibre, and determination of the individual or nation whose pre-eminent position is the subject of scrutiny."

On the Government of India Act of 1919, his opinion is quite terse and explicit: "The Central Executive being wholly irresponsible, the Provincial Executives being only partially and very inadequately responsible, with the power of the purse sull with the Executive, elected majorities are a farce, the Councils a sham, and the increased association of Indians with the higher executive administration an idle and even a mischievous allingment.

"You seem to disclaim any particular disposition on the part of Great Britain to resort to a policy of divide and rule." I disagree with you Great Britain has taken advantage of such a policy in the past, it is doing so now, and will continue to do so on suitable occasions. Personally I see no reason why the British Government should not do so. It may not be a satanic Government, but it cannot claim to be an angelic one either, such a policy has an immoral taint, no doubt. But what Government in the world has cared for morality in preference to power? Let us all free our minds of cant Let us not profess what we cannot practise, and what others in a similar position do not practise."

"Non-cooperation is half dead, but the causes which brought non-cooperation into being are still working, and whatever the temporary checks and set-backs which the movement may suffer, non-cooperation has come to stay. It will reassert itself over and over again in varying shapes and forms so long as the causes which gave it birth continue to exist. An active rebellion is a tangible thing and can be met by brute force. But non-cooperation is an elusive ghost which your guns and bayonets cannot touch. How is British statesmanship going to meet this ghost?"

"Your analysis of the present situation is as true as it is interesting. The Government is in a pathetic plight, 'almost a suppliant for favour and an apologist for its own existence.' This ridiculous position is due to the fact that the Government is in essence a despotic Government, while it seeks to make itself out to be a popular and representative Government. Its desire to keep up the appearance of a popular Government, ruling the people by their free consent and solicitous for their support, coupled with the despotic exercise of its powers, has brought about the anomalous position to which you refer. The Government is neither sufficiently generous to concede all the legitimate demands of the people, nor sufficiently wicked to put down all opposition by ruthless repression. The result is that while in practice it flouts public opinion, in theory it seeks to respect it and has to hamour, flatter and whine in a vain attempt to rally the people to its side...Let not a false notions of prestige stand in the way of right, justice and truth...There is nothing which shatters the prestige of the Government soomuch as a policy of firmness-cum-cowardice."

In the epilogue Mt. Harcourt, who is a.

sympathetic bureaucrat, but nevertheless a bureaucrat to the backbone and is of opinion that real democracy is probably unattainable in India, puts a question which may very fitly be considered by the present Government of Bengal: "Are not", Mr. Harcourt says, "some of our troubles due to the fact that too often those Indians in days come by who were selected as the Indians in days gone by, who were selected as the favourites and confidents of Government were men who represented themselves rather than their countrymen, and whose whisper was apter to soothe their patrons than to supply them with accurate

GREEK PHILOSOPHY By M. E I Taylor Published by the Oxford University Press. Price 2s-6d net-

This is one of a series of introductory volumes brought out by the Oxford University Press They have named the series the World's Manuals and we hope the world will take the hint and availated of this splendid opportunity to get into touch with the hest in the world of brought to the hint. with the best in the world of knowledge at so little cost and expenditure of time From this little book one can get a fair idea of Greek Philosophy. It is written in simple and expressive English and should command a large sale among intellectually inclined people who have very little time to go through large volumes.

AN INTRODUCTION TO RELLECTIVE THINKING. Published by Constable and Co. Price 10s-6d net.

Nine members of the staff of the department of philosophy at Columbia University have combined labour to produce this treatise on the Science of Reason. It is a noteworthy fact that in this case too many cooks have most certainly in this case too many cooks have most certainly in this case too many cooks have most certainly followed the line of exceptions and provided a first-rate dinner. They tell us what reflective thinking, as opposed to rambling or feeling, means and take us through a wide range of subjects showing the uses of the reflective machine Astronomy, Biology, Mathematics, Physics, History, Ethics, the Social Sciences, Law, everything comes up in turn under the guidance of the learned perfectors and acknowledges its indicatedness to professors and acknowledges its indebtedness to methodical thinking. We are told that good thinking "requires a considerable accumulation of experience and knowledge. Not everybody can think well because not everybody knows enough, thought requires, men must have a stable civiliza-tion, books and investigators who bequeath fluir

tion, books and investigators who bequeath their findings, schools or places to impart knowledge. Thought on a wide range of subjects makes very large demands indeed."

This is a word of warning to the logical giant who thinks that a thorough understanding of the principles of rational thinking is all that is needed to give one a master mind. Even the finest of machines manufactures nothing without materials to work upon. The human thinking machine does not get off here.

not get off here.

The writers greatly emphasise the value of a Proper Mental Attitude in the field of investigation. By this they mean freedom from prejudges or prejudgments etc When arriving at conclusions of any kind one ought not to harbour any love for a farticular conclusion, for such a bias always reduces the chances of correct judgment.

The writers have explained the principles of methodical and correct thinking elaborately. We have seldom read a book dealing with legical

processes written in such a lucid and extreme interesting manner. It should draw the atte of University professors as a valuable help to v_1 of aimless, haphazard and fallacious thinking.

THE DEFEAT IN VICTORY: By George D. III.
Published by Cecil Palmer, Oakley House, Blubury Street, London W.E.I., price 7s-6d net.

The writer deals in this book with the Disappointment after President Wilson lost points at Paris. On the title page of the boo find the following paragraph which gives us a idea of the general nature of this book.

"The present evil plight of the World, incre

unto the possible extinction of our civilization the precise result of the betraval of Wilson, at the perjurious repudiation of his principles the Conference of Paris. Nor of this fact of matter can the faults of Wilson be made mitigated. Not all the things wherein Wilson erred, nor of the things lacked, can anywise atone for guilt of the peace-makers, or cancel the susues of their perjury."

The book is written in a passionate strain

nevertheless retains a large measure of hist

"The peace of Paris, were there no redem from it, would prove a more infernal fall of a more desperate derangement, than the war

These are not peace, these treaties of I

they are rather a pitless provision for a mi and predatory Government of the World."

"If there were instances of international he before 1914, there are none now. These this World Continents are one monstrous weat basest diplomatic duplicity and batter, not appearing notice of the world whole propagate notices. crossing network and whole peoples daily back and forth for a farthing of advantage" "Even the German violation of the neutralit

Belgium taken merely as a matter of internat ethics, diminishes besides the entente violate the covenant with Germany."

Such passages as the above show a relent ness of opinion and a regard for the truth, aby the author, which obeys no laws of cou

or compromise.
The writer takes a view of the national of Germany that is not fair in our opinion accuses Germany with creating the non-moral of nationalism found in Europe. But he Germany succeeded, even in her downfall creating a political and military France in France in Grand Company of the creating and military france in Grand Company of the creating and military france in Company of the creating and company of the creating and company of the creating and company of the creating the non-moral of the creating the creat own Prussian image:—Such was the real (id) atrocity—an atrocity visited upon the in being of France." Historians and students of (id) Culture will judge the fairness of this ver In the author's opinion Germany "psych ically assaulted the whole moral front of human That some nation or nations did so is be question; but was it Germany and if so, w Germany alone?

ENGLAND'S EDUCATIONAL POLICY IN INDIA V. V. Oak. Junior Fellow. Clark University lished by B. G. Paul & Co., Madras. Rs. 2 not It is a happy sign of the age that educated both here and abroad are taking a keener into the control of in the educational affairs of the country. The not mere dogmatic critics but are taking in pains to have a thorough knowledge, at first of the educational policy that is being pursual India. The book under review is the resusuch investigation. The author is thorough inted with current literature on the subject both cial and 'popular He has treated the subject m two pomts of view. In the first part of hook, he has given us a short and informative torv of education in India. His view on this exton may be briefly summed up by the follow-quotation by Howell. "Education in India first ignored, then violently and successfully bosed, then conducted on a system now versally admitted erroneous, and finally placed its present footing." And he has supported view by statistics drawn from various press in order that the statistics may appeal the imagination of the reader, he has qualised them by means of graphs which give an unate idea of the comparative growth of educam in India and other countries of the world, at they are a sad commentary on the beneficent this hadministration in India.

The second part gives us an account of how meating is financed in India. Here he has laid the the underlying autocratic principles which wein indian finances specially with reference to a provincial budgets. He points out that even in a case of transferred departments the state of connecial innances is such that it does not allow a minister to make provision for the expansion the department in his charge. From an analysis, educational expenditure by reference to the incestrom which they come, he shows that education is carried on more by the help of private and local funds, in the shape of fees and grants an by governmental grants. And finally he is opinion that the obvious reason why the British ders do not follow the right policy is not because even do not know it but because they believe and at rightly that by so doing they would not be be to continue their autocratic rule over, it is a ok which will amply repay perusal by every udent of politics in India.

A. Sex.

Semoza, Discartes and Mamonides: By Leon th, M.A., D.Phil. Published by the Oxford University Press. Pp. 148. Price 7s. 6d.

The book has four chapters. The first chapter on Descartes, the second on Spinoza, the third Maimonides and the last chapter is on the

relation between Spinoza and Maimonides.

Descartes was a pluralist and Spinoza a monist. Spinoza was not appre lated during his life-time and the following century—because his monistic ideas ran counter to the pluralistic theory of the time. The Cartesian tradition had to reach its culmination before Spinoza could be studied and appreciated. Intil Kant had worked out the logic of the pluralistic individualism of Descartes there was no room for the monism of Spinoza. His work was first recognised by the post-Kantians who extelled him rather extravagintly.

recognised by the post-kantians who extended rather extravagantly.

Principal Caird says that a vast amount of learning and ingenuity has been expended on the question of Spinoza's supposed obligation to Maimonides. Chasdai Creschs and other distinguished philosophic writers of his own race. But according to him "their occasional coincidences are such only to the ear." But our author has shown that the 'supposed obligations' are more than occasional coincidences. Our author has described the various stages of the development of Spinoza's

monism and traced back one by one their analogue or origin in Maimonides. According to him "Maimonides and Spinoza speak throughout with one voice".

The book is well written and will repay perusal Maneschandra Grose.

INDINA & OTHER STORIES By Bankimchandra Chatterjee Translated by J.D. Anderson, J.C.S.D. Lit with an introduction. Published by R. Chatterjee, 91 Upper Circular Road Culcutta. Second Edition. Pp. 145 Price Rs. 2 (1925).

The price of Mr. Anderson's translation has been reduced from Rs. 2-8 to Rs. 2 with the result that the illustrations for which the late Mr. Anderson made these translations, as he says in the introduction, have not been inserted in order that the cost of the book might be equalized with the sale price. As to the merits of the translation, there can be no better testimony than this that the first edition was exhausted long ago, and the demand to meet which this new edition has been brought out, is the best proof of its popularity with the English-reading public. Those non-Bongalee readers who have not yet made the acquaintance of this great novelist of Bengal, specially of his short stories, will have no excuse if they do not take the opportunity for doing so through the excellent translation of an Englishman whose intimate knowledge of our vernacular made him peculiarly fitted for the

PRIMARY EDUCATION ACTS IN INDIA. A STUDY By J. M. Sen, M. Ed. (Leeds), B. Sc. (Cal), Professor, David Have Training College Calcutta, with an introduction by E. F. Oaten, M. A. L.L. B. Director of Public Instruction, Bengal Published by the Education Committee, Calcutta Y. M. C. A., 25, Chowringhee Road, Calcutta. Price 8 as

This modest volume of some 100 pages should be in the hands of M. L. Cs and members of District Boards and Municipalities in order that they may benefit by the knowledge and training of an educationalist who has made the problem of education itself his special field of study. Mr. Sen has discussed the problem in three chapters viz. (1) Government's Educational Policy from 1990-1917, (2) Passing of Education Acts in different provinces, (3) Progress after the Passing of the Acts, and some general remarks. His conclusionand suggestions are made in the liberal spirit to be expected of him and Mr. Oaten writes in support of their acceptance by the people through the Minister who are glorified as the custodians of the future welface of the masses without mentioning a word about the former trustees who have till now neglected them and kept them sink in such ignorance. However, Mr. Oaten assures us that he will doem it a privilege to work for the popular minister who will initiate these reforms in Primary Education

HINDUSTANES SUPLIFIED By Dinesh Chandra Datta M A Tobe had of S C Addu & Co and other leading book-sellers. Proc Rs 3. Key Re 1

This new book to make the learning of Urdueasy for learners has been present by persons competent to speak on the subject. It will facilitate the study of Urdu language for persons who cannot afford to learn it from a teacher, as there is a key to the exercises available for use by learners also.

A K. Ghose.

Pundalik: By Harindranath Chattopadhyaya. Reprinted from Shama'a, January 1924.

OUT OF THE DEEP DARK MOULD. By Harindianath Chattopadhyaya (Mrinalini Chattopadhyaya)

THE WIZARD'S MASK: By Harindi anath Chatto-padhyaya (Mrinalim Chattopadhyaya)

The reviewer has had these three little books before him for some time and has read and reread them with the utmost pleasure. Indeed were it not presumptuous, he would be tempted to quote Browning's praise of Keats "Stand still true poet that you are ... one man
Saw you and named a star"
For, judged by the highest standards, Mr Chatto-

padhyaya has every claim to be called a poet and one does not wonder that he has won praise from such eminant writers as Rabindranath Tagoro, George Russel, Laurence Binyon, Aurobindo Ghosh, Yone Noguchi and Alice Meynell amongst others It is not unnatural that Mr Chattopadhyaya should their rectus courses. show poetic genius. His family abounds in genius. The reviewer well remembers the poet's father, a man simple as a child in all worldly matters, but wiser than most in the affairs of the spirit one has not read the poetry of Sarojini Naidu especially the Bird of Time and the Broken Wing he has before him hours of delight when he does so. Another sister, Miss Mrinalini Chattopadhyaya has been and is editing the Shama'a with most conspicuous taste and has attained a success, if not commensurate with her descrits, at all events extremely encouraging to lovers of literature and art And Harindranath Chattopadhyaya! If the reviewer were not afraid of being led too far by his enthuwere not afraid of being led too far by his enthusiasm he would unhesitatingly describe this poetry as worthy to rank with the very best Pundalik is a playlet written in distinguished blank verse—indeed the greatest English blank verse any Indian poet has written after the late Manmohan Ghose—and interspersed through it are some excellent little lyrics calling to mind some faint reminiscences of Swinburne Pundalik Bushed with the arrogance of youth insults his flushed with the arrogance of youth insults his parents, derides old age and declares that the life of the flesh is the only life. His parents leave all their worldly possessions to him and go on a pilgrimage to Kasi. He decides to follow them—not as a pilgrim but as a great lord Who knows whether awed by his magnificence the people there may not erect a shine to him as a God? On his way however a storm overtakes him and he seeks shelter in a hermit's hut. There he sees the three rivers Ganga, Yamuna and Saraswati who point out to him that reverence to one's parents is one of the greatest of virtues. Pundalik experiences a complete change of heart and is vouchsafed a glimpse of Vishnu himself. The playlet ends on this theme. It is written in beautiful language and beautiful verse with a strong dramatic touch. Let us consider a few extracts He explains to him mother why he has smarked the lattern returns. his mother why he has smashed the kitchen pots of clay

Because I could not suffer a blue shadow That stole in through the door with guilty steps To kiss the red curve of their earthen bodies,

Your kitchen pots were whores"
-an insufficient excuse, because Pundalik delighted in whores himself.

"Pale hands of lovely harlots light his house." Another extract to illustrate the author's wealth of metaphor and phraseology may be given: And every com whether of gold or copper Whether of brass or silver brings the world A cringing cur to us a somewhat closer Until at last it licks one's feet with joy And renders thanks for all the crimson stripes
We print upon its body with proud strokes"
'somewhat closer' is an uncommon phrase but here it is not out of place. Here is one of the lyrics -

1st Pilarim

We are going to seek the Mother of mother, Come with us, come with us, into the light The stones on the roadway are only our brother They will not hurt us even at night.

2nd Pilarim

We are going to seek the Father who waits for us Come with us, come with us, out of this land Lo! he has opened his luminous gates for us And waits with a wonderful lamp in his hand "Nearer to nestle in the nest of God" is a line

"Nearer to nestle in the nest of God" is a une the alliteration in which is very successful.

Occasionally the poet does not maintain his high standard for example "The celebrated Guiu of the Gods" is almost as fatal as 'A Vir Wilkinson a clergyman' (a line written to parodi Wordsworth at his worst) and 'to bode' (unless it has misprint) instead of to bide is not very happ. First thing tomorrow at the dawn of day' cannot have any strictly of the invertination by described as by any stretch of the imagination be described a poetry. Towards the end of the work there is passage strongly reminiscent of Shelley's won derful lines

"The one remains the many change and pass'

the passage in Pundalik

And it may be that when the one is seen The invited melt away dissolve and pass lake winter hazer wandering over a hill Wander and pass and then are seen no more"

Pundalik in short is a great achievement in the

realm of poetry

Out of the Deep Dark Mould is a collection of poems which takes its title from the first piece. The poems in this volume written in written in ringing metres fully live up to the author's reputa tion and deserve a better get-up Of many good things mention may particularly be made of "The Old Dream". 'Seership'—the last line of which is haunting—In the sweet twilight of ephemeial things'—"Pale fruit" and "Song of a Mod" which again is reminiscent of Swinburne's lone "Outside the garden" In the poem—"Volcano" onto the swinburne's lone of "love lone" with rather deplores the rhyming of 'they know' with volcano

The Wizard's Mask contains other verses of Mr Chattenadhyaya and concludes with a playlet entitled Seva the Barber which is written in rhyming verse and is very successful. The song of the 1st Musician suggests something of Matthew Arnold

and no higher praise could be given it than that.

A perusal of these three little books shows that Harindranath has established for himself a place in English Literature. Of Indian writers of English verse he is worthy to rank with Manmohan Ghose Mr Chattopadhyaya is no novice and yet he is still young. May he have many years of life still further to delight lovers of peetry with his admirable craftsmanship and his real poetical feeling.

SANSKRIT

The Rajaniti-Ratnakara: By Chandesvara, edited Kashi-prasad Jayaswal M. A. (Oxon). Published the Bihar and Orissa Research Society.

Wr Javaswal, a "revolutionary", as styled by padhyaya Sri Saila Kanya Bhatta (Dr Sten Konow) a meeting of the Visyabharati Research Society, tho pulls down old edifices and builds up new less, comes to us this time as an editor of a anskiit work on his own favourite subject, to hich we extend our hearty welcome The author handsvara who was born in a very learned mil in Mithila wrote the work in the first parter of the fourteenth century of the Christian rain the reign of the king. Hari Sinha of the arnata dynasty in Mithila His Vivadaratnakara in the Bibliotheca Indica is well ublished in the Bibliotheca Indica is well nown to scholars. As the very name shows, his resent work is on Rajaniti. or in older terms, landaniti or Arthasastra. It is divided into sixten chapters called tarangas, 'waves' the main plume being termed a ratnakara 'Ocean', and alls with the common themes of the subject ich as Rajan, Amalya, Purolita, etc. It is therefre a very tumortant work, specially for the indents of Hindu polity, and we are thankful to ne Bibus and Orissa Research Society for their ringing it out for the first time. It is well edited, hough not free from printing inistakes. The hough not free from printing inistakes fort 1s a standing one as regards an Indian ress. On page 26 in the last sloka quoted from land (VII 70) the word must be dhanna-dunga quivalent to dhannana dunga of Kautilya's or autalya's Arthasastia XXI. p. 51) 'desert fortress and not dhannanadinga as printed. This is repeated so in the following line on the next page which so in the following line on the next page which ads "dhanm-durgam urchraya-restitam". So far we can say, the last word here, urchraya-restitam which has no sense, should be manu-restitam in the Tiha of Kulluka from which evidently e exposition has been taken by Chandesvara The editor should have given here a short note on it With reference to a sloka in the text (n. 83, 1' 18-19), Mr. Jayaswal writes in the Introduction (p. 8) "Chandesvara quotes a text (n 83, l' 18-19), Mr. Javaswal writes in the introduction (p s) "Chandesvara quotes a text (n 83) where P raja or subjects are described as Vising." We are afraid, this can hardly be accepted. The second half, which is defective owing to some, misreading, is edited by Mr. Javaswal in three ways in three places (pp s, bh. Javaswal in three ways in three places (pp s, bh. Javaswal in three ways in three places (pp s, bh. Javaswal in three ways in the places (pp s, bh. Javaswal in three ways in the places (pp s, bh. Javaswal in three ways in the places (pp s, bh. Javaswal in three ways in the places (pp s, bh. Javaswal in three ways in the places (pp s, bh. Javaswal in three ways in the subjects hear from today this kingdom does not belong to me, from today this kingdom does not belong to me. Here is the king Let him protect the subjects. Thus there is nothing about describing the subjects as Visnu

ADHYATMATATTVALOKA WITH GUJRATI TRANSLAnjaya, translated into English by M. J. Mchta. Published by Abhaya Chandra Bhagavandas Gandhi, Bhavanagar. Pp. LII+13+47+829.

The volume before us deals with spiritual principles with regard to Jinisim The original book is in Sanskrit verses composed by the author himself and extends over only 40 pages, the remaining ones being covered by the translations,

notes etc. We do not find any necessity in the present age for composing such new books in Sanskrit and specially on the same old topics and in the same old way or mainly in an inferior one for the benefit of the public

GUIRAT PURATATTVA MANDIRA SERIIS, SAMMATITARKA-PRAKARANA OF SIDDHASENA DIVAKARA WITH ABHAYADEVA'S COMMENTARY, VOL 1 Gujrat Puratativa Mandna, Ahmedabad.

Siddhasena Divakara (about 533 A D) was the first writer among Jams on systematic logic. His Nyayaratura is now known to the students of logic His present work Sammati or Sammatitarka is composed of 167 gathas or verses in Prakrit, and divided into three chapters (Kandas) It establishes the anchantaiada or Syadiada of the Jinists, dealing with their general philosophy The commentary on it. Tattva-bodhim, by Abhayadeva Suri is a big one and full of subtle discussion with with opposing parties belonging to different schools of Indian philosophy. In it their views are strongly criticised and refuted on every occasion And in doing so it quotes a number of authors in which Buddhists are also included. In the present part (pp 20+166 of lng size) there is only one original gatha of two lines and all the pages are covered by the commentary only in that one globa. From this fact one may imagine the extent of the commentary. In the philosophical literature of the country the book has special importance in various respects. It is written in the style adopted in mediaeval philosophical works and as such is a difficult book. The whole work will be issued in four parts the last one containing translation, etc. The Guirat Puratattya-mandiza is to be congratulated on bringing out the book.

Anvaitadipika Bu Pandit Anantaki ishna Shastri. Professor, Calcutta University.

The author hardly needs any introduction to those who have any connection with the society of the deeply learned pandits of old type whose number is unfortunatly dwindling day by day life is one of those profound teachers of Vedanta and Mineroes of whose the country to the society of the country to the society of the so and Umamsa of whom the country may still feel proud The book is written by way of a criticism of Vyasarava's Madhi atatparya Candiika and two other books refuting Sankara's adiantarada from the diana stand-point of Madhya Pandit Arantakrishna has, however, re-established that ndi aitai ada offering as strong arguments as could be expected from a teacher of his calibre

VISADA: By Pandit Maharir Pandeya, Professor Astronomy and Mathematics, Bharatesvari Marawari Sanskrit College, Chapra.

In Sanskrit Pathasalas, Spherical Trigonometry of Pandit Nilamban's Golaprakasa is widely read and is prescribed as a text-book in different Sanskrit examinations. The author has written the commentary, Visada, on this work with a view to There are meeting the requirements of students given some model questions in the end.
VIDHI'SEKHARA BRATTACHARIA.

HINDI

PRITHIVI-PRADAKSHINA: By Shir prasad Gupta* Edited by Mukumdilal Srivastava Published by the Juanmandal Office, Benarcs, 1924. Pp. xxiv and xin+409. Price Rs. 15.

Babu Shivaprasad Gupta, the patron of the "Inanmandal Series" is well known for his munificance in the cause of learning. His fortune coupled with high culture has secured for him a unique position in the United Provinces. His extensive tour for 21 months in foreign lands as the sub-title of the work indicates—forms the basis of the present volume in which Egypt, America, Japan and China are described. From a study of the book one will surely be convinced that Mr Gupta is not a mere sight-seer. He knows how and what to see in the peoples of other lands how and what to see in the peoples of other lands. We need not hesitate to assert that Hindi literature is enriched by this production of Mr. Gupta So we look forward to other parts of the work. The perusal of such a book with so many beautiful illustrature and broad or account of the contractions and broad or account of the contractions. trations and based on personal experience will help one in forming a notion about what is going on in the wide world of to-day. We congratulate the author and the publishers for the number and execution of the pictures which may be termed as a landmark in the printing of Hindi books. The life-sketch of the author will be interesting to many, owing to the troubles through which he had to pass in the course of travelling in the hard days of the Great War.

BHARATIVA SASANPADDHATI—PARTS I and II. By Ambikaprasad Vappeys. Pp 136 and 228. Published by the Indean Naturnal Publishers Ltd 156 B, Mechabarar Street, Culcutta 2nd Impression.

These books give a general account of the present system of the administration and constitution of India.

MARATHI

HISTORY OF THE ROYAL FAMILY OF AUNDH. PART I. By Mr A. N. Bhagwat, Pages over 600 Pric Rs. 5 Publisher—the Aundh State.

One good sign of the awakening of Maharashtra One good sign of the awakening of Maharashtia to the importance of history is the growing number of historical works in Marathi literature. A good deal may be said in praise of the untiring exertions of those who are making researches in history, but the unpleasant truth has to be told that most of the writers on history on this side of the country display lack of historical sense and sound judgment. For instance, in the volume under notice, the writer seems to have adopted the partisan spirit and displays utter lack of the sense of proportion, when he makes a vain attempt to tisan spirit and displays utter lack of the sense of proportion, when he makes a van attempt to prove that the title Pratinidhi, which, in ordinary parlance means the Viceroy, carried with it, in the case of Parasharam Trimbak (the founder of the present ruling family of Aundh State) an equal, if not higher, dignity and powers than the Maratha King himself who conferred that title on him. This missingeption on the part of the writer has vitiated his whole outlook of history and made him magnify the importance, of Parasharam Tambak, who was undoubtedly a great figure and a

conspicuous personality in the time of Rajaram, last played false to Shahu, a fact that cannot be denied whatever attempts be made by mercenary writen to whitewash his 'conduct or to controvert the statement made by responsible historians of unfectered and unbiassed judgment. Had the author of this biography of Parasharam Trimbak produced a single reliable document from the archives of the State records in support of his contention, it would have been something. But such is not the case as an instance of the utter lack of the sense of proportion displayed by the writer we may men tion here that over 110 pages out of 600 of this book have been devoted to the praise of the poetic composition of Parasharam Trimbak, who was anything but a poet in the strict sense which literary critics attach to the term Even a cat may look at a king, says; well-known adage, and true historians and true literary critics are wild cats. They cannot foiled an attempt to over-ride truth and allow any other consideration to soil it. The present Chief of Aundh is himself a man of fine literary talent and we wonder how he allowed such a book tainted with faults inherent in any mercenary work, to get the state of the present of the presen played false to Shahu, a fact that cannot be denied with faults inherent in any increasing work, to go unrevised by a competent person and to enjoy his patronage
The big volume is nicely printed and the illustrations are finely executed.

Arm. Vadeep—A Treatise on Health. By Mr. & J. Golhale of the Training College for Men. Pound Pages 152. Price As. 12.

'Back to nature' is a slogan with many person in these days and the writer has done well to show how health can be well-preserved by observing the laws of Nature and without resorting to drugs. The book is full of useful information, well-arranged and nicely expressed.

TALLS OF BENGALI HEROES: By Mr A V Aph Pages 41. Price As. 5

A book of anecdotes of Vidyasagar, Blude Mukherjee and others, illustrating several virtue which Indian boy-scouts should make a constan endeavour to attain.

Shri Dashodhachi Rutresha of a General Oti Line of Dashoda of Swami Randas By Mr. V 1 Sathe Pages 183. Price Re 1-10

Dashodh, the unmortal work of Swami Ramda Shiwan's Guru, is a household gospel in Male rashtra, and is highly respected especially by th Nationalists. Much preliminary information, politica social and spiritual, is required to be able to grafully the meaning of the simple-looking word used by the political saint and the book undo notice is a creditable attempt to supply the information.

GADE TRI: By Messrs S. V. Joshi B. A. an K. V. Sathe M.B.B.S. Pages V44. Price Re. one.

This joint production of two well-read, your enthusiastic writers is a welcome addition in permanent form to Marathi literature. Young in in these days have a peculiar fascination for B. Gadkari, who shone brilliantly in the literary firm ment of Maharashtra for too brief a period enable persons of a critical turn of mind to rea examine, and pronounce on his dramatic at poetic works. The authors have in the preservolume subjected Gadkari's dramatic works on to a searching examination and have pointed of faults, which are admittedly very garaing, at nt to dethrone him from the giddy height to his undiscriminating admirers have attempted chin. Gadkari had, no doubt, uncommon y parts, and had he been spared to us for a mire more, he would have perhaps achieved e lasting fame. But taking his performance is, we cannot join the chorus of the high num showered on him by fussy admirers at expense of the world-renowned poets and thats like Valmki, Shakespeare and Goethe, without of this book have wisely abstained committing such a folly in praising Gadkari hey have mingled praise and consure in due notion in judging of his morits and demerits.

MACHEN BUND OR KING'S REVOLT.—A DRAMATE By Mr. S. T. Karkhams, Price Re. I.

king completely playing into the hands of the aneracy whose high-handedness knew no bounds, lenly revolts against his own former conduct turns over a new page in his. This simple when skilfully worked into a play by a person Mi Karkhanis who, by the way, has carved a retor keen insight in dramatic lore was expect-to command high praise from critics. But here unexpected has happened The play does not the expected height of excellence and falls on its readers, owing to the excess of idealism realism. The author seems to have anticipated is result, masmuch as he has given his play an emative title of 'Monorayya.'

A BIOGRAPHICAL SKETCH OF BARRDTLE SAVARKAR I Mr S R. Binnde, Pages 86, Price as. 8

Mr. V D. Savarkar's life has so far been eventl, though full of musings and long sufferings life is more than paid for his indiscretions of youth id we have no doubt he will be only too glad to rop a cultum over them and begin he afresh is alimning biographer has therefore unwittingly one him an injustice by not letting him atone ad choosing a new path of life after mature insideration. As it is, the book is readable and fill serve as a warning to erring youths.

V. G. APTE.

MALAYALAM

Hema-paniaram: The Case of Gold. Translated by Semant T. Madhari Amma. Published from the lumaning Printing House, Trichur (Cochin State) Pp. 309. Prioc as. 12 only.

Thus interesting love-story is a free translation from the English rendering of the Sonar-khapicha, the original Bengali novel by Sita Chatterjee. After going through the book carefully we are able to say that Srimati Madhavi Amma writes in the lucid and flowing style of a novelist. We carnestly hope that ere long we shall see some of Madhavi Amma's own productions, besides her translations of all the other novels written by Sita Chatterjee from the original Bengali.

The long light of create of sixty pages added to

The long list of crata of six pages added to the beginning of the book looks hardly harmonious with its nice get-up.

MALATI. By C. P. Gopala Pillai M. R. A. S. Published from the S. R. Book Depot, Trivandrum Pp. 68.

This contains a very pathetic story of a young girl, Malati, who renofinces her life to prove the truth of her devotion for her lover by drawning

herself in a river It is written in the well-known Galha style of poetry. The subject seems to be the author's own creation Mr. Pillai is evidently, a poet of deep insight and original ideas, and can, undoubtedly, do, if he will pursue this line, a great service to the Malayalam poetry.

P Anujan Achan.

GUZARATI

MANONUKUR, Vol. I. By Narsinhiao Bholanath. Printed at the Guyerati Printing Press, Bombay. Cloth bound Pp 567 Prue Rs 3-0-0 1924.

This Manomukui or Mirror of the Mind is a collection of a part of the numerous prose writings of the author who, though his melier is versewriting, is none the less widely known as a vigorous prose writer and meticulous reviewer. The volume comprises of subjects, grave and gay, biographical and technical The volume is a valuable addition to our literature, as it brings together in one place, what was lying scattered in many old and new periodicals.

ARAVIND VICHAR MALA FLOWER II: Translated by Thakker Narayan Visanji Printed at the Diamond Jubilee Printing Press Ahmedabad Cloth bound, with pictures of Aravind Ghose, Paul Richard and Bankim Chandra Chattern Cloth bound Pp 282, Prira Ro 4-9-9, (1924).

This translation in its get-up and matter is fully in keeping with its predecessor. The thoughts of Aravindatihose as Vi-liwa Vichai have been correctly conveyed to the (juzarati Reader, and it has been done at a great sairifice of time and labor, as appears from the footnotes

MARKTEN SAIKH SANDE By Saday Printed at the Mahes Printing Press, Bombay. With inclures, Cloth bound, Pp. 206 Princ Rs. 2-0-6 (1924).

Sadin Karbatai who has written this book on the basis of the Men of Letters Series in English, is a young man from Iraq or Mewpotamia, whose mother tongue is certainly not Unjarati, and it is a marvel how he has been able to put all he has to say about Sa'adi, the well-known Persian poet and author of the world renowned Gulestan and Bostan, in such comparatively correct and chaste Gujarati Everything known about him has been put down here, with illustrative extracts and allitogether the work has been done in such a way as to furnish a land-mark to students of this branch of literature.

Drsus Dansitan v. By Kumari Sumira Dayalji Mehta, Principal, Kanyagurukid, Dellii, Printed at the Aditya Printing Press, Alimedahad, Cloth bound Pp. 381, Price Rs 3-0-0 (1924).

The original of this translated book by Thakin Shree Randass Sinha, B.A., in Hindi requires no introduction. The social stato of our country as well as its economic condition, as viewed from the principles of Eugenies and Birth Control, and the miserable picture it presents is set out in the most forceful way by the author He has selected a mass of statistics and instances to illustrate his points; the ill-matched life of India's married couples and the way in which in consequence thereof, both men and women go wrong, are paticularly discussed, and the details though nauseating, vividly color the picture. The lady-translator a fine student born of Hindi and Gujarati has boldly tackled the task

and not shrunk from referring to the last nonsavoury details. We like the book and wish it good luck.

Local Self-Government in Ancient India: By Champallal Lalbhai Mehta. B.A., L.I.B., pp. 200. Price Re. 1-1-0.

Unnati Vichar Part I. By Jayasukhrai P. Joshipura. Pp. 360, price Re. 1-10-0

CONSUMPTION IN INDIA By Manulal Chhotalal Parikh, B.A. Pp. 183. Price Re. 1-0-0.

Bugs Ann Lace: By the late Mr. Indurasan Dalsukhrar Desar B A. Pp. 45, Price as 0-6-0, All printed at Baroda, cloth bound (1924)

The first three books belong to the admirable series started by H. II. the Maharaja Gaekwar of Baroda for the encouragement of literature in general and the fourth to the series for the encouragement of juvenile literature. Dr. Radha Kamal Mukherji's researches into our old books have resulted in an admirable treatise on the subject of Self-Government in ancient India, and this translation very brings out the important points of the thesis. The second book is based on certain chapters of Bagehot's Physics and Politics, and as great minds think alike, the writer of these pages says that his thoughts on the social problems of India had led his to the some conclusions of Pagebat and his led his to the same conclusions as Bagehot and he is grateful to H. H.'s offices for having allowed him an opportunity to publish them in this book. The third book is written with the laudable object of familiarising people with the evils of consump-tion and tuberculosis, and the means of overcoming them. It is written by a layman and so far it is creditable. The title of the last little book speaks for itself

PRAKRIT

PAIASADDANAHANNAVA By Pandit Hara-govinda Das Trikamchand Seth. Nyaya-Vijaka-rana-tirtha, Lecturer in Prakrit, Calcutta University, Part I, p. 259. To be had of Daluhand Manik-chand Seth, 49, Erra St Calcutta.

The author hardly needs introduction, to those who have acquaintance with the Yasorijana Janua Granthamala. His present work is Piakrit-Hindi Dictionary. We extend our hearty welcome to it Dictionary. We extend our hearty welcome to it Prakrit is the sacred language of the Jinists as Pali is of the Buddhists. One is, therefore, really glad to see that the former have discharged their own duties by bringing out different lexicons of the Prakrit language being not dependent upon others for them. The first Prakrit dictionary is the great Abhidhana-Rayendra edited by Sri Vijayarajendra Sun. It is in fact an Encyclopædia or the Sabdakalpadruma or Vacasputya of Sanskrit. or the Sabdakalpadruma or Vacasputja of Sanskit. It deals with the words and subjects relating to Jain literature and religion. The second is the Ardhamagadhi Dictionary in Sanskit, Guirati, Hindi and English by Satavadhani Muni Sri Ratnachandraji. As the very title shows, it is confined only to Ardhamagadhi words found in Jain literature. The third is the present one. It is not confined to any particular kind of Pkt. or sectarian literature but it deals with the words in Pkt. in general in Pkt. in general

It supplies Sanskrit equivalents so possible, quotes authorities and gives references. The words are explained in Hindi, yet the language is so simple that it can be used by anyone knowing some vernacular of Northern India. A Pkt. dictionary of this kind was a desideratum and every Pkt. -lover should feel thankful to Pands Haragovindadasa who has now supplied it Wi have not the least doubt in saying that student of Pkt will be much benefited by it.

As regards the treatment of the subject w should like to make here some observations Speaking generally, it seems to us that a large number of words has not been dealt with critically or discussed philologically, merely depending on the commentators or the grammarians who are generally very fend of giving fanciful or farfetched derivations of words Of course, so far as the authorities are concerned, the author is quit them always, we cannot rest satisfied with the more statements. Let us take here a few example. On page 101, we read "Arayaccha Idio dekhna Arayaccha (He 4181) It mean that arayaccha is from dris But it is impossible Hemachandra's statement must be explained in different way. When he says that in the place (√dris there are following adesas: myaccha, perchi avayaccha, etc., he only means to say thereby the in the sense of \sqrt{dr} those roots are to be used for he can never mean that those forms are derive from \sqrt{div} . So in showing the derivation of the respective words one must write arms Vgaccha (gam), ni+Vgaccha (gam) ma+Viky etc and not Vdri. And in Sanskrit, too, non should say that pasyate is derived from Value which is impossible. The fact is that pasyatin from spas 'to see' used not infrequently i Vedic texts, while only three derivatives of it, s far as we know, are found in classical Sanshi viz. spasa spy' (Cf Lat sper in ousper, Gr. shope Ger. spaken Eng spy), spasta clearly perceived and paspasa the name of the first chapter of Patanjah's great commentary on Panini In th same suba of Hemachandia pasar is from passed and is in no way connected with dries. There are many such instances in the detionary. Let us take only one of them more lt is said (p 130) "Aumtana [ahincana] Samko (He 1177)" Acharya Hemachandra himself is no justified here in saying Ahincanam Aumtamanam Atra casya taliam" C can never change to The fact is that aumtana is from avartana the intermediate stage being auttana which has how ever, been shown by the author. He is also quit right in explaining aumta on the same page correcting it with autha (s. availa). It is evident. necting it with autia (< acritia). It is evident the Dictionary that marking words as den desya has not always been done properly. The is a large number of words which cannot be classically a large number of words which cannot be classically a large number of words which cannot be classically a large number of words which cannot be classically a large number of words which cannot be classically a large number of words which cannot be classically a large number of words which cannot be classically as a large number of words which cannot be classically a large number of words which cannot be classically a large number of words which cannot be classically a large number of words which cannot be classically a large number of words which cannot be classically a large number of words which cannot be classically a large number of words and large number of words as dear of the large number of words and large number of words as dear of the large number of words which cannot be classically number of words and large number of words which cannot be classically number of words and large number of words which cannot be classically number of words which we fied under dest even though Hemachandra masay so. For example, ohadam (p. 258), Pandi Haragovinda Dasa rightly gives its Sanskri equivalent avoghatani, and thus the word is tadbhava one. Yet he marks it as de (=dcst) referring to Hemachandra. The word uniharia (p. 180 is also marked as de. But could it not be derived. from Sanskritized upharita (ud+ \sqrt{jhar+ta})? Fo √ jhar 'to flow' cf. jhan 'a river,' nirjhara 'a foun tain.' This root in its present form is not to b found in Vedic texts, the former form being \square ksar Compare here its Avestic form \sqrt{ghzhar} 'to flow Therefore, the word in question must be marked as tadbhara and not de. The word jhar max

iginally be an onomatopoetic one, but we have sthing to deal with it here.
On page 6 the actual word is ausa (the first a ung long and not ausa nor is it dedoes not also mean an upasaka. The thor has evidently been misled here by a writer of the chaya of the Prakrit rion in the Principly uninthrough T.S.S. 12. pp 44 45, from which the word is taken he true form ausa is given by the author in its

proper place (p. 131) in the sense of dirghayus 'a long-lived one'. Its Buddhist or Pali form is aruso, a polite form of address, specially of bhilkus of equal rank. Both the words are evidently from Sanskrit ayus with different suffixes

As the Dictionary is being published part by part, the abbreviations should have been explained in the present part which contains words begin-

ning with vowels.

VIDHU-ПЕКНАВА ВНАТТАСИАНУА.

VILLAGE UNION BOARDS IN BENGAL

By BHUBANMOHAN RAY

TNDER the Village Self-Government Act of 1919, Union Boards have been established at various rural centres in Bengal, and they are now well under way. These union boards, are not, however, a novel institution in India. The old panchayet system as a phase of the one-time village communities, is well known to history, but its vogue has long passed away, and to-day after that system has been practically moribund for centuries, the union boards just started are evidently an attempt towards a revival of past conditions in tune with the present.

The ultimate success of Self-Government in ludia will depend to a large extent on the degree of success achieved by the union

boards away in the countryside

Act V of 1919 thus marks a transition-stage, and is fraught with very large possibilities; but the provisions of that Act, while excellent in their general bearings, unfortunately leave here and there loopholes for maladministration, miscarriage and friction, all of which must needs be covered up to make for the best results possible with what average resources the Indian village commands

Villages in Bengal are unfortunately all in a bad way. Talent is nowhere idle, and to find the best scope for itself, rural talent has a tendency—and this tendency is very marked now-a-days—to move off to its own proper field in the towns. The best men of every village thus invariably immigrate to urban centres, and only their less capable brethren are left behind to shift for themselves as best as they may. The capacity of these people for concerted action, except

where the conditions are particularly favourable, is of the least, and the merest trifle often sets the ball of faction and intrigue rolling for no one knows how long. That is a point which must be kept constantly in view in legislating for our rural population, and calling the tune for reform in the country-side.

I propose here to offer a few comments in the light of my own experience on certain provisions of the Act which, should be revised so as to suit the requirements of those for whom it is meant, better than it does at present

1

First, as regards the constitution of the union boards and the powers vested in them. The whole executive power is left practically to just one man, the president, out of a total of nine members, the duties of the rest being confined solely to attending the monthly meetings of the board and to giving That done. their votes at those meetings they wash their hands of the whole business, as if they for their part had no direct stake in the results. As a former president of a union board, the present writer has at every step felt the evil effects of such a centralisa-As tor the other members, tion of authority the feeling at the back of their minds in every union board constantly is that while all the nine men on the board are working together to produce the same results, only one of them figures at the top bossing the show and taking the hon's share of honours in the shape of prizes and iewards, the remaining eight men, though all of them are his colleagues, contributing more or less to his

success in discharging his many-sided responsibilities, having to go away empty-handed when, after the year's grind is over, a general survey of the board's work comes to be taken.

There is such a thing as human weakness, and it must be duly allowed for. Though an attitude like the above cannot have a shadow of moral justification, there is all the same no denying that in the work-a-day world petulance and petty jealousies are nothing out of the common, and we must not be too hard upon union board workers if they are not free from this taint and the relations among them are not always the most cordial.

The remedy that occurs to me, however, lies perhaps in such an apportionment of functions on the executive side as would to all intents and purposes shut out party feeling and split, by giving to the other members a reasonable share of the president's own responsibilities. Let the president stand responsible as now for the general working of the board as a whole, but let one member be held answerable for Education as Education' Member, another for Sanitation as Sanitation Member, a third for road works, a fourth for water-works, and so forth, the president exercising general supervision over them all, and a power of vote on their actions what I have seen of the ways of people in the country. I feel warranted to believe that under such an arrangement the best results will be obtained, and obtained soonest. The sense of self-esteem of the members will be stimulated, and they will get to be decidedly more alive to their responsibilities than they have been till now, a sense of amour propre will spring up, and their co-operation with the president and with one another will become a living reality.

Government has instituted a system of annual rewards for good work done by union board presidents. As a president is by virtue of his position already a man of mark, a certificate of ment or any other mark of public recognition of his services, more substantantial than a certificate, does not exalt his position much. The very fact that he is president of his board is advertisement enough of his superior worth, but his colleagues pine away in obscurity. though they may be giving solid work all along the line, they get no credit, and their merits make no outward show. no earthly incentive to their activities only an altruistic zeal for the promotion of the public good. Ţ.**\$**

The average mortal is seldom content with such a lot, and a member of a union board, whose calibre by the way is scarcely above the average, cannot be much to hlame if he occasionally frets, and reaching out in vain for privileges to which he has no access, grows lukewarm or positively in different to the varied interests entrusted to his care; and stands practically aloof and aside, leaving the president to bear his own burden single-handed as best as he may. When the president happens to be a mere lay figure, and matters come to such a pass, the interests of the board suffer terribly.

Far be it from me to suggest, however that the above is a normal picture of the unior boards in Bengal I am proud to be able to say that most union boards work smoothly in full harmony with the president and it cheerful submission to his lead. Yet where jars and bickerings are in evidence they are as a rule, due to the one cause just indicated to the fact of the president holding a mono poly of power and responsibility, and employing the agency of the other members only as an advisory body, which, by the way, the latter virtually are relatively to him

Looking at the matter again from the standpoint of the president himself, it would be idle to deny that his responsibilities ar too many for an honorary worker He i the cashier of the board he stands for, and the custodian of all its furniture and recordhe alone stands to look after the collection of the rates, and to carry on the board' correspondence; to execute union decrees, to inspect all work in progress unde sanitation, road-works, water-works and al the rest of them, to invite tenders and settl contracts, to make and receive payments, t keep the boards' accounts, to receive inter viewers and hear their grievances, to meet a hundred other calls on his time and atten tion—all of which makes a mountain-high hea of distracting work which only a leisure man free from the cares of family and th trammels of private affairs can cope with Few men with any pretension to worth and above soiling their hands with dirt work are prepared to face such a terribl grind, and many a president after a year or two years' spell of devitalising toil ha at last resigned from sheer exhaustion.

In some Eastern Bengal districts a good many union boards have not yet fund enough to start work in every direction; but once their scope of activity has fairly developed with ampler funds than are no

ailable to back their operations, many more esidents, I warrant, will either sheer off, or t things slide, however public-spirited and triotic they may be.

So the only possible remedy for the esent anomalous position of affairs, I take is to be found in a judicious division labour between the president colleagues—at all events the abler one nong them—subject to president's the pervision, and his veto where necessary. ut this division should like the presidentand the vice-presidentship be always ective, and not delegative at the president's hil , that is, after the election of the presient and the vice-president, the Education, anitation and other members will, under the theme I propose, have to be elected by the oard from among themselves by vote.

Village folk, much like urban people and perhaps more than the latter, are keenly motious of personal distinction, and the tere designation of Education or Sanitation sember will generally act as a potent spell in them and enlist their whole-hearted ympathy and co-operation. There is no out a touch of vanity verging on the uerile about such a sentiment, but if there is that weakness, why not take advantage if it towards ensuring goodwill and amity?

The proposed arrangement is calculated to ffer numerous other advantages to boot At present the people of a union have practically little means of making sure which of the members other than the president have worked well during a given term, and which have not, and for purposes of election in tuture, or nomination either, neither the people nor the Government can lay their fingers upon any definite data as regards the usefulness or otherwise of the outgoing members of a board towards their subsequent election or nomination But once definite duties are assigned to the members, the record of an expiring term will show what work they have individually done, and an unworthy or apathetic member shall have no chance of getting on the board again, and once more stultifying his constituents by disservice.

In any case the Act should be so revised to make it possible for every member of a union board, or at least every leading member of it to feel that he stands for a definite set of interests ear-marked for him, and him alone, though under the shadow of the president's guidance and control. Else the inevitable consequence will be seediness

and sloppy progress, with a vast amount of work thrown upon the president, and with practically few or none to second him in his efforts.

П

Open voting in elections to union boards should cease, and give way to voting by ballot. Balloting is the rule in Council and Assembly elections, the principle in those cases being to eliminate the operation of all backstairs influence. In those elections, the candidates are, however, seldom men on the spot with much personal influence on the electors But union board elections present a sharp contrast to these, the candidates and electors in this case being all residents of the same union with a hundred and one ties of mutual obligation Independent voting in the case of such people is absolutely out of the question, so long as the elections are made openly as now.

The landholder and the proverbial moneylender rule the roost in a village, and they may turn the scale in their own favour or in favour of whomsoever they please without let or hindrance In fact, 80 per cent. of the votes recorded in a union board election are the direct result of undue influence. sometimes culminating in actual intimidation. and if unworthies preponderate in a good many union boards, even though decidedly abler men are available in plenty in those unions, it is due primarily to open voting. Balloting once introduced, would prove an effective remedy for this evil, provided that no subsequent disclosure is possible; and it is difficult to see why balloting has not been insisted on just where it is needed most. The Act, when it is amended, should by all

III

by balloting

means rule out open voting and replace it

Pare passe with the above may be noted the fact that, strange as it may appear, there is no clear provision in the Act or in any of the Bengal Government Notifications issued up to date under section 101, providing for cases where a president of a union board has a call to make over charge to any of his colleagues during his own absence or incapacity. Rules 12 and 13 of Government Order no. 1030. L. S. G., dated 29th March, 1920, provide for a transfer of charge only to the vice-president. But where there is no vice-president—and indeed many union boards have none—or the vice-president in his turn happens to be absent or subject to

٠.

a disability at the same time as the president himself, and none of the other members is willing to take over charge, the president finds himself in a nice fix. He must choose between letting his private interests suffer. and leaving the board's affairs to take care of themselves till such time as he is in a position to resume charge—simply because none of his colleagues has the good grace to relieve him. This is no doubt an extreme case, but extreme cases do occur now and then, as indeed occurred one such case within the present writer's knowledge some time ago. The president after using all his resources to induce his colleagues one by one to take over charge from him for just ten days, and finding that they all declined and there was no other way out, had to stand tied to his charge till the occasion passed away, but not without considerable loss to himself for the sake of the public trust he held in his hands. A like stand-offish attitude was displayed on another occasion in a matter of inquest in which the president being too ill to act asked some of his colleagues to hold a local inquiry and make an in-spection of the corpse. The only response it produced was a crop of plump Noes. The possibility of such episodes occurring in future should be duly provided against, by widening, if necessary, the president's power of delegation in special cases and making all the members amenable to it.

IV

Dafadars and chaukidars are Government servants, whose services are, however, at the disposal of the union boards. The union rates collected under section 37 (a) are collected exclusively on their account, and these rates make in most unions from 75 to 80 per cent. of the total collections under all heads. Nay more; in a good many unions up till now the whole amount assessed has, year after year, been swallowed up by the chaukidar, whose salaries and equipment leave no margin for anything else. The union boards in all such cases exist practically only for chaukidars. Yet the power of a union board over these menials is subject to so many limitations that all real control over them is out of the question. For, the collective power of an entire board does not go beyond fining a chaukidar up to the limit of a quarter of his pay. Thus even the president himself, to say nothing of his colleagues, is as good as powerless against, a chankidar, and if things go wrong with him

must move the whole board, and that to for nothing more than a fine covering only quarter of his pay. Chaukidars are wise i their generation, and they know how to tak advantage of the situation. "But then chanki dars are Government servants, and not ser vants of the Board," will perhaps be th reply from the side of Government. Surely they are; but they are after all village ser vants, and does it stand to reason that member of a Union Board, or for the matte of that, even the president should have to apply to all and sundry to make them g straight? The money raised from a union for chaukidars, let us not forget, is raised no through any State agency, but through the agency of the union boards, and union board presidents stand to help the Government of the criminal side of its judicial administra tion with local inquiries and in various othe ways, all which work is supererogatory, and indeed vicarious, having no manner of bear ing on the interests of the boards themselves Now if Government employs the agency o the union boards for its own purposes in s many ways, they in their turn may in al reason claim that their power over dafadar and chaukidars should be absolute, even to appointing and dismissing them, and determin ing the total member of chaukidars to be maintained in each union

There are Union Boards by the score and the hundred having a good many more chaukidars under them than they know wha to do with, and the existing number in these unions may be considerably reduced with ad vantage. For, such reduction, even if 1 serves no other useful purpose, will at leas have the effect of setting free a considerable sum of money at present virtually thrown away upon them. In several unions—and say it from personal knowledge—as the board: were out to enhance the old assessment to meet the new exigencies, the rate-payers made a bold stand, holding indignation meetings and pointing out with good reason that in stead of taxing the resources of the people by a general enhancement of the old rates which for years past had yielded them no tangible return in any shape, the boards would do well to begin by cutting down their annual expenditure on chaukidars by reducing their number. That was obviously a fair suggestion to make, but the pathetic side of it is that when these boards appealed to the local Government officers for such reduction, the only 'reply they received im plied that the number of chaukidars must

and good, and that in case the rate-payers ould persist in their clamour against hancement, the woards' work under section (b) might be held in abeyance. All this as tantamount to saying that self-governent in villages under the new Act was to reduced to a mere chaukidari concernrewell to sanitation, farewell to road-works ad water-works, and farewell to primary lucation, lest a few chaukidars less per nion should lead to some unforeseen, and robably imaginary political or other disaster Government also has it in contemplation. s a responsible Government functionary had ccasion to remark publicly some time ago. reduce the number of chaukidars in each mon, but on what basis? Only with a view p raise by this mains the pay of those left That will be n service after reduction. obbing Peter to pay Paul, but will it improve natters for any union? Not at all; it will ather make matters worse. For where a iven union has now, let us suppose, 18 haukidars at an annual cost of about ks. 1200, it will have after such reduction ay, only 12 chaukidars or six chaukidars ess, the total annual cost yet remaining what it was before the reduction, ie Rs 1200

Every union board of any account has a judicial side to it—a bench for the trial of criminal cases, and a court here and there for the disposal of civil suits. experiment has had a fair trial these three years The union courts have given in most unions a satisfactory account of themselves, and admittedly proved a most useful institution They are everywhere keenly appreciated by the people, and considering how much money and trouble is saved to the litigants by their means, the only drawback to them, It seems, is their lack of jurisdiction in rent For rent suits and suits for money bulk large in munsiff's courts, and once these suits come under the jurisdiction, up to a reasonable pecuniary limit, of union courts, not only will litigants be spared all the pressing expense to which they now mevitably submit, but the formidable file of suits in munsiff's courts will get whittled down considerably, and the grinding labours of munsiffs ease off to the same extent. Besides, if this should in course of time lead to a reduction of the number of munsiffs now employed, that would save up a vast deal of public money every year. Let there be a suitable limit to the pecuniary jurisdiction of union courts for rent suits, as there is now for money suits, and let there be a trial. This extension of jurisdiction, once made, will, I am sure, prove a real boon to both people and Government

It may be noted by the way that there is a weak spot in the Actin its present form in that neither the sections bearing on union courts nor the Government notifications supplementing them bear reference to the Indian Limitation Act whose applicability to suits before a union court is beyond question, and though union courts stand to deal with just three classes of suits, the law of limitation governing them should have been summarised in the body of the Act, or indicated by a reference to the Indian limitation law. But neither has been done, and union court judges have nothing for it but to draw upon their own experience or to trace out the law and interpret it in their own way

To come now to the union benches, which also have a fair record of work to their I have, however, my own doubts, and I share them with others, as to whether these are an unmixed blessing all round like the union courts. That they serve the ends of justice decidedly better than district and sub-divisional courts, partly because the judges, laymen as they are, are all men on the spot commanding special facilities for the discovery of truth, and partly because they are not trammelled by the cumbrous formalities of law which often defeat rather than promote the ends of justice in those tribunals, is a fact no one can ganisay. But then a case before a union bench costs nothing, and the result of it unfortunately is that whoever has a bone to pick with his neighbour, will hasten straight off to the union bench lying perhaps within half a mile, and sometimes even a stone's throw of his own door to lodge a complaint and let it work; though perhaps as a matter of fact the case is such a one that had there been no union bench for his recourse, the complainant would never have cared to tramp from half a dozen to 8 miles to the Sub-Divisional Magistrate's Court for the mere pleasure of spiting his adversary. These union benches are thus, I am afraid, putting an indirect premium on the litigious spirit among our rural population. To close them down, however, would. be to make bad worse. That would only let all the money now saved by means of them pass out of the pockets of their owners to fill the

capacious maw of the lawyer and to oil those underlings to whom a tip or a douceur is the only open seame?

the only open sesame.'
But an improve improvement nevertheless is not far to seek. All that is necessary is to prescribe a general institution fee of say Re. 1 or Rs. 2 as a test of reality of the complainant's grievance in each case. It may be objected that this will militate against the root principle' of the Act by making litigation before a union bench an affair of money. Surely it will have that effect, but only within a maximum limit of just Rs. 2. In a Magistrate's Court, the pettiest case means for the parties concerned a cost on the lowest reckoning of from Rs 15 to Rs. 25 on each side, and a paltry sum of Re. 1 or Rs. 2 from start to finish in a case before a union bench is a mere bagatelle. saving clause leaving some latitude of discretion to the union benches for exemption in cases of extreme poverty from the strict application of this rule would be protection enough to those who happen to be too poor to meet this requirement. Besides, it is preeminently a case where the end justifies the

Then under the Act as it now stands, the hands of union benches and union courts are absolutely tied against cases of contempt. The application of the contempt of court provisions of the Indian Penal Code has not been extended to them, perhaps because they are not courts in the sense in which a Magistrate or a Judge is. But whether courts or not, they should have some sort of power lodged in their own hands to protect themselves against contempt or contumely. They have not as yet even the semblance of it. They have at every sitting to deal with people

whose outstanding characteristic is a moh mentality, and who finding themselves in the presence of a miniature court whose members are all familiar figures to them, raised to their position on the bench or the court by their own election, are often very rude and unseemly in their bearing, even to the extent of indulging occasionally in coarse gibes and making unsavoury insinuations: and all the more so, because they know that the arm of a union bench or union court not long enough to reach breaches of discipline of the above brand, even though occurring under its nose. There should be check on this license, and a summary muld of say Rs. 25 in the maximum should be provided for to match offences of the nature of a contempt. Else all self-respecting people will feel shy of getting on a union bench or union court, and keeping up their connexion if they are already there.

Every novel institution has its initial difficulties, and union boards are no exception to this rule. The difficulties at the present stage are many, yet fortunately our union boards have made everywhere a promising start, and once the spadework pover, the training of just two terms, it phoped, will improve away all unsightly features, and let in an awakening whose beginning is already well within sight But the existing legislation on them needs touching up here and there, and that done, provided is done with due regard to rural requirements in India, this young institution is destined to prove a marvellous success an usher in ere long an era of progress of which we have yet but a dim preconception.

INDIAN PERIODICALS

Education in College and by Experience

Of the education of the late Sir Guildford Molesworth, a distinguished engineer, The Thdian and Eastern Engineer writes:—

Like most young men he felt after completing his course, that there was very little in the engineering world that he did not know. Though not a brilliant scholar the principal's report on young

Molesworth was "a studious painstaking perso whose conduct was uniformly satisfactory". Si Guildford always said of this report that the principal's findings were more favourable than the facts justified. It was only in later years whe fame had come to him, and his reputation as a engineer stood high that he was able to say "after a long professional career, I have achieved a knowledge of my own ignorance and the conviction that the education of an engineer is never complete

think it is with all men of outstanding To them is given the power to delve into depths from whence a recognition comes to if the larger unknown still to be discovered.

Jamshedpur Technical Institute

his Review published an account of the hedpur Technical Institute when it was 3d The Tata Iron and Steel Co. Ltd., contributed the following account of it to Indian and Eastern Engineer .-

le Jamshedpur Technical Institute was opened le Tata 'ron and Steel Co., Ltd., towards the of 1921. The Company has always recognised necessity of training Indians to hold the necessity of training indians to note the ror positions in the works, especially in view to mereased plant which is now being brought operation. No facilities for such training lously existed in this country, and the compression of the ror in the ror its training to the ror its light and the ror its ror in the ror its ror position. resources, with such assistance as it might in from the Provincial Governments and the vernment of India.

The Institute is probably the only example in the Institute is probably the only example in the industry employment, in the industry for which is man is trained, on his completing the course isfactorily. This ideal of technical training has y seldon been realised. The students of the innual Institute, if their ability and application satisfactory are at once on heaving the Institute. satisfactory, are at once, on leaving the Institute, wiled with suitable posts in the works of the many. The Institute is supported by grants in the Governments of Bihar and Orissa, Bengal, njab, Mysore, and by the Company. Applicants admission are required to be under 22 and to we passed the Intermediate Examination of a company of the control of t cognised University, or its equivalent. The entire urse is for a period of three years and consists alternate weeks of class-room and mill work ich student receives a stipend of Rs. 60 per onth during the entire course.

onth during the entire course. So far 15 students have completed their course training at the Institute Two of these, having en trained for the Mysore Iron Works at the opense of the Mysore Government, returned to ysore The remaining 13 have been employed by the Company in the following departments:—last Furnaces, 4; Open Hearth, 3, Bessemer Concerters, 1, Rail Mills, 3; Special Training, 2.

The Institute has attracted, numerous students from all parts of India and the rigorous selection faintains a very high standard of efficiency. The number of admissions is limited by the number of nen, who can be recruited for superior positions

nen who can be recruited for superior positions at the works and by the size of the classes. During the current year the admissions were 23, and this number was selected out of 2,397 applicants from all parts of India.

The following forward show the applications and

ants from all parts of India.

The following figures show the applications and admissions for the current year:—

Rombay, 204 applications—2 admissions; Bihar and Orissa, 252 applications—8 admissions; Bengal, 996 applications—6 admissions; Punjab, 274 applications 2 admissions; Madras, 317 applications—3 admissions; United Provinces 115 applications—1 admission; Central Provinces, 57 applications—no ad-

mission; Assam, 51 applications—1 admission; Mysore, 17 applications—no admission; Baroda, 19 applications—no admission; Gwalior, 4 applications no admission; other Provinces 96 applicationsno admission.

As various complaints have appeared in Indian papers to the effect that the Tatas are very fond of appointing British, American and other foreigners to the superior positions in the works," even when qualified Indians are available, the Company should have stated what are the superior positions for which the Institute trains students and what what salaries and proswith pects trained students have already obtained. Probably some of our readers may know the the facts and publish them

Village and Town-Planning in Ancient

Rao Sahib K V. Vaze, I. C. E., continues in the Vedic Magazine his series of informing articles on "Extent of Ancient Indian Engineering Philosophy" In the March issue he treats of town-planing. Various provisions show that sanitation and convenience were kept in view in those days For example, it was enjoined

Chandal, Charmakar Shababas, Smasan and such other things which are dirty or injurious to puone health should be away from water, temples, stores, residences, and main roads. The temples of gods, roads, and markets should never be considered as vacant and therefore fit for the collection of refuse. A place is considered vacant or abandoned, if one is permitted to throw polluted things in it

Intermediate Education in the United Provinces

Prof P Seshadari writes in Education:

The recent reform of Intermediate education in the United Provinces has not yet resulted in the numerous beneficial results contemplated by the scheme, owing largely to defects of execution and scheme, owing largely to defects of execution and the absence of energetic pursuit of the original policy underlying the measure. It is undoubtedly capable of enriching and advancing Intermediate education in happier circumstances, though as yet improved conditions are perceptible, in some measure, only in University education which has been freed of Intermediate work and in High Schools associated with Intermediate education If the reform is to be carried out in other Provinces of India, it must be done with a full knowledge of the heavy responsibilities involved and with a guarantee of all the facilities necessary for a proper function of the scheme

Krishna 2 Lover of the Poor

Prof. T. L. Vaswani says in The halpaka: Krsihna, like Jesus, like Budda, like Mahavir, is a lover, a champion of the Poor. An epithet which according to a Purana, Krishna loved the most was "Friend of the Poor. His dear ones, through the centuries, have found happiness in the cottage, have voluntarily embraced poverty. The rich make money:—how? By murdering their souls. Krishna's bhaktas love poverty, for they are rich in the Lord's Remembrance,—the only wears that count.

Who were the first worshippers of Krishna?

Who were the first worshippers of Krishna? Poor cowherds and milk-maids and cows. Who were his companions in Brindaban? Shepherds; himself a shepherd of Humanity. Who bring him up in Vraja? Simple cowherds.

The Krishna-cult knows no caste. As Sri Chaitanya said. 'It a mochi (cobbler) has bhakti, I bow to him a thousand times'. With what joy the poor cowherd Sudama goes to meet Krishna! Here is an extract from a mediaeval song:—'Here Here is an extract from a mediaeval song:—Here comes the cownerd Sudama with a striped turban on his head. He almost reels like a madman for joy at the expected meeting with Krishna. This joy springs from a feeling that Krishna the Simple is a lover of the Poor.

Islam, and Peace and Toleration

Mr. G. F. Malik contributes to The Review of Religions an article on "Toleration in Islam," in which it is stated among other things:-

It is not a secret that in the past much human blood has been shed in the name of religion, and there exists still an unappeasable enmity between nation and nation on account of the difference of their religious views. Islam holds aloft the banner

Islam is a religion of peace, and it has laid down the basis of peace and harmony among all religions by making belief in the missions of a!l prophets and equally respecting them one of its

fundamental principles.

Nevertheless it is a regrettable fact of history that the followers of Islam have been surpassed in causing bloodshed only by those who profess to follow Jesus, whom they call the Prince of Peace It would be good for humanity if in the living present and in the future to come the followers of all religions tried to show by their conduct more than by their writings and speeches what their respective religions stood for, though such writings and speeches are also necessary.

-Indian Exports of Cotton Goods in the Seventeenth Century

In a paper with the above heading Mr. W. H. Moreland attempts to give in the

Indian Journal of Economics a general di cription of the export trade in cotton god from India in the seventeenth century. gether with a few data which may students to an appreciation of its mag

"At this period there were three domin lines of commerce in Asiatic witers, spices; drugs, cotton goods and the precious met Species and drugs had to be distributed over A Europe and part of Africa; in order to move the it was necessary to lay down cotton goods in producing markets, because producers would thitle else, and, in order to obtain sufficient cot goods, it was necessary to lay down gold silver, because the effective demand for other ports was altogether inadequate. Thus at opening of the century, the cloth trade was marily of Asiatic interest, though the Portuguland developed an additional outlet to West Affined Pengulant Constitution of the contract of the c and Brazil, but as time went on, Europ markets were opened up, first for house linen, then for dress and decorative fabrics, until trade came to interest the West almost as in as it interested the East. No one can hope understand the extensive literature dealing with the commerce of the century until he has obtain ground idea of the nature of this trade, and a general idea of the nature of this trade, and present object is to furnish a description who may serve as an introduction to the contempor documents."

Relation of House Accommodation to Chi Mortality

In the same journal, Mr. Raj Bahac Gupta dwells on the relation of house acco modation to child-mortality, and reaches conclusion:

The more the congestion the higher the n tality and vice versa. Not only this, but it been found over and over again on examina that children who survive in these overcrow conditions grow pale and sickly and have non the vigour of youth. It has been estimated the boys living in single-room houses lose about inches in height and over 11 lbs. in weigh compared to those living in four-room houses.

We must point out in conclusion that

We must point out in conclusion that treatment of child-mortality as being dir treatment of child-mortality as being dire-connected with house accommodation is not reat variance with the general belief which association infant mortality with poverty, ignorance malnutration. For poverty and ignorance themselves encourage overcrowding and insanitation. I and overcrowding again bring about mental pression and impaired metabolism, which in t react upon health and lead to impaired efficient and insanitation. unemployment and poverty. All this leads only to a physical waste in energy and gen-enervation, but also to low standard of health low resisting power, which play directly into hands of immorality and disease. Thus the vici circle continues. More often than not, intoxical and other evils add to the irresistible strength sweep off the vicious circle and aggravate effects of poverty and overcrowding.

iendship between Meat-eater and Vegetarian

The following is part of a story from halese literature translated by M. Museus ouns for the Young Citizen :

In the Total Control C

inds stood two animals, a dog and a goat. The had some grass in its mouth and the goat was putting down some meat on the ground. Both mals looked at each other contentedly. The dog an eating the meat which had been brought an eating the meat which had been brought the goat, and the goat enjoyed the grass carried the dog Both were very busy with their food, when they had finished they lay down ether for a while. Then they parted in a ndly manner, one going towards one part of courtyard and the other in the opposite retron ection

The Maharaja had seen this going on for several is and the peculiarity of this evident friendship the him think: "How is it that the dog comes

de him think: 'How is it that the dog comes bring grass and the goat meat?''
This is the story; The goat used to steal grass in the elephant stables, and when one day the phant-keeper found it out he gave the goat such peating that he almost killed it. The poor animal keked the wall of the courtyard and fell down ere evhausted. About the same time a dog with nging head and tail arrived there in the same ndition.

"What is the matter with you, Mr. Dog, that on look so dejected?" asked the goat.
"I would like to know the same thing about on, answered the dog.
Then the goat told its story, and the dog said; fy story is almost the same. I used to steal leaf from the kitchen because I felt hungry, and leaf from the kitchen because I felt hungry, and beat ing that day the cook has given me such a beating that am almost dead."

So you cannot go to the kitchen again?" sked the goat.

"No," growled the dog. "That business is over. would surely be killed if I showed my face there

The same is the case with me," said the goat adly. "What are we to do? Let us be friends and telp each other."

At first the dog thought; "What is the use of laving a goat for a friend?" But then both were very miserable and he concluded that it was better

to have one friend, even if it were a goat, than to have one friend, even if it were a goat, than to have no friend at all: so they swore friendship.

Then the goat had an idea: "Look here, friend dog, suppose I go to the kitchen and find a piece of meat. The cook will not suspect me as I do not at meat. I will bring it you and you can eat it."

"Well, friend goat," replied the dog, "that is an excellent idea, but how will you get something to sat?"

"That is quite easy," answered the goat. "You must go to the elephant stables and get me some

"Brilliant!" barked the dog. "Or course, the dephant-keeper will not suspect me as I do not eat grass. He will think, I am looking around to see that everything is in order. And when he goes away, I can take some grass and bring it

to you."
So the two friends agreed and from that day
the goat brought meat for the dog and the dog

carried grass to the goat

This it was that the Maharaja had observed, and he was so struck with the cleverness of their design that he let them have their own way, and thought he would make a question for his wise men based on the peculiar friendship of these two animals,

Each needs the other's services And so good will extends, And turns these natural enemies To warmest friends.

Students Attack Military Training

The same monthly reproduces the passages printed below from the Japan Advertiser.

Organising to combat the introduction of military training into the schools of Japan from the middle schools upward, student-representatives of 38 colleges and universities took the first step toward the formation of the National General Federation of Students Opposing Military Training at a conference in the room of a student of the Imperial University here Indignation at the recent ruling of the Minister of Education adding military training under active army officers to the school curriculum was expressed in the speeches made.

A committee was named to send out an invitation to every student in Japan to affiliate himself with the new organisation. It is planned to establish a branch in each college and university, which min a orance in each conege and university, which will be entitled to a representation of three members in the National Headquarters Association. An active campaign of public speeches and literature will be conducted throughout the Nation by the students, in the hope of getting Mr. Okada's ruling rescinded prior to its going into actual operation

next April. The student orators at the organisation meeting denounced the plan as a retrogression of civilisation and a programme calculated to revive the influence of the military caste It was a shame, they thought, for the students of Japan meekly to submit to a scheme devoid of high ideal, a scheme which was in effect, no more than a system of training for scientific murder. They considered the plan especially dangerous at the present time when the American people, they believed, were filled with martial ardour and were looking for, although perhaps unconsciously, a chance to show their strength in arms.

SEES CHANCE FOR JINGOES

"As a result," said one student, "the adoption of this plan now will only electrify the air with the dangerous misunderstandings which it is inevitable that such a system will breed, and imgoes on both sides of the Pacific will avail themselves of the opportunity to throw the world into confusion again.

The rising generation of Japan cannot afford to
entertain the world with fire and the blood of the Nation's sons, a spectacle for which the world is cagerly watching as if for a baseball game, merely

to humour the caprice of a limited section of the militarists, who have not progressed with civilisation's

Attention was called by one speaker to the fact that the opposition of the students to the plan is a phase of the rampant anti-military feeling that is a reaction to the sword-worship which followed Japan's victory in the War with Russia.

Indians in Canad

We read in Bulletin No. 12 of Indians Abroad.

The Chinese were the first of the Oriental peoples in modern times to go to British Columbia. They helped in building the Canadian Pacific Railway, the first trans-continental railway in Canada linking up the Atlantic and the Pacific sea boards of the Dominion. That was in the latter half of the Nineteenth Century. The Japanese followed soon after but Indians were the last to emigrate to Canada. Of course in castern parts of Canada there are settlements of Syrians, Armenians and Persians—all peoples of Asiatic origin. Swami Ram, who was a lecturer in Mathematics in a Lahore College had left for the Pacific coast a little earlier. His visit and personality created some interest in India and in Indian affairs among the peoples and in places where he addressed the peoples and in places where he addressed meetings. Some students followed to study at meetings. Some students followed to study at various educational centres in that part of America. Their letters to the Indian newspapers also awakened interest amongst the Indians In the Fiji islands, which are not very far from British Columbia, there is a permanent Indian colony. But the conditions in Fiji and Canada are totally different. The Indian settlers in Fiji were taken there as indentured labourers, whilst those who went to Canada went there of their own choice and as free men

EARLY EXPERIENCES

At that time also advertisements about Canada At that time also advertisements about Canada and its economic advantages appeared in the Indian papers. It is said of the first pioneers how it was, on the first day of their landing, not knowing about the new conditions in a new land, they had to tramp for some days to get work. The Canadians had no experience of India and the Indians and being a practical people gave these first Indians a chance to prove what they were capable of doing. Their first employer recommended them to other saw-mills and the Indians had no difficulty in getting work.

The Indian emigration was mostly from the

The Indian emigration was mostly from the Punjab and that only from 4 or 5 adjacent districts Panjab and that only from 4 or 5 adjacent districts via., Amritsar, Lahore, Jullundur, Ludhiana and Ferozepore. Nearly 80 per cent. of the immigrants are Sikhs. The general method of procedure for an emigrant in this case was that when he had heard from a relative or a friend in his village about the high wages paid in Canada and how one could improve one's standing, he would mortgage his different country.

distant country.

It did not take the Indians long to adjust themselves to their environments. The climate of British Columbia, especially on the coast, is like that of the Punjab in winter. No sooner had the

Canadians found out that the Indians were has working and efficient, our countrymen were give work by the railways for their construction work for repairing tram-lines, in canneries, in the building trades, darrying, fruit picking and other kinds farming. Indians also on account of their physic farming. Indians also on account of their physic endurance got work in clearing and scrubbing lar and logging etc. British Columbia is noted in its timber and the land was so full of stumps the it is quite an expense to clear up land The Indians being British subjects were accustome to British laws in India and on the whole the were a law-abiding community, this being asset to their nowly adopted land. In the mean time, a very small number of Indians had come British Columbia from Fiji. Only 2 or 3 Indian who had been to Australia emigrated to Canada.

The Hindu Civilisation of Java

Mr C F Andrews writes in Curren Thought:

In the previous articles we have considered together the rise and decline of the ancient. Hind civilisation in Java and its supersession. all by the incursions of the Arabs from the Persu Gulf, and after that by the Dutch and Britis from the West This more recent occupation. Java by conquest is clearly not of a permane character because the white race cannot settle at bring up families in such a tropical and dan atmosphere. Indeed, already it is clear that a ne era is beginning and the inhabitants of the land which are nearer to Java and Malaya, such as ind and China, will once more give their impress the civilisation of those countries. Mere milital conquest is very little. It often opens the way

a new spiritual conquest which goes far deeper Let us consider carefully the present situation First of all in Java and Malaya, the population st remains Hindu in its background, but with superficial covering of Mahommedan culture a superficial covering of Mahommedan culture at and religion. I have been often reminded by what I have seen in North and East Bengal where it population is definitely called Islamic to-day, by the character of the people is essentially Hind owing to the vast number of Hindu traditions in Java and Maiaya, the Hindu civilisation is still be seen everywhere beneath the surface.

be seen everywhere beneath the surface

But a new factor has come in, in comparativel
recent years. A very large influx of Indian en
grants has poured into these lands from India, an
an even larger number of Chinese emigrants hi
entered these territories from China. The number
in Malaya alone of the Chinese are well over
million and the numbers of the Indian settlers at
about half a million. In Java, the same proportio
of Chinese and Indians may be found that about helf a million. In Java, the same proports of Chinese and Indians may be found: but the actual numbers in Java are much fewer because the original inhabitants of Java are much more prolific, and therefore the space for a new immers propulation is very limited. In both countric however, this new immigrant population from China and from India is already having its ow remarkable effect upon the civilisation of south eastern Asia. Along the coast of the Malay peninsula we constantly find ourselves in a atmosphere, which is an exact equivalent of the Madras Presidency. The villages, the temples, the streets, the castes, and the religious rites and remonies, are all directly taken over from India elf. At Singapore, on the other hand, everying is a replica of China. To the east of Java e old Hindu civilisation still remains in a series small islands and even in Java itself a new dian population is beginning to spread from the ports inland. In other parts of Java, whole lones of Chinese settlers have taken up their rmanent occupation and residence.

As on many occasions I have watched this ocess of re-settlement going on, and studied the of the people in Malaya and Java alike, the restion has continually forced itself upon my tire, whether the Chinese civilisation from China the Hindu civilisation from India, is likely to in in the long struggle for existence. At present, ere are many signs that the Chinese civilisation ere are many signs that the Chinese civilisation advancing more rapidly than the Hindu: but on e other hand, it is to be remembered that the hole past of both these territories is saturated ith Hinduism because as I have explained, the rab and European invasions only left superficial

So it may well happen, that the new Chinese So it may well happen, that the new Chinese ettlers, who enter these lands and settle down in hem, will themselves adopt much that is truly indu. It has also to be remembered that in hina itself, the Hindu culture played a very great art, owing to the spread of Buddhism from the eginning of the first century A. D. onwards. The hine-e of the South of China, who are entering along and layer at the present time, and layer are the present time, and layer are the present time and layer are the present time. alay and lava at the present time in such large umbers, had themselves in the past adopted much if the Hindu culture from Buddhist sources. To

Imbers, had themselves in the past adopted much if the lindu culture from Buddhist sources. To he, therefore, it seems certain that, in the long un, whatever, the character of the new settlement hat is made, whether from India or from China, he ancient Hindu civilisation which has stood the est of so many centuries is not likely to be obliterated. The Indians who come over will arry with them their own Indian culture; the hinese will, in part, become Hindused. There is one further possibility, which has often pipcaled to me with remarkable force. How is that Hinduism itself in the present day cannot end out a new stream of spiritual missionaries to pread once more the Hindu culture by peaceable ind non-violent means as it was spread so marvelmisly in the past? Is there not a field for linduism to expand in these territories, second to one in the world? Should it not be an ideal of lose, who hold Hinduism to be the Sanatan Dharma and love the ancient Hindu tradition with all their earts, to re-enter and recapture, by the pure force I love, these lands, which of old had been already emeated for many centuries with the Hinduism to those ardent souls, who are followers of wami Vivekananda and members of Rama Krishna lission, or of Swami Dayananda and members of its Arya Samai, or of some other progressive type. lission , or of Swami Dayananda and members of ie Arya Sama), or of some other progressive type i Hinduism which is not content merely with maining circumscribed within its own narrow

I have written these articles with the definite lew in mind of suggesting this final thought; and will be a great happiness to me, if, through, the ages of this new Magazine, Current Thought, I can it into the hearts of the younger Hindu generation I India the ideal of spiritual expansion in those accept lands which look beyond the borders of adia across the sea.

The Political Situation in India

Mrs. Annie Besant tells us in the Indian Review:-

We have now, in India, the Congress which the Swarajya Party represents in the Legislatures; the all-India Liberal Federation, composed of the old Moderates and the advanced Liberals; the National Home Rule League, an all-India Association with its definite control of the cont National Home Rule League, an all-India Association, with its definite programme of legislation, and allied through its Council to the National Convention and Conference. The two latter have no programme outside Swara, to be obtained by constitutional means, and the education of the electorate. They contain men of all political parties united only for the winning of Swara.

Outside these, there are those who are faithful to the idea of Non-Co-operation with the Government, and who work for social and economic improvement. There are Independents and Nationalists, with various political programmes, not clearly defined There is the revived Muslim League which should form a strong regiment in the

clearly defined There is the revived atustim League which should form a strong regiment in the National forces, but I have not seen its political programme. But there is at present no common ground for political action outside the National Convention and Conference, to which men and women of all parties belong, and yet carry out their work in their own organisations in their own presentation of a Free content of the presentation their work in their own organisations in their own way, but uniting in the presentation of a Free Constitution for India. Before 1920, there was the National Congress, to which political bodies could affiliate themselves, and yet work along their own lines during the year, meeting once a year for general discussion, and passing resolutions which expressed the views of the majority without binding the minority. It thereby spoke for the Nation, but compelled none. It might be well if the Liberals, who largely made the old Congress, would receive it, not as another party, but as a political centre to which all progressive political associations might affiliate themselves in the old way. The body which still bears the name of the National Congress selects a single party to speak in its name in the Legislatures, does not discuss any political questions or give any political speak in its name in the Legislatures, does not discuss any political questions or give any political lead; it has handed over the purposes for which it originally existed to the Swarajya Party, which has, in some Legislatures, as in Madras, a microscopic minority, and holds a majority in none, except perhaps in the Central Provinces.

To win Swaraj there must be a united a strong recoular autation like that of 1917. Is the

a strong popular agitation like that of 1917. Is the mother to be rent in pieces by her children? Are fratricidal struggles to be the end of her glorious life?

"Who is a Volunteer?"

Mahatma Gandhi answers this question thus in the Volunteer:-

Since Volunteers must be the future army of India, too much care cannot be bestowed upon a proper selection of them. During 1921, whilst they rendered immense help they also hindered the National cause, for all of them were not of the required type. Every one of them must, no doubt, go through physical drill and must be able to compete with the trained soldier in performing the different movements in dealing with crowds, and

must know first aid to the injured. They must also have the following qualifications. They must

Cruthful, chaste, non-violent,

Amenable to perfect discipline and obedience to superior officers.

Respectful towards and friendly to the meanest of their countrymen,

Able to speak Hindustani,

Carding and spinning at least 2000 yards of yarn per month.

Able at least to cook their own food

Free from the curse of untouchability, and, Thorough believers in Hindu-Muslim unity

Origin of the Purdah System

In a judiciously-written scholarly article on the origin of the purdah system, Prof. Muhammad Habib observes in The New Orient :--

Inquiries into the origin of social institutions are always difficult and in India they are even dangerons; for we have a national genius for casting the fierce rays of religious fanaticism on the most se-cular of social problems. Six hundred years ago the purdah system was instituted as a sensible protection against obvious evils; it has now become a part of the ordinary Indian Mussalman's religious

The purdah system was the last desperate expedient of a society fighting with its back to the wall. Its institution is an evidence of the good sense of our ancestors and its continuation a proof of our own super-abundant folly.

I must premise that the purdah is essentially an institution of the Mussalmans, and the credit or discredit of the invention is exclusively theirs. And we must also dismiss the cheap explanation that the purdah originated from the habit, correctly or incorrectly attributed to the mediæval Mussalmans, of stealing and running away with non-Muslim girls. If the purdah system had been a method by which Hindu society sought to protect itself against the Mussalmans. the strict observance of the system among large sections of purely Muslim populations, such as those of northern Afghanistan and Central Asia, who are too far from India to have been influenced by it, would be inexplicable. They did not adopt the institution from us; they discovered it of their own accord and sent it hither. The custom is observed by all Mussalmans of India, and by such Hindus as have been socially—not militarily—influenced by the all Mussalmans of India, and by such Hindus as have been socially—not militarily—influenced by the Mussalmans. The Mussalmans invaded Madras and Guirat, but Madras and Guirat have not learnt the system, because no large and progressive section of Mussalmans settled in those provinces. The origin of the custom has nothing to do with the Hindu-Muslim question, though its adoption by the Hindus has no doubt been due to that influence which neighbours always have upon neighbours. For just as the Mussalmans have adopted from the Hindus many customs not only alien but directly Findus many customs not only alien but directly contarny to their creed, the Hindus also condescended to learn this new discovery in the art of life from the Musalmans.

Even a cursory glarce at the geography of the Muslim world will convince us of one very signi-

ficant fact. The purdah prevails in some Muslin countries and not in others. It is unknown the Arbs of Northern Africa or to the Muslin Negroes who inhabit the interior of the Dark Continent The Arabs of Arabia do not bow their king to it and it is very laxly followed in Westen Turkey. On the other hand (modern changes and Atal.) Turkey. On the other hand (modern changes apart the Musalmans of Persia, Central Asia and Aighanistan are remarkable for their strict adherence in the system. Why so? Obviously a system followed only by the Eastern part of the Muslim world, the part inhabited by later converts—could have no religious sanctity about it. It must be as institution of purely secular growth.

In his article Prof. Habib describes the horrors of Chengiz Khan's invasion and conquest of the countries where the purdek system has since then prevailed. Chengiz Khan and his Mongol hordes were not Moslems. The writer has described the hornble treatment which the women of those regions received at the hands of the Mongols. He holds that

"It was in the stormy atmosphere of the Mon gol invasions that the purdah system arose as the last despairing effort of Muslim society to protect what if held most dear—the honour of its women

He also holds

"The combination of the purdah system with early marriages to be the basic cause of most of our national misfortunes.

Labour Day) nobody works-The Mysore Economic

The Educational Review writes:-

The Government of the United Provinces has just received an educational trust as the result of the generosity of the late Mr Kamta Prasad, I.M. S. to which wider attention deserves to be drawn. The trust is to be vested in the Vice-chancellor of

Allahabad University, the Director of Public struction, United Provinces, and the Principal, and George's Medical College, Lucknow, and is to asset, for the present, of two Research Scholaraps of the monthly value of Rupees one hundred ch, the condition being that the scholarship-liders should devote themselves, in the Science spartment of the Allahabad University, "to the emical analysis of such of the Indian medical ants as have not so far been analysed. The work chemical analysis is to be systematically done d in this connection the works on Indian edical Plants by Col. K. R. Kirtikar and Major I) Rasu are to be consulted." There is great ope in this country for the study of Indian edical plants, though we are conscious of the edicinal plants, though we are conscious of the ct that some work is already being done in the pe at one or two centres in India. Side by side in the attempts at reviving Ayurveda which are indent in the country, it is desirable there should a systematic investigation into the medicinal an's of which such a large number are used in a Avurvedic and Unani systems in India. The siems cannot otherwise be based on a scientific bothing Another advantage is likely to be the idition of a large number of cheap medicines to be western system of medical treatment which has sined such extensive vogue in India.

Adherence to National Religions

In our last issue, page 334, we reproluced from the Roman Catholic organ The Light of the East some passages in answer o the question, "Must one's religion be the national one?" Some more passages are nuoted from the succeeding issue of the same monthly.

It is absolutely cortain that community of religion is the closest tie that can bind the nation of the present to the nation of the past and the different members of the nation of the present to one another To break away from our ancestors and itellow countrymen in the matter that most affects our souls and moulds our conduct, in the matter of religion, is to place between them and us a gap which only the deepest and most sympathetic charity can bridge.

A general change of religion may also imperil the national arts and national culture, and, if the new religion comes to us through another race it induces us not only to forsake the ways of our own people but to embrace those of the foreigner. The peril is so great that both missionaries and converts must be in constant watch against it.

Nor shall we he itate to say that, if the foreign religion one accepts is the national religion of mother people—a religion made, never mind how are hy whom a religion made, never mind how are hy whom the same are likely and the same are likely as the or by whom, to suit the special moral and intellec-ual temperament, the special civilisation, the pecial laws and government of another race—we all to see how the acceptance of it can lead to mything but complete denationalisation

Can a European accept either orthodox Judaism or orthodox Hinduism with their complex codes of seremonial ablutions and outward rites, with their trict prohibitions regarding certain kinds of food, with their minute rules concerning all sorts of incleanliness, with circumcision or caste, without

losing all his European characteristics and becoming unable to lead the kind of social life which is ing unable to lead the kind of social life which is that of his fellow countrymen? Can an Indian embrace the "Church as by law established in England," which recognises His Majesty the King as its supreme Governor in things spiritual and temporal, attends the orders of the English Parliament, varies in its discipline according to the changes of English civilisation, without denationalisation, humself? Loricelly, it comes to the changes of the changes of the changes of the changes of the country to the changes of the changes o

changes of English civilisation, without denationalising himself? Logically, it seems to us, they cannot. A man cannot at one and the same time embrace two different social systems, nor can one serve two different and often rival masters.

But let this be as it may We believe that the true religion must be the means—the only one to a certain extent—which God has instituted to unite mankind into one whole in spite of its many diversities, We need not therefore say anything infavour of religions that are exclusively national invented to suit the needs of one country or one cace alone National religions should keep at home. Our only task will therefore be to prove that catholic religions, religions given to satisfy the

catholic religions, religions given to satisfy the religious needs, not of a special nation, but of all men, in no way imperil nationalism, national arts and national culture.

and nanonal culture.

But we should like to preface a remark. There is in all the arguments in favour of keeping to one's national religion "right or wrong," a horrid defect. They contain an implicit blasphemy.

To say "my national religion, right or wrong" is in the mouth of a theist a blasphemy. On his lips in the mouth of a theist a blasphemy.

the words also spell dislocalty to the country. For a theist knows that what God wills is best both for a theist knows that what God wills is best both for individuals or for nations, and that God can only will the truth No doubt, we men with eyes of flesh may not see at once that what God has willed is for the best. But is this peculiar to this case? We do not accept the principle that honesty is the best policy, because we see honest dealers become rich faster than dishonest ones, but because we know that, there being a God of Justice, the maxim will ultimately work itself out it spite of appearances to the contrary. Poor indeed is the faith of the man who dares not entrust to God the future of his nation, and frail the philosophy of the man who doubts that truth works better than error.

How to Live Long

Dr. Daniel H. Kress, M. D., writes in the Oriental Watchman and Herald of Health .-

"Henry Ford says people can live to be one hundred twenty-five, but must quit tea, coffee, tobacoo, and liquor." Thus reads the headline of a special to the New York Times of August 12. Henry Ford, while enjoying a little leisure in company with Mr. Edison and Mr Firest once at his Wayside Inn, is said to have made the statement that it is possible for man to live to the age of one hundred twenty-five if the working parts of the human automobile are kent free from carbon. By taking as good care of himself as he would of ore of his automobile engines, he said he might reach that age.

Being asked, "If the carbon is already there, how are you going to get it out? He replied, "By mastication" And continued: "You know that when you chew the food well, it satisfies you sooner, and you don't need so much. Get

only good food. White rats lived three days longer at the hospital without food than the ones that were fed on white breads alone. We eat no white bread in my house."

Coffee, tea, tobacco, and liquor find no place in Mr. Ford's prescription to prolong life. They will not be found, he predicts, on the table of the man of the future, and "it is not so far in the future either," he said.

Edison's great-grandfather was so influenced by the life of Carnaro that he adopted that man's simple mode of life, and lived to the age of one hundred two. His son, the grandfather of Edison, was brought up in this same simple manner, and was brought up in this same simple manner, and lived to the age of one hundred five. To him were born seven sons, of which Edison's father was one. They all lived past the fourscore, three of them nearing the century mark. Edison attributes his vigorous health and usefulness chiefly to the fact that his great-grandfather had the good sense to adopt the simple habits of Carnaro, which he himself in the main follows.

LUTHER BURBANK'S HEALTH PROGRAMME

Mr. Burbank, the plant wizard of the world who has accomplished more than any living man in the development of plant life, is also a man who is most temperate in his manner of living, and a fierce agragonist to the use of tobacco, tea, and coffee. Mr. Burbank is a marvel in his line as Edision and Ford are in theirs.

While it is not possible for all living to reach the age of one hundred twenty-five or even one hundred years, should time continue, it is possible for all to live longer than they do, and accomplish more while they live, by adopting the simple

for all to live longer than they do, and accomplish more while they live, by adopting the simple habits of Mr. Ford, Mr. Edison, Mr. Burbank, and others whose names might be mentioned, men who to-day are accomplishing things out of the ordinary, in spite of the advanced years of some.

Old Thomas, Parr, who is buried in Westminister Abbey, England, died at the age of one hundred forty-nine. When examined by the king's physician a short time before his death, he was said to have been in excellent health; his arteries were still soft and elastic. The doctor who examined him said he saw no reason why he should not live another and elastic. The doctor who examined him said he saw no reason why he should not live another ten or twenty years. Unfortunately he was taken to the king's court. One year of such living was sufficient to end his earthly career. All his life his habits were simple. He neither drank nor smoked, and he practically subsisted upon a fleshless diet altogether. The food on the royal table caused his death.

The Vernacular as the Vehicle of Instruc-

Prof. R. M. Joshi says in the Sydenham College Magazine:—

India is probably the only country in the world where a case has to be made out for using the mother-tongue as the medium of all instruction. Elsewhere the proposition would be regarded as a signature. The strange phenomenon in India is a

result of historical circumstances.
"But", it is said, "it must be admitted that in the present circumstances of the country, learning English is an absolute national necessity. For India to be a nation, she must have a lingua franca. We

have now got one in English. Why not make the most of it?" Now the *lingua franca* argument is in the first place, a bit overdone. Little Switzerland is a nation, as good as any other, with three official languages—German, French and Italian Canada, vast in territory but small in numbers, is a nation with two official languages—English and French. The South African Union has two—English and Dutch. Again, does any one in his senses believe that English can ever be in this country a language. and Dutch. Again, does any one in his senses believe that English can ever be in this country a langua franca in the sense of a language understood and spoken by the mass of the people all over the country? Have not our very first efforts at getting a responsive electorate in the mofusual revealed the fact that the conduct of the business of our provincial legislatures in English is largely responsible for the anathy towards the same of many of the members from the country-side, and still more so of their constituents? Are not English-educated Indians themselves coming more and more to realise the necessity of re-distributing the present provinces on a linguistic basis?

provinces on a linguistic basis?

But even granting that a good working know ledge of English must be regarded as a necessary part of a good general education, does it in the least follow that English must be the medium of least follow that English must be the medium of instruction all over the country even in the second ary schools? In English public schools and un versities at the present day, a good knowledge of French and German is regarded as an essential part of the curriculum, but they do not on the account make the students learn history, geography mathematics, etc., all through the medium of French or German and with the help of French or German text-books. They do, of course prefer the direct method of teaching these languages to the grammar-translation method, and so do we now with regard to English here. But we go further and delude ourselves that four or five years of the direct method are bound to give the boy such a mastery over the English language that he may then use English as the medium of his learning with the same ease as his mother-tongue—and that too, when the direct method is used, not by a Englishman but by an Indian, himself feeling pretty shaky about his English and exerting himself to give a good, make-believe show of his direct method.

To raise the level of our university education we must first raise the level of our matriculates To do the latter, we must, among other things, free the students of the secondary schools from the tyranny of using English as the medium of instruction. It is of no use to do that only up to the fifth standard. What is necessary is that candidates should be at complete liberty to answer all dates should be at complete liberty to answer all papers, except those in English, through their

vernaculars.

Islamic Prayer

The following extracts are taken from T^{m} Muslim, which is the organ of the Ajuman-1-Islam, Singapore:

It may be said that prayer is an attitude of the mind and why should it be necessary to bow, prostrate and stand? The answer is that the external position is a reflex of the internal attitude. When we wish to show our respect to a Market and do not we wish to shew our respect to a Master we do not simply say by word of mouth: I respect you, but we prove it by some physical action.

tvery idea of the mind is expressed by means ne organs. So when a Muslim folds his hands he breast he expresses the natural position of a new meditate or when we listen to an or Thus folding of the hands also signifies reason. Physical and spiritual conditions are in or This folding of the hands also signifies re-ation Physical and spiritual conditions are in way blended together. We see pictures of hired warriors with folded arms awaiting their go. A Muslim bows on his knees in prayer, are is nothing strange in this. This impresents reverence of a Muslim. In our daily expurenc-we see other peoples bowing themselves belowed go and queens. The prostration of a Muslim is physical expression of humility and prayer for pfulness.

All the postures that a Muslim takes in his yers have some meaning. The standing means ention and regard, expression of solicitude and courting of favour. The bowing and prostrating an humility of mind, gratitude, love and sincerity, feelings of pride and conceit are banished when fusion lays his head in the dust before the Al-ghty presence of God.

WHY WE MUST PRAY FIVE TIMES DAILY

It may be asked why it is necessary to pray five It may be asked why it is necessary to pray five ness a day. The answer is that just as it is neces-ty to feed ourselves for a fixed number of times ay, so it is with the soul. If we take no food for or 3 days, we will be greatly weakened and re-ced in fiesh and power. So in the case with the il. Prayer brings strength to the soul; it is in fact diet. Lack of prayer means starvation of the nl It is now admitted on all hands that the eping of the soul in good state is much more imprant than the keeping of the body.

In Islam the prayer is not set apart for a narti-dar day on which no work is done as in some ther religions. Islam gives quite a new meaning prayer by introducing it into the every-day flars of man. No particular day is set apart and is therefore that sabbath is unknown to Islam bery day is a holy day in which a Muslim may old communion with God without giving up his coulty occurrations. Islam thus restrains the instru vordly occupations. Islam thus restrains the insti-ution of munkery. Islamic prayer is to be consi-lered as a means of the moral elevation of man.

India's Inheritance

in a paper by Rev. N. Macnicol pubished in the Young Men of India occur the ollowing passages :-

Let me say a word now of some gifts that are ot peculiarly the property of Maharastra, but that ave come to you as an inheritance that is the ossession of the whole people of this land. These re gifts that are not merely intellectual, but that, thile they have expressed themselves in certain lens have contained to the schicing of leas, have contributed greatly to the fashioung of he Indian character. There are three such ideas thich I would do little more than name. First here is the idea of unity. The long desire of shilosopher and saint throughout the ages, deeper n its roots in India than n any other land, has seen to sum up all things in one. How they solve his ultimate mystery. On whether, their solution his ultimate mystery, of whether their solution an satisfy any human heart, I am not now

considering, but we can say without any hesitation that, in seeking this end with such passion and resolve, they were seeking the deepest thing in the resolve, they were seeking the deepest thing in the universe. They were seeking God as the ultimate principle of all things. Therefore, to belong to a race that has followed such a vision, even if it were only to be "in wandering mazes lost," is a fact, once you have had a glimpse of it, to inspire and uplift those who have come after.

and uplift those who have come after.

Again, a second desire that has entered into the blood of India is the passion for liberty. This is not such a liberty as has so powerfully attracted Western peoples, but something that reaches far deper freedom from all that bondage which seemed to them sometimes to be life itself. Release tro... chains that fetter and enslave the spirit—that is what I dia through all the centuries has most passionately desired. They saw that it could only be attained when they reached that oneness with the Ultimate which, as we have seen, was their goal, but on the way there they are striving continually to break their chains. They failed, I think we must confess all but a few great spirits, who escaped into some dim shadowland where there were no longer any fetters. land where there were no longer any fetters. They failed, and India has been more than most lands enchained in bondage to its priesthood, in a social bondage, in bondage to harsh and tyrannous over-lords Yet the protest of the soul of India has ever been against such enthralment, and the has ever been against such enthralment, and the cry that comes to us down the ages from its saints is, just as it was the cry of St. Paul, "Who shall deliver me?" You who come after have your feet set upon the way of freedom. It is for you, as the children of those forefathers, to see that you are not entangled again in any yoke of bondage, that you yourselves in your souls are free in fellowship with Gpd, and that all chains that bind the souls of others are likewise broken.

A third conception that has been powerful over the soul of India for many a century is that

the soul of India for many a century is that expressed by the word ahimsa, or non-killing." Some would identify it with love. If it has not some would needtry it with love. If it has not all the positive content of that word, it means at least that one should refrain from injury and so far show compassion. It is a lesson which has done much to make the Indian spirit gentle, free from the harsh and aggressive temper that disfigures so many other peoples. It should preserve the Indian of the future from these wars have which other of the future from those wars by which other nations have sought to prove their greatness, and should enable her to be to the world a pioneer of

These are some of the inspiring ideas that come down to you from the religious life and literature of ancient India. There are many others, some of them, like Transmigration and Karma, only at most partially true, but all of them great awakening ideas, worthy of a race that has never been content to live upon the surface of things.

A Suggestion for Removing Middle-class Unemployment

Sir George Godfrey, Agent, Bengal-Nagpur Railway, express the following opinions in the Bengal-Nagpur Railway Magazine:

We are all struggling to secure economy in working results. In my opinion one of the chief

obstacles to economy is the large number of men that have to be employed on the lower kind of clerical work in all Railway Offices and as Porters and Pointsmen at all our stations.

The eastern side of India, (I cannot speak for the west), is on the verge of a great unemployment problem, not amongst the coole-labour class, because that class is never in excess of demand, but amongst the sens of the lower middle class. In amongst the sons of the lower middle class In my opinion, the solution of the problem will be that this class should take up much of the work which is now done on Railways by the Coolie class.

At Home and in Europe generally, Porters, Pointsmen, Coupling Porters, and other men doing work of this nature are intelligent, they are well paid and they are efficient—in their off time they take part in the social amusements and entertainments of their community. In many cases Porters on English Railways have risen to be Chief Clerks at stations, Station Masters, and even to higher

We could afford to pay our Pointsmen a bigger wage if they were more intelligent and did the work of two of the present type, and this would not be difficult. I should much like to see the young boys who are growing up now, who are sons of the lowerpard clarks. Assistant Station Masters of the lowerpaid clerks, Assistant Station Masters, etc., taking to this kind of work. The coolie class could then be relegated to their proper work such as agriculture, earthwork, permanent-way gangs, etc.

This solution, however, of the unemployment of the offspring of the lower-paid clerical classes, of which the numbers are increasing so rapidly year by year, would mean such a complete revolution of the social ideas of that class that I do not feel very hopeful that it can be brought about.

Different Classes of Railway Psasengers

According to the same magazine,

The Work and Position of Teachers

Mr. V. Ramchandra Rau contributes to Welfare a thoughtful article on Elementary and Middle School Teachers" in the course of which it is stated:

One often hears the contention that our educational machinery is not equipped with the best of brains in the country; that the profession of teaching is one of the noblest and most responsible of profession, and that we want only capable and sincere men to make the young people of today the good citizens of to-morrow. With regard to the first of these contentions, it is a sad but undeniable truth that our educational institutions are not only not equipped with the best of brains

but often driving away men qualified for, a doing excellent work. My statements refer of to teachers below the high school grade, a let me not be mistaken as bringing within a sphere of my remarks teachers in any way connect with a High School, i. e. from the Fourth For upwards.

The truth is that the profession of a teacher has no longer any attractions for really good at capable men. As it is, the teacher is a creature of circumstances, and is made to adjust himse to them. The work he does is in no way inspiring it is not even congenial, but the teacher has to make it so. And when the teacher has create work that is congenial and in some measure in the profession of the spirit to purpose the has not the soul or the spirit to purpose. spiring, he has not the soul or the spirit to purs

For the simple reason that 'teaching' has become For the simple reason that teaching has been the refuge of a class of persons, who either the cause they could not successfully solve the graph problem of unemployment, or because they have some private ends to gain, take to it and not of of any sincere motives for the cause of education or for the equally noble cause of the uplit of the children of the country. It is a matter of comma knowledge that at least half the number of teachers recruited in our elementary and middle schools are men with ambition; men, who do not mean to stick to their line, but who do mean to mean to stick to their line, but who do mean w abandon it as soon as a better opportunity offer itself to them elsewhere Such men are abore blame, for, do we blame a man for wishing better the state of the st improve his prospects of earning a better lively hood? The second variety in this class consist of people, who have failed in their college career. and who, unwilling to waste their time, and anxious to carn something, out of necessity of expediency, offer their services as teachers. Now we may very well dispense with the two foregone we may very well dispense with the two foregonesets of teachers But, all the same, it should be noted that the greatest disservice to the caused education arises from them. Their interest is transitory, and their responsibility is light, for they may be going away at any moment, at the end of a year or two, and their work in the very nature of things cannot be expected to be anything but mefficient and insertisfactory.

nature of things cannot be expected to be anything but inefficient and unsatisfactory.

Why then, it may be asked are such kinds of teachers entertained? The answer is simple institutions like individuals have false notions of economy, though, be it understood, the economy is not false—it is true, it is something palpable for the time being. But, the notion of it is false, of course, when you have in view the end and aim of all real education. When you want to produce the best lot of students in your school when you the best lot of students in your school when you cannot secure the best of teachers because insufficiency of tunds, when naturally, you have to employ third-rate teachers, and when, in conse quence, your pupils do not attain the standard of progress expected of them, then you feel that your economy has not been worth while, that it has been suicidal. This will lead us into the further question, how far the heads or managing bodies of institutions are earnest in the putpose they have set forth before themselves, and how far Government and State aids have been able to remove their difficulty.

We now come to the third set of teachers. These are the men with whom we are really concerned. They have no soaring ambition; of they have they have not the whose within of

if they have they have not the wherewithal of

it: they can think of no other means not. They are forced into the profession, h they have to cultivate a liking and on.

Buddha and Asceticism

read in the Mahabodhi:-

ugh the Rija Suidhodana tried to keep the life hidden from his son's eyes, there time when Siddhartha saw the black cloud and sover all men—old age, sickness and Once he had seen the cloud and pondered is riches, his palaces, his gardens, lost their in his eyes and he became serious and I Then came a day when he said. Forth go and seek until I find some means where id all men may escape these grievous ills—is, old age and death. As he resolved, so he put off all his princely state and wandered is a beggar.

sting with ascetics, he determined to learn hein and to subject his body to every hard-nd severity, gradually cutting down his food a was living on a few heans a day. But by of these privations he became very thin—a skeleton After several years of these prache realized that he was no nearer his goal, t, if anything he appeared to be farther away, ith a wasted body, he had weakened his mind had become unable to bear the burden of used meditation.

om this time forward he ate sufficient food vore sufficient clothes. One day, coming to a int place beside a broad flowing stream and the cattle cross by the ford to the further he thought how it might be possible for him il mankind to cross the great flood of ill and o surety. And he sunk himself in profound atton

Youthfulness Even for Old Teachers

fir Haridas Roy says in the Teachers' rnal how teachers may remain youthful pite of age. A part of his observations uoted below.

you think of yourself as perpetually young, rous, robust and buoyant, if you feel interested to hopes and aspirations of the young people especially in their youthful amusement and ts, if you always keep in mind the bright, orful and buoyant picture of youth in all its, andour and magnificence and if you believe that are still in the enjoyment of youth, it is sure, ure as the day follows the night, that you will in your youthful appearance and strength in e of your age. Perpetual rejuvenation is possibly right thinking. You must look as you think feel because it is thoughts and feelings that age our appearance. The London Lancet—the hest medical authority in the world—gave a endid illustration of the power of the mind to up the body young. A young lady being deserted

by her lover had gone mad, she lost all consciousness of the passing of time. She thought her lover would return and for years she stood before her window and waited for him. When she was over 70 years of age, some visitors including physicians saw her and thought she was not over twenty. Her skin was as fair and smooth as a young girl's. Her firm conviction was that she was living in the very time her lover deserted her This conviction controlled her physical condition She was just as old as she thought she was.

"What Can We Learn from America?"

Prabuddha Bharata has published notes of a lecture delivered by Swami Bodhananda dealing with the above question, from which we extract the following passages—

There are two kinds of labour—the skilled and the unskilled. The skilled labourer, such as the carpenter of the brick-layer, gets \$ 15 a day in America. It means that he earns Rs. 46 a day. And how much does your carpenter get? Perhaps not more than As 14 a day. Then the unskilled labourer, a sweeper for instance, gets \$ 5 i.e. Rs. 15 a day in America. This great wealth of America is not of course, equally distributed. They say that five per cent, of the people possess ninety-five per cent, of the wealth. Still there is no poverty there—nothing like this appalling poverty that you have here in India. In America, if a man is willing to work, if he is not lazy, he can earn easily Rs. 15 or something like it a day. So America being a free country possesses these great advantages. It is all due to her freedom. I believe as a principle that unless a nation is completely free and independent to shape its own destinies, it cannot prosper.

I am interested in economics. I want to see my people well-fed, well-dressed, self-reliant and prosperous. Swami Vivekananda used to observe that there cannot be any Yoga (religion) unless there has been some Bhoga (enjoyment).

Three things have appressed me doorly in

Three things have impressed me deeply in America. The first is the American educational system. In America every child whether a boy or a girl, must go school, until he or she is fifteen years old. This is the law of the State. The children of poor families are supplied with books, pencils, paper and all other things necessary for education by the State. And the education imparted is completely free, no tuition-fees being received from anyone. By true education I mean, and I know you all mean, the spiritual education. The education of America which I am speaking of, is secular education. Still this secular education, this literacy, is also necessary for the progress of a nation, and we also badly need it

The second thing that has interested me in America is its saintary arrangement. If there is an outbreak of any epidemic disease, hundreds of people will volunteer their services, and the State will provide money to start institutions to investigate the nature and the cause of the disease and to stamp it out. If the State has not money enough, it has a right to conscript the weilthy. In times of national emergency, the State collects the wealth of the millionaires and uses it for public good. For instance, in the case of a flood, fire or epidemic, if there is a need of money and if it is

not forthcoming, then the Government has the right to conscript the wealth that Rockefeller and others possess. So, that is the great advantage of the people's government. Although the national wealth is unequally divided in America, still it remains in the country and is available in times of national need. The wealth is the people's wealth and the government, as I told you, is the government of the people for the people by the people. The administration is always for the good of the people, and the higher executive officers take pride in saying. "We are the servants of the people" I heard three of the great Presidents in public lectures say that.

I heard three of the great Presidents in public lectures say that.

Then, apropos of sanitation all the children of America are examined by State physicians once in a while. The American people have discovered a great psychological truth. They believe that if the children are physically defective or have some physical ailments, they develop such habits as trusacy, delinquency, telling lies, stealing, etc. The scientists have established it, and that explain the people's great attention to the health of their children. Then the third thing that has impressed me in America is the general prosperity of the country. I have already told you about it and do not like to say anything more on the point.

We badly need these three things here in India for our national welfare. The first is education, the second health: and the third, wealth. Every member of a nation has a right to them.

Cochin Again Leads

Stri-Dharma writes.—

In certain directions so quickly does the women's movement advance in India that each month sees some new and noteworthy step forward being taken. This month we are happy to record that a woman has been nominated to an Indian Legislative Council for the first time in her own right. The Government of Cochin has nominated Mrs. T. Madhavi Amma as a member of its new Legislative Council. It will be remembered that the sister State of Travancore was the first to include a woman member, but Dr. Lukhose Poonen, the lady in question got her seat in the Council by virtue of her appointment as a substitute for the Darbar physician, a man. Now Mrs. Madhavi Amma is the first woman directly appointed as a member of an important Legislative Council. We congratulate her on being the recipient of the hiscongratulate her on being the recipient of the historic honour and hope she will be the forcrunner

of many Indian women M.L.C's. Cochin State has been ever in the van as regards women's progress, which is what one would expect to a State where matriarchy still holds sway, where the rate of female literacy is the highest in India and where the write of the Maharajah wields very great political influence.

The Age for the Consummation of Marriage

With reference to the recommendation of the Select Committee of the Legislative Assembly that the Age of Consent for married girls in the case of their husbands should be raised from twelve, its present number, to thirteen years instead of fourteen as was fixed in Dr H. S. Gour's Bill, the same journal

It is heart-breaking to find the Indian men who are supposed to be India's leaders into the Promised Land of Self-Government so little able to govern their own lower natures that they are willing to offer up to it, or to it in other men, the bodies of girl-wives of thirteen. These children will then become mothers at fourteen. To talk of consent in the case of a child of thirteen is a frightful abuse of language. Perhaps the public would awake if one could broadcast some graphical illustrations of the agonies suffered by girl mothers in delivery the deaths that are result. by girl mothers in delivery, the deaths that result in the case of some, the weakening of the body and the consequent life-long depression in spirit of others, the physical degeneracy of the children and of the race-stock born of such child-mothers in consequence. We have seen only four protests in consequence. We have seen only four protests in the press against this disappointing proposal of the Committee, namely in The Servant of India, The Modern Review, The Madras Mail and New India No political move could do India more harm in the eyes of the outside world than the attitude to its young womanhood taken by the Select Committee. Other countries protect their girls until sixteen and they consider any nation barbarous in which a girl is entrusted into a man's hands before that age. India will be lowered in the eyes of all by such disclosures as are published in the Committee's Report. It is still possible for the Assembly and Council of State to pass the Bill in its original form. We call on them to do so. Every woman society ought to call on them to do so and save the girlhood of the nation. girlhood of the nation.

FOREIGN PERIODICALS

Theism and Laws of Nature

Writing on "Theism Nature" in the Harvard Theological Review,

Mr. F. R. Tennant of Trinity College, bridge, observes :-

Without the similarities and the repeatableness

nomena, without some regularity in Nature, ould neither be thought nor knowledge. nor prescience, intellectual nor science y, intellectual nor moral status, virtue of a reign of law that there mos to have meaning and a human reason ver it. In reign of law, moreover, we have nent an explanation as can be forthcoming. ; as we know but in part, of that greatest theism, the existence, within an order that is the highest goods, of evil as a necessary uct. Theism necessarily takes the highest to be subservience to the rational and tatus of finite spirits, and their communion od. In the settled order of Nature a necessary precondition of that highest In so far as Nature is intelligible a meaning, and those qualities must have tent ground the theistic interpretation the most reasonable. The world is a Newton did not make a chaos into a when he discovered his laws of motion and on, it was a cosmos already in the time ny. And it is not merely its cosmos-form catable similarities, that Nature shows to more significant is the epigenesis, the pary development from lower to higher, the veness of increasing purpose which it This suggestiveness, expressed in terms of cal, aesthetic, and moral arguments for the God, has always been the basis of commonitural theology, and has always commanded nt, they have been severely iconoclastic much of order as the world presents can putcome of blind chance or undesigned and ded coincidence has generally been as to human reason as it would be to have d that Hamlet was produced by the of some founts of type. It is difficult the least, to conceive of a world being by intelligible and also amenable to ethical less it be the outcome of intelligence,

regularity and adaptiveness 14 to have I, as indeed it must, we can find no such in Nature itself or its parts, nor in the man, which cannot begin to be rational external order be first presented to it, the ernative then is the theistic. A reign of 1 as we find, and such as 15 not to be led with its pseudo-scientific travestics, is the strongest links in the chain which centific knowledge to religious faith.

Baby Talk

James Sonnett Greene writes in

the faculty of speech through his faculty of speech through his faculty of speech through his faculty of it is strictly true that he does—
the faculty of speech that he does—
the faculty of speech of the speech. But this to the question as to what kind of speech of the standard speech; that is, speech preceded ite, complete thought, and consisting of and distinctly articulated words, put in straightforward, complete, grammatical al sentences, the whole being governed as

to intonation, rhythm and accent by the innate musical ear?"

"Training in speech should begin as soon as the awakening intelligence of the child prompts him to struggle after speech. The worst thing to talk to

a baby is baby talk.

"From his earliest years a child should be spoken to in correctly and distinctly articulated words, put together in simple but complete sentences. Frequently it has been observed that the only child of a fully mature, staid, educated couple far outruns the average child in mentality. The explanation is that having spent most of his time with his parents he has acquired good speech habits and a good vocabulary. Surely we here see the folly of leaving a child mainly under the influence of some uneducated, loose-talking nurse girl, and the wisdom of guarding him from the bad speech habits of other children.

"The most evil outcome of talking baby talk to babies, and particularly of imitating their omissions and substitutions of consonants because his mutilated speech sounds so cute', is that such speech often becomes confirmed as a habit Hardly anything could be better designed to confirm defective speech in a child than for him to hear it constantly invitated.

The Growth of Protestant Missions

We read in The Literary Digest.

United States, for instance, gave forty-five times as much to missions in 1923 as in 1859. The volume, edited by Charles H. Fahs, of the Missionary Research Library, and Professor Harlan P. Beach, of Yale University, shows that about 700 organizations, with head quarters in North America, Great Britain. continental Europe. South Africa, Australia and New Zealand, are conducting the Protestant foreign missionary enterprise, the of this number only 380 actually send out missionaries. The total income of the 700 organizations devoted to foreign missions, as reported in 1923, was \$69,555,148. Of the total income stated, \$45,272,793 was received by societies having headquarters in the United States, \$3,357,739 by Canadian societies, and \$13,342,499 by British societies. Continental societies had an income of \$3,631,305, the great part of this coming from Norway, Sweden, the Netherlands and Switzerland which were neutral in the World War Germany's gifts, which amounted to \$2,118,935 in the year preceding the beginning of the war, dwindled in 1923 to \$29,740, to such Protestant Church in Germany.

The quarter-century has seen a marked development in the strength of the growing Protestant Christian constituency in the field. Here are the

"In number of communicants Asia has increased trom 622,160 to 1,533,057. Africa has increased from 342,457 to 1,015,683 (Europeans permanently resident in various parts of Africa not counted here), aboriginal or indigenous populations in Australasia, Netherlands, Indies and the Pacific Islands, from 117,092 to 647,728; Latin America and the West Indies, from 132,388 to 368,228. In North America, north of Mexico, numbers of communicants among American Indians, Eskimos and Asiatic immigrants has increased from 20,506 to 48,711. The great increases in Asia have been in

China from 112,808 to 402,539; India, 376,617 to 811,505. Japan, 42,835 to 134,547; while Kores showed extraordinary growth, 8,288 to 277,377.

"In the Philippines, taken over by the United States in 1898, there were only 266 Protestant com-

municants reported at the beginning of the century; there are now 64.184 reported. In the Netherlands Indies, a region little known by Americans, there has been a very marked movement toward Chris-tionity in contain relationship of the companyment. tianity in certain islands, and the communicants reported in 1900 as numbering only 36,187 are now reported as 475,848.

A total of communicants, haptized non-communicants and others under Christian instruction numbering 8,342,378 is reported for the 116 areas for which missionary statistics are given Under the comparable categories for a quarter-century ago, the number was 3,613,391.

Machines Have Not Degraded Labour?"

Mr. Paul W. Brown, editor of The Executive's Magazine writes .-

"The year 1870 witnessed the taking of the first real occupations census by the federal Government. It is an easy matter, therefore, to divide the number of skilled workmen in the different trades by the number of millions of people, to do the same for the census of 1920, and thus place before our eyes a complete picture of the effect of

modern industry upon the development of the individual skilled workman.

"The carrying out of this plan blows to shivers the myth of the degradation of the skilled worker by the introduction." by the introduction of the automatic machine. The number of skilled workers has substantially increased. This statement is based on an examiincreased. This statement is based on an examination of seven of the principal building groups; five of the leading woodworking shop trades; seven of the leading groups in the iron and steel trades, beside three trades not readily classifiable—stationary engineers, engravers and bakers. The workers in these various groups show 25,149 skilled men per million in 1870 as against 30,739 skilled men in 1920. In relation to the population, the number of skilled workers of these groups in the United States increased 22 per cent, in the fifty years. in the fifty years.

"No doubt, the skill of the American craftsman averages much higher to-day than it did fifty years ago. Take the stationary engineer, for example; in 1870 the engines were small and simple affairs, hile to-day the engineer usually has to care for and supervise one or all of a group of complex devices, including dynamos, ventilating fans, steam heating systems, air compressors and refrigerating machines.
The trades that have been born—structural steel
workers and electricians, for example—are of
infinitely greater complexity than those which have almost disappeared, such as coopers and wheelwrights. And the modern machinist works to ten-thousandths of an inch, where his father

worked to hundredths or thousandths.

"The modern in lustrial nations have learned hew to make machin a do the work of skilled men only to set these soil of men at new tasks requiring greater, dexterity of hand and a wider comprehension of mechanical principles. The man who stands by the automatic machine to-day is not the son or grandson of the skilled craftsman of 1870:

his ancestor at that period was shoveling in the street under a broiling sun, or tugging at steel bars in a rolling mill, or doing back-breaking work bars in a rolling mill, or doing back-breaking work in the field, now done by high power implements drawn by horses or tractors. Modern industry has not degraded the skilled workman, it has only enlarged and exalted his opportunity. The census of 1870 showed 25,066 human beings per million doing work as domestic servants, while in 1920 that number stood at but 12,023. The modern machine has added to, not subtracted from, the dignity of man and the height of his calling."

The Spanish Army and the Riff Army

Captain Gordon Canning observes in the British Review of Reviews:

It is an extraordinary fact that the Spanish Army in Morocco which varies from 50,000 to 120,000 has never, during a period of 14 years, been able to defeat the Riff tubesmen who, until the last few months, have seldom numbered over 20,000. Besides the Spanish superiority in numbers, one must also remember the weapons of offence and defence which modern science places at the disposal of Spain, and of which the Riff tribesinen are altogether devoid: as well as the immense sums of money at the command of the Spanish Govern-

Now, what are the causes which can be assigned to explain the success of these small forces over the Spaniards? There are three:

(1) The mountainous country

Patriotism.

(3) The incompetence of the Spanish High Command.

The patriotism of the Riffs has nearly always sustained them for 2,000 years against the aggresions of the foreigners, and even when temporarily subdued it has invariably broken out once more and inspired them to renewed suffering, until their country was again at liberty and no foreigner trod their soil.

The difficulty of subjecting the Riff tribes has frequently been compared to that with which the Indian frontier forces are confronted. However, the Riff country is not nearly so inhospitable and rugged as are those spurs of the Hindu Kush, while its capital and centre of resistance has always been the most vulnerable point to its opponents in command of the s va

Though the Riff is mountainous it is by no incaninvulnerable, and if, in the portions which had been Spinish possessions for several years, roads had been constructed, work offered, education begin and women left unmolested, the registance would have subsided and doubtless the remainder of the country would have been posited. of the country would have been pacified.

None of these things has been done, and as no benefit has accrued to the tribes under Spanish rule, no allegiance can be expected of them when their fellow tribesmen rise

The difficulty of the country helps the Riff soldier in the warfare which Spain permits him to carry on, but if France chose to violate the treaties her army would find little difficulty in subjugating the country.

Sydney Smith and Scots' Humour It is generally assumed that it was Sydney

Smith who affirmed that a surgical operation was necessary to get a joke into a Scotsmans' nead? But according to the Dundee Adveruser:-

Mr William Harvey, F. S. A. Scot., lecturing in Dundee on "Scottish Wit and Humour," declared that it was not true, and that, indeed, Sydney Smith

that it was not true, and that, indeed, Sydney Smith and something very different.

Dr William Chambers tells the story in his largely forgotten but wonderfully interesting life of his greater brother Robert. Long after Sydney Smith had left Edinburgh and settled in London, Dr Chambers met him, They talked of the old life in Storland and of patronal characteristics.

m Scotland and of national characteristics.
"You must have seen that the Scotch have a considerable fund of humour," said Chambers.
"Oh by all means," replied Smith, "you are an immensely furny beople, but you need a little operating upon to let the fun out. I know no instrument so effectual for the purpose as the cork-crew!"

"Persia, the Victim of Russo-British Rivalry'

Mr Louis Fischer, an American newspaper correspondent at present in Russia who served during the war with the British Army in Palestine, concludes an article on the above subject in The Current History Magazine thus -

These are the characters and stage setting in the Persian drama. Persia, the prize, represented by its most promising leader. Riza Khan: Soviet Russia by her new Ambassador, Borts Zacharo-orch Shumiatsky, Great Britain by her Minister of Percy Lorrain, the United States by Dr. A. C. Willepaugh, and finally, Germany, approaching from the background carrying her Berlin-to-Bagdad experience with her as a Baedeker and Machiavelli in one. Only the bind Utopian can imagine, or between Russia and Great Britain in Persia will be composed. It seems to be Persia's fate, both on account of her geographical location and her natural wealth, to be the hone of contention of these two powers

The Living Age writes on much the same topic -

A Telegraphic dispatch recently appeared in the British press to the effect that the American Financial Mission to Persia, under the direction of Dr Millspaugh, which has been in charge of that country's fiscal administration for the past two years, had proved a failure; that the Persian Government had hoped to attract American money to the to that country when it appointed the Mission and this hope had not been realized, that the people imagined the Americans would reduce taxes, instead of the taxes of the country with the countr tead of which they had proposed additional imposts. As a result, according to this account, the Mission had become exceedingly unpopular. Dr. Millspaugh had twice tried to resign, and it was expected that he and his account a mould should be releaved on he and his associates would shortly be relieved of their duties.

As an illustration of at least a state of mind-

whose state of mind we are not in a position to suggest, for we are totally unfamiliar with the facts—the following comment upon this dispatch, from Deutsche Augemeine Zaung, the leading Berlin organ of Hugo Stinies's successors, is interesting reading:

"We must allow for the fact that this report reaches us from an English source, that English influence in Persia has been decidedly on the wane since 1921, and that England is naturally striving since 1921, and that England is naturally striving to recover her former precedence. In this connection the following statement by a high Persian official is significant: So long as the American Mission is in my country, England will give us no rest.' Rumor has it, moreover, that England is paying a monthly subsidy of a thousand pounds to several influential Persians in Teheran, whom she employs as spies and for the purpose of promoting discord between the Americans and the Persians. It is also reported that England was behind the It is also reported that England was behind the recently suppressed revolt of the Sheik Mohammerah, and is financing the constant incursions of the kura leader, Simko.

Egypt and the Sudan and England

"An Egyptian Publicist" examines Egypt's claim to the Sudan in the Current History Magazine and quotes official correspondence between Lord Salisbury and Sir E. Monson, Lord Cromer and Lord Salisbury, and Lord Kitchener and Lord Cromer in support of the following passages in his article:

The only conclusion to be drawn from these communications is that the conquest, or rather the restoration, of the Sudan was at the expense and in the name of Egypt Fingland helped as an ally, just as Egypt helped England in the World War in Palestine

BURDEN BORNE BY EGYPT

A glance at the record of expenses and casualties of the Egyptians during the restoration of the Sudan shows clearly that it was Egypt that contributed almost the whole man-power

that contituted almost the whole man-power and the financial and other resources:

(a) The Egyptians provided 25,000 men, while the British aimy was at the beginning, 800, and never exceeded 2,000 men. That is to say, it was never more than one twelfth of the Egyptian aimy. Moreover, the long drawn out campaign waged against the Mahdi and his successor, and communature in the victory of Ondurnian, would culminating in the victory of Omdurman, would have been impossible without the patient toil of thousands of Egyptian workmen in building the railways, working the river haulage and main-

taining the far-flung lines of communications.

(b) The expenses of reconquest amounted to £2,400,000 Egypt paid two-thirds of this and was ready to pay the other third, but for the arbitrary objection of the Public Debt Commission .

(c) Form the time of the reconquest, Egyptian Government has paid for the upkeep of 10,000 Egyptian soldiers, who cost her £13,000. 0'00. The Egyptian Army, in fact, provides the whole military garrison of the Sudad, with the exception of a single British battalon of 1,000 soldiers, whose expenses never exceed £2000,000:

(d) From the time of the reconquest, it is the

Egyptian taxpayer that has borne the whole costs of building railroads, public buildings, telegraphs and, in short, of the whole administration of the Sudan, totaling a cost of £5,600,000.

(e) The Egyptian Government has made good the annual deficit in the Sudan budgets, a deficit that has cost Egypt up to now a total of £5,350,000.

In short, it is the Egyptian possent who has

In short, it is the Egyptian peasant who has been taxed for the upkeep of the Sudan administration. He is the one who will have to pay the benefits expected to be made by the British shareholders of the wealthy cotton plantations in that country

Although it was Egypt that actually conquered the Sudan and also paid the entire expenses of the administration since the conquest, yet Egypt was forced in 1899 to sign the Convention of the Sudan Condominium. The text of the convention

provided as follows ... "The British and Egyptian flags should be used throughout the Sudan, (b) the supreme nultary and civil command should be vested in one officer termed the Governor General of the Sudan, and to be appointed by a Khedival decree on the recommendation of the British Government (c) Proclamation of the Governor General should have the force of of the Governor General should have the force of law; (d) the jurisdiction of the Egyptian Mixed Tribunals should not extend to or be recognized for any purposes whatsoever, in any part of the Sudan, and (e) no foreign consuls should be allowed to reside in the country without previous consent of the British Government?

"After Forty Get a Hobby"

We read in The Playground -

Dr. Lewellyn F. Barker Professor Emeritus of Medicine in Johns Hopkins University and former physician -in-chief of Johns Hopkins Hospital in Baltimore, believes play is potent to keep the middle-aged man fit instead of letting old age win years before it has a right Reasonable diet, sufficient sleep and a hobby make up Dr Barker's

prescription.

"It is an easy thing to tell a man 'not to worry' but he is likely to reply with the question 'How can I stop it?" Recreation offers a means. Every man should have at least one or two hobbies to divert his mind and to relax the tension of business cares. Gardening, fishing, an interest in art, music or books, or engaging in some social-welfare activity may provide a fit hobby Every man must pick his own hobby through inclination and

by a process of experimentation.

"Play is the best kind of exercise, but the middle-aged man must use care in the selection of the games in which he indulges Tennis is good exercise for the man of 40 who is content not to play it too strenuously, but for a man past 40 golf is perhaps better fitted to his needs. Riding and walking are also excellent forms of exercise

walking are also excellent forms of exercise "Calisthenic exercises will do much toward keeping a man in condition, but calisthenics should not be overdone. Men who are past 60 will often find that the exercises best fitted to their needs are simple ones that can be performed in bed while under the covers and out of danger from exposure to cold.

"But real play is the thing of which the middle. But real play is the thing of which the middle aged man is most in need. He should give a week-end or an afternoon each week to recreation. He will find it will pay him to take a day off now and then and to make semi-annual vacations a regular practice—at least two weeks in the summer and a shorter vacation in mid, winter. The chief object of these vacations should be to get into the open air and as far away as possible from the sights and sounds of the city and the thoughts of business."

Cecil Rhodes and Asian Independence

After describing the imperialistic aims of Cecil Rhodes in The Chinese Students' Monthly Dr Taraknath Das observes. -

Cecil Rhodes held that it is the will of God that Great Britain through the co-operation of the United States of America and through the superior genius of the Anglo-Saxon peoples would dominate the world for justice, peace and liberty. We find that Great Britain is ruling India and dominating major parts of Asia and other sections of the world keeping hundreds of millions of people under subjection, denving simple justice and freedom and we can safely assert that British imperialism has been a curse to the world and has been the cause of more wars than any other factor in recent

God is not so unjust that He has decreed once for all that the peoples of Asia which were far more civilized than those of Europe many continues before the Christian era, be kept under perpetual subjection of the Anglo-Saxons or other Europeans. The present degraded condition of the peoples of Asia is more due to their faults than any other reason. They have to struggle to rise again. Britishers do not depend upon the will of God to carry out the scheme of dominating the world, particularly Asia and Africa. They use all possible means to attain their end of extension of British imperialism on a solid foundation, even by destroying a possible competitor or a rival God is not so unjust that He has decreed once by destroying a possible competitor or a rival by war, starvation and political isolation

Are there young men and women in India, China and Japan and other parts of Asia and also in Africa who see the vision that their God-given duty is to give all their energy of life and all the wealth in a well-calculated manner, particularly by procedure education and with the convertion of spreading education, and with the co-operation of all peoples under subjection to secure freedom of the oppressed peoples of the world? A few Cerl Rhodes of new type are badly needed in all countries of Asia and Africa. They should inscribe in their hearts the ideal of Asian independence equal opportunity and no discrimination against any people, because of race, to be achieved through concerted action in all parts of the world.

Their ideal cannot, be achieved within a year or two nor can it be achieved by merely delivering.

speeches, by adopting resolutions or by rousing racial bitterness between the East and the West Life-long consecration to the ideal, untiring work to spread the gospel of freedom, augmenting wealth ly developing national intelligence and efficiency, industrial and economic strength and proper international understandings are needed to win the victory. None with a light heart and hasty

lament should respond to this call Only those who ve a vision and sustained energy should under-te to perform the duty of crowning human free-m through many-sided activities—World Peace th Justice and Liberty to All Peoples, to be hieved Through Asian Independence

"Conquest of India by Alexander the Great"

P A Malpas remarks in The Theosophic all that

The Greek and Latin histories of the 'Conquest India by Alexander the Great,' ought most ematically to take their place among the first to be

Think how they were written! The chief offendout the time that Vespasian was destroying insilem say nearly four hundred years after exander's fairy-tale conquest Arrian fook his ton from the pages of Aristobulus and Ptolemy less lustories are lost to the world.
But what of that well these good bookwrights

the history of Mezasthenes This was a Greek ho visited India some years after the 'glorious nquest' of that country by Alexander (which

Now here is the point. These second-hand rekauthorities never once set eves on a single ord written by Megasthenes! As for the thirdnd Arrian

Could any history ever be a more illegitimate andchild than Arrian's history? It is a book

and hild than Arrian's history? It is a book aften by a man who took it from two other men in never saw a word of the history from which by took it in their turn. The Greeks certainly 'fancied themselves' at it date when Alexander invaded Afghanisthan I Beluchisthan—say between 325 and 330 B c d really their civilization was something of ich to be proud. Less than a hundred years is we English were content to base all our art I sculpture on Greece, and our polished men ild never speak more glossily than when quoting tek tags—in short, we were content to recogni ek tage-in short, we were content to recog-

charge—in short, we were content to recog-char Greece was greater than ourselves. But that does not in the least interfere with fact that Indian civilization was then far sup-or to that of Greece in almost everything ex-t boastfulness. Greek civilization was the infant indial of an India heavy with age—and that why today artists and theologians and folk-ists find Indian art and literature always show-Greek influence. It is wonderful how heredity as But even so, our most learned authorities re-But even so, our most learned authorities re-infrom speaking of the 'influence' grand-habies to on their grandparents: they do not rhapso-to over the squalling infant and declare that "his adfather takes after him wonderfully"!

Indian Medical Men and Medical Research

In the opinion of Major-General Sir Gerald ffard, I. M. S. (Retd.), as expuessed in the urnal of the East India Association:-

It is a sad reflection that, up to the present, Indians have shown hardly any aptitude for medical research. For more than twenty years I have urged the need for research on the students and young qualified medical men in the Madras Medical College, but so far without result. The great discoveries in tropical medicine have all been made by Europeans. I have discussed this matter with my Indian friends on many occasions. The answers given to my questions generally are that Europeans have always held the appointments in India which provide opportunities of such work, and that the Indian medical student and practitioner are too poor to spend their time at unremunerative work. This cannot be the correct answer If it were correct, how comes it that Laveran, Ross. Rogers, correct, how comes it that Laveran, Ross, Rogers, Donovan and all the others have made such world-renowned discoveries. They did not hold big appointments and were not attached to large scientific institutions, yet they did their splendid work. No one would be more pleased than the European medical men of the world if Indians followed in their footsteps and advanced the science of tropical medicine. The future of medicine in India will largely depend on the advent of Indian medical discoveries.

City Planning and "Regional Planning"

The New Republic says —

Most people are now fairly familiar with the phrase "city planning" and what it connotes We predict that in years to come "regional planning" will be heard even more frequently Among the engineers, architects and others who think about such things, the belief is growing that the problem of the great modern city cannot be solved except by working on a scale which includes as well a large area of the surrounding countryside. These men long ago realized that new transportation lines do not relieve congestion, but only These men long ago realized that new transportation lines do not relieve congestion, but only
increase it that with land values left strictly in
private hands, the problem of decent housing for
people of modest means is unsolvable in thicklyinhabited areas, and that we must think, not of
facilitating more growth, but of making cities
smaller. This is to be done by creating satellite
centres on the outskirts, and perhaps by limiting
these satellites in size by encircling them with
bands of agricultural or park land

The Women of Japan Today

The following items of information are gathered from an article in the Japan Maga-:ine .-

In the towns, common school girls mostly wear foreign clothes. In the provinces, they are not so westernized in dress as in the towns and it is generally the rule that all school girls wear maroon or purple hakanla (skitts).

Ourls are graduated from high school at 18 or 19. This age was the marriageable one in old days, but nowadays it is 22 or 23 although the old idea. is still retained in the provinces, where the daughters are married soon upon their graduation from high school

Marriage is arranged mostly through third parties. A respected gentleman or his wife volun-teers to mater suitable parties from among friends or relatives. The parents of each are told of the lineage, age, character, education, looks, etc., of the other. If the proposal is found worthy of consideration the son and daugnter are told of it by the parents, and if they are not opposed, they hold a formal interview at a fixed place, after which a match is made, if each is pleased with the other

There are different methods taken nowadays for removing the evils from marriages arranged through match-makers. One of them is that after the formal interview, they have friendly intercourse with each other for about a year under the supervision of the parents, after which they marry, if each satisfactorily understands the other.

Even to-day, old marriage system is not considered objectionable, provided that the go-between

has sense and high personality.

The love-match is not thought of in the middle order of Japanese society as quite ideal. There are, however, many men and women, who are free and fetterless of family restraint, and make good matches of their own selection, an unavoidable course taken by persons placed in such circums-

Middle-class men usually marry middle-class women. Japanese married women are unequalled women. Japanese married women are unequalled in faithfulness. In large towns, newly married couples form new homes of their own as a result of the introduction of new ideas, but in the provinces, it is not allowed, and the bride is duty bound to serve the parents of her husband as faithfully as she serves him. This is an important item of the marriage conditions, the old idea being still held among the provincials that she is married into the family of the burkend as well as to him.

family of the husband as well as to him.

Such wives must work busily as housekeepers as soon as they are married. They cook the meals sometimes with the aid of a maid. They sew and wash the clothes for their families. This regular household work keeps them so busy that they have scarcely time to rest. Upper class women have more leisure, their household affairs being left to the management of numerous maids. Lower class women can be contented with a simpler life than the middle-class, as they need not maintain their houses as well as the latter. Middle-class wives are, therefore, in the hardest position among Japanese women and may be compared to German

Newly educated young men and women are inclined to speak disapprovingly of wives being so occupied at home which they regard as the out-come of antiquated ideas. Women of such homes are interested in social questions, although they

form still but a fraction of society

Exchange of Christian and Moslem Inhabitants

P. Gentizon discusses in L'Illustration what has been done to give effect to the exchange of populations between Greece and Turkey according to the Treaty of Lausanne, and asks -

What will be the result of this obligatory ex-

change of inhabitants? It is certain, in the first place, that even when it is complete it will not mean stability for either country or a definite localization of the newcomers. Hitherto the emgrants have been compelled to obey official orders and settle in the regions assigned to them. In other words, numbers of them have been taken to be a property which do not suit them at all and it is places which do not suit them at all, and it is perfectly certain that the exchange of populations, properly so called, will be followed in turn by a movement of the exchanged populations within their new fatherlands, which may reach very considerable perpertions. Among the emigrants, some—the intellectuals, for example-will wish to live in cities others in more fertile districts or regions better fitted to their special skill. That is why a number of years must pass before all the sufferings which have been caused by this unique uprooting of the life of peoples can be effaced. From the economic point of view the exchange of populations will translate itself on each side into a large decline in production: but it is also certain that from a political standpoint the reciprocal departure of the minorities from Greece and Turkey will constitute the best possible measure for re-establishing peace and quiet in the Eastern Meditoiranean it would indeed have been preterable that the conflict of races nationalities and religions should have ended in an ideal of concord and fraternity between all these nations that have been so inextricably intermingled, but human passions and human weaknesses would not have it so Instead of persisting in the quest for what may have been no more than a chimera the popular mind finally preferred a complete divorce to a marriage that for centuries has been unhappy. The hour of separation for incompatibility has struck, and this solution however sad it may be, will certainly facilitate the regeneration of the Near East. Hitherto large majorities have spoken Greek in Turkey and Turkish in Greece, and misunderstanding arose beccause it was impossible to comprehend one another's language This time, with the exception of the Greek groups in Constantinople and Turkish groups in Western Thrace which have not been included in the exchange, a sharp line of demarca-tion has been traced between them—the Greeks on one side, the Turks on the other. In this way the Christians need no longer complain of handleaps, nor the Mussulmans be submitted to exaction. There will be no more master, no more raya, no more dominant race, no more of the eternal subjectrace. Minorities having disappeared, there will no longer be that frenzied competition within the bosom of the same nation, that chaos of contradictory pretensions, that clash of opposed ideas, that silent warfare of different religions, that conflict of races whose qualities differ.

Hitherto most of the wrongs with which Turks have been reproached were due to the structure of their government. To dominate and control strong and unassimilable minorities, they felt themselves and unassimilable minorities, they felt themselves compelled to use the dogma of Islam with the greatest rigidity. Henceforward, being alone in their own country, they will be able—though without running any risk—to interpret these same conceptions in a broader way. The exchange of populations will have the far-reaching consequence of facilitating and making possible a kind of liberalism in Turkey. In Greece it will have the advantage of increasing pational unity and homogeneity. It will therefore constitute a guaranty of a more favourable future for the people of the Near East.

Soviet Russia's Secret Police

It is not merely autocracies, plutocracies, oligarchies and middle class governments which have secret police The proletariate government of Soviet Russia has the same agency Georges Popoff writes in Pester Lloud of Budapest -

What is the Cheka? It is a political secret police But that alone would be nothing remarkable. It would not be worth wasting words over; able It would not be worth wasting words over; for every country has something similar England has Scotland Yard, France the Surele, America her Secret Service Furthermore, all these institutions bear some resemblance to the Cheka, and vice versa. But the resemblance goes only part way it exists to the extent that the Cheka, like the other hodges mentioned performs, the functions the other bodies mentioned, performs the functions there by any means It is a far more important organ of the Russian Administration, it is far greater in every way, than the ordinary Secret Services of bourgeois countries

Between December 1917 and September 1918 nine hundred people, an round numbers, were executed in Petrograd, and nine hundred more elsewhere in Russia.

But the system has produced even worse abuses than executions—even executions en masse. I need only mention the custom of seizing hostages, which the Cheka adopted—or rather resurrected from the darkness of the Middle Ages—as early as 1918. Its officers seized one hundred, two hundred, three hundred, and even more, perfectly innocent men, women, and children, incarrorated them in the damp cellars of the Lubianka Prison, and announced that they would sell be shot the moment any that they would all be shot the moment any person whatsoever tried to kill a Soviet leader. Mothers and wives were held as hostages until their sons and husbands surrendered to the Cheka, and even today the Cheka still regards the hostage system the main prop of its power

A German's Indian Impressions

W. Staegli has recorded in Berliner Ingeblatt his impressions of India. According to him, the Maidan in Calcutta.

Is surrounded by a row of ugly buildings in what some one has called 'the speculation style of architecture'. These accommodate several rather medicine has all the discusse the ideas of architecture'. These accommodate several rather mediocre hotels, clubs that discuss the ideas of yesterday, and shops that sell the fashions of day-before-yesterday. On the north stands the old Government House, seat of the Indian Administration before its removal to Delhi. It is an imitation of a baroque country-palace, now happily concealed by a screen of trees and trellises. To the south looms a sort of marble wedding-cake, which I at first thought was a temposary exposition-building but learned later was a museum Compared with the Taj Mahal, it is like Mrs. Newrich beside a princess. princess.

The Victoria Memorial is spoken of as th The writer marble wedding-cake. nues :-

Scattered over the lawn that senarates these tw masterpieces of our superior European culture ar some thirty statues. Happily they do not stand i a row like those in our Sieges-allee, but in other respects they resemble them. They represent the Governors of India from Clive—that wonderfuctors between Napoleon and a footpad who founde British rule in Asia—to the elegant, well-groome lords of the present era, whose noble titles qualif them to rule for a period of five years over thre

hundred million natives.

Calcutta has a million and a half inhabitants: (whom about twelve thousand are Englishmen an practically all the rest Indians living in dust Black Town.'—among them Rabindranath Tagor The city has no concerts or theatres, except a fermediocre movie-shows, but there is a university fe Indians, The climate keeps Europeans from under taking strenuous intellectual labor. All the hote are surprisingly poor, especially in respect of foor for neither Indians nor Englishmen are good cook A couple of Italian restaurants are oases of Eur pean culmary culture.

On the other hand, football, golf, tennis, an horse-racing are very popular. Indeed, the Indian themselves have become excellent sportsmen. I say an important match in which the Indians thoroughly drubbed the English Most important of all, the natives have learned to follow such events intelligently and to bet on them, so that here in the lan of the Vedas and Upanishads the sporting-pages in the land of the vedas and Upanishads the sporting-pages in the sporting-pag the newspapers are devoured with equal eagerner by whites and browns.

About "Tagore, the Poet", the Germa visitor writes.

At length he appeared, a tall, slender gentlema with kindly, delucate features and a heard,—a raril in Bengalese society,—wearing a long robe of yello silk, a high lilac, satin cap, and sandals on his ba silk, a nigh flac, sath cap, and sandals on his bafeet. He removed the latter when he entered the room. I was introduced to him, and he spoke a most appreciative way of Germany and her spritual kinship with India. He regretted that a na row-minded bureaucraev still keeps Germans frow visiting India, and thus forcibly prevents direcontact between German thought and science as the intellectual life of his own counter. the intellectual life of his own country.

On Indian temples in general he ol

As a rule Indian temples are designed not i much to be seen with the eye as to be felt with the spirit. Only a person who is prepared to one his ears to the language of the stones and to te the experiences and the emotions incorporated i them will discover the secret of then meaning He must catch the swelling rhythm of the thre or fourfold temple-design, rising from pinnacle t pinnacle to the loftier dome that covers its sacre shrine. He must let the language of these strang mages of the gods, half-human and half-annua mak into his soul until he feels in the depths his own consciousness how truly they expres man's primitive awe and secret terrog before the mysterious forces of nature. He must interpret the lines of the towers not as he would in Europe has a secret terrog before the mysterious forces of nature. where each stands out straight and distinct, by

in all their undulating and tendril-like confusion. as symbolizing clusters of human arms lifted in passionate appeal to God.

Ot the black pagoda at Konarak in Orissa. he writes:-

Unlike many conventional Indian temples, this one shows evidence of being designed by an original mind and a master hand. Colors have been consciously and effectively used to emphasize structural details. The crossbeams of the pagoda contrast in deep black against the predominant gray of the building, while the dance-hall in front is of brilliant red sandstone. Conscious emphasis is of brilliant red sandstone. Conscious emphasis has also been laid upon individual members of the group in their relation to the whole, for example the dance-hall is managed so as to give a clear view from the main entrance to the dominant central edifice. Last of all, the Indian's passion for expressing movement maintests itself in a remarkable device, the whole temple is conceived as if it were moving away from the observer on an immense carriage; it stands upon ten gigantic wheels, which the four horses of the sun are drawing toward the neighbouring ocean—an arresting ing toward the neighbouring ocean—an arresting and truly Indian conception

A Huge Paper making Scheme

We read in Chambers's Journal -

We read in Chambers's Journal—
It is common knowledge that the paper on which most newspapers are printed is made from wood, and that large areas of forest abroad, more especially in Newfoundland, are being devastated to maintain the supply. The wood is literally ground up into pulp before it is fit for manufacture into paper, and this process requires a large amount of power. A huge scheme for producing the necessary power from water and for laying down a factory to produce 120,000 tons of paper a year is now being carried out for the Newfoundland Power and Paper Co, Ltd. by Sir W. G. Armstrong, Whitworth, & Co., Ltd., Newcastle-upon-Tyne,

The paper-making machines, which have been supplied by a Lancashire firm, are said to be the largest in the world They turn the paper out in a width of 219 inches. To supply the paper-mill, 200,000 cords of wood per annum will be needed and this huge quantity will be taken from forests estimated to yield 10,500,000 cords [A cord—128 cu. ft.]

Imperialism and Democracy

The American Locomotive Engineers' Journal writes:-

The American nation was founded on a protest against imperialism. The Revolutionary War was fought to vindicate the right of an exploited people fought to vindicate the right of an exploited people to rebel against the empire which sought to hold the new continent as a colonial dependency. For a hundred years, the traditions and political policy of America vigorously opposed the imperialistic policies of the European powers. The famous Monroe Doctrine was a warning to the imperial rulers of the Old World that the United States would go to war, the extension of imperialism if need be, to prevent the extension of imperialism

in the Western Hemisphere. The whole genius American democracy, as opposed to autocratic m perialism, is summed up in Abraham Lincoln's gre declaration. "No man is good enough to govern at other man without that man's consent." Less the a generation ago we still cherished this principal when the American people became righteously indipendent at the suggestion that nant at the suggestion that we should copy the "dollar diplomacy" of Europe in dealing with Chirand Japan. But it is the gravest menace now in perling American democracy For imperialism his become enthroned in America. Its spokesmen an apologists determine governmental policy.

Indeed, America has so far strayed from the principles of its tounders that today it leads the world in the extension of economic imperialism, much more subtle and complete form of exploitation than the military imperialism of old. Europe over achieved.

Democracy and imperialism cannot be reconciled One or the other will have to go Which shall

Imperalism is caused by the lure of larger pro ins by exploiting a weak or supposedly "inferior people than can be made from legitimate business enterprises at home. Profit is the taproot of the whole imperialist system. If the victimized people object, the military forces are called in to establis "law and order" at the point of the bayonet. they are powerless to make opposition, then the natural resources and public utilities are gobble up by the imperialistic interests "developing" th country.

The journal then mentions incidents and facts illustrative of American and Spanish im perialism, and concludes -

India stands out as the world's worst example of ruthless imperialism. Ever since the days o Warren Hastings the people of India have been bled economically and dragooned by British militarism in order to supply British manufacturer with cheap raw materials and British investors with tremendously profitable investments The article tremendously profitable investments. The article by Mr Das in this issue is a scholarly, conservative presentation of fact, which does not attempt to depict the tragic cost of imperialism in human agony. A dispatch, during the past week, state that three Indian members of the Bengal Provincia Council have been arrested without charges and imprisoned indefinitely without a warrant. The activities of imperialism in India are matched in Egypt and Ireland, only on a smaller scale. The victimization of China by the imperialism "Christian" powers is equally shameful. As it India, the white man has forced opium on the natives to drug them into submission and extract still larger profits, still larger profits.

During the War we gnashed our teeth at German imperialism. Is British or French or American imperialism any better? Are they not all made from one piece of cloth, differing only in the colour of their uniform?

Mr Das's article, referred to above, is very well documented and ought to be reproduced bytour dailiés.

Women's Conference on the Cause and Cure of War

The Woman Citizen of America devotes a sli-illustrated article to the recently held merican Women's Conference on the cause id cure of war. The causes of war, as ought out in the discussions, have been miniarised by the Committee.

They classified causes into psychological, economic, hit al, social and contributory. Under psychologistical, social and contributory. Under psychologistical they listed fear, suspicion, greed, lust of power, bition, revenge, hate, jealousy, envy; under pannice—aggressive imperialism, economic rivalries, periment protection of private interests abroad ithout reference to the general welfare, population estile, profits in war, disregard of the rights of ikward peoples. Under political—the principle balance of power; secret or unjust treaties and explained of treaties, disregard of the rights of morties, partisan polities, political sanction of al, and organization of the state for war, ineffective obstinctive political machinery. Under social and monitolary the Committee included, exaggerated shouldism, competitive armainents, religious, and mal antagonisms, general apathy, indifference and morance, war psychology (created through otto) pictures, textbooks, home influences, the ck of spiritual ideals

As regards the cures we are told :-

If the causes were legion, the cures were a ultitude, but three or four stand out as the most ressed subjects of discussion. On one of these the inference was unanimous and ready to act at once the World Court

Other cures developed in the discussions were codification of International Law, the League of tions, in various phases, the Protocol of Geneva, e operation of governmental international agencies is economic and social ends, education in its ternational aspects, the missionary as an agent for aild peace, the right teaching of history, medicine a factor in internationalism, the influence of the

ess, and of diplemacy.

Back of all the Conference discussions ran the dization that the world's interests—financial, litteal, economic, social—have become one. A old demonstration of international linking of the fields came in Raymond Fosdick's account of the agencies as the Rhine Commission, the Postal non League of Nations Commissions on Opium, with, Traffic, etc. Health, for instance, is no iger a local or even a national matter, but lemational. Influenza was as international as the it—starting in German pison camps, it swept aund the world, taking uncounted toll of civilians to should hightfully be added to the war casual—s. Bubonic plague comes out of the wastes of abia, is carried on to Southern Thibet, to China, dout to the poits of the world. So with infantile talysis And with the modern round-the-table thoughted these common enemies are combated by induidization of serums, so that they are the same crywhere; by an information bureau that sends t information on diseases and is "on the watchtower the human race." This is the conference method, plied to social matters, that the League would ply—does apply—to the disease of war.

THE LEAGUE PARAGRAPH

The paragraph as passed, which was stronger than the original drait—and weaker than some would have wished, reads.

The Conference league of Nations to the ideals that are dominant in the United States of America. It is the only functioning world organization providing for the realization of those ideals. The Conference therefore believes that, whether our Government enters the League or not, it should as far as possible enlarge our responsibilities in League plans and cooperate with its activities.

plans and cooperate with its activities.

Inasmuch as the Protocol of Geneva is the most advanced proposal ever made for the outlawry of war, the Conference believes that the United States should hold itself ready to take sympathetic and cooperative action in the furtherance of the success of the Protocol.

of the Protocol
The text of the adopted report on cures combines
the various points of vew about outlawry. It

Work for the outlawry of War with the understanding that this involves two definite steps: (a). The enactment through an adequate agency of an international law declaring that war is a crime in which an aggressor nation should be dealt with as a criminal. (b) The use of international machinery through which such a law can become operative among all nations. This involves and actually compels permanent would organization, which shall be continuously operative.

be continuously operative.

This one law would be but one of a whole bcdy of international laws needed to conduct the world on the visioned lasis of law instead of force, and the Conference also endorsed in its program the progressive codification of international law. Arbitiation treaties making for international conciliation, the revision of existing treaties that violate international justice and a share in movements toward reduction of aimament were also endorsed.

But the most striking recommendation was the restoration in the Department of State of the office of Under Secretary of State for Peace, whose special function shall be to foster international understanding and peace.

Coming to Economic Forces, the Conference recommended acress to essential natural resources and raw materials, development of channels of distribution, establishment of a commercial code between nations to define unfair competition and taboo the exploitation of weaker peoples by the stronger, establishment of a fair industrial code. As means of accomplishing them it recommended international conferences on world resources and the utilization of such agencies in the economic field as the International Lapor Organization.

Discussion, from platform and floor, of the social and educational forces that contribute to peace had a wide range—such as exchange professorships and fellowships in the educational field, cultivation of inter-racial understandings and tolerance, even by such simple human methods as hospitality to foreign students. The moving-picture came in for its share of responsibility, and the proper selection of text-books. There is no space here for the sections of the report that sum up these things, nor to digest the speeches.

The claim of Professor Donald Talt of Wells College that the next war is being prepared in the text-books was perhaps the most striking. He

. . .

displayed charts showing by parallel extracts from school histories, the contrary impressions of the great war and the peace settlement that are being given to children of France and Germany. Here

is one intance:

"As to the policy of the 'armed peace,' Freach children read: 'Germany's assertion that she was encircled by enemies was a mere pretense. The danger from the wicked Germans alone made European armaments necessary.' German children read 'Germany was encircled by her enemies and her armaments were purely defensive.'"

About this Conference we read in The New Republic:

Presiding over the five hundred were some of the notable figures in the contemporaneous history of women's affairs: Mrs. Currie Chapman Catt, vetforward to forty more struggles for causes not less worthy, a woman with a mind like a mickel-plated dynamo, and a personality which, it you insist on interpretation in masculine terms, is a combination of Gladstone and Savonarola, with a dash of Disiaeli.....

About the results it is stated in the same

Chief of these results is efficiency without cynicism; this reporter, who has been attending public meetings of various sorts for a fifth of a century, wishes to make deposition that no group of men whom he ever saw or heard of can assemble and conduct affairs so competently and yet spiritedly as these ladies. It isn't merely that the meetings began and ended on time, or that thirty minute speakers spoke for thirty minutes, but that the participating audience also played its part incredibly well. Questions from the floor were really questions, not minority reports, and they showed that the preceding speeches had been stened to and understood, a phenomenon incomparable.

The convention, furthermore, was honest in its

Not the least striking aspect of the conference. and a refutation of the charge that women do not mow now to conduct their business in a businessike way, was the efficiency with which the facts
presented before it were written into conclusions,
and the groundwork laid for continuing action—
ection both in the detailed study of war's causes
and curse, and in educating the general population
as to what should, can and must be done if war is
to be abolished. mow how to conduct their business in a business-

The Geneva Protocol

Mr. E. E. Dillon writes in The Commonweal of Australia:

The framers of the protocol had three objects in riew, viz, arbitration, security, disarmament. These bree objects are also sought by the covenant. In in the coverant. In the coverant of the coverant of the coverant. They have given the factor of the coverant. They have given the factor of the coverant. They have given the factor of the coverant of the co

arising out of domestic matters. Is not this practi-cal common sense? The present system of periodi-cally sacrificing the lives of thousands, nay millions of young and innocent nationals over matters that the moderate men of each nation could satisfactor. ly settle in 24 hours of conference amounts to criminal insanity, and is certain to bring about another Armageddon. But arbitration, by having both sides to hear and weigh, coupled with the decision of able, honest, impartial and disinterested third persons, is more likely to accomplish justice, and avoid war, than the present system. The effects of the msidious propaganda, even now being carried on in the press of each country, and of which the young men who will die are quite ignorant, would be nullified by arbitration. To any one whose preponderant leanings are towards justice, humanity or civilisation, there should be no hesitation in choosing between universal arbitration and the present system of universal armed force.

As to Security, the protocol brands aggressive war as a crime, and defines an aggressor nation as one which goes to war in violation of its undertakings under the covenant and protocol, and direct, the council to call on the rest of the nations to apply sanctions against the aggressor and to come

to the assistance of the attacked or threatened State One can understand Pacifists objecting to this One can understand Pacifists objecting to this clause, because they see no difference in objective miseries between aggressive and defensive wars, and because they think the League should have no sanctions at all. They waive their objection, however, hoping that there never will be any need to enforce arbitral decisions, and believing that wars (if there are any), will be far fewer than under the present system of organised universal conflict. But how can those who believe in armed force logically object to it Moreover, the physical assistance which any nation is obliged to give against an aggressor is your much within its own which aggressor is very much within its own choice. The League has no army of its own and can give no orders to any nations' armies. There is no compulsion on any nation to actually join in the fighting unless it likes.

As to Disarmament, it must be remembered that the protocol is not to come into force until a plan of universal disarmament has been universally agreed to, and it provides for the calling of a universal conference for that purpose in June next. "No

plan, no protocol.

Louis XIV and Aurangzeb

Sir Theodore Morison, principal for years of Aligarh College, whom no one will accuse of anti-Moslem bias, has an article in the March Contemporary Review on Louis XIV and Aurangzeb. He begins it by drawing a parallel betwen the careers of the two monarchs, but observes :-

These certainly were curious coincidences: but they were accidental and do not afford matter for instructive comparison. Indeed, I must own that historical analogies usually inspire me with distrust.

At the same time Sir Theodore says:
"Both Louis XIV and Aurangzeb were confronted
th the familiar problem of religious non-conformy
and both tried the yet more familiar remedy
persecution. Both found on coming to power persecution. Both found on coming to power that religious toleration was the established practice their kingdom and both deliberately set it aside. Ith what results to France? With what results India? Those are the questions which we must re consider.

After describing what Louis XIV did, Sir heodore Morison observes:-

"It was some time before France realised the "It was some time before France realised the rice that had to be paid for intolerance and longer ill before any one dared to breathe it to Louis miself. But Vauban ventured to speak the inplatable truth....In a memorandum addressed his official chief, Louvois, he thus tabulated is losses which the persecution has caused to

(1) The desertion of eighty to a hundred thousand ersons of all conditions who have left the king-om carrying with them 30,000 larger of good

oney
(2) The damage to our special arts and manufacres, most of which are unknown abroad, and thich brought to France considerable sums of money from all the countries of Europe.

(3) The ruin of the best part of our trade.

(4) It has swelled the fleets of our enemies with ght or nine thousand of the best sailors in the

ingdom, and their armies by five or six hundred ficers and ten to twelve thousand soldiers, better

ained to war than theirs.

"It would be difficult to frame a more damaging arge. The number of Huguenots driven into exile variously estimated at 150 to 400 thousand. very protestant country was enriched with a rain of Huguenot blood. The exiles spread a knowdge of the superior civilisation of France and at dge of the superior civilisation of France and at c same time a fierce determination to resist the mination of Louis XIV, out of which sprang a league of Augsburg, the great coalition which as to drain France of her strength in a long and mous war. But serious as were the wounds hich the policy of Louis inflicted on his country, by were not mortal. France passed through the deal weakened but unbroken. The sentiment of the distinctionality gathered strength in the course of the enternth century and gradually observed to itself a passionate emotions which had in the sixteenth ntury been associated with religion. By the ne of the Revolution, patriotism dominated all her claims to allegiance, and in 1789 the Consuent Assembly annulled the Revocation by colaiming the equality of all citizens before the without distinction of religion."

This is followed by Sir Theodore's observaon on the career of Aurangzeb.

Very different was the history of religious perorded him little justification. Contrary to the inton generally current in Europe, Islam is tolerant religion. The docty of toleration is tolerant religion. The duty of toleration is tolerant religion. inly enjoined in .many passages of the Quran; clearest injunction is if the verse, "Let' theme no compulsion in religion', and forcible conraion is condemned in the text: "But if thy Lord pleased, all who are in the world would have believed together. Wilt thou then compel men to become believers? No soul can believe but by the permission of God."

In course of time the tolerant attitude enjoined by these texts and observed by the Caliph Umar and others changed to intoler-

"There can be no question that the Hindus were grievously oppressed by the rough soldier Kings who ruled northern India between the thirteenth and sixteenth centuries and that the glory of

Islam was often the ostensible pretext.

But this oppressive policy of sectarian domi-But this oppressive policy of sectarian domination was publicly reversed a hundred years before Aurangzeb came to the throne. His great grandfather Akbar, laying aside the prejudices in which he had been brought up, abolished all inviduous discrimination between his Muhammadan and had been brought up. 1574 to the properties. Hindu subjects. In 1574 (i.e., twenty-four years before the Edict of Nantes), he established complete toleration by annulling the tax upon non-Mushms at an enormous loss to his revenue...

From this time forward there was genuine toleration throughout the Mughal Empire...

"Nationality was a conception that had not found its way to Asia in the sixteenth century and we should not be justified in saying that Akbar attempted to evoke a national spirit among his subjects. But unquestionably he established conditions which were propitious to the formation of a national sentiment, and I believe that even at this day we can find in Northern India some traces not quite obliterated of his unifying policy, such as are not to be found in those parts of the Peninsula to which his rule did not extend. Is it unreasonable to suggest that, had all the peoples of India been encouraged for another century to offer their undivided allegiance to the Moghul throne, lovalty to the monarch might, as in Europe, have broadened out into patriotism?

"Those hopeful possibilities were shattered by

Aurangzeb...
When Aurangzeb mounted the throne of Delhi, I have no doubt that he had convinced himself that it was his duty to extirpate idolatry from his dominions and. in spite of the obvious impossi-bility of the task, he set about it with fanatical vigour. Space forbids a recital of all the measures by which he attempted to bribe or compel Hindus to abandon their religion

At the close of his life some realisation of the disaster he had brought on his Empire seems to have visited Aurangzeh In one of his last letters he wrote—'Old age has arrived. Weakness subdues me and strength has forsaken all my limbs. The instant which has passed in power has left only sorrow behind it. I have not been the guardian and protector of the Empire. My time has been sorrow behind it. I have not been the guardian and protector of the Empire. My time has been passed vainly," and he continues later: "I have dread for my salvation and with what torments I may be punished. In 1707 he died, ... under his feeble successors the vast Empire, which had no organic coherence, tumbled to pieces,......
"The evil Aurangzeb did lived after him and his dynasty. When a hundred years after his death the English extended their dominion to. Northern India and re-established material order, they were unable to impose a moral peace. The age-long feud between Hindus and Mahammadans

which Aurangzeb had envenomed was still inflamed, and it has not yet healed. There are probably more causes than one which prevent the growth of a national feeling among the peoples of India, but without question the most conspicuous and the most important is the enmity between Hindus and Muhammadans Nationality has been defined as a community of historical antecedents, as the common memory of sufferings endured and of triumphs achieved side by side in the history of their country the Hindus and Muhammadans of India cannot bind this common memory. The Muhammadans feel a justifiable pride in the splendour of the Mughal Empire. To the Hindus

the Mughal Empire is associated with the name of Aurangzeb and evokes memories of humiliation and suffering; for a past in which they can take pride they have to go back to the almost legendary days of Asoka, in whose renown the Muhammadana have no lot or part. Had the tolerant policy of Akbar, Jahangir and Shajehan been continued by Aurangzeb, the Hindus might have joined with the Muhammadans in a common pride in one of the most splendid epochs of Indian history, and on this basis an Indian nationality might have been established. It is the memory of Aurangzeb which still marshals Hindus and Muhammadans into separate and hostile camps."

NOTES

Japanese Rule in Korea

A copy of Korean paper, named The Dong-a Ilbo, dated Seoul, Korea, Wednesday, August 20, 1924, has reached us somehow We learn on very high authority that, as in the case of some Indian papers, editor after editor of this Korean paper was imprisoned by the Japanese Government until at last it was suppressed. The copy of this paper in our hands contains one article in English, which we reproduce below, everything else being in the vernacular

BARON SAITO'S POLITICAL FORMULA

Baron Saito is reported to have uttered to a foreign journalist Senator (?) Raiston and subsequently published in the Foreign Affairs in London that he pursued his policy according to the following formula. First make Korea economically prosperous, then educate the Korean people and finally give them political rights. That is to say, you must first of all he rich so that you may be able to afford to educate your children and you must first of all be an educated people in order that you may be able to meddle with politics. There is nothing new in this formula, for our people have been repeatedly told so ever since the annexation. Has the Japanese government done anything towards the materialisation of this formula? Those who look at things in Korea with spectacles made in Japan are inclined to believe that Japan has been "crowned with success". But the fact is that, after twenty years of the Japanese occupation of our country, we are now a bankrupt people in spite of all the boasts of economic developments, while our mothers and fathers are complaining that through the loudly advertised educational activities under the Japanese supervision our children and youther as a spite of conomic improvements are of course.

made, it is boasted, by the Japanese, but they are also made for the Japanese. Roads, for example are made at the expense of our taxpayers for the Japanese quarters in a city and for the Japanese troops in a province. If the Government publishes statistics showing increases in numerical estimation of export and import, the alleged increase is that of the Japanese settlers in Korca, while an industrial effort of our people is either discourage or directly hindered. We cannot compete with the Japanese who have more capital and are protected by the Government, while we are unprotected, discouraged and even intentionally hindered. Ou memory is still fresh how the Japanese Government imprisoned a Korean inventor and tried to "squeeze out" his secrets last year. Examples of direct exploitations of our people by the Japanese Government and the private Japanese undertaker abound in number. We shall have opportunitic later on for making known to the world the variou methods of exploitations.

Baron Satto is the Japanese Governor General of Korea.

The reader will be able to judge to what extent the development and exploitation of India by the Britishers resemble the development and exploitation of Korea by the Japanese.

"Missionaries to Washington"

Foreign Affairs quotes from the New York Nation the following interesting declaration signed by twenty-five American missionaries in China and addressed to the American Minister at Peking:—

The undersigned, American missionaries, are 1 China as messengers of the gospel of brotherhod and peace. Our task is to lead men and wome into a new life in Christ which promotes brothe NOTES 469

i and takes away all occasion of wars. We, refore, express our earnest desire that no form nilitary pressure, especially no foreign military is, be exerted to protect us or our property; that in the event of our capture by lawless on our death at their hands, no money be I for our release, no nuntive expeditions be tout, and no indemnities be exacted. We take stand believing that the way to establish itcourness and peace is through bringing the it of personal goodwill to bear on all persons let all circumstances, even through suffering my without retaliation

In a covering letter these truly revered attemen wrote as follows.—

We appreciate the fairness and justice which a generally characterised American policy tords China. In spite of the enormous difficulties expect further advance toward reciprocity in the some are advocating, we do not care for 1-boats on the Yangtze

In its reply,

The American Legation pointed out that the tition was inconsistent with the necessity that its for safeguarding Americans in Chinas, and it no exception could or would be made in the need in emergencies with regard to the ners of the petition

Thereupon the New York Nation suggests at these American Christian missionaries ould petition the Chinese Christian Church send missionaries to Washington!

Perhaps Buddhism was the earliest missiony religion to send missionaries to foreign untries. We are not aware that they were companied or followed by any ancient equilent of gun-boats, or that punitive expedins were ever sent or indemnities ever acted in consequence of their persecution massacre abroad But, of course, that is reason why Christian nations should not um to be superior to all other nations, cient or modern, in all sorts of things, cluding spiritual ideals and methods.

The Russo-Japanese Treaty

By the Treaty that was signed at Pekin January 20 by Mr. Karakhan, Soviet mbassador to Pekin, and Mr. Yoshizava, e Japanese Ambassador, on behalf of their spective countries, Japan has obtained duable eil and coal concessions in Northern ikhaline. Japanese troops are to evacuate orthern Sakhaline. The treaty marks another pp forward in Russia's development in the ast.

In refusing to come to some understandg with Russia, the British conservative

government has been guilty of a blunder whose consequences not only Britain but India may have to reap.

Japan is not the only direction in which Russia has been strengthening her position. China is more pro-Russian than pro-British, and that partly on account of the British opium policy. Afghanistan is also more pro-Russian than pro-British. There has been also a sort of diplomatic and economic duel going on in Persia between Britain and Russia

Certain cautious remarks made by Mr. Chicherin on the significance of the Russo-Japanese treaty gives one some slight idea of the importance attached to it by the Soviet government.

"It marks not only the commencement of a period of friendly relations between Russia and Japan, but also a complete break in Eastern Politics, and in all contemporary Politics," "It provides a basis of security for Russia and the East" "It is a continuation in development of Russia's Policy in the East" "For Japan this treaty signifies the gaining of a friendly neighbour in her rear, in the event of threatening complications."

"All very vague and cautious", observes Forcign Affairs, "but it is clear that Soviet Russia has taken a further step towards the securing of a leading role as guardian of the rights of Eastern nations against Western economic imperialism"

Not that Soviet Russia is in every respect an improvement upon Czarist Russia, though that is no reason why other States should not have diplomatic relations with it. For example, Mr. John Turner, a member of the British Trade Union Delegation which recently visited Russia, tells the public in Foreign Affans that a free press does not exist in Russia in any form, the Communist papers are the only ones allowed to be published and even they are severely censored.

"What is worse, it is more difficult to put any kind of illegal literature into circulation now than in the days of the Tsar. Then it was mostly a question of a secret printing press Today paper! has to be obtained through a government departiment and without paper even a printing press is useless." "The publication of books is equally i restructed. All manuscripts have to be submitted to the censor and, if passed, permission to publish them obtained.

Mr Turner also says:

A witty Freichman is reputed to have said of politicians. "The more you change them, the more they are the same!" Whether that is true or not of the rulers and would-he rulers in modern. democratic countries, it must be admitted that so far as the present political rulers in Russia are concerned,

100

aminations of the University. But the most striking proof of the growing appreciation of his English works at Indian Universities is furnished by the fact that an American lady, Miss Dimmitt, Professor of English at the Isabella Thoburn College, Lucknow, has just come as a research student to spend. a short time at the English Department of the Benares Hindu University, to write a thesis on Rabindranath Tagore as a dramatist with special reference to his King of the Dark Chamber. The Head of the Department, Prof. P. Seshadri, is the official "supervisor" of the thesis which is being written for an American University. Apart from the appreciation of Rabindranath's dramatic genius which the writing of the thesis implies, it is significant of the unique position of the English language in the world of to-day, that an American should write a thesis on the work in English of a contemporary Indian writer at a Hindu University in Benares under the official supervision of an Indian approved for the purpose by a University in America.

X

It is certainly good and necessary that theses should be written on the dramatic conius of Rabindranath Tagore But, if we are not mistaken, the usual practice is fer theses to be based on the original works of an author, not on their translations, even though the translations be by the author himself. The King of the Daik Chamber in its English version undoubtedly possesses much merit; but justice to the neet constrains us to say that it can never be a substitute for the Bengali original. The English version is not lacy of the Indian soil, and does not possess the music of the original, nor the haunting spiritual yearning pervading many scenes Miss Dimmitt would do well to study the original in addition to the Engksh version. And in the Hindu .: University itself she would find some persons able to help her in such study.

Indis's and Japan's Military Expenditure

In the Indian budget for 1925-26, the revenues are shown as totalling 133 crores and 68 lakhs of rupees and the total expenditure as 130 crores, and 44 lakhs. Out of this sum, military expenditure accounts for 56 crores and 95 labbs, or in round numbers

57 crores of rupees. In 1924-25 our milital expenditure was 57 crores 43 lakhs.

In the Japanese budget for the yet 1924-25, the ordinary and extraordinary revenue comes up to 1,409,054,086 yen, a the ordinary and extraordinary expenditurals reaches the same amount. This sum roughly equivalent to at least 211 croies lakes and 81 thousand rupees. That is say, the revenue of Japan is more than or and a half times as much as that India.

Out of this revenue, Japan's ordina expenditure for the War Department is 17 452,000 yen and extraordinary expenditu for the same 13,661,000 yen; total 193,113,00 yen, or roughly 28 crores 96 lakks 69 the sands and five hundred rupees.

This means that, though Japan's incon exceeds that of India by more than his per cent, her expenditure on her War Depar

ment is about half that of India.

In addition Japan has also a Navy D partment, which India has not. For this Nav Department Japan's ordinary expenditure wi 120,322,000 yen and extraordinary expenditure 112,268 yee;—total 238,590,000 yen, or roughly 55 crores 78 lakhs 85 thousand rupees

Taking the expenditure for both the War and Navy Departments together, we find it to be 64 crores 75 lakes 54 thousand an

five hundred rupees.

the world.

So for defence Japan spent 64 crores of a revenue of 211 crores. In 1925-26 ware to spend for that purpose about 57 crores out of 133 crores. Our percentage expenditure is therefore much higher that that of Japan

It should also be borne in mind the by spending a lower percentage of he revenues Japan has both an Army and a Nav and that the two are so efficient as to suffic to keep her independent and make her is spected and feared by the great Powers is

By spending a higher percentage of he revenues than Japan, India has only a army but no navy, making her depender on England for protection from attacks b war vessels. Moreover, India's army has standard of efficiency which did not dete even small and backward Afghanistan from invading India some time ago, and which

serves to keep up the Afghan and the Russian bogey.

Nor must we forget that India has no in digenous air force. Her air force is entirely manned by foreigners. And her artiller

NOTES 473

except some mountain batteries) is also

manned by non-Indians.

in countries which are foremost in war. very great importance is attached to air planes, but in India Indians are excluded from the air force. They are also almost entuely excluded from the artillery. And. needless to add, Indians have no navy and consequently no place in a navy.

Such is the position of India and Indians. her expenditure for defence and offence absorbs a larger proportion of her

revenue than Japan's.

This is the result of the comparison taking the figures for India for 1925-26. In the five years immediately preceding this year, om military expenditure was even higher According to the Bengalee, it was 5743 lakhs in 1924-25, 5923 lakhs in 1923-24, 6527 lakhs in 1922-23, 6980 lakhs in 1921-22, and 8738 lakhs in 1920-21. This is the price at which we have to purchase subjection year after year Japan purchases her independence by paying a lower proportion of her revenue than India as its price And what Japan spends is paid to her own fighters and manufacturers of munitions and war vessels, etc. On the contrary a very large fraction of India's expenditure goes to the pockets foreigners

Unity in Religions and their Evolution

Those who call themselves "Fundamentalists" in America and many other orthodox Christians and possibly also Mahatma Gandhi who called Rammohun Roy a pigmy, may not like the following paragraphs, with which MI C F Andrews begins his article on "The Body of Humanity" in The Visrabharati Quarterly, nevertheless the position taken up

therein is right.

"Ever since I was able to think seriously, it has appeared to me self-evident, that if the of physical evolution is true, and human life in this planet is the crown of creation, then it is impossible that the religiout instinct in man can be a disorderly and chaotic factor in human life,--a mere malry of warring creeds. There must be an organic unity between those difficent creeds, which have persisted in hirman development,—a relation between them that is intimately spiritual We can no longer think of each creed as a special creation. The genealogical tree of religion in man's long history has many branches, and these branches

issue from a parent stem, they are not individual and distinct and cut off from one another. as we used to think of them in our pre-

Darwinian days.

"Such thoughts have been with me all through my conscious life of seeking after truth. The difficulty has been, to trace out the main directions in which the different branches of religion have grown, and also to relate them to the parent stem I have come to one personal conclusion, which I have slowly made my own. Just as, amid the many names of those who dealt with the physical evolution of mankind, the name of Darwin stands first as a pioneer and discoverer, so in the realm of religious evolution, Raja Rammohan Roy's name will stand out greatest and highest of all

"What I am trying to describe in this article as a result of my own conscious experience in thought, owes its outline at least to the extraordinary stimulus which I receive from my first reading of the English works of Raja Rammohan Roy I would wish to acknowledge this, as a debt which is deeply

due, before I go on

Bengal Widow-Remarriage Conference

A conference to discuss the ways and means of A conference to discuss the ways and means of promoting the cause of widow-remarriage in Bengal was held last month in the Albert Hall, Calcutta There was a large gathering of the Widow-remarriage Associations of Calcutta and motussil as well as of the supporters of the cause from the different districts of Bengal Pandit Murahdhar Banerjee. M. A., retired Principal of Calcutta Sanskiit College and President of the Bengal Social Reform League, was voted to the chair. The President delivered a lengthy and apprealing sueech and the following resolutions, were pealing speech and the following resolutions were passed ·

This conference strongly approves of the introduction of widow-remainage in the Hindu Society and for this purpose the following measures be adopted, viz. (a) carrying on a vigorous propaganda in favour of the reform by publishing booklets showing the opinion of Hindu Sastias in support of the cause delivering lantern lectures, and otherwise, (b) the formation of Widow-remarriage Associations in the districts and subdivisions (c) creation of a permanent fund and (d) inviting the co-reperation of the various associations for social reform already existing in the country.

"That the Bengal Social Reform League be asked

to take early steps to form a sub-committee consisting of representatives of different associations working for the cause to give effect to this re-

solution.

It is to be hoped the resolutions will be The remarriage of sin Bengal is speedily acted upon. m Hındu widows an urgent need no only from the points of " view of justice and humanity and for effecting social and moral improvement, but also

from the political point of view. The political strength and rights of the Hindu community in Bengal must go on dwindling, as they have been doing for some time past, with the continual decrease of the Hindu population. The remarriage of widows is one of the means by which this decrease can to some extent be arrested Of course, we would not have suggested this means if it had been in any way immoral, unspiritual or otherwise detrimental to the best interests of society But as it is conducive to moral and spiritual improvement and would make for social purity, we have no hesitation in pointing out that it would also prevent to some extent the decrease of the Hindu population in Bengal For, at present many childless Hindu women of child-bearing age do not become mother, because they remain widows owing to social custom, and many men, too, remain unmarried owing to paucity of suitable brides

One other point requires to be mentioned in this connection. Women who would re-marry after being widowed, would be generally of a maturer age than the Hindu spinisters who are married in Bengal, and hence these remarried widows would become mothers at a higher age than the child-mothers of Bengal, and their children are likely to be stronger and healthier than the offsping of those who have been not unaptly styled baby mothers. That would be a national gain Indirectly, the re-marriage of young widows would have the effect of gradually raising the marriageable age of girls in Bengal, and that would be a very desirable result.

Bengal Ministers' Salaries Rejected

The Bengal Legislative Council has, by a majority, refused to vote the salaries of the two ministers recently appointed by the Governor of Bengal

As all political parties are agreed in thinking that there ought to be full autonomy in the provinces, or, in other words, that all subjects ought to be "transferred" to Ministers responsible to the Provincial Councils, all efforts made by Government to prolong the life of dyarchy deserve to fail

But apart from the question of maintaining, mending or ending dyarchy, the two persons who had been appointed Ministers were not the best available Among the Hindu members of council, there were abler, more experienced, more public-spirited and better educated men than Raja Man nathanath

*

Ray Chaudhuri. And among the Mosler members, too, there were better qualified persons than Nawab Saiyid Nawab Ali Chaudhuri. This we say without supporting the idea or the policy that the posts of ministers should be divided proportionately among the religious communities. We are against communal representation and division of post There should be everywhere an open door be merit and talent alone.

In placing Nawab Saiyid Nawab 1 Chaudhuri in charge of the Education Devai ment, Lord Lytton proved himself capable humour No one can acen unconscious the Nawab Bahadur of being an illiterat man But his worst friends will not, w hope, claim on his behalf that he is an edicated man, qualified to shape and guide the policy of the Education Department 1 relation to primary schools, secondar schools, colleges, universities, technologic, institutions. research institutes, museum libraries, &c

The recent performances of Mauly Fazh Haque and Sir P C. Mitter in connection with dyarchy and ministerships have cause much profane mirth. There need not be an betting on who is the greater weather-cock

Far Eastern Medical Conference in Tokyo

It is reported that a plan has already be perfected to hold a Far Eastern medical conference in Tokyo from Oct 18, 1925, to Nov 7, 192 Invitations have been issued and all the nations. Asia will be represented except Persia and Turke The conference will not be exclusive of doctofrom European and American countries and doctofrom the United States and Cuba are also to there. The conference will discuss primarily it subject of public health. Two hundred thousand yen, it is said, has been appropriated for entertail ment by the Japanese government.

We wish to draw the attention of India medical men and national leaders to the above news item. Japan is the only nation in the Orient which has attained the status of nation hood She is regarded as one of the five give Powers of the world It is also a fact that possibly Japan stands next to Germany and America in the advancement of Medica Undoubtedly she is not inferior to Science Great Britain, France and other nations. It quite fitting for Japan to take the leadersh in calling the Far Eastern Medical Conference We hope that those who are talking about "Tederation of the Asiatic peoples" and "closer relation among Asiatic Powers" wil do all that is possible so that first-rate medica

NOTES 475

men of India be sent in large numbers to

paracipate in this Conference.

Indian medical men should take the leadership in this Conference by presenting the inal papers on their research. We hope the will take the leadership in having a thorough discussion on the Opium Question for the medical stand-point. This is imperative because Mr. Campbell, Lord Robert Cecil and others have given the impression in the lat International Opium Conference held at Gracia that the people of India demand the continuance of opium-cating which is not

minimous to the people of India.

Then again in sending the delegation of medical men to Japan to attend the conference, steps should be taken so that they might take advantage of the opportunity to study the Japanese educational system, Japanese governmental machinery, Japanese commercial and industrial expansion and scientific progress We hope that the All-India Medical Association, if there is any such organization, will take the lead in this matter. We hope that all the medical colleges of India will be represented by Indian professors in this conference hope that the Hindu University, Aligarh University, the Visvabharati and National Medical Colleges will play their part in particounting in the proposed Fai Eastern Medical Congress to be held in Tokio in 1926 There is not much time to lose and we expect that all necessary information about the conference can be secured from the Education Minister at Tokio or Japanese Consul General In India

Rockefeller's Present to Tokyo University

lollowing up the recent appropriation of 1.300,the ten by the Japanese government toward the
resulting of the library of the Tokyo Imperial

2014 as a gift to the University \$1,600,000 or nearly
1000,000 yen, to assist in the reconstruction and to
tender books burnt in the 1923 quake The gift
to made without strings attached to it and its
disturgement is laid in the hands of President
but of the University, Prof. M. Anasaki, chief
to man, and Dr. Takuma Dan. Mr. Rockefeller in
but to Mr. Kozai said that he was pleased to
the in hastening the day when the University
these

If Universities are to become centres for mal research, then first-rate libraries and instories are of equal importance with the safely asserted that India has not one

first-class library connected with its universities. There are rich Indians who lavish their money in various ways of luxury and there are Indian Princes who spend their fortune—which is the blood of poor people—in vicious ways as recent news about "Mr. A." from London indicates. We would like to see that the library established in the Visyabharati be endowed by some Indians with such an amount that it will be developed into the finest of its kind in the world.

T. D.

American Women in the Political Field

As the result of the last presidential election in the United States, two women were elected as Governors of the States of Wyoming and Texas no less than 88 were elected in State legislatures, one Representative in Congress and a Secretary of State for the State of New York This is tremendous when we compare the achievement with the position of women even ten years ago, when they did not enjoy the right of equal suffrage. The American women have won this position by silent non-violent but active work for more than 100 years. Success of American women is not a unique thing so far as the western would is concerned.

America Takes Notice of Indian Legislature India Should Call the Far Eastern Immigration Conference.

All important American papers have taken notice of the passage of the bill, by the Assembly at Delhi, proposing reciprocal treatment for the United States and the Colonies which treat Indians as an inferior race. The New York Evening Post makes the following comment—

"The action of the Indian Legislature at Delhi in adopting a reciprocity measure on inferiority is something new in the line of internal relations. Governments like the United States which treat the Hindus as inferiority lest by them. The act seems plausible. Among the western nations it seems quite all right to apply to all other nations and peoples a sliding scale of disparaging appraisal—backward peoples here, arrested development there, corrupted, incompetent and the like. By the new Hindu Act the rule will be made to work both ways."—New York Evening Post, February 5, 1925

Of course, the Indian people must not forget that they cannot expect equal treatment in America unless they can acquire

·# \

equal status within the British Empire and in their own country. In their own country the Indian people are held to be inferior and incompetent by the British overlords and thus they have not full share in their own government. Indeed, the very sense of self-respect of the people of India has forced them to adopt reciprocity legislation But this Immigration question has a tremendous significance in international relations. Indian statesmen should take note that the Immigration discrimination in the Anglo-Saxon world is directed against India, China and Japan It is directed against Eastern Asia where about 900,000,000 people live. The question will never be solved unless China recovers her full sovereignty by abolishing all torms of extra-termtorial jurisdiction and India achieves at least the same kind of independence as Canada or Australia emoys It is nothing unusual to suggest that because China, Japan and India have common interests involved in world affairs, far-sighted Indian statesmen and scholars of these countries should cooperate in solving these problems in a way which will lead to better understanding between the East and the West

As a matter of concrete suggestion tol Indian statesmen who are discussing the probability of holding a congress of all Asiatic nations in India, possibly through the leadership of the Poona Sarvajanik Sabha (as suggested in the Marhatta), in the near future, we propose that India should call for a Far Eastern Immigration Conference to be held in Cawnpore during the session of All-India National Congress during the Christmas week of 1925 in which all the peoples of the Far East particularly are to be invited. Of course, other nations will be allowed to participate. Japan is going to hold a Far Eastern Medical Conference in Tokio in 1926 Is it too much to expect that India will take the leadership in calling the Far Eastern Immigration Conference in the near future?

Nepal and Her Future

The abolition of slavery in Nepal by the wise ruler of the land of the (furkhas has attracted world-wide attention. The New York Times, which rarely pays any attention to what is happening in India and the adjacent countries like Tibet and Afghanistan, has devoted about two columns of its

valuable space on the front page to t generous act of the ruler and a brief histo of Nepal and its traditional friendship w the British Government.

The potentialities of Nepal are no l than those of Afghanistan or Switzerla That spread of education and democia institutions, which are the most import requisites for national awakening and nation greatness, would receive greater attent from the Nepal Durbur, is our earnest ho But if Nepal is to attain that status wh Switzerland enjoys among the comity nations, steps must be taken to establ international relations Nepal's great as is its friendship with Great Britain. It known to all that Great Britain, through recent treaty with Aighanistan, has m. it easier for the Amir to establish indepeent foreign relations with various power particularly Russia, France and Turkey V not the same thing be possible for Nepal '

We are inclined to believe that British Government in India will have depend more upon Nepal's support than t of Afghanistan, to check Russian penetrat in Central Asia Nepal will have more do with Britain in North-Eastern Inc particularly in the affairs of Tibet i South-Western China and even Mongo between India Closer relation Nepal in terms of offensive and defenalliance 18 desirable for the vation of mutual interests We hope t those who are directing the affairs of No will do their best to cement friend-between Britain and Nepal on the basis equality. In this connection, may we suggest that a Nepalese Consulate-Gene at Delhi or Calcutta and a Nepalese Legat at London will be the first steps to en into the comity of nations? Some time i Forward of Calcutta published a letter fi a Bengalee gentleman, a Professor of Eng in the Maharaja's College, Nepal, to the ci that some Asian State should take the ini tive to nominate Nepal as one of the meml of the League of Nations There is no hi in making an attempt to enter the Lea by Nepal, and if that is to be done at it is most desirable that steps should taken for Great Britain or India as a fri or ally of Nepal to take the initiative render this friendly service of nomina Nepal as a member of the League Ne in entering the League of Nations, will I to pay for her membership by bearing

NOTES 477

share of the burden of maintaining that international diplomatic body; and this fact must not be forgotten. The amount that will be necessary to meet the demands of the League of Nations, may be as well used by astablishing a Nepalese Legation in London and repalese Consulate-General in India May we not suggest that, as the future of repal depends upon the increase of efficiency of the people of that State, it is necessary that first-rate Repalese scholars be sent to occur lands to acquire scientific education?

Nepal's luture is intimately connected with that of India. This being the case, it will be well that some Nepalese students be given apportunity, by special arrangement, to study in the Visyabhaiati, Hindu University and segure College of Calcutta University.

The British Government's Opium Policy

In a telegraphic account of the proceedlings of the International Opium Conference, lated treneva. Feb 7, published in the New York Times, we read—

India highting to maintain the Indians right to at opium it they wished to do so announced that ndia would accept the American principle if it vere applied only to opium exported, and not to opium grown

India never did anything of the kind It s the foreign government of India which has pen inistepresenting India This is clear from overal well-known facts All Indian-owned newspapers of India, as far as ware, have condemned the opium policy of ts (myernment. The Indian National congress · against it. A representation signed by tabundranath Tagore, Mahatma Gandhi and others and presented to the Geneva Confernce condemns the cultivation of the poppy and the manufacture of opium for any other hupose or requirement than medical and scientific Mahatma Gandhi, as president of 'ingress and representative of our people, sent 1 tolegram to the Conference conveying the ame opinion. Lastly, the Indian Legislative issembly has recently condemned the opium miley of Government and demanded an monny

The telegraphic message from which we have quoted above opens thus.—

CENEVA. Feb. 7 (Associated Press).—China, all matters the United States, dropped out of the matter another dramatic isituation when had as its

climax a violent attack on Stephan G. Porter, head of the American delegation, by J. J. Loudon, Dutch Minister in Paris, who is known as the master diplomat of the conference.

In ignorance of the storm Representative Porter packed his trunk and with Dr Rupert Blue left for Paris, en route to Washington, where he will make a personal report to the State Department and probably to Persident Coolidge

and probably to Persident Coolidge
Alfred Sze, Chinese Minister at Washington, heading his nation's delegation here followed the same method as Vr Porter He did not appear at today's plenary session of the conference, called to discuss the draft of the anti-narcotic convention but sent his personal secretary with a letter to Dr Herluf Zahle, President of the Conference, announcing the withdrawal of the Chinese delegation and a memorandum setting forth the reasons for this action

Mi Sze recalled, he had always held that no proposal was acceptable to China unless it gave definite assurance that the logalized traffic in opium for smoking would be ended within a reasonable traffic.

able time.

"It is apparent now from the proposals made by the deligeations of Great Britain. France, the Netherlands and Portugal and insisted upon by them that the Governments they represent are not at this time prepared to agree to adopt measures which will meet the desires of the Chinese Government.

his communication continued

'China sincerely hopes that the policies of of these governments will have so altered that they can see their way to the common adoption of measures that will lead to the early total suppression of that legalized traffic which now is bringing such misery and moral degradation to hundreds of thousands of the citizens of China living within their respective territories.

The reasons for Americas withdrawal the Conference are stated in a memorandum from which we quote the opening paragraphs.

The League of Nations on October 8 1923 extended an invitation to the power-signatory to The Hauge convention including the United States to participate in an international conference called for the purpose of giving effect to the following principles, subject to reservations made by certain nations, regarding the smoking of opium

Firstly, if the purpose of the Hague Opium

Firstly, if the purpose of the Hague Opium Convention is to be achieved according to its spirit and true intent, it must be recognized that the use of opium products for other than medical and scientific purposes is abuse and not legitimate.

"Secondly, in order to prevent abuse of these products it is necessary to exercise control of the production of raw opium in such a manner that there shall be no surplus available for non-medical and non-scientific purposes."

CITES CONGRESS ORDERS

"The joint resolution adopted by the Congress of the United States on May 15, 1924, authorizing our participation in the present conference quoted the principles referred to in the preamble and expressly stipulated that the representatives of the United States shall sign no agreement which does not fulfil the conditions necessary for suppression of the narcotic drug traffic as set forth in the preamble a

"Despite over two months of discussion and repeated adjournments, it now clearly appears that the purpose for which the conference was called cannot be accomplished. The reports of the various committees plainly indicate that there is no likelihood under present conditions that the production of raw opium and coca leaves will be restricted to the medicinal and scientific needs of the world. In fact, the nature of the reservations shows that no appreciable reduction in raw opium is to be expected."

The Salt Duty

By a majority of votes the Indian Legislative Assembly had reduced the salt duty from Re. 1-4 to Re. 1-0 per maind. The Council of State restored it to the former figure. When the matter was again placed before the Assembly and the members were told that if the duty were reduced by 4 annas per maind, relief would not be afforded to the provincial exchaquers to the extent that had been done, most of the M. L. A. s. voted in favour of Re 1-4.

The Inchcape Committee had recommended that the military budget should not exceed fifty crores of rupees and had pronounced their expert opinion that that was a practicable limit But in the budget for 1925-26, the military department absorbs more than 56 crores of rupees Why could not this enoimous figure be reduced in order to reduce the salt tax or abolish the cotton excise duty? We propose to show that Japan has a far stronger and more efficient army than India, and a navy to boot, she spends a smaller fraction of her revenues for her army and navy than India does for her army alone The Finance Member's argument is always the stereotyped one that if some popular demand has to be met, some other popular demand cannot be met Why should not extravagant civil and military expenditure be cut down

The abolition or reduction of the salt duty is generally advocated on the ground that it is a necessary of life, particularly for the poor, and hence the poor man's salt ought not to be taxed. It is a just plea. But it must be said that so far as India's poor are concerned, a reduction of the price of salt to the extent of four annas per maund could not have made the commodity cheaper for them than it is; for there are not many among them who buy even so much as a seer of salt at a time. If the duty, and consequently the price,

were reduced by ten annas to the maund t price per seer would be lower than what now is by one pice. That would be relief. But a reduction of four annas maund would not at all bring down retail price per seer, not to speak of retail price per any smaller quantity course, any reduction, however small, n be rightly justified on the ground that ev if it does not make salt cheaper for small retail purchaser, it would increase grocers' profits, and, as they are also of the people, their enrichment to any ext would mean the enrichment to that ext of the people as a whole.

Reduction may be advocated as a profagainst. Government's flouting of pull opinion and against extravagance in variedirections. And in fact, the larger the remues in the hands of Government, the mextravagant becomes its expenditure.

The Age of Consent

We were glad to read in The Bengalee to the Indian Legislative Assembly had passed Chanda's amendment by sixty-five to twentwo (Government members remaining neutomaking the age of consent in Sir Harr Sir Gour's Bill sixteen in case of non-main relations, in place of the present age twelve and also of fourteen as original provised in the Bill and supported by Select Committee

We were also pleased to read that "Regarding married girls the Assembly, deopposition from the orthodox section voiced Fundit Malaviya and Mr Rangachanar and off and opposition from Government on the groof a possible serious agriation in the compassed Dr. Datta's motion by forty-five to fo three votes fixing the age of consent at four in case of marital relations."

We know, of course, that the reactive ary and conservative Council of State still to be reckoned with, but after the votes did not apprehend any danger to Bill from the Assembly itself. But we warrong. The Bengalce announced next that Dr. Gour's Bill had been rejected in Assembly

As the matter is of great importance, would be proper to consider in detail debate on the subject as reported in the paper.

When the Assembly met after lunch, the ther consideration was taken up of the Sc

NOTES 479

muttee's report on Dr. Gour's Age of Consent

1) Chanda moved an amendment that the age asent be raised to sixteen in the case of ungirls and fourteen in the case of the In I girls and fourteen in the case of the relations with a married girl by his band and the other with an unmarried girl by his band who is not her husband. The consecutive of the later case were very deplorable. It was an outcaste and if she happened to the later case were very deplorable. ()) course, Mr. Chanda meant and it is be understood, that when the male person coined is not the husband of a girl cerned, the age of consent is to be sixteen t is to say, in the case of unmarried girls age of consent is to be sixteen, but in case of a married girl it is to be fourteen ner relation with her husband and sixteen, against other males

li Rangachariar Is there any country to ago of the consent is sixteen. It ('handa England is one and Egypt has taised the ago of the consent to sixteen.'

Government's Position

on Mexander Muddiman, explaining the position the Government said that the House was ting the criminal law of the land and must be hasty He quoted the opinions from the pent provinces, official as well as non-official and that it was unanimously against the raise of the age. The Government would do its best out it reforms but they must have a clear lead Home Member emphasised that there was a solution of opinion against rusing the age consent and this opinion should not be ignored mying at the decision However the Government there would not vote on this motion and official members might vote and speak they liked. Regarding raising the age outside marriage tie, the Government would support ing it to thirteen and if the House decided it to ourteen the Government would have no objec-He did not think the amendment of Mr ida had the support of this house. If there support, he would be agreeably surprised Of course, in the event Sir Alexander had to 'agreeably" surprised But we do not all understand why even outside the mage tie, "the Government would support ing" the age of consent only to thirteen do not want the government to be Drain the case of any offender of any But we do not see why Government overcautious or overtender 1st those who would injure girls outside nairiage tic. "The Home Member em-sed that there was a large volume of ion against raising the age of consent, this opinion should not be ignored in

arriving at the decision" There was at least an equally large volume of adverse opinion in 1891 when it was raised to 12; yet it But in consequence not the least was raised eril result has followed

Mr Harbilas Sarda supported the Bill of Dr. Gour He said that no girl should be married before she was sixteen vears of age. The Hindu belief that a girl should be married before the age of puberty was wrong Public opinion was sufficiently advanced to raise the age of consent to

thirteen years at least
Captain Hira Singh in supporting Mr. Chanda's amendment regretted that, more members of the House did not visit the last Baby Show in Delhi, If they had gone there, they would have seen the rickety children of baby mothers. These children were the result of early marriages. How could such children make a future Sandhurst. People who are opposed to the raising of the age of consent were running the future generations of

Both Mr Harbilas Sarda and Captain Hira Singh were quite right, and be it noted that they come from provinces where 'martial races" dwell and where education had not made so much progress as in the home lands of some learned and eloquent opponents of the amendments of Mr Chanda and Mr Datta

Dr. Gour agreed that the age of consent could be raised to sixteen for unmarried gulls and quoted authority in support, but he advised caution and requested Mr Chanda to withdraw his motion. The House divided and Mr Chanda's proposal to raise the age of consent from twelve to sixteen in case of unmarried girls was carried by 65 votes to 22 votes.

Dr. Datta then moved at Mr. Chanda - suggestion that the age of consent in the case of the married gill arthin the marital relation be raised from twelve to fourteen instead of threen as proposed by the Select Committee He referred to the agitation and the passing of the Act of 1891 and said the arguments used against the raising of the age then were being used to-day. He asked why we wished to raise the age of consent. It was because the evils of early marriages were recognized by all. The last Act was passed in 1891 and it was high time that further step was taken in the direction of the social reform.

Mr. Amarnath Dutt said, though he was in favour of raising the age of consent in the case of unmarried girls, he strongly opposed the age being raised in the case of married girls. The Government constituted as it was by aliens whose so all and moral ideas were quite different from those of the people of India, this Government had not any right to legislate and thrust upon an unwilling people a law that no husband could have relations with his wife unless she was thirteen. The present age of twelve must remain and the raising of the age to fourteen or even to thirteen would be to offend the feelings of the people

Mr. Dutt referred to the feeling of the people" Have not the child wives any

feelings or sensations? Does not the whole of society suffer and degenerate because of the untimely subjection of these girls to sexual life and motherhood? Why is it that the alien Government's right to legislate in a matter like this is challenged, when everybody knows and ought to know that this Government has actually legislated in many similar matters already? We cannot understand how any decent man can insist upon a husband being free to "have relations with his wife" even before she is thirteen. The natural instinct of brute beasts is better than that.

Social legislation under present circumstances is not really the act of Government alone, but of a legislature possessing a somewhat representative character

COL. CRAWFORD'S SUPPORT

Col. Crawford supported the age being raised to fourteen and read out a telegram received from a woman's organisation

(Mr. Rangachavar.—Do you know the strength of the organisation? When it was started and what its representative character is ?)

Col Crawford strongly asked the Assembly not to shirk its responsibility, but to take a bold step

Mr Rangachariar asked his question with impunity, because the Assembly had no woman member to shame him. He ought to know that even a single woman who cites out for justice and humanity to girl wives has a more truly representative character than all the M L. A.'s combined And the more so, as in the matter under discussion. the female sex is the aggreeved party whom there was not a single member specially to represent We are sure, if there is to be any sectional representation at all, special representation of the temale sex ought to come before the special representation of any religious community or depressed class. There is no greater depressed class or unrepresented class in India than her women

RAISING OF THE AGE OPPOSED

Pundit Malaviya opposed the age being raised in a country where unfortunately a large number of early marriages took place. This legislature had no right to pass legislation raising the age in the case of married girls, although individually he would wholeheartedly support the motion of Dr Datta. Already there was some progress of social reform and the number of early marriages were decreasing. They must therefore trust to social reform and progress in education to act as corrective to the situation.

We are sorry to find Pandit-ji in such company. 'We should think that the fact that unfortunately a large number of early

marriages took place" in this country at that leaders like himself have not be able practically to do much to improve t situation, is really a justification for suppor ing the measure and not for opposing 1 If one is practically powerless or without the effective will to do a humane and necessal thing, has one the right to clallenge th right of someone else to take a beneficistep? It is too late in the day to call 1 question the right of Indian legislative bodie to make laws relating to social and religion matters From the abolition of suttee down wards much has been done in that direction with good results, even when there were n legislative bodies or when the were less representative than the bodies now are

The progress of social reform and the decrease in the number of child mailinger are due more to the efforts of the social in form party (to which the Pandit does not belong) who advocate such legislation and also partly to such legislation itself, than to the obstructive speeches of socially conservative members

We are believers in social reform and progress in education. But we also believe in quickening their pace by legislation when necessary

To make mothers of little girls of 13 or 14 is really a crime of which our society has been guilty for generations Socio-teliligious sanction has prevented its punishment in courts of law, but the laws of biology and ethice have punished us all the same If legislatures have the right to make laws against other crimes there can be no objection in principle to making laws against a great social crime

Mr. Rangachanan in a vigorous speech said ere was no harm in raising the age to there was no harm in raising thirteen, but to raise it to fourteen was unwise If Dr Datta utilise his elequence on the plat-forms he would perhaps get the country round to his views in about ten years. It was wise and prodent to proceed slowly and cautiously in this matter. Let it not be forgotten that for one supporter of mising the age of consent in this House there were hundreds outside to oppose it. This legislature should not force down the throat of unwilling people a law making it penal for husband to have relation with his wife. If a husband was sent 10 pail then he was sent out of caste and the life of the gul would consequently become a miscry In the name of doing good to the gurl this flouse ought not to create misery for her' (Applause)

There is no substantial difference between thirteen and fourteen When in 1891 it was proposed to raise the age from 10 to 12, NOTES 481

 $\frac{m_{\rm c}}{h_{\rm H}}$ people said it would be unwise to do so; $\frac{m_{\rm c}}{h_{\rm H}}$ it legs of more than three decades has

she in its wisdom.

Datta and men like him have been to make their eloquence on platforms for about four times ten years, but without suction bringing round such a learned, intelligent and eloquent man as Mr. Rangachariar to their views. Why then pin one's faith on about ten years" platform eloquence in the years to come?

For from being a girl under fourteen, Mr Rangachariar is not a woman at all. So it is very easy for him to prescribe a delay of ten years, during which numberless girls are to sitler, large numbers of weakings are to be born and the race is to continue to degenerate. And all because some persons of the male sex have not yet been brought round to Dr. Datta's view!

The proposed law was not for "making it penal for a husband to have relation with his wife", it wanted to penalise such relation with only those girls of tender age whom even Mr Rangachariar and others like him tacitly consider unfit for conjugal lite,—for he says that in about ten years such girls would be considered by "the country" immature for conjugal lite

We are sure very few husbands would have been sent to jail if the Bill had been bassed -How many husbands have been sent to pail uptodate since in 1891 the age of consent was raised fram 10 to 12. The law his really been more an instrument for bettering the treatment of gul-wives and of to ing the age of marriage than as means of punshing bad husbands. The proposed law would have been a still better instrument of Mr Rangachariai s argument has helly a wider application than merely to the is posed law. Would be plead for all crimes committed by husbands against their wives in the ground that "if a husband was sent to pail, then he was sent out of easte and the La of the girl would consequently become masery "

Mr Rangachariar says that if a guloffending husband were sent to jail,
he life would be made miserable. That
he true But in this imperfect world
durs, we have often to make a choice of
Would it not be better for a few bad
hands to undergo just punishment and
wives to be made unhappy to some
that than that a far larger number of
the lewives should continue to be victimised

and the race should continue to degenerate without anybody being brought to book?

Sir Henry Stanyon said the relations between the husband and the wife below the age of consent could not be regarded as dishonourable but they were punishable because they were against the interests of the race. Public opinion ought to be mobilised. Criminal law was hardly the proper instrument for social reform and the limit of 14 years would be regarded as in excess. He endorsed the remarks of Mr Rangachariar in that direction. In summing up, Sir Henry said that he would suggest to leave alone the law as it was to-day.

We endorse Sn Henry Stanyon's view that the relations between the husband and the wife below the age of consent (of course only when they do not involve any bodily suffering) could not be regarded as dishonourable, but they were pumishable because they were against the interests of the face. When, however, the wife is so immature that they involve suffering, they are worse than dishonourable.

Criminal law may not be the proper instrument for social reform, but it is necessary when social reform propaganda fails to put an end to or check a social abuse. It also helps forward social reform

Would Sir Henry Stanvon say in and with reference to his own country that the limit of 14 years would be regarded as in excess?

Sir Henry seems to have forgotten that neither individually nor tacially was he in a position to judge where the shoe pinches.

SIR A MUDDINAN'S WARNING

Su Alexander Muddunan gave a serious warning to the Assembly not to go far beyond the opinion. He contessed he was not prepared to see the Assembly show itself in favour of drastically raising the age of consent in the case of married girls by two years. From administrative point of view. Sir Alexander Muddiman feared there might be serious violation if Dr. Datta's amendment was passed It was a very serious step which the Assembly was asked to take. Let every member consider the consequences before voting in favour of the amendment as the consequences of accepting the amendment would be serious. The Government members would vote against it.

At the time when in 1891 the Bill for the age of consent from 10 to 12 was under discussion, various serious consequences were apprehended, none of which came to passafter the bill became law. When Sir Alexander Muddiman expressed the fear that there might be serious violation if Dr. Datta's amendment was passed, he ought to have supported his apprehension by giving statistics of prosecutions for violating the present age of consent law since 4891 up to date. As lakhs of gills are married before

12 and even before 10, it would have been instructive and would have given the members some idea of the forces making for violation, if such figures had been quoted. It may be asked, what is the use of making a law which must largely remain a dead letter? One may reply that it is needed if only for its moral effect and influence

The Assembly divided and amidst loud applause Dr. Datta's motion to raise the age of consent to fourteen in the case of married girls was carried by a majority of two votes, torty-live being for and forty-three against it

The clause as amended was put and carried by

fifty-five against twenty-three votes.

Delhi, Mar 24

After recess I)r. Gour's Age of Consent Bill was further considered. Discussions on various amendments being over Sir A. Muddiman rose to express Government's attitude to the Bill. He said that the House superseding the recommendation of the Select Committee altered the age of consent outside and inside marital relations to 16 and 14 years respectively. That was too big a change, considering that the present law laid down 12 as the age of consent for all purposes. He was atraid if the house wanted to pass the Bill as it now stood, he would have to oppose it on behalf of the Government. The Government of India was not aware of local Governments opinion on the matter yet and he moved that the debate on the Bill be adjourned till September when he said the Government would be able to make its considered statement.

Mr. Jinnah opposed the adjournment motion He said he found no reason to adjourn passage of the Bill. The House after long deliberation decided to raise the age of consent to this figure Let the Bill be passed he said, and let it go to the Council of State and it will leave ample time for the Government to try to amend it before it is passed

into law.

Sir Muddiman then withdrew his motion. But Pandit Malaviva stood up to move that further consideration of the Bill be adjourned. But he was evidently out of order as a similar motion was just withdrawn. Pandit Malaviva then remarked that the Bill having been vitally altered required recirculation. The motion for passage of the Bill was then put to vote and lost by 54 votes against 36.

There is one feature of the debate which, in spite of its infructious character, seems to be hopeful. None of those who opposed the raising of the age of consent contended that a girl was fit for sexual life and maternity before she had completed the fourteenth year of her age. And they also appeared tacitly or explicitly to hold that social reform was the proper means to prevent consummation of marriage and maternity before the fifteenth year.

May is therefore, be hoped that Pandit Madan Mohan Malaviya, Mr. Rangachariar and other opponents of the amendments would make unceasing efforts to raise the marriageable age of girls to a minimum of fourteen? For that is the only effective means for preventing maternity before fifteen

One thing might have been done which has not been done. It is generally a soun principle that no penal law ought to have a netrospective effect The present age o consent inside and outside marital relation twelve. It was proposed to raise ; to fourteen So those whose conduc was quite lawful according to the presen law might have had the feeling that they were offenders if the limit had been laised even if they were not brought before a count For this reason, the age of conof justice sent in marital relations might have been raised to fourteen years with this proviso that this section was to come into effect after Sometimes laws are passed with two years similar provisoes

A woman cannot dispose of her property before she is 21, but she can "consent" to her ruin, body and soul, when she is only twelve! Such an absurd incongruity should be put an end to at once. A woman's body and soul are infinitely more precious than any property. So the goal to be reached is that outside munital relations the age of consent should be twenty-one. Inside the marital relation it may be sixteen as in England and Egypt.

Contradictory arguments have been urged against raising the age of consent inside marital relations. It was said by some that if the age were raised, the law would remain a dead letter—we need not inquire why It was said by others that the raising of the age would be followed by serious consequences that there would be serious agitation, that people's feelings would be hurt, etc.

Now, if a law remains a dead letter, there cannot obviously be any sorious consequences, such as stormy agitation, etc. On the other hand, if there be serious consequences as the result of the passing of a law, it must be because of the enforcement of the law—because of the law being set in motion against offenders, not

if it remain a dead letter

Moreover, if the argument that the law if passed, would have remained a dead letter, be true, the opposition of those who say so loses force. If a law must needs be still-born, why bother about it, one way or the other? But our opinion is that, though if the age of consent, inside marital relations had been raised, there would not have been many prosecutions, it would still have acted

NOTES

as a deterrent by its moral effect as setting up a standard of conduct and as an indirect ud to social reform, and so it would not

heen altogether a dead letter.

sir Alexander Muddiman's profession of car of agitation sounds somewhat curious when repressive laws are passed in the teeth of opposition in and outside the councils, where remains this fear of agitation? The cal truth is that the Government considers he opposition to repressive laws as confined the interoscopic minority of educated men, whereas the cry of religion in danger may onvulse the masses. The latter contingency to teniment does not like to face

Rabindranath Tagore on His Mission

After returning to India Rabindranath apprentiative of the Free Press interviewed in Among other questions he asked

Can you explain to me more fully the purse and method of your mission of cultural unity? A Wy idea is to establish contact with the hole world. In my view, India should not remain utter obscurity. We should be able to take our if in helping the world in her present situation if occupy an honoured place in the reconstruction civilization. I also know that the West is eager know the East, and specially India and to seek it from the store of wisdom which has come to from ancient times. It is our duty in India to life these expectations. I hope the movement of symbolizati will help to bring India out from her initial and intellectual segregation into contact of the West. This is the one service I can rent to my Motherland. We have to know that in modern age the problems of each country are rest of the world problem. No country to-day is increased. And until we (Indians) find a true place in this greater world we shall resum obscure and neglected, and there will be no ance of our real civilization asserting itself in the and making its contribution to world pro-

HOW TO BE ACHIEVED

1) How do you propose to achieve your ob-

By some good chance, I have been able to nony place in the heart of the world outside to Therefore, I feel a responsibility born of special position. I want to take advantage of and open a channel of communication that the linked both with other countries. India on the linked both with the East and the West. I have that purpose that I travelled to China and to As a result of my visit to those far Eastern metres, something was accomplished to the fulfilment of this object. For it is my left that the recent visit to the Far East has liked to establish a cultural connection between

India, China and Japan After this, I have been seeking to attempt a similar contact with the Western countries, and my conviction is that if I succeed in however meagre a measure, in my mission, I shall have done something which would not be without permanent results

Another question which was put to the poet ran as follows -

Q Do you think that in any scheme of life the West and the East with their seemingly conflicting interests and cultures, can fit in harmoniously with each other.

C F Andrews and Rabindranath Tagore

A Yes, I think they can When geographic boundaries were real even the people developed unity among themselves. Those people who formed that bond of unity came to be great. They were great in their literature, science and arts. Those who always fought against that unity, sooner or later perished and went down in the scale of civilization. Conditions have now changed. It is no longer individuals who have met together within geographical limits. Different human rages have come together closer than ever before owing to easier communication and this nearness to each other must be developed into a living and real tellowship. Until all the races of the world become fully conscious of their unity—the unity of the interests and culture—there can be no lasting peace. The fulfilment of the mission of world unity depends upon the realisation of this great truth by mankind.

A GILT TO THE COUNTRY

Through Visvabharati", continued the Poet, "I endenvour to give expression to the truth of the

indivisible entity of the human race. This institution is going to be my last gift to my country. I hope it will be accepted. I also hope India may have reason to be proud of the fact that this message of world-unity first took shape on her soil It is this expression of truth and nothing more, the expression of faith in the ideal of human oneness and the divinity in man that the "Visvabharati" seeks to achieve. This is also the Truth which the great utterances of our Upanishads preach and it is the special spiritual mission of India to give expression to this Truth by precept and practice and to secure its acceptance by the whole world. This is the voice of India and the voice of Truth.

Asked whether he did not think that his efforts were premature and he was attempting the impossible, Rabindranath replied -

Does not the Gitawarn us 'Action is the cure(*), not the fruits thereof"

It is the "effort that counts and not the result ' The effort is the most valuable of all things I do The enort is the most valuable of all things I do not know whether my efforts will have any effect nor do I seek to know I know it is the truth and I know that Truth has to be asserted against all contradictions Only Action is our duty,—not the greed of results I know that it can be said that my message has not been fully accepted by my country. I mean that I have struggled for the conception of my country non in my work. I have operation of my countrymen in my work. I have sought acceptance of my work at their liands by their sharing in my labours. I have not so far fully succeeded in enlisting their active support. But this does not discourage me. The fact that the vision of Truth has been seen and testimony has been borne to it even by a few seekers after the truth is courte or or with the second of the seekers after the second of the seekers. truth is quite enough

India's Segregation

Rabindranath Tagore was also asked

Q. Do you not recognise that the practical difficulties in the way of India accepting your message are great, specially in view of the com-

pheations arising from her political subjection.

A. Yes, I do recognize that the difficulties in the way of our countrymen accepting the message of world-unity are very great. What counts is not the difficulty. In any great cause, these are bound to be seemingly insurmountable obstacles. What I deplore, is not so much the lack of progress and appropriate advancement in the direction of the deal. practical achievement in the direction of the ideal as the inertia and apathy even to visualize the possibilities of such an ideal India is suffering from the effects of segregation. It seems exceedingly difficult for us to see things in their proper perspective. We have no right background against which to place our own experience in the different departments of life. The outcome of this is that it makes our national values and efforts so petty and futile as to shut out all possibilities of our spiritual expansion. The process of enlightenment is highly difficult in this country owing to our poverty of mind. We do not lack in intelligence, We are spiritual by temperament and race, and there can be our national life. I do recognize that our can be our national life I do recognize that our system of education, the system of administration and a number of extrapeous causes have all con-

tributed to our degeneracy I do not blame on people, but I do feel that we have lost and cont nue to lose faith in ideals and are becoming mon and more utilitarian and materialistic, I woul even say, more materialistic than the West

Our Materialism

The last sentence in Rabindranath's reply quoted above, naturally made the interviewed inquire whether the poet really maintained that we are more materialistic than the West, whereupon he said

Yes. In the broad sense of the term. What i 'materialism,' if it is not the formalism that dominates our religion'. The belief that external observances have spiritual meanings,-is that not, materialistic view? Is it not inaterialistic to be lieve that sin can be washed by water, by touching people's fect or taking dust? The fact 18 out country comprises a multitude of races in various stages of development, acting and inter-acting on each other, until our average standard has gone down. It is difficult to raise the average level

OUR HANDICAP

Further, we have a mill-stone round our negliruther, we have a mili-stone round out het ke the complex social organism which had its existence purely as a device to regulate the inter-relationship of the different groups of people at varying stages of development. This has now taken root as a part of religion and imparted sanctity even to our dividing castes. The con-tinuance of our old social organism, after it had ceased to have any meaning or purpose has belief ceased to have any meaning or purpose has helped to raise walls around us, to perpetuate out inherent natural tendency to unite. The artificial barriers which divide us had their origin in causes which have now ceased to operate and can be overcome only if we can cultivate the Will to overcome them. Our greatest handicap is not permanence except without concurrence and compared to the concurrence and concurr plicity. Our real difficulty is the mixing up of the fact of the existence of these barriers with the religious conception that they are rightly there, that they had always been and will always be there is the conception. I cannot think of a greater anachronism than the behef deliberately cultivated in the name of religion that, from the beginning of beginnings, the Lord of all creations had instituted all out differences as an abiding factor, which no course of evolution can change. This handicap is peculial to our country.

Conclusion

Is not this conception of 'materialism' differ-

ent from the common usage of the term?

A Yes. I am using the word 'materialism m its wide sense. I imply by 'materialism' the meaningless ritualism, which has become a large part of us. Ritualism is permissible which does not obstruct or obscure the vision of the unity of life. The realisation of unity lies essentially through the unity realisation of unity lies essentially through the naid and the soul, and not through the body or the object. There is always scope for unity, when, even though.

NOTES 485

remingly divided by vast differences, we de dividing medium as a fact and not as the fact of only want to emphasize that great as our constraint of spiritual tradition and remind ourselves are sons and servants of all humanity, and through success and failure constant to have it all

Curious Explanation of "Tower of Silence"

The reader is aware that the Parsis, who are Zoroastrain by faith, neither bury nor cremate their dead, but place them in towers known as towers of silence. But La Nacion, a spanish paper of Buenos Aires, dated 29th December, 1924, prints a picture of a tower of silence with a few lines of description which mean

This is probably the first photograph of one of the famous 'towers of silence' of India. The British Government is studying how to suppress them Rudyard Kipling has described marvellously these tombs for living men where the violators of the religious laws are put "

We do not know where Rudvard Kipling has given this marvellous description it is certainly a most marvellous misrepiesentation of India to describe a tower of silence as a tomb of live men which the Butish Government is endeavouring to suppress. The philanthropic zeal of European bureancrats and missionaries has been credited with many wonderful achievements, but it is to be hoped the conversion of a repository or dead bodies into one for entombing living men is not one of them. We wonder where the editor of La Nacion got hold of this malicious traveller's tale. As we have never naligned South America, we do not deserve his good turn

Lesson of America's Withdrawal from Opium Conference.

from the American action withdrawing ion the International Opium Conference. Ir han statesman have much to learn. The 11 yican delegation under the leadership Stephen G Porter played the honest at Hon heroic part of upholding a principle oven were willing to make certain con-" nons about the method of carrying out programme and wanted to extend the two for the final abolition of opium-smoking but they flatly refused to be a party to sur' a compromise as evould mean abandonof the principle. Indian statesmän

are often asked to participate in Commissions and Conferences to decide upon questions involving vital interests of the Indian nation. It is invariably the case that some of them sacrifices national interests by making compromises with the British statesmen Let us hope Indian statesmen of whatever school will learn from American, Japanese, Chinese Turkish statesmen that they must not sacrifice India's national interests to please British people and their British masters statesmen are free people and they at heart loathe those contemptible Indians who like slaves submit to them and sell away Indian national interest, and the Indian people cannot but have a feeling of contempt for Indian leaders who betray them in the council of the nation or in their dealings with British statesmen

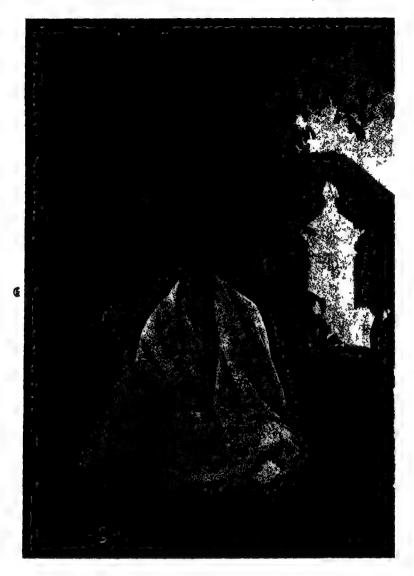

In connection with the last International Opium Conference, one thing must never be forgotten by the people of India, viz, that India has been betrayed internationally by the British Government and the so-called representatives of India It has been reported that the British officials representing India were willing to accept the American programme of limitation of production of opium for medicinal and scientific purposes so far as the export opium was concerned, but refused to agree to any such proposition so far as home consumption in India was con-This makes it clear that the British Government has a double standard of international morality, one for Britain and one for India, and it does not matter to the British Government, if the people of India are drugged to denigration

Jyotirindranath Tagore

By the death of Jyotirindranath Tagore, at the age of 70. Bengal loses one of the few surviving members of an earlier generation of Bengalis who were inspired with love of the motherland and who tried to serve their countrymen in various fields of culture as well as of business enterprise

He wrote some original plays in Bengah which were very popular in their day both among readers and playgoers. One of these plays, Purui ikram, received high praise from Prof. Sylvain Levi in its Gujarati translation, the learned reviewer mistaking the translation for an original production.

He was one of those who in those early, days got a good play written by offering a

Jyotirindranath Tagore

prize. He was a good actor and encouraged others possessed of histrionic talent

Jyotrindranath later gave up writing original works and devoted himself to translating books from Sanskiit, English, French and Marathi. The output of his translations was enormous and their quality high He vas, we believe, the first among his contemporaries to translate from the French. His ranslations of Tilak s, Gita-ruhasyu and Mrs. I. G. Ranade's reminiscences of her husband 'ere highly appreciated

He composed some hymns and other songs, and set numerous hymns and other songs)

to music—including many by his brother Rabindranath Tagore. He was well versed in both instrumental and vocal music For some time he edited, one after another, two musical periodicals, named Vinabadini and Sangit-Pralassika.

He was possessed of no mean artistic gift-He cultivated the hobby of drawing portraitof relatives, friends and acquaintances at sight. These were thought so highly of that Mr. William Rothenstein has published some of them with an introduction.

Phrenology and spiritualism were among his other hobbies.

NOTES 487

He was instrumental in founding the wat Sangit Samaj in Calcutta for the tivation of music and the histrionic art. He was the founder of the Bengali maganatary.

In the days of his youth, there used to held in Calcutta a patriotic annual fair I festival, called the Hindu Mela, in which eches were made, patriotic poems were ited, national songs were sung, paintings

Indian artists exhibited, indigenous nufacture kept for show and sale, various to of strength and skill performed, etcotiming the himself underwent training wrestling and horsemanship. He was a fearless huntsman, though mostly innoting of bloodshed

In social reform, particularly in removthe purdah, he was an ardent supporter his elder brother Satyendranath Tagore He so great an enthusiast that he and his le would go out together on two Arabs the Maidan, where they rode at full gallop en now in purdah ridden Bengal, the most ahead reformers would consider this going tar

For some time he tried to promote inland agation, incurring enormous losses in undertaking He also engaged in the e-business and in indigo-planting

During the latter part of his life he lived retirement at Ranchi, where he had built nouse on a hill-top, with a garden, a otto, and a chapel on the highest peak for worship of the One, Formless, Supreme int He continued his work of translation til his last illness. He had some advanced poiles of education, according to which he ight some grandchildren of his brother trendranath Tagore. He had a genial pertality and was a perfect gentleman. In uth he was noted for his bright and fair implexion and his strikingly handsome mily figure.

In his youngest brother Rabindranath's immisconces" we get many tantalising upses of Jyotirindranath. Writes the poet -"v fourth brother Jyotirindra was one of the thelpers in my literary and emotional training an enthusiast himself and loved n enthusiasm in others. He t Voke others. did low the difference between any bar to my free intelligental intercourse with him. our ages intellectual and him. This great of freedom which he allowed me. lse would have dared to do: many even the him for it. His companionship made it is for me to shake off my shripking sensi-The lt was as necessary for my soul after

its rigorous repression during my infancy as are the monsoon clouds after a fiery summer.

"But for such snapping of my shackles I might have become crippled for life. Those in authority are never tired of holding forth the possibility of the abuse of freedom as a reason for withholding it, but without that possibility freedom would not be really free. And the only way of learning how to use properly a thing is through its misuse. For myself, at least, I can truly say that what little mischief resulted from my freedom always led the way to the means of curing mischief. I have never been able to mike my own anything which they tried to compel me to swallow by getting hold of me physically or mentally, by the ears. Nothing but sorrow have I ever gained except when left treely to myself.

My brother Jyotir.ndra unreservedly let me go my own way to self-knowledge and only since then could my nature prepare to put forth its thorns, it may be, but likewise its flowers. This experience of mine has led me to dread, not so much evil itself, as trainingal attempts to create goodness. Of punitive police political or moral, I have a wholesome horror. The state of slavery which is thus brought ou is the worst form of cancer to which humanty is subject to which humanty is subject.

cancer to which humanity is subject
"Wy brother at one time would spend days at
his piano engrossed in the creation of new tunes.
Showers of melody would stream from under
his dancing lingers while Akshov Bibu and
I, seated on either side, would be busy
fitting words to the tunes as they grew into
ships to help to hold them in our memories. This
is how I served my apprenticeship in the composition of songs."

These extracts show to what extent the poet is indebted to his fourth brother for the development of his genius

The reader of the poet's 'Reminiscences' will also remember the paragraphs beginning,

My fourth brother, Jyotirindia was responsible for a political association of which old Rajnaram Hose was the president Merc child as I was, I also was a member

We need not quote the description of all the doings of this association but one passage must be reproduced

"My brother Jvotrindia began to busy himself with a national costume for all India, and submitted various designs to the association. The dhote was not deemed business-like, trousers were too foreign; so he hit upon a compromise which considerably detracted from the dhoti while failing to improve the trousers. That is to say, the trousers were decorated with the addition of a false dhoti-fold in front and behind. The fear-some thing that resulted from combining a turban with a sola-topee our most enthusiastic member would not have had the temerity to call ornamental. No person of ordinary courage could have dared it, but my brother unflinchingly wore the complete suit in broad day-light passing through the house of an afternoon to the carriage waiting outside, indifferent alike to the stare of relation or friend, door-keeper or coachman. There may be many a brave Indian ready to due for his country, but there are but few I am sure, who even for the good of the nation would face the public streets in such pan-Indian garb."

٠ ري ١

We shall close this note with one more extract—a long one—from "My Reminis-

Lured by an advertisement in some paper, my "Lured by an advertisement in some paper, my brother Jyotirindra went off one afternoon to an auction sale, and on his return informed us that he had bought a steel hulk for seven thousand rupees, all that now remained being to put in an engine and some cabins for it to become a full-fledged steamer.

"My brother must have thought it a great shame that our countrymen should have their

"My brother must have thought it a great shame that our countrymen should have their tongues and pens going, but not a single line of steamers. As I have narrated before, he had tried to light matches for his country, but no amount of rubbing availed to make them strike He had also wanted power-looms to work, but after all his travail, only one little country towel was born, and then the loom stopped. And now that he wanted Indian steamers to ply, he bought an empty old hulk, which, in due course, was filled, not only with engines and cabins but with loss and ruin as well

"And yet we should remember that all the loss

"And yet we should remember that all the loss and hardship due to his endeavours fell on him alone, while the gain of experience remained in reserve for the whole country. It is these uncalled the state of the whole country.

alone, while the gain of experience remained in reserve for the whole country. It is these uncalculating, unbusinesslike spirits who keep the business fields of the country flooded with their activities. And, though the flood subsides as rapidly as it comes, it leaves behind ferhlising silt to enrich the soil. When the time for reaping arrives no one thinks of these pioneers, but those who have cheerfully staked and lost their all, during life, are not likely, after death, to mind this further loss of being forgotten. "On one side was the European Flotila Company, on the other, my brother lyotirindra alone, and how tremendous waxed that battle of the mercantile fleets, the people of Khulna and Barisal may still remember. Under the stress of competition, steamer was added to steamer loss piled on loss, while the income dwindled till it ceased to be worth while to print tickets. The golden age dawned on the steamer service between Khulna and Barisal. Not only were the passengers carried free of charge, but they were offered light refreshments gratis as well. Then was formed a band of volunteers who, with flags and patriotic songs, marched the passengers in procession to the Indian line of steamers. So, while there was no want of passengers to carry, every other kind of want began to multiply apace. "Arithmetic remained uninfluenced by patriotic fervour; and while enthusiasm flamed higher and

Arithmetic remained uninfluenced by patriotic fervour; and while enthusiasm flamed higher and higher to the tune of patriotic songs, three times three went on steadily making nine on the wrong side of the blance sheet

"One of the misfortunes which always pursues the unbusinesslike is that, while they are as easy to read as an open book, they never learn to read the character of others. And since it takes them the whole of their life-time and all their resources to find out this weakness of theirs, they never get the chance of profiting by their experience. While the passengers were having free refreshments, the staff showed no signs of being starved either, but nevertheless the greatest care acceptance. but nevertheless the greatest gain remained with my brother in the ruin be so valiantly faced. "The daily bulletins of victory or disaster which used to arrive from the theatre of action

kept us in a fever of excitement. Then one came the news that the steamer Swadesh. I fouled the Howrah bridge and sunk. With a last loss my brother completely overstepped limits of his resources, and there was nothing the business." it but to wind up the business.

Mahatma Gandhi's Advice to Labourers

Without any intention to disparage t other speeches which Mahatma Gandhi ma during his recent visit to Madras, we this it necesserry to call particular attention the advice which he gave there to labour of both sexes He said in part -

Friends and fellow labourers, I thank you to it addresses that you have presented to me I or you fellow labourers, i.e., I call myself a labour because I take pride in calling myself a spini weaver, farmer and scavenger I have thrown my lot with you so far as a man like me can so. And I have done so, because I that India's salvation has through I have done so, also because I realise there is a lower manual allow my which it is the salvation of the I have thrown there is a joy in manual labour which is not to had in reading books or mental gymnastics. I ha realised that man is born to labour with his box for his bodily sustenance. In mixing with spinne weavers, farmers and other labourers I meessant tell them never to cease to be labourers, but to a tell them never to cease to be modulers, but to at to their bodily labour, mental education. But I knot that the joy I can derive from labour is not not lot Labour to most of you is painful toil without pleasure, partly because your labour is exploited moneyed men, but mostly because of your own defents and houststons. Another reason thousand defects and limitations. Another reason, therefore why I have become a labourer is to be able to dia from the same level that you occupy your attention. tion to your limitations and defects.

Therefore, I am never tred, when I speak a labour gatherings such as these, of drawing the a labour gatherings such as these, of drawing the a tention of the labourers to their own limitation. I want you to realise that you should be in may inferior to any other class of people in the country. I want you to develop the capacity had understanding national affairs and ruling over them. And, if you will be all these things, you may give up drink. You ought to give up insanitation and fifth. Whether you are living in houses for which you are paying rent or living in houses built is you have compleyers, you should decline positive. you by your employers, you should decline positive to live in dirty houses where there is no sun-him and where there is no air. You must keep you and where there is no air. For must keep your houses and your yards absolutely clean of all dinand insanitation. So must you keep your ow bodies clean by washing them properly every day and, as your bodies and your surroundings mite. And, as your bodies and your surroundings into be absolutely clean, so should your life be you men and women, should be absolutely chasted You must never gamble. Send your children schools that may be appointed or made by solve on the solve of the schools that may be appointed or made by solve of the solve of the schools that may be appointed or made by solve of the solve of the schools that may be appointed or made by solve of the schools that may be appointed or made by solve or the schools of NOTES 489

Hind. should not regard any body of Hindus as unto ables. Panchamas or Pariahs No man largest his lustful eye upon another's woman Panchamas or Pariahs No man the last me toother eye upon another's woman took is the last, if you are wearing, as I know many of the are wearing, foreign cloth or cloth even the Bombay or Ahmedabad, you shall cease to well that cloth, but wear only hand-spun and hand-hadden, because only hand-spun and handhalf country because every yard of khaddar half con buy means a few annas into the pockets of allow labourers like yourselves. I am asking yer, labourer in India to learn and practise and pinning, carding and, if possible, even nearing

If you are sufficiently industrious, you can spin and weave your own clothing. I have nothing more to say save this, early in the morning, getting up at 4 o'clock, ask God before you do anyhing else to help you to do the things that you have intend to this evening. May God bless you and make you to lead good lives!

Lord Curzon

By the death of Lord Curzon of Keddlestone, England has lost one of its distinguished politicians As viceroy and governor-general of India, he gave evidence of great industry and administrative capacity, but not of farseeing statesmanship or sympathy with the political aspirations of the people whom he had come out to rule. He possessed great intellectual powers, command over the English language, and the gift of eloquence. Some it his dieta many find place in history; ' q administration and exploitation were mly different aspects of the same thing, ", Butish rule in India (we are unable to

mote his exact language)

He will be remembered as the author of he partition of Bengal, though after he had reased to be viceroy, he disowned this child il his By the partition he wanted, it is scheved, to drive deeper the wedge between findus and Moslems, and to counteract the nedominant influence of Hindus in Indian soldies and of Bengali Hindus in Bengal whites by the creation of a Moslem a ince where Moslem influence would be nedominant All this he did in order Η, increase the stability British լլև But the measure produced results not ided or anticipated by him Nationalreceived a great impetus, and for the " time in the British period of the history d longal, a party of English-educated men into being who wanted to put an end of da's political connection with Britain: "poy Mutiny was not predominantly a obvision of those who had received English The revolutionary movement to then the Bengal partition gave rise has not the hom killed, though it has been scotched

several times. Probably it will die out only when India becomes free.

The Bengal partition had also some noteworthy economic consequences. People's minds were turned toward articles of indigenous manufacture—swadeshi articles, as they are called. Though the boycott of foreign, particularly of British, goods largely failed and though many of the swadeshi enterprises of Bengal were unsuccessful, the indirect results were important, and Bombay mill-owners were able to convert Bengal's swadeshi zeal into hard cash, and some loss

was inflicted on Lancashire.

Owing to the unprecedentedly persistent and extensive agitation against the partition. an agitation which for the first time in the history of political agitations in modern India was able to enlist the active sympathy of the masses, the Curzonian division of Bengal was unsettled and a new partition was made. When it was announced, some Indian politicians welcomed it But there were others who could see through the game. In the days before the first partition, Bengal, Bihar, Orissa and Chota Nagpur formed one administrative province in which formed the majority and Bengali Hindus had the predominant influence Lord Curzon's object was to give the Moslems a province in which they would form the majority and to decrease the influence of the Bengali Hindus as a whole. When the first partition was undone and followed by the second partition, it was found that the same object had been attained in a different way. Musalmans still form the majority in the province of We are far from contending that Bengal Moslems ought not to be predominant and in the majority anywhere; they ought to be in some regions But if regions must needs be divided to give them their due Hindus ought also to Bengali influence. have a province of their own.

Lord Curzon created a Moslem province in pursuance of the 'divide and rule' policy But it is noteworthy that in recent months Lala Lajpat Rai, whose patriotism is unquestionable, has suggested the creation of Moslem provinces in the north-east and north-west of India for an exactly opposite purpose, iii, to set at rest the ceaseless Hindu-Moslem bickerings and jealousies in

some provinces.

Lord Curzon had travelled extensively in Asia, but probably had acquired an unwarranted and evaggerated belief in the absolutely static character of the civilisations

of Asia and her unchangeableness. Had his earlier travels been followed by later ones, he would have found an East which had in recent decades covered the march of previous centuries; and it would have done good to his contemporary compatriots if he had recorded that fact.

All departments of the administration in India felt the influence of his active and masterful personality. By his Universities Act he probably wanted to arrest the spread of higher education and to bring the universities under full official control. This object was not gained,—particularly in Bengal owing mainly to the efforts of Sir Asutosh Mookeriee.

In a notorious address Lord Curzon branded Asia, the birth-place of Mahavira, Buddha, Zoroaster, Christ and Muhammad, and the home of all the great religions of the world, with untruthfulness and claimed superiority for the West in truthfulness! Sir Rash Behary (thosh gave a fitting reply

in a memorable address.

His lordship will be gratefully remembered for inaugurating an enlightened policy for the restoration and preservation of ancient monuments and the pursuit of archæological researches. He will also be remembered for converting the Calcutta Public Library into the Imperial Library and adding largely to its stock of books

Calcutta Corporation Against Intoxicants

The Calcutta Corporation has passed the following resolution nem con—

That this Corporation do recommend to the Government of Bengal that all wine and liquor shops including shops for the sale of opium, ganja and other intoxicants, within the Municipal town of Calcutta, be removed therefrom and that in future licenses be granted only to recognised chemists and druggists for the sale of such quantities of wine liquor and other intoxicants within the Municipal town of Calcutta as may reasonably be required for medicinal purposes.

This is a good resolution. But supposing the Government of Bengal accepted the recommendation, which is quite unlikely, who would pay for the large staff necessary for preventing smuggling? Simultaneously with passing the resolution, the corporation ought to have tackled that question. By not doing so the Calcutta aldermen have simply courted refusal. Or perhaps they never had any serious hope or intention, but wanted only some cheap praise from the unthinking

crowd at the expense of the Bengal Goverment.

If Calcutta had been a walled city with a few closely guarded gates, even then would have been difficult to prevent some gling. But as it is not walled and can reached by rail, river, highways, etc., at indefinite number of places, the prevention of smuggling is not a practicable proposition.

Prohibition to be successful, must tried in the country as a whole, not in cition other areas individually. Still the Calcugesture is an encouraging sign of the time.

Inconsistency of Some Bengal M. L. Cs

As we are opposed to dyarchy and wa full provincial autonomy, we have supports the rejection of the Bengal ministers' salain as an individual act But we cannot overloa the fact that a substantial majority of the councillors had previously voted for the appoint ment of ministers The recent voting, how ever, means that a majority of the membe do not want ministers at all Therefore, it clear that there are some members who have a few days ago, voted for the appointment of ministers now declare that ministers at not wanted. Men who change their minds i this fashion cannot expect to be respected a trusted Such men cannot be believed to have any sense of responsibility

President of Council as Dictator and Bully

Owing to two recent rulings of Sir Eva Cotton, president of the Bengal Council, th Nationalists and Swarajists walked out twice It happened in this wise, as described in th following letter addressed to the Presiden by Mr C R Das and Mr. B. Chakravarti o behalf of their respective parties

To the President, Bengal Legislative Council Dear Sir,—It is apparent from what took plat yesterday that it is impossible for the members this Council to do their duty by their electroate as they are not permitted their legitimate freedon of debata. It appears that Mr. A. C. Baneije in course of his speech said, "It is a department (referring to the District Intelligence Staff), the ostensible object of which is to detect crimes, his we find that in some cases at all events its activities were more identified in manufacturing evidence than in detecting crimes." Sir Hugh Stepherson having objected to that statement you ruled that you could not allow it without having heard yourself what Mr. Banerjea had said and without asking Mr. Banerjea as to what he had said It is clear that Sir Hugh Stephenson made a misre presentation and although Mr. Banerjea re-stated to

NOTES 491

on what he had actually said, you called upon him to withdraw the statement. It is further clear that your rather calling subsequently given shows that your ader calling upon Mr. Banerjea to withdraw as an antingement of the liberty of speech to which every connected is entitled and we find it extremely difficult to discharge our duty as members of the council if rulings are given in this manner and if members who insist on their right are treated with such scant courtesy. We have further to observe hat this is not the first time that the members of the parties have taken exception to the offensive one in which they are addressed and the temper isplayed by you.

Yours truly,
B. Chakravarti,
(()n behalf of the Nationalist party)
C. R. Das,
(()n behalf of the Swarajya party).
Dated, Calcutta, the 25th March, 1925.

We have read the report of the proceedings of the meeting where all this took blace in The Servant, Forward and the America Ba.a. Patrika, and are of opinion that the nesident behaved in a rude and dictatorial nanner, and wanted to extract an abject apology from Mr. A. C. Banerji by bullying immand some other councillors Sir Evan tractically showed that in his opinion no courtesy was due to the Bengali members, and that Sir Hugh Stephenson was to be mpherity believed, not any Bengali councillor

We cannot pronounce any authoritative pullon on what is or is not a parliamentary expression; but this we can say that what it. A C. Banerji stated is a fact, and that leither he nor any other Indian member behaved in a discourteous or disorderly

nauner

Bengal Repression Acts

The Bengal Ordiance Bill was thrown out y the Bengal Legislative Council, but was assed by the process of certification he Bengal Ordinance Supplementary Bill was hown out by the Indian Legislative Assembly twice. Of course, some members spoke ut very strongly against the Bill But the lways subservient Council of State has assed it, only three members dissenting and ne walking out by way of protest

Passing bills, including finance bills, in property of the opposition of a majority of larislators" has almost become the usual accordance. Regard for reality therefore one not that the legislative bodies he sum-

namis suppressed or guillotined.

Was It a Trick?

When on the 25th of March the Nationalist and Swarajist members of the Bengal Council walked out for the first time, we read in the report of the proceedings,

The Nationalists having withdrawn no less than 59 motions for refusal and reduction in the Police Budget were placed. The President called them one after the other which however necessarily fell through. As amended the original demand was then put and carried.

The subsequent walking out of these members and its advantages are thus referred to and described in the report—

At this stage the Nationalist members again walked out of the Chamber, and the demands for Ports and Pilotage and Scientific Demands were put and carried without any discussion or opposition.

In the absence of the Ministers, Mr. Donald moved for the demands to Education, Medical, Public Health, Agriculture and Industries, which

were similarly carried

The proceedings of Thursday the 26th instant are thus briefly described in the Bengalee.—

Within a brief period of half an hour the business of the Bengal Legislative Council was concluded on Thuisday afternoon and the demands for Civil Works, Famine Rehef and Insurance, Superannuation Allowances and Pensions. Stationery and Printing, Miscellaneous Expenditure in England, Loans and Advances etc., having been made and passed in full without any discussion or opposition the Council was prorogued. As a protest against the ruling given by the Hon'ble President against the ruling given by the Hon'ble President against Mr. A. C. Bancijea on Wednesday, the Nationalist and Swarajist members absented themselves from the chamber, and the opposition benches remained empty.

A wag suggests that, as in these days some legislator of other is bound to make strong remarks, it was pre-arranged that taking advantage of some such remark, the president should lose his temper and make a display of his strength, which was sure to lead to the opposition walking out, and then the bureaucrats should make hay while their sun shone un-obscured by the vaporous speeches of Indian members. If the wag is right, the bureaucracy in the other provinces should follow their example. It is easy to learn and do the trick

Sun Yat Sen

Reuter has killed Sun Yat Sen, the great Chinese statesman, for the third time, without giving any explanation as to why he was killed twice before, or without following upthe latest news of his death with any information regarding his funcials, the tribute of gratitude paid to his memory by his fellow-countrymen, or other similar details. We cannot be sure, therefore, that he is dead. But whether his body be dead or alive, he will live for ever in history as par excellence the maker of modern China, a statesman who framed for China a constitution which was not a mere copy of the constitutions of some occidental countries, and a true patriot who, though he overthrew the Manchu dynasty and set up a republic, did not covet the office of president of the Chinese Republic.

A Festering Sore

Guglielmo Ferrero is one of the greatest European historians living to-day. What he writes will be remembered for many generations, and his verdict on many subjects is likely to be final for posterity, far beyond anything that is uttored by statesmen and politicians, with whom financial and party considerations are paramount. He has recently written and published, under his own signature, this opinion as an historian on the Opium Question:—

Opium is a festering sore on the face of modern civilization.

In olden days consumption of opium was necessarily limited by inadequate means of production, but now with modern industrial and agricultural methods there is an overproduction which threatens extinction of the race

It is surely patent that the only solution is to rigorously limit production and that limitation of consumption is bound to follow I cannot see how any other plan can be seriously adopted, especially by a nation which is conscious of its responsibilities.

responsibilities.

The scandal becomes criminal when the State itself is engaged in the traffic, as is the case with

It is an international shame that a society of nations is so linked with commercial interests that its members are unable to act to blot out this scourge.

The moral conscience of the world must be profoundly low when a small number of vile traders are able to sway the councils of nations which vaunt themselves as masters of civilization and pretend to govern the world.

Sir Basil Blackett has now, in India, the chief responsibility for deciding whether India's part in the Opium Traffic shall be subject to revision by an impartial enquiry or whether old worn-out platitudes shall still be repeated, as the Indian Government verdict, and no impartial enquiry granted My hope is, that the opinion of the provincial Governments by not definitely taking a hostile position will make an enquiry possible.

C. F. A.

Mr. John Campbell's Libel

Mr. John Campbell, the representative of the Government of India, declared at Gener that no Indian leader, not even Mr. Gandle himself, had any fault to find with the Govern ment of India's opium policy. In contradic tion of this outrageous libel, which has neve been apologised for and withdrawn, the clearereferences have been given and published i the press from the writings of Mr. Dadabla Naoraji, the Hon. Mr. G K. Gokhale, and als from almost every living Indian writer an statesman. The Debate in the Legislativ Assembly, in which the clearest pronounce ments were made by leading Indian politicians the Government suffering defeat on a division should dispose once and for all of the calumny which Mr Campbell made to the The petition to the League World Press Nations under the signatures of Mahatm Gandhi and the poet, Rabindranath Tagoic demanding the limitation of cultivation to the medicinal and scientific needs of the world should also help to dispel the falsehood which unfortunately obtained a long start in th world's news Quite recently, since the poet return, he has pointed out to me that, a early as the year 1881, when he was Edito of Bharati, in Bengal, he published an edi torial review on the Opium Traffic between India and China. The review is of such im portance, in the light of the scandalous state ment made by Mr John Campbell, that I have asked permission from the Poet to get translated and reproduced I hope that may appear in the next issue of the Mod r Review.

C F. 1.

Sir J. C. Bose at the Central Anti-Malaria Society's Annual Meeting

The Central Anti-Malaria Society of Beneral has been doing much good work for a number of years. Public appreciation of its services: was evidenced recently by the crowded and influential attendance at its president. Sir J. C. Bose made an appropriate speech. He departed somewhat from the beaten track by concluding his additions with the following passage:—

In this connection, I would venture to sugar an additional item which may be carried out a some of your workers. My own researches and me increasingly realise the influence of mind on the body. The body easily succumbs, when it mind is in a state of depression. Hence it is easily to cultivate cheerfulness by increasing

NOTES 493

buters of healthy amusement. We were once a apply people, there were a succession of fairs and apply people, there were a succession of fairs and modes all the year round, at which people used to be a considered to be the subsection of the people of the succession of the people of

The Cotton Excise Duty

To handicap an indigenous industry of ndia for the benefit of a British industry is not inconsistent with the British sense of ustice, though it may be an unrighteous policy. In opposition to this policy, there ias been a persistent demand for the abolition of the cotton excise duty. But self-interest has stood in the way of justice being lone even in this year of a surplus budget

Popularising Indian Civil Service

In order that stay-at-home Britons might eadily feel the urgency of increasing the moluments of British Covenanted Civilians in ndia service in India had been evidently so flectively painted in the most unattractive plours that even repeated increase of pay, etc., he latest being the "Lee Loot", has not succeeled in inducing the young university men of Butain to think of an Indian career, which vas formerly so highly prized The need ins therefore, now been felt to counteract he effect of the previous propaganda by nopaganda of a different kind. The services t v-governors of Indian provinces have been fortents of Oxford, Cambridge, etc., the "It intages and attractions of service in India. ingland you have to pay for everythinginle, a pose, a gesture, everything has its It goes without saying, then, that propaganda would cost a certain amount. Inc as official Englishmen have always come and would come out in future also to India absolutely and entirely in the interests of India, what is more just and more natural than that this country should pay the whole cost of this propaganda? England has never gained even half a cracked farthing by her sons coming out to rule India in return for starvation wages. Hence it would have been the height of injustice to saddle England with the expenses of this propaganda. And mark how merciful and high-minded the ruling class of England is! Lord Winterton has declared from his place in Parliament that the cost would be trifling. Should we not in gratitude worship Lord Winterton and his ilk? "Bow down, ye slaves, bow down"

Government of India Civil Services Bill

Another example of the sense of justice and generosity of the British ruling class is furnished by the introduction in the British parliament of the Government of India (Civil Services) Bill, which is described as—

A bill to amend the provisions of the Government of India Act by exempting proposals for expenditure upon certain salaries, pensions and other payments from submission to the Indian legislatures and to enable rules made under the said Act relating to the civil service of the Crown in India to be dispensed with or relaxed in certain cases

Of late the gratitude which Indians feel for the rulers of India has been increasing by such leaps and bounds that, overwhelmed by it, the Indian legislatures might any day pour out at the feet of these neo-Brahmins not only the public but the private wealth of India as well, as dakshina for their highly unselfish and spiritualising services. But the British Parliament does not want to utterly impoverish India by taking advantage of her superabundant and overflowing feelings of gratitude. Hence that body has determined to deprive the Indian legislatures of any power to increase the salaries, pensions and other payments made to India's white rulers.

Nou there will be great economy and the Indian treasury will be quite safe

Reforms Enquiry Committee Reports

Two reports, a majority report and a minority report, of the Reforms Enquiry Committee have been published. The former is for leaving things almost as they are, the latter for a substantial advance, and automatic progress in the future

As regards the Reforms there are two demands which may be called national the establishment of full responsible government in the provinces, all subjects being transferred

to ministers responsible to the provincial legislatures; and the establishment of responsibility in all departments of the internal civil administration of the country by the central government. There is no political party in the country whose demands fall short of these two, though there are persons and parties who want much more.

The majority report does not meet even a fraction of these two demands; and is

therefore quite unsatisfactory.

The majority report has arrived at the absurd conclusion, not warranted by facts, that the system of dyarchical government in the provinces has on the whole worked satisfactorily. Every one, outside the ranks of the bureaucracy and their partisans and hangers-on, knows that the truth his the

other way.

The minority report has met with general acceptance. It has recommended that, whether by the appointment of a royal commission or by any other agency, the Government should take steps to place the constitution on a permanent basis with provision for automatic progress in the future so as to secure stability in the government and willing cooperation from the people since the publication of the two reports, Sir Muhammad Shah, late Law Member of the Government and a signatory of the majority report, has supported this recommendation of the minority, it has now become practically the recommendation of the majority of the members of the Reforms Enquiry Committee As such, it should be given effect to by the British Parliament, though it would be too much to hope that it would be

Officiating Governors

Before the enactment of the law which has enabled the Viceroy, the Governor of Bihar and Orissa, and other high functionaries to leave India on long leave, it was the rule for the senior members of the provincial executive councils to officiate for provincial After the passing of the above-mentioned law also the practice is not to be departed from in Assam and Bihar and Orissa. where the the senior members of the execucouncils, who are Englishmen are to officiate for the Governors But in Bengal the "senior member, Sir Abdur Rahim, is an Indian. Hence his claims have been overlooked. On a previous occasion, years ago, when Sir K. G. Gupta was the senior member.

he was placed in charge of the fisheries depail ment in the nick of time, in order that if Bengal satrapy might be given to an Englisman, and the Indian claimant might fish if consolation in the wide wide ocean.

As between Indian and Indian, the theo of the favourite wife may and often do come handy, but when the time comes f choosing one who is to play the husband, must always be the Englishman. Once upon a time the experiment was tried of Englishmanising and husbandising Satyend Prasanna Sinha by be-lording him, had according to Englishmen, the experiment was failure.

Why High Officials Go Home

It is no longer a secret that Lord Reading going home to confer with Lord Birkehead, the Secretary of State for India, containing Indian problems—whatever they must be Some provincial governors who are all going home are to help him in the conference. As none of these public servants are known to advocate self-rule or justice for India their advice can only confirm the Tories their Toryism. Of course, India pays for the conference, though it will do her no good

Though no public report of the conference may be published, the enterprising Press England will be sure to publish some accounce of it. It would be good if some accredite and well-informed representatives of Indiverse on the spot to correct misrepresentation. Not that we expect any immediate or direct that British opinion and world opinion a line in the India should not be formed on wrong das supplied by either interested or ignoral persons. It is foolish and futile to complate of misrepresentation of India if we do not take care to supply correct information.

Military Training for Students

University after university is going if for compulsory military training for it students. We have written adversely on the subject and wanted to see what other paper had to say. So far we have not found an other paper opposing it. Young India, whave been told, has written nothing on the topic.

On the whole, it may, therefore, be said that Indian papers are ahimsaists as a matter of, policy so far as armed rebellion goes, bu

are not thoroughgoing ahimsaists.

NOTES 495

Militarist Propaganda in Schools

The Guardian writes:-

The Education Minister on the Labour Government of Victoria states that he is determined to put an end to militarist propaganda in schools. He has therefore issued an order that no articles or songs extolling wars, battles or heroes of past wars are to be printed in text-books or school magazines in Victoria In South Australia, the Education Department have gone one better and ordered that a copy of a book on the League by Mi (i L. Ellis, a Melbourne barrister, should be placed in every school library.

The National Council of Education, Bengal

The Foundation Day of the National Council of Education, Bengal, which was established in 1906, was fittingly celebrated last month at Jadavpur, where its Technical permanent has class-rooms. Institute hostels, laboratory, etc The subjects at present taught, by a competent staff, are Mechanical Engineering, Electrical Engineering and Chemical Engineering It has about 700 students, candidates for admission having been double this number during the last four The Council has an endowment worth about 25 lakhs of rupees. Babu Hirendranath Datta has worked for this educational institution with a zeal and quiet persistence worthy of all praise and emulation

Vykom Satyagraha

Satyagraha at Vykom has taken a new tuin In handing over for publication the correspondence between himself and the Police commissioner, Trivandrum, Mr Gandhi observes.—

It is only necessary for me to point out that the agreement embodied therein marks a step forward in the movement now going on at Vaikon. The Satvagrahis' respecting the boundary line in pute of the removal of the barrier and the removal also of the order of prohibition would, on the one had show completely the non-violent nature of the Struggle and, on the other, prove the bona fides of the Government declaration that they favour her reform for which the Satvagrahis are fighting. I am hoping that the opponents of reform will improcate the gesture made by the Satvagrahis.

The barriers and the order of prohibition $h_{\rm c} \, \nu_{\rm c}$ been removed. According to the agreement:—

Ine effect of this would be that a very small marber, not larger than at present, will continue to the foundary line by way of the thing their cause and stand or spin as they are not doing in front of the lines. They will no the strong of the lines agreement lasts, and I expect that if ever it here mes necessary to challenge in a court of law

the so-called right or custom under which the so-called untouchables are prohibited from making use of the roads round the temple, the prosecution would be under the ordinary criminal law of Travancore I am hoping with the assistance of the Travancore Government to formulate public opinion so that it becomes irresistible, and that without recourse to law on either side The common right of using the public or semi-public roads is not denied to any class of people by reason of their birth. I have already discussed with you three proposals made by me, namely, referendum by taking the vote of Savarna Hindus in select areas, arbitration, or interpretation and examination of the authority of the texts from Hindu Sastras supposed to be available to the orthodox in support of their contention as to the uses of roads round certain temples It must be a very simple matter to adopt one or all of the suggestions.

Let us hope this non-violent struggle will soon be crowned with success. Orthodox people can now agree with good grace and honour to themselves to the so-called untouchables using the roads round certain temples

The Indian Chemical Society

The Indian Chemical Society was established last year The Society publishes quarterly journal in which only original contributions approved by a committee of publication find a place It is a matter of sincere pleasure to note that the Society enjoys the support of about 200 qualified chemists, including most of the prominent scientific workers in chemistry in the country. The spirit of goodwill and co-operation in a common cause has united the European and the Indian in common effort We have had to refer more than once to the achievements of our young chemists. It is pleasing to note the increase in the number of successful investigators in chemistry in our midst. The foundation of a society with the status of the Indian Chemical Society brings home to us that India is after all awaking from her deep slumber. The contribution of chemists working in India to chemical knowledge is no longer quite negligible.

It is in the fitness of things that most of the Indian Universities should recognise the importance of the efforts of the society in the cause of chemistry and be contributing to the funds of the Society. It is a truism that in the development of the natural resources of India lies our future. Chemistry is a branch of science which has a fundamental and leading bearing on problems of industrial agricultural and biological processes. If India is to realise her dream, of taking her proper

place in the scientific and industrial progress of the world, she must devote more attention to the growth of a spirit of research in the country. She must not remain satisfied with simply supplying skilled labour but must also have the power to initiate ever new and more and more effective processes through inventions and discoveries. A society such as the one under reference is the fittest institution to realise this object. Our motto must be to encourage by all means research in pure science and the spread of the scientific spirit and knowledge in the country. It is the experience of the world that this is the surest way towards the industrial development of a country. We appeal to the public and to the State to do their duty by the Society by contributing substantially towards its research and publication funds. We would mention that the annual income of the London Chemical Society and the American Chemical Society is from 3 to 7 lacs of rupees and that Britain and America have each no less than 10 thousand qualified chemists It is through their joint and organised effort that these countries are zealously and successfully maintaining their position in the van of the industrial progress of the world.

The Black Man's Burden

The following letter which appears in the 'New Statesman' of Jan 28, 1925 under the heading of "the Black Man's Burden' gives a picture of what is happening in Africa with regard to the use of African labour for the white settlers -

"Sir,—The following notes from my diary, made when passing by Kenya twelve months ago, may throw some additional light on the labour problem in Kenya. Perhaps I am not an unbiassed observer having lived for more than thirty years in South Africa, where similar though less drastic methods for making the black man work "for his own good" are in use. Walking along the three-mile road from Killindini to Mombasa, I turned aside to read the notices on the board outside the police offices. One notice announces the introduction of regulation for the registration of natives which will bring 500,000 natives under control Each is to be furnished with a pass upon which 'employers are required to supply certain particulars. That giving

these particulars is irksome to the white man is suggested by the fact that the notice gives a number of reasons why it is to the interest of employers to fill them in. Briefly, they resolve themselves into the argument that it will be possible more effectively to keep the native in

subjection. A recent speech in the legislative chamber at Nairobi begged the Indians and Araba $t_{\rm c}$ leave politics alone (what a familiar ring this advice has i) and with the Europeans concentrate on developing the resources of the province The chief of these resources is cheap native labour, and this registration regulation is to help to secure

It is an amusing commentary on this attitude toward native races that in the English "memorial church" a brass tablet erected to the memory of Sir E. S. Mackenzie records, that "the first at of this advinctory was the redempton to the second state of the second stat Sir E. S. Mackenzie records, that the first act of his administration was the redemption of 1422 domestic slaves at Rabar." Thus does Europe strain at our 1,422 gnats and swallow 500,000 camels! The system of registration includes the taking of finger-prints of these 500,000 natives. I suppose it goes without saying that finger-prints are not taken of Europeans, nor, as yet of Arabs and Indians, these latter being numerous and intelligent another to make such a measure difficult intelligent enough to make such a measure difficult of application to them What is the fate of the native who comes into conflict with the law -in the making of which no pretence is made of consulting him—is shown by the fact that on my walk I came upon two gangs of native convict, at work on the roads, both under the guns of native

police warders.

A sidelight may be thrown on the situation by the following facts. In order to secure reforms and greater economy in the working of the kenvarilways a new and experienced general manager was sent from the offices of the South Atrican Railways at Johannesburg. In the monthly magazine published by the SAR., I saw an extract from the first report of this new manager. From the first report of this new manager. from the first report of this new manager. From it I gathered that one of his lirst administrative acts in the pursuit of this bubble economy was to reduce the wages of native and coloured servants of the Kenya Railways. No mention is made of similar reductions of the emoluments of the white officials, indeed, it is probable that these were increased in a manner which must be familiar to all who have inner knowledge of bureaucrates. It was bad enough to make the burden fall upon the shoulders of the already badly paid black and coloured men, but it was adding insult to inner coloured men, but it was adding insult to muri to say, as Mr. Felling said in the report referred to, that the reduction was made for the coloured man's own good.-Yours, etc.

Wallasey, January 17, 1925. J. F NANO

should add to this letter that by the word 'coloured servants' the writer, who is a South African, evidently means the Punjabi railway workman who have gone out on contract Every effort has been made by this new General Manager to retrench them in favour of white employees.

Planchette

The animate-inanimate medium for Spirit-invocation

The wave-length transmitted through the space by radio-electricity, generated by the automatic motion of the planchette reaches the higher plane; and the response from the spirit-world is mysteriously recorded on the sheet of paper spread underneath

Businessmen, students, examinees, seekers of fortune, litigants and lovers have found in Planchette a Secret of Success.

Price Rs. 3-8 Packing & postage 8 as.

A. Law & Sons, 78-1 BALARAM DE STREET, CALCUTTA

The Light That Never Fails Dinamo Pocket Lamp

Is an Electric Lamp without any Battery or Accumulator, a pocket size, self-contained inexhaustible lighting plant generating its own electricity whilst held in the hand. This handy, compact shape, light and small in shape (about 4" by 1% by 1"), Lamp is undoubtedly the most perfact Electric Torch in existence owing to its distinctive features. It is always ready for instant use even if left untended for months at a time. It is perfectly safe and is most valuable for purposes where the use of an open light might be dangerous. It is a boon to the Farmers, Miners, Engineers, Motorists, Sportsmen, Sailors, Night-Watchmen and to all who must have an everlasting source of illumination. In regard to its practical indestructibility, the purchase price is small and is the

only cost since there are no Batteries to replace or accumulators to recharge. In short, it is a trusty and indispensable companion—Rs. 15 only.

The Automatic Stove-Lighter

is superior to all other lighters hitherto introduced because it will hold a supply of Petrol to last for 3 weeks, It is cheaper than matches. Price Re. 1 only.

FREE:—One Silver plated permanent nice "Calendar" will be given free with every Dianamo Pocket Lamp

Asoka

(Carmichael Lectures, 1923.)

BY DR. D. R. BHANDERKAR, M.A., Ph.D., F.A.S.B.

Carmichael Professor of Ancient History and Culture, Calcutta University Demy 8vo. pp. 364.....Rs. 5.

In this book the author has set forth his views about the Buddhist monarch after a careful and systematic study for quarter of a century not only of the inscriptions of Asoka but also of the valuable translations and notes on these records by distinguished scholars in the field of Ancient History of India. The book consists of eight chapters dealing with the following topics:—I Asoka and Asoka as a missionary. VI Social and Religious life from Asokan Monuments, VI Asoka's Dhamma. I Asoka inscriptions.

Extracts from a letter from M. Senart, the distinguished French savant—

"...... I am grateful to your book because it has brought me a brilliant example of the ingenious and passionate skill with which Modern India endeavours to reconstruct its past......You intended to show by an analysis of the inscriptions what information hitherto unexpected they can yield to a sagacious and penetrating exploier."

Wages and Profit-Sharing

With a chapter on Indian conditions

BY R. N. GILCHRIST, M.A.

Labour Intelligence Officer, Government of Bengal Royal Svo. pp. 430 .. . Rs. 7.

This book deals with three subjects. The first part is taken up with a description of the various systems of wage payment, viz. the time wage, the piece wage, premium honus systems, and systems of payment connected with Scientific Management. The Second part deals with profit-sharing and co-partnership, and is an exhaustive analysis of the principles underlying them. A large section of the book is taken up with the description of individual schemes, and there is also a separate section dealing with profit-sharing in countries other than the United Kingdom. Finally, in this section an attempt is made to appraise profit-sharing and co-partnership as an instrument of industrial peace. The third part of the book deals with Indian conditions and is divided into three sections. The first section is a general discussion on Indian labour conditions and deals with labour questions in India in a way which no author previously has attempted to do. The second system deals with industrial peace in India, and is an authoritative and first-hand account of what has been done in recent years towards settling differences between labour employers and labour. The third section deals with the payment of wages in India with special reference to payment in kind. Tea-gaiden, and colliery labour are dealt with in some detail. Finally there are two appendices, the first of which brings up to date the material contained in the author's book on conciliation and Arbitration. This part is a comparative study of teach legislation on conciliation and arbitration, and also of trade boards and works councils. The second appendix gives in extense the recent proposals of the Government of India regarding trade disputes and trade unions." This book deals with three subjects The first part is taken up with a description of the

The Recent Development of International Law in the 20th Century

THE MODERN REVIEW OFFICE. 91, Upper Circular Road, Calcutta.

CHRISTIAN POWER IN INDI

BY MAJOR B. D. BASU, I. M. S. (Retd.)
Complete in 5 Volumes Rs. 25 for the Whole Work
For Subscribers to "Prabasi" Rs. 18-12. Postage Extra.

PRESS OPINIONS :

"This history should prove a most useful work, an it should read by all slike We hope that it may have a wide sale England especially at this crisis in the listory of the world. We are struck by the very fair way in which the whole heen treated by this author, for in the volumes that have conto our hand there has been no worl of condemnation for our or expression of bitterness for suffering imposed. It is a f, history of events, sparing the faults of none and expression admiration where admiration was due and commonding action when those actions were disinterested and done for love truth, justice. "In concluding this "Notice" we must again say that this should have a wide circulation. It deserves it from the point of the well written history but more from the standarding of the well written history but more from the standarding of the well written history but more from the standarding these who hold adverse opinions on many points. --- New India RORIVARD says in a Leadung Advisor.

those who hold adverse opinions on many points --- New India

FORWARD Says in a Leading Article.

"Major B D Basu, I M S (retired) has laid all publicates india under a deep debt of gratitude by writing a book in favolumes entitled the "Rise of the Christ'an power in India" in the light of our present knowledge, it e materials contained this important book may be regarded as disclosures of a carefuplot among text-book writers of British Indian History to conceall roal facts about this most important period of our nation ovolution. It will not do for anybody writing after him to string all the governor-generaliships and vicero, all cost of India in on common story of benevolonce and good-will towerds the India people. Our estimate of each of them must need so revised "Major Basu's book will take the same place in the historicality of British India' has dore in economic literature. We held to utilize his book in future for discussing problems and danger against which our author has werned us."

The Hindu of Madras says:-

"Right through Mr Basu has based his conclusions upon the unimpeachable records of the rule themselves and that is the distinguishing merit of the work."

The Amrita Bazar Patrika of Calcutta says:—

"Major B. D. Basu (Retired I. M. s.), who has devoted considerable time and energy in resuscitating the true facts with regard to the most instructive period of Indian history, has presented his countrymen with the accounts culled mostly from the records of Englishmen embedded in a work of five volumes. In the light of our present knowledge, these facts appear to us to be as nothing short of disclosures."

"Major B. D. Basu has completely succeeded in proving the incorrectness of almost all the favourite theories of the Anglo-Indian historians and of those Indians who derive inspiration from them and repeat them in their text books."

"It is impossible within the brief space of this paper to draw attention to the many important topics which are discussed in this book, but it may be hoped that Major Basu's book will be widely read by those who want to have a correct view of the circumstances which metanorphosed a handful of traders into imperialists."

N.B.—This work is one of the books recommended for study by the Allahabad University for its M. A. degree examination in the Modern History group.

Being the Reminiscences of PMy:

BY

SIR SURENDRANAT

425 PAGES

Sir Surendranath played the leading many years in the struggle for integration of the Congress movement. His Reministry with such vast and enthralling subject Indian National Congress, the Boycott Partition Movement, Revolutionary Taction Swaraj and Non-Co-operation, Dyamby, Social Problems, Indian Aspirations.

Sir Surendranath is indeed the Grand of Bengal and to know his life work how a nation came into being.

Extracts from reviews are studied

Oxford University Press, is not merely by a competent observer of the sweep of this country during the last fifty. Surendranath has been himself a great make the describes. Had he never lived India pecially Bengal, would be very different india and Bengal of To-day. None will book without coming across many knows, nor will any after reading it is the help he has received towards unterthe world of men about him. It is the a great personality and a great age, and question the propriety of the title "A. Making." No book on modern India given sense of onward movement "Dande leading article in Statesman of April 16th.

Perforce we have left unmentioned. It the most valuable and important chapters the conclusions of which deserve to with care not only by Sir Surendramata followers, but hy those who differ whether the point of difference is that to progress more swiftly or whether that the veteran Nationalist hardly appropriate and necessities of a brake moment of its birth it is a classic in the birth it is a classic in birth it is a classic in the birth it is a

ROSE

THE QUEEN OF FLOWERS

The charm and delightful fragrance of Rose

is well known and highly appreciated by all classes of people: Since earliest time Rose is being regarded as the Queen of Flowers. Ancient literature contains many references to its use. Mogul Emperors were very fond of Roses,

Rose Water and Otto De Rose, their gardens were filled with Roses. It is said that Empress Nurjehan—Wife of Emperor Jehangir—discovered the process of making OTTO DE ROSE from flowers by distillation.

PAUL'S OTTO DE ROSE NO.A

A CHARMING PERFUME OF EXQUISITE MERIT.
RICHEST IN ODOUR VALUE. GUARANTEED 100% PURE.

No perfume is so pleasing. Far better and more lasting than the High Priced French, English or American Spirit or Alcoholic Perfumes One Drop is equal to Fifty Drops of Spirit Perfumes. If once used, it can never be forgotten. Its delightfully Sweet Scent really delights the heart. It is all pure perfume, not a perfume mixed with Alcohol or Spirit Most of the perfumes, sold in the market contain 95% Alcohol or Spirit, and 5% perfume. PAUL'S OTTO DE ROSE No. Al contains not a drop of Spirit or Alcohol. An Ideal "One Drop" Perfume for Handkerchief, or Garments. One or Two Drops will be sufficient to perfume a Handkerchief or Garment. A few of our Patrons out of many:—

MAHATMA GANDHI—The World Significance

By Rev. Dr. P. G. Bridge, Principal, St. Paul's Cathedral College, Calcutta

Appended with Mahatma Gandhi's Jail Experiences both South African and Indian. It presents who is He—how He has revolutionised the whole world to a new faith. It absorbes great and small—guides high and low—attracts Sympathetic and cynic—moves tender and stony—inspires imaginative and practical—embraces Eastern and Western. It reveals the essential spirit of the Mahatma—out and out—through and through. A pleasure to the reposer—A thought to the philosopher—A piece to the doer—A wonder to the explorer—A decision to the waver—A lull to the fighter. To crown all it is a mirror—whereon "the man of the ages" glasses.

The book deals with 112 subjects.

THE ILLUSTRATED SUPER-EXCELLENT EDITION-Price Rs. 3/-, CARRIAGE FREE.

TRUE COMPANION IN EVERY WALK OF LIFE
SRIKRISHNA—His Life and Teachings

BY DHIRENDRA NATH PAUL Social - Political - Religious

Notes—references—researches from start to finish
THE ILLUSTRATED FOURTH EDITION—REVISED AND ENLARGED

His Life and His Teachings are the Beacon Light that guided—and will ever guide the humanity to the eternal Land of Bliss. Equally appreciated by the thinkers of Asia—Europe—Africa—America, Highly spoken of by Max Muller, Wilson, Telang, Sir John Woodburn, Wilmherst, P. G. Bridge, C. R. Das, and thousands of eminent persons. The only book which has ever been written systemstically on a really historical basis. All sorts of Human-life—emperor and slave, wise and fool, lover and hater, murderer and martyr witty and dull, merry and sad—march ever onward through the pages of this book. The book deals with about 100 subjects in two parts which will fascinate the readers like hypnotic influence. Super-excellent valuable golden binding, Price Rs. 10/- Carriage free.

The Wisdom of Choosing Wisely

tly thy habit, thy purse can buy-

-Shakespeare.

THUS did Polonius. Lord Chamberlain, impress upon his son the need for living within his means,—the wisdom of so choosing his adornments as to keep his expenditure within the limits of his purse. Advice of this nature, though, is more easily proffered than followed, but it is the more easily followed when a wise discrimination plays a leading part in the making of one's choice.

THEREFORE choose wisely, you must spend, but you can save as you spend, if you spend where the greatest value is offered for the least outlay

Let Us serve You.

Englands' Educational Policy in India

V. V. OAK, B.A. S.T.C. etc., Rs., 2

Pp I to xxiv+168 INDIA'S problems are many and varied but it would be easily conceded that one of the most vital of these is that of the adequate education of her sons and daughters. The appalling illiteracy of India and the backward condition of the masses so far as primary education is concerned are well-known and constitute a reproachful ban obstructing the neth of her becoming a truly progressive country.

known and constitute a reproachful ban obstructing the path of her becoming a truly progressive country. The educational policy pursued by the Government of India during the last hundred years is the subject of study in the following pages, in which the author has attempted to draw a realistic picture of the educational position in India as compared with the other civilised countries of the world. The graphical illustrations prepared by the author and appearing on pages 22 to 106 form an interesting feature of the work and would we believe help those interested in Indian education to form a correct estimate of India's position in matters educational. A bold and faithful representation of India's case has more than ever before become necessary in view of the great interest evinced in Indian problems in England and America.

an Administration to Dat of Responsible Govt.. 1765-1920.

Price Rs 4: 6s. Abroad. OPINIONS AND REVIEWS.

Socialist Monthly Berlin, 1923—An extraordinarily interesting and original work. Most desirable that our libraries should procure a book of this high character and make it accessible to German students of India.

Sir C. Ilbert—A sound piece of work.
Sir V. Chirol—Clearly a very useful contribution.
A. B. Keith—Contains important contributions to

the solution of present difficulties.

P. E. Roberts—Vivid and stimulating. You have put some things extraordinarily well.

Times Literary Supplement 17-2-1922—Praiseworthy freedom from prejudice. States as plainly as possible the alternatives between which India has to choose.

English Historical Review, October, 1922—One of the most vigorous, interesting and original volumes on India. Based on wide reading and inspired as a rule with shrewdness, insight and sympathy.

Conference, August, 1922 — Gives a vivid glimpse of the deep-going changes the impact of the West has wrought upon the East. Launches his criticism right and left with tearless hand.

Modern Review, June, 1922 —Shows considerable

ability.

Hindusthan Review April, 1922—An ideal text-book for the student

Hindu 10-4-22—A valuable treatise.

New India 10-4-22—A longfelt need supplied by a really impartial Indian.

Times of India, 12-4-22—Based on original sources.

All the better for the very candid criticism which with all through it. runs all through it.

Pioneer 11-6-22 The text fully supported by

2. The Text of the Sakuntala

A PAPER ON-

Price Re. 1-8: 2s. 6d. Abroad. OPINIONS AND REVIEWS.

Dr. Jolly-Your valuable work. The understanding of the S. greatly furthered by your remarks, I think.

Dr. Charpentier—You are on the whole quite right.
Only I feel quite sure you will always have to
meet a sturdy opposition from scholars to whom

the letter is every thing and the spirit nothing.

Dr. Sten Konow—Shown excellent reason for disagreeing from the lamented Pischel—my own Guru on many points. Dr. G. Morgenstierne—Treated a very fascinating question in a happy way. Dr. Lamman—Helps us to a clear understanding of the problems and shows the way to

a reasonably good text.

Vedic Magazine and Gurukula Samachar June
1922. A distinct service to the cause of higher
literary criticism. Displays complete mestery of

the subject.

The Well-renowned Talisman, Paramananda Brahmacharu's

bagraha Kabacha

Do you wish to propitiate the nine planets which regulate and influence human fate? Use, then Brahmachary's Nabagraha Kabacha. This Talisman has extraordinary power to undo the evil influences of all the planets and to bring you all success, peace and happiness in life. It is purely and sacredly made in the Shastric term. Thousands of unsolicited letters testify that this Talisman is wonderfully and verily efficacious for:—Success in Business, Trade, Commerce, Agriculture, Examination and Litigation. Cure of all sorts of diseases, Aversion of worldly troubles, Premature death, Dangers at every step, Pecuniary distress, Quarrel with friends and relatives, Mental disquietude, Loss of wife and children, Increase of the number of enemies, Service, Promotion, Increment of pay, Suitable marriage, Conjugal love, Honours from Government, Longevity of life. In a few words, Health, Wealth and Prosperity.

It acts marvellously on the body of men, women and children, either Hindu, Mussalman, Christian, Parsi or any other faith. Price Rs. 3 ans. 4. Postage Extra.

a few testimonials.

- 1. Raja Sreenath Roy Bahadur, Bhagyakul, Dacca,—I have used your Talisman; its effects are undoubtedly wonderful.
- 2. Prof. A. B. Bhattacharya, M.A., Rajshahi Government College,—I had no faith in any Kabacha but Brahmachary's Kabacha's miraculous effects have astonished me.
- 3. Mr. P. C. De, Well-known Detective Novelist, Calcutta,—One of my relatives, suffering rom chronic diseases, has achieved great benefit by wearing your Talisman.
- 4. Mr. R. C. Guha, Dacca,—Just after using your Talisman I have secured a good service. Its prompt effect really reminds me of Aladdin's Wonderful Lamp.
- 5. Mr. Raicharan Mistri, Khulna,—Babu Harimohan Roy, a neighbour of mine, by using your ralisman comes out successfully in every Litigation. He instructs me to wear your Kabacha Please send me one.

 6. Mrs. Kusumkumari, Deca.—Wearing your Nabagraha Kabacha I have gained a new life. am now out of diseases, mentl disquietude and pecunity difficulties.
- 7. Mr. M. P. Pradhan, Craddock Town, Nagpur,—The Nabagraha Kabachas I ordered, were not on by myself, my brother and my daughter. I got my increment, my brother also got increment and my daughter came out successful in Matric., quite unexpectedly.

TO Our Advertisers

THE MODERN REVIEW 18 India's greatest advertising medium. It circulates widely in every part of India, Burma, Ceylon, F. M. S., S. S., South Africa and all over the world wherever Indians and people interested in things Indian are found. That it is a paper well worth advertising in is proved by its long list of advertisers who have used its columns for giving publicity to their wares for years without a break.

The Modern Review makes every effort to keep its printing, paper, get-up as good as possible and for an all-round advance in popularity, circulation and quality of articles and pictures. This means extra profits to its advertisers. In view of the above facts advertisers always find it well, worth having their publicity done through the Modern Review.

1. Our rates are fixed.

2. Our advertisement charges should be paid strictly in advance. Known parties only may remit their charges within 15 days after publication.

3. Advertisements will be received up to the 22nd of each month.

4. Changes and stop orders will be accepted up to the 15th of each month. The advertiser will be responsible for mistakes arising out of non-observance of this rule.

5. Outstanding bills will automatically discontinue advertisements.

6. We do not undertake any responsibility for blocks damaged in the process of printing, nor for any errors caused by our inability to read or correct illegibly or incorrectly written copy.

7. Advertisers may be sure of our best attention to good display and neatness in printing.

MODERN REVIEW

OL. XXXVII. NO. 5

MAY. 1925.

WHOLE NO. 221

TRUTH

BY RABINDRANATH TAGORE

T is evident that life in the West, like an ice-berg tottering under the weight of its growing hugeness, has lost its moral balance. She knows that things are behaving in a drunken manner, but she does not know how to stop. She is easting about for all kinds of devices whereby she may save herself from a crash, not by closing her drinking hooths, but in spite of them

The young generation of the East, who m their intoxication with the new wine of bolsterous energy from the West are likewise growing unstable in their gait, are content jeeringly to remark that our pursuit of the cult of perfection which gives balance has led us to inertia. They forget that balance is even more needed for that which moves than

tor that which rests.

I had a good illustration of this on board ship whilst I was travelling to China. It has made me think deeply about the contagion of this moral drunkenness that spreads from

shore to shore

One of my Indian friends asked his Japanese fellow-traveller why Japan neglected to cultivate friendliness with China. Without giving a direct answer, the Japanese asked a German passenger, who was there, if he could ever think of Germany and France uniting in the bonds of friendship. It clearly shows the spirit of the schoolboy in the present generation of the Eastern youth brought up under Western school-masters. They have learnt by rote their texts, but never their lesson. They are proud when they mimic the voice and gesture of their teacher. teacher, reproduce his language, earn their

full number of marks and a patting on the back, while they are not even aware that the

living lesson has escaped them.

It evidently caused great satisfaction to this Japanese young man, who, I am sure, does not represent the best minds of his people, to know that the feeling of animosity that exists between China and Japan has its analogy in Europe. He failed to realise the fearful meaning of the hatred which furiously drives Germany and France to ruin, in a victous circle of mutual destruction.

This conversation set my mind thinking how the carefully nurtured noxious plant of national egoism is shedding its seeds all over the world, making our callow schoolboys of of the East rejoice because the harvest produced by these seeds,—the harvest of antipathy with its endless cycle of self-renewal,—bears a Western name of high-

sounding distinction.

And yot the time has come when we must realise the ancient truth, which has been relegated to the lumber-room of truisms that what saves us is not pride, nor the satisfaction of hatred, nor the black lies of diplomacy, nor the power represented by

money, or muscle, or organisation.

Great civilisations in the East as well as in the West, have flourished in the past because they produced food for the spirit of man for all time; they had their life in the faith in ideals, the faith which is creative. These great civilisations were at last run to death by men of the type of our precociousschoolboys of modern times, smart and superficially critical, worshippers of self,

shrewd bargainers in the market of profit and power, efficient in their handling of the ephemeral, who presumed to buy human souls with their money and threw them into their dust-bins when they had been sucked dry, and who, eventually, driven by suicidal forces of passion, set their neighbours' houses on fire and were themselves enveloped by the flame.

It is some great ideal which created great societies of men; it is some blind passion which breaks them to pieces. They thrive so long as they produce food for life; they perish when they suck life dry in insatiate self-gratification. We have been taught by our sages that it is Truth which saves man from annihilation. Let me try to explain what this Truth is.

It has been the tradition in India closely to attach our mind to some mantram, some great text, and daily to concentrate our thought upon it, while its meaning grows one with our being, and gives our wordly life its equilibrium in the truth and peace that dwell in the eternal. One such mantram, which has been of great help to me, begins with the word satyam, indicating that the Supreme Being is satyam, which means Truth

Man is afraid of the numerous, of numbers, which add but do not connect. It is wearn-some for him to approach things through their several individual doors and pay to each one of them its separate homage of

recognition.

At the beginning of life's experience a child puts everything into its mouth, until it gets to know that all that comes to its hand is not food. In the primitive stage of our intellect, our mind, in its indiscriminate greed, grabs at detached facts and tries to make a store of them. At last the mind comes to know that what it seeks is, not the things themselves, but, through them, some value.

where can it be that man may realise satyam, the Supreme Reality? Nothing is ever in a state of quietude; things rapidly change their form and become something else, even as we try to fix our gaze on them. The very mountains, which are looked upon as the symbol of solid permanence, behave like shifting screens on time's stage, and one never knows when they may skelly be folded up as the play proceeds and one act gives way to another. The stars are bubbling out into light on the bosom of darkness and dissolving into oblivion. So, in Sanskrit, our term for the world pheno-

menon is samsara, or that which is ever on the move,—and this samsara we know as maya, we call it a dream. Where then 18 Truth?

Does it not become evident that Truth must have its full expression only in this movement itself,—in the current which always leaps over the fixed boulders of finality and can therefore suggest the indefinable, the infinite? In a dance it becomes possible for the different gestures to move together and yet not thwart each other, because they are the expression of a certain musical truth which is ineffable, which is one, which comprehends and yet trascends each separate part of its manifestation.

Moralists have often lugubriously cried out that the world is vanity, because everything in it moves and changes They might as well say that a song is not real because every note of it is transient, giving place to another. We have to know that this moving and changing world, because of its mutability, is giving expression to a truth which is eternal. It would come to a standstill in a crash of discord, had it not such truth permeating and

transcending it.

It is to the person, who keeps his eyes solely fixed upon this aspect of the world which is an unceasing series of changes, that the world appears as delusion, as the play of Kalı, the black divinity of destruction To such a one it becomes possible for his dealings with this world to be superficial and heartless The world being, for him, an unmeaning progression of things, and evolution that goes blindly jumping from chauce chance on a haphazard path of survival he can have no scruple in gathering opportunity for himself, dealing cruel blows to others who come in his way. He does not suspect that thereby he hurts his own truth, because, in the scheme of things, be recognises no such truth at all. A child can tear, without compunction, the pages of a book for the purposes of his play, because for him those pages have no serious truth.

The way to be considerate in our dealings with the world is to realise the permanent medning which underlies it and makes each one of its changing facts touch its end every moment. It happens in this way with our own movements of vital growth; they are innumerable, and yet they have their joy for us, because every passing fraction of their totality immediately reaches its end, which is life itself. This very moment, when I am speaking, all the separate words of mine

would be a burden to me, if they were not the expression of my life, of my mind, which is the source of their truth.

What is evident in this world is, the endless procession of moving things; but what is to be realised is, the Supreme Truth by which the world is permeated. When our greed of wealth overlooks this great truth and behaves as if there were nothing in this world but the fact of these moving things, then, our pride rises with the amount of things produced and collected, and jealous competition thunders down the path of conflict towards dark futility.

All our true enjoyment is in the realisation of perfection. This can be reached, not through augmentation, but through renunciation of the material for the sake of the ideal. The material which an artist uses is the minimum which is possible for his purpose. It would be barbarism to make it too gorgeously profuse, forgetting the final value of the ideal. When the artist reaches that ideal he reaches his enjoyment, and not a mere possession.

Thus, according to the Upanishad, the complete aspect of Truth is in the reconciliation of the finite and the infinite, of everchanging things and the eternal spirit of perfection. When in our life and work the harmony between these two is broken, then either our life is thinned into a shadow, of it is set on fire.

TO THE CHILD.

By RABINDRANATH TAGORE

ONCE upon a time when I was busily engaged in writing, I suddenly felt a call from the young I was spending my life in a solitary place in a house-boat near a sand-bank of the great river Ganges, when all of a sudden across the mustard fields, the illage market with its beautiful bamboogroves, across the sands, where the wild ducks had their noisy haunts, came the cry of the young, "Comrade, poet," it said, "where are you hiding yourself? Come to us" It said, "We are suffering from the hands of the School-master, come and rescue us. Give us 'freedom, bring the magic touch of the spring-time into our school-house, for our hearts, like buds, are thirsting for sunlight and the warm south breeze"

I was sorely puzzled. I did not know how to help these suffering souls, how to get access to them through the stony walls and gates of the citadel of the Education Department. For, from my childhood I did play truant; I neglected my lessons I was typically a bad boy, who according to the prediction of the wise, always comes to grief. And so one day, though I was a poet, I had to disguise myself as school-master and open a school, which was a camouflage of a school.

It is a beautiful spot, this place Santiniketan, away a hundred miles from Calcutta, open all round to the verge of the horizon. bare of vegetation Only just about my school, there is an avenue of sal trees, big tall trees, which give good timber and bear beautiful clusters of sweet-smelling flowers in summer. There is a shady mango-grove and a tew other trees from which we get the green life of the forest. It has something of the aspect of the great Chinese and Japanese pictures I have seen. What that is, let me explain. One thing I have found in the character of these artists and painters. they are not afraid of open spaces. It has often struck me that in their pictures they wanted to make us realise the great space itself, with the help of just the slight outline of a mountain or of a pine-tree top. finger. which, like the ındex out that which could not be seen but be telt. In their paintings a few touches of a crooked branch or the flying wings of bird represent that shock to the immensity in response to which it breaks out in a great silent cry.

Last time when I was in Japan, I was present at a dramatic performance, and I found the same genius at work there. While the

great actor gave expression to his part, the rest sat absolutely still, as if they were in a picture, mute and motionless. This one man had around him the expanse of silence and stillness. On the European stage every actor is doing something. They are restless. But on the orthodox Japanese stage, you see life and its intense expression but in the surroundings of an infinite quiet. The West densely crowds its space with cities, with factories and hotels, with chimneys and skyscrapers. The contagion of this we saw in Hankchow in China, where the fushionable beauty beauty-seekers trample down the of the lake scenery with the proud march of gandy comfort and convenience choko the great voice of space with brick and mortar, with din of advertisements and throng of things.

In their drawing-rooms in the West they are busy with covering space with articles that are unmeaning. They are afraid of the infinite; they pull down blinds to shut out the sunlight, they close their door to keep

out the breeze

The flood has been let loose. The cheap and the vulgar which have no value, which kill space, kill time, but which are being enormously overproduced have come to make our mental atmosphere dense have come to the point where we are about to lose our infinite, the infinite in our space. in our life. Before long, the sky over the whole human world, East and West, will be smudged with factory-smoke and the green of the living nature will be licked grey by the demon of the utilitarian spirit But that 19 another story.

In this beautiful spot, Santiniketan, I tried to gather a few children. They came from the overcrowded cities, hungering for food at the breast of their Mother Nature, the food of life. I brought them to her. I became their playmate and they found out before long that I was of their own age, not very much different from them. In beautiful spot I came into the world of the young and there found my own place.

As I felt the youth within me when I was in their company, I wanted them also to be fully conscious of their thfulness, conscious that they not grown-up people. You may laugh at this statement of mine. I speak from my personal experience. There was a time when I went to school, and though it was not for long, yet I know. In proper schools boys must behave. as if they were not boys, they must never be

boisterous, they must not laugh too loud, But boys are born savages and must pass through the stage of savagedom. I let them run and climb and swing and when the rain fell, go out and get thoroughly drenched in the open air. I waited the poor boys to realise that they had been made to be boys at least for fourteen or fifteen years of their life.

As in the best Eastern pictures there ample space, so in human and especially in child life there should be ample space of surroundings. What is space? It is freedom, not emptiness. Through this treedom of Space child life finds its own voice. Most people, and especially schoolmasters, forget this. They want to fill every moment with tasks, with discipline and rules. So their life becomes a single solid thing, one hard lump of lessons without any space for the poor cramped mind

to find its outlet of energy.

I myself got this lesson from the work that I started, that he who gives freedom gets freedom The taskmaster is as much a slave as his victim I wanted to make these children happy in an atmosphere of freedom. I never cared to watch them too much, to distrust them. I did not keep an eve on their conduct. I never suspected them. Even when they their examinations, I trusted them and them Ι freedom: I found when gave my own freedom through trust, through m faith in human nature and child nature In this atmosphere of happy youth I myself began to grow from the age of forty. I find I am still growing and that life itself is still full of surprises, of new manifestations. The resson is this, that I offer freedom, and therefore that I get freedom, the freedom which has the power to stimulate the creative mind and life

But I have not come here to give you my idea about education, but to say to you that I love children, not as those elders say it m a loud voice from their great distance of the grown-up world. But I have my passport, as a poet, to enter into the mystery of the child life, and my love for the child is not patronizsing; it is full of respect. Somehow children soon find it out, in spite of the exaggeration of my grey beard. I have nearly always been fortunate to win their love. I have come to claim from you your love which is my due Maybe I am a little too hasty, but I assure you that only if I had more time every on of you would have fallen in love with me.

I am afraid I have been talking at crue length to you, that you will accuse me o having no consideration for your own desir for freedom, of being nothing but a garrulou

man, and that I am contradicting my own strine. If I have given you that impression, have your pardon. I am really an inoffene creature. I can play and laugh and ile. That I am somewhat human my friends to know me will acknowledge and therefore would not be at all in accordance with my m ideas to give a monotonously long monotone to your young minds which crave for shower of new impressions, sparks of de-

light. I give you leave to go, and to dispense with what older folk love so much, formal talks. Before I leave, let me tell you once again that my heart dwells with the young and I feel grateful to them for bringing new hopes, generation after generation, to the world of man

[Spoken at Kyoto Girls' College, and specially contributed to The Modern Renew]

MY SCHOOL

BY RABINDRANATH TAGORE

I have been told that you would like to hear of the educational mission. I have taken up, but it will be difficult for me to give you a distinct idea of my institution which has grown gradually during the last twenty-four years. With it my own mind has grown and my own ideal of education has come to its fullness, so slowly and so naturally, that I find it difficult now to analyse and put it before you.

The first question you may all ask is: what urged me to take up education I had spent most of my time in literary pursuits till I was forty or more. I had never any desire to take my part in practical work, because I had a rooted conviction in my mind that I had not the gift. Perhaps you know the facts, or shall I make a confession? When I was thirteen, I finished going to school. I do not want to boast about it, I merely give it you as a historical fact

So long as I was forced to do so, I felt the torture of going to school unsupportable. I often used to count the years that must pass before I should find my freedom. My elder brothers had passed through their academic career and were engaged in life, each in his own way. How I used to envy them, when, after a hurried meal in the morning, I found the inevitable carriage, that took us to school, ready at the gate. How I wished that, by some magical spell, I could cross the intervening fifteen or twenty years and suddenly become a grown-up man. I afterwards realized that what then weighed on my mind was the unnatural pressure of

the system of education, which prevailed everywhere.

Children's minds are sensitive to the influence of the great world to which they have been born. Their subconscious mind is active, always imbibing some lesson, and with it realising the joy of knowing. This sensitive receptivity of their passive mind helps them, without their feeling any strain, to master language, that most complex and difficult instrument of expression, full of ideas that are undefinable and symbols that deal with abstractions. And through their natural gift of guessing they learn the meaning of words which we cannot explain.

But it is just at this critical period that that the child's life is brought into the educational factory,—lifeless, colourless, dissociated from the context of the universe, within bare white walls staring like eyeballs of the dead. We had the God-given gift of taking delight in the world, but such delightful activity was fettered and imprisoned stilled by a force called discipline which kills the sensitivity of the child mind, the mind which is always on the alert, restless and eager to receive first-hand knowledge from mother Nature. We had to sit mert, like dead specimens of some museum, whilst lessons were pelted at us from on high hallstones on flowers.

I rebelled, young as I was. Of course this was an awful thing for a child to do,— the child of a respectable family! My elders did not know how to deal with this pheno-

menon. They tried all kinds of persuasion, vigorous and gentle, until at last I was despaired of and set free. Through the joy of my freedom, I felt a real urging to teach myself. I undertook the task of playing schoolmaster to myself, and found it to be a delightful game. I pored over any books that came my way,—not school-selected text-books that I did not understand,—and I filled up the gaps of understanding out of my own imagination. The result may have been quite different from the author's meaning, but the activity itself had its own special value.

At the age of twelve, I was first coercod into learning English. You will admit that neither its spelling, nor its syntax, is perfectly rational. The penalty for this I had to pay, without having done anything to deserve it, with the exception of being born ignorant.

When in the evening time my English teacher used to come, with what trepidation I waited! I would be yearning to go to my mother and ask her to tell me a fairy story, but instead I had to go and get my text-book, with its unprepossessing black binding, and chapters of lessons, followed by rows of separated syllables with accent marks like soldiers' bayonets As for that teacher, I can never forgive him. He was so inordinately conscientious! He insisted on coming every single evening,—there never seemed to be either illness or death in his family. He was so preposterously punctual too. I remember how the fascination for the frightful attracted me every evening to terrace facing the road; and, just at the right moment, his umbrella,—for bad weather never prevented him coming,-would appear at the bend of our lane

One day I discovered, in a library belonging to one of my brothers, a copy of Dickens's Old Curiosity Shop. I persisted in reading it, and, with the help of the illustrations supplemented by contributions made by my own imagination, I made out some kind of a story. In this manner, with no help from any teacher, but just as a child learns by sheer guessing, I went on reading and reading and a twilight atmosphere of colourful vision was produced in my mind

This was the experience of my own young in and I believe that a large part of such success or reputations I may have acquired, I owe to that early freedom, won with wildulness.

In our childhood we imbibe our lessons with the aid of our whole body and mind,

with all the senses fully active and eager When we are sent to school, the doors of natural information are closed to us: our eyes see the letters, our ears hear the abstract lessons, not the perpetual stream of ideas which form the heart of nature, because the teachers in their wisdom think that these bring distraction, that they have no great

purpose behind them.

When we accept any discipline for ourselves, we try to avoid taking in anything except what is necessary for our purpose, and it is this purposefulness, which belongs to the adult mind, that we force upon the children in school. We say "Never keep your mind alert, attend to what is before you, what has been given you". This becomes torture to the child, because it goes against Nature's purpose, and Nature, the greatest of all teachers, is thwarted at every stop by the human teacher who believed in machine-made lessons and not in the lessons of life, so that the whole growth of the child's mind is not only hurt, but force ibly spoilt.

I believe that children should be surrounded with the things of Nature, which have their own educational value. Their minds should be allowed to stumble on and be surprised at everything that happens in the life of to-day. The new to-morrow will stimulate their attention with new facts of life. This is the best method for the child But what happens in school is, that every day, at the same bour, the same book is brought and poured out for him. His attention is never hit by the chance surprises which come from learning from Nature.

How quickly the child, left to himself, is capable of gathering facts. In its early days it is always picking them up, and even if, for the time being, it does not grasp all their meaning, yet because of the immense receptiveness of the subconscious memory, nothing that passes across the mind really ever leaves it. Our grown-up mind is always full of the things we have to arrange and deal with, and therefore the things happen around us, the coming of morning, celebrated with music and flowers, leave no mark upon us. We do not allow them to, for our minds are really crowded; the stream of lessons perpetually flowing from the heart of Nature does not touch us, we merely choose those which are useful, rejecting the rest as undesirable because we want the shortest cut to success.

Children have no such distractions. With

hem every new fact or event comes to a find that is always open, with an abundant ospitality; and, through this exuberant, adiscriminate acceptance, they learn innulerable facts within a very short time, mazing compared with our own slowness, hese are most important lessons of life thich are thus learnt, and what is still more conderful is, that the greater part of them re abstract truths. I cannot even imagine ow it is possible for a child to understand bstract ideas through mere guessing, to laster that most complex organism of expression, our language, while its mind its so mature.

Knowing something of the natural school thich Nature herself supplies to all her creatures, I chose a delightful spot and used to told my classes under some big shady tree taught them all I could. I played with hem. In the evening I recited our ancient pres and sang my own songs. I trusted the presence of the spirit of freedom in he atmosphere. I had to fight the teachers the assisted me, who had been brought up in a different environment to that of mine, who had no faith in freedom, who believed that it was impertinence for the boys to be boys.

Then I tried to create an atmosphere of culture. I invited renowned artists from the city to live at the school, leaving them free to produce their own work, which I allowed the boys and girls to watch if they so felt inclined. It was the same with my own work All the time I was composing songs and poems, and would often invite the teachers round, to sing or read with them. Our boys would also come, and peep in since they were not invited, and listen to the poems and songs fresh from the heart of their composer. This helped to create an atmosphere from which they could imbibe something impalpable, but life-giving.

We have there the open beauty of the sky, and the different seasons revolve before our eyes in all the magnificence of their colour Through this perfect touch with nature we took the opportunity of instituting festivals of the seasons. When nature herself sends her message, we ought to acknowledge its compelling force. When the kiss of rain thrilled the heart of the surrounding trees, if we had still behaved with undue propriety and paid all our attention to mathematics, it would have positively been wrong. impious.

The seasons of the rains often brought us unexpected release from duty. Some voice

suddenly would proclaim from the sky. "Today is your holiday!" We submitted gladly and would run wildly away. Such sympathy is so easily crushed by routine which takes no count of nature's claims, and does not keep open the path for this great world to find its place in the soul of man. I do not believe in such barbarity

Our children began to be of service to our neighbours, to help them in various ways and to be in constant touch with the life around them. They had their own freedom to grow, which is the greatest possible gift for the child life. There was also another kind of freedom at which we aimed, the freedom of sympathy with all humanity, a freedom from all racial and national prejudice.

The sympathies of children, like the undergrowths of a forest, are allowed to cling to the dust of the soil to which they belong and not to grow up to that height from which they can send their branches in all directions. Therefore their hearts remain stunted. incapable of understanding other people with different languages and customs. This causes us, when our growing souls demand it, to grope after each other in darkness, to hurt each other in ignorance, to suffer from the worst form of blindness of this age. The missionaries themselves have contributed to this evil. In the name of brotherhood and in the arrogance of their sectarian pride, they create misunderstanding. This they make permanent in their text-books and poison the minds of children The worst of fetters come when children lose their freedom of sympathy.

I have tried to save children from such vicious methods of alienating their minds which are fostered through books, through histories, geographies and lessons full of national prejudices. I have done it with the help of friends from the West. In the East there is a great deal of bitter resentment against Western races, which rankles in our hearts, and in our own homes we are brought up in feelings of hatred. I have tried to save the children from that and these friends from the West, with their understanding, with their human sympathy and love, have done us a great service.

We are building up our institution up the ideal of the spiritual unity of all races. I want to build it with the help of all other races, and when I was on the comment of Europe, I appealed to those great countries, to their scholars, and I was fortunate enough to receive their help. They also came to this institution, with is poor in material things, leaving their own centres of learning, and spent a year or more with us, helping to

build it up.

I have in mind not merely a University—that is only one of the aspects of our Visvabharati,—but I hope this is going to be a great meeting place for individuals from all countries who believe in our spiritual unity and who have suffered from the lack of it, who want to make atonement and come into huthan touch with their neighbours. Such idealists there are and when I travelled in the West, even in out-of-the-way places, many unknown persons of no special reputation wanted to join this work.

When the races come together, as they have done in the present age, it should not be merely the gathering of a crowd. There must be some bond of relation, otherwise

they will knock against one another.

Our education must enable every child to grasp and to fulfil this purpose of the age, not to defeat it by acquiring the habit of creating divisions, and of cherishing national prejudices There are of course natural differences in human races which should be preserved and respected and the mission of our education should be to realiss our unity in spite of them, to discover truth through the wilderness of their contradictions.

This we have tried to do in Visva-Bharati Our endeavour has been to include this idea of unity in all the activities in our institu tion, some educational, some that comprise different kinds of artistic expression, some in the shape of service to our neighbour by way of helping the reconstruction o village life. As I wanted this institution to be inter-racial, I invited there great mind-from the West. They cordially responded and some have come permanently to joil hands with us and build a place where mer of all nations and countries may find then true home, without molestation from the prosperous who are always afraid of idealism or from the politically powerful who are always suspicious of men who have the freedom of spirit. *

THE DEATH TRAFFIC

By RABINDRANATH TAGORE.

Written in Bengah in 1831

THE Article which follows was written by the Poet in May, 1881, exactly forty-four years ago, for the Bengali magazine called 'Bharati'. At Geneva, in May, 1923, as I have related elsewhere, Mr. John Campbell, the official representative of the Government of India made the statement to the World Press assembled, that "from the very beginning, the Government of India had handled the opium question with perfect honesty of purpose; and not even its most ardent opponents, including Mr. Gandhi, had ever made any reproach in that respect". Although called upon to withdraw the latter part of this statement. Mr. Campbell has never done so. Mahatma Gandhi viscontradicted it in 'Young India': many passages have been quoted also, in contradiction, from the writings of Mr. Dadabhai Naoraji, G. K. Gokhale, Surendranath Banerica, and others of a quite early date as well as later expressions of opinion, but still the statement remains as it was uttered. This article, written by the Poet in Bengali when he was twenty years of age and now for the first

time translated, is a further convincing proof of Mr. Campbell's inaccuracy. In the original Bengali, the article takes the form of an editorial review of Dr. Christheb's book entitled "The Indo British Opium Trade."

We have never before heard such a revolting story of Thuggism, as is contained in this book by Doctor Theodore Christlieb

which lies before us for review.

A whole nation, China, has been forced by Great Britain to accept the opium poison, simply for commercial greed. In her help lessness, China pathetically declared: "I denot require any opium". But the British shopkeeper answered: "That's all nonsense You must take it."

Both the hands of China were tightly bound. Opium was forced down China

^{*} Specially contributed to THE MODER'S

throat with the help of guns and bayonets. while the British merchants cried, "You have to pay the price of all the opium you take

from us".

For nearly a century, the British traders have been carrying on this disgraceful trade in China. The article, which the customer does not want, is shoved into one pocket by force, while the money to pay for it is forcibly extracted from the other pocket, and Such a method of ts full price realised. carrying on business and accumulating wealth can only by courtesy be called by the name of traffic. It is sheer brigandage. The very nation which had become an object of gratitude thousands of African negroes, by removng from them the chains of slavery, is now aying to China: "I want more money, and herefore you must take opium."

This poison of opium, eating at the vitals of one of the greatest and oldest countries of Asia, has been spreading like an infecion over the whole body politic. It has been killing slowly by inches mind and body dike. A strong nation, like Britain, is using ts strength to sell death and destruction to weak nation, and thus make profit: though he profit made is pitiably insignificant compared with the vast destruction wrought.

If we trace the history of the way in which this traffic was introduced, it is enough to arouse indignation against Great Britain and pity for China even in the hardest hearts. When we read the history of unnatural and unhuman bloodshed in war, we have simply a feeling of horror mingled with that of wonder. But, in the Indo-China opium traffic, human nature itself sinks down to such a depth of despicable meanness, that it is hateful even to follow the story to its conclusion.

In 1780, the British East India Company sent two small ships full of opium into the Gulf, at the entrance of the Canton River, near Macao Before this time, only two hundred chests of opium had been imported into China as a medicinal drug. Therefore, there was no customer at first for the two ship-loads carrying 2,800 chests, which were exported by the East India Company in 1780-81. So the Company worked very hard indeed to find out some means of introducing this vicious traffic into China. The British are past-masters in the game of commercial strategy. This game began in China; and it was played by the Bast India • Company with such success that in the year 1799, the Chinese Government had to pass legislation prohibiting the import of opium into China altogether. But in spite of these laws, the British merchants went on smuggling opium into China. Legal or illegal, open or secret. China was obliged to take opium. That was the settled policy of the Company, and they

carried it out like brigands.

Apprehending some trouble, the ships that were loaded with opium were removed to Whampoa. Then the Chinese authorities took security bonds from all the Hong Kong merchants, that no ships should enter the harbour with opium on board. The law was enacted that if opium was found on any ship. it should be sent back at once, without unloading, and the security should be punished. This law was renewed from time to time; but it had no effect. At last, in the year 1821, the Governor of Canton tried his hardest to prohibit opium smuggling He earnestly requested altogether. English, Dutch and Americans to give up detestable practice which they had employed of demoralising the Chinese officers with bribes.

The East India Company removed its own ships from Whampoa to the island of Liu Tiu. Opium was smuggled in from the ships there. and the traffic was still carried on secretly. The English merchants continued to corrupt the Chinese officers in order to introduce the drug into the interior of China. There had never been before such a method adopted of bribing Chinese officials with heavy bribes to violate their own laws and to disobey their

own superior officers.

Then, a new law was passed against the Opium Traffic by the Chinese Government: but the smuggling increased to such an extent that there was a great agitation against the British. The Chinese patriots proposed the boycott of British goods. Then the Chinese Emperor being greatly concerned about the possibility of danger to his subjects, sent Commissioner Lim to Canton as his representative. Commissioner Lim destroyed all the opium that he found in the ships in harbour, stopped all trade with England, and expelled from China all the officers of the East India Company who had carried on the traffic. In the end, war was declared.

Everyone knows what was the end of this Opium War. The Chinese were defined and had to sue for peace. Five seaports were opened for the English merchants. Hong Kong was ceded to the British and twenty one million dollars were paid as indemnity. The British consented that a clause should be inserted in the treaty allowing the Chinese to confiscate all illegal goods. At the same time they tried their utmost to get their traffic in opium made legal. But that attempt failed. Then the British representative agreed, that opium might be confiscated, but refused to help in any way in preventing smuggling. He knew full well that all the opium ships were fully armed, and that the weak Chinese, without his help, would not dare to approach them. Thus openly, after the war, before the eyes of the helpless Chinese, the trade was carried on the same as before.

After this, the Chinese people became so enraged against the red-haired foreigners, on account of their repeated violation of the laws of the country, that they were becoming more and more determined to turn them out of China altogether. The Chinese authorities captured an English opium ship, called the Arrow', and this led to the Second Opium War with China, in which France sided with

Great Britain.

The unfortunate Chinese, defeated again. were obliged this time to open seven more sea-ports to the foreigners. Opium henceforth was not to be considered an illegal traffic. Only a nominal tax was imposed upon it. The Chinese people repeatedly sent petitions asking that at least a heavy tax should be imposed; but the British rejected all such petitions. Therefore, after this Second Opium War, the trade flourished to such an extent that in the year 1875 as many as 90,000 chests of opium were imported into China from abroad.

Now we have reached the year 1881, and millions of men and women have become addicted to the vice of oppum-smoking. The opium smoked is grown in India. Just as in our country of India, we offer the hookah to a guest on his arrival, so wealthy people and rich merchants in China offer their visitors and their customers opium to be smoked. Opium shops are to be seen in every street. Nankin is so notorious for opium-smoking that the inhabitants lie intoxicated during the day and work at night. In the city of Ningpo, we are told that 2700 shops of opium have been set up in the poorest quarters. It has been noticed that whereever opium-eating was most prevalent, the to this is not far to seek. For people who smoke opium become lazy and inactive : and the cultivation of opium leaves less space for the cultivation of rice and corn. During the famine when the Chinese people could

not buy any food, they then realised that opitm alone could not satisfy their hunger.

two-hundred opium-smokers were returned out of one thousand troops, who were sent against the revolutionaries Since the revolutionaries at that time were against opium-smoking, they easily defeated the royalist soldiers over and over again The Chinese assert that the crafty Englishmen have introduced opium in order that they might easily conquer the country.

China is becoming poorer and poorer every day, because so much money is being drained out of the country for opium alone In the year 1872, China bought opium worth £4,261,381. This proved an excessive drain on her resources. We read that those who become addicted to the drug, are so degraded that they will sell their own One of the children and their own wives recently said, that Chinese addicts has all the bamboos of the Southern Hills (which are used for making pens) could not exhaust the story of the woes caused by opium and all the waters of the northern sea could not wash away its stains. In this way, owing to the selfishness and greed for money on the part of Great Britain, the millions of the Chinese people are drifting towards political and social destruction. It would appear that the British people are not really moved by the promptings of religion, but only by those of money. This is what they call Christianity', in the Nineteenth Century after Christ!

Once an American missionary went to the city of Ki Fung Fu, and he was turned out by the people. They said to him: "You have killed our Emperor, demolished his palace, brought poison to destroy us,—and now you want to teach us religion!"

An Englishman went into one of the opium dens and a confirmed opium-smoker confessed to him, that he spent 80% of his whole income on opium. When the Englishman told him that he came from England, the reply was: "Then you are one of those The deal in this fatal poison. What sort of a person is this Queen Victoria? We send her the finest silk and tea; and she sends us instead this poison to kill us". This 18 the way in which the Chinese people think about the English.

This distrust of all foreigners has gone so far, that, owing to this curse of opium traffic, the Chinese do not want to construct railways in their own country for fear lest the opium should spread into the interior.

They fear that with the increase of trade in opium the foreigners will invade their country. This fear is so strong, that the Chinese Government has not ventured to develope the minos, except those of coal and iron to some extent, lest they should have to employ the foreigners and thus increase the foreign trade

The English people are really sustaining a great loss in moral prestige owing to the utter distrust with which the Chinese have begun to regard them. The English trade also has actually suffered in the long run through this short-sighted and immoral

opium policy

We have written at length about the offects of the opium traffic in China and the hostility of the Chinese Now let us consider the evils that have been done to India itself by this opium traffic, which the British have been keeping up A large part of the Indian revenue is obtained from this opium But as the traffic is a fluctuating one, there is a universal fear on account of the dependence of revenue on this uncertain Furthermore, the cultivation of Chinese opium is increasing. At the same time, there is a strong feeling growing up in China among the people against the use of opium altogether Thus, the cultivation of home-grown opium in China is on the mercase, while the actual consumption is likely to decrease. These factors will make the Indian revenue from opium more variable than ever.

Furthermore, the cultivation of an opium crop requires highly fertile land, where good grain crops could be produced In 1877-78 one million men died of famine in Bengal alone. Yet the half a million acres, which are now employed in opium cultivation could easily supply the food for a million men and save them from starvation. Dr Wilson declared in Parliament recently that the cultivation of opium in Malwa had done such harm to other crops, that twelve lakhs of people had died of starvation in the neighbouring parts of Rajputana. It would almost seem as if the whole of Rajputana nere going to commit suicide owing to the growth of the opium habit. It is hard indeed to think of such a brave and chivalrous people becoming stolid and inactive, lazy and lifeless. Whereas the ancient kingdom of Rajputana was a kingdom of noble dreams, the present kingdom of Rajputana is a kingdom of dull sizep. Such a great people has become of so little worth!

Again, the quantity of opium that is being consumed in Assam is doing the greatest harm to the Assamese race. The Trade Expert Mr. Bruce has written: "The dreadful mortality due to opium-eating and smoking is changing the beautiful country of Assam into a desolate wilderness inhabited by wild beasts. It is making the noble Assamese race the most dishonourable and servile people".

This is what has been done in India by the opium trade If the Chinese Emperor can say that he could never stoop so low as to make money out of the sin and suffering of his subjects, why cannot the English, who pride themselves on their Christianity, declare that they will never cherish the idea of gaining wealth at the expense of the sin and suffering of a great people like the Chinese?

D 4

But we know well this 'Christian' nation! These 'Christians' have exterminated the aboriginal Americans. By their 'Christian' method, they confiscate 'heathen' lands, whenever their covetous eyes fall upon them

Before the Arakan coast fell into the hands of the British people, those who took opium were liable to the punishment of The inhabitants were frugal, diligent and simple. But the English merchants opened the opium shops there, and all kinds of intoxicants were introduced Young men who had not reached years of discretion, were tempted with opium, without paving any price for it at first, but later when the opium habit was formed the price rose higher and higher. As the Government revenue increased, the pockets of the merchants swelled; the hardy people of Arakan became blind addicts of opium, and gamblers into the bargain. This has been done by what is called a Christian nation.

It has become well known, all over the world, how the British Christians treat those who are weak and helpless. Their one desire is to spurn them and to beat them down. It is written in the Christian Scriptures: "If anyone smite you on one cheek, turn to him the other also". When the English Christians tempted the Chinese Emperor with a big revenue to be obtained by killing his own subjects, the Emperor refused would not do a thing so despicably mean. Doubtless, what this non-Christian Emperor did was a slap on the face of the Christian English. Unfortunately it had no effect.

PURDAH

By AZEEZ-UD-DEEN AHMAD B. A.

Purdah may seem to be an anomaly. I should, therefore, at the outset, offer a word of explanation. I look upon Purdah as a social institution and not as a palitical system as some pious people us believe. I shall attempt to show as briefly as possible, that Purdah as a social institution has long outlived the age in which it was found necessary and useful in India, and that at the present time it has become only a fruitful source of many

social, physical and moral evils.

ないのであるというないという

It is difficult to determine how and where Purdah was for the first time introduced into human society. It may, however, be attributed to two probable causes. First, in a rude age and among a ruder people, when might was the only right and brute force the only recognised form of law, Purdah might have been introduced to protect the honour and chastity of women from the attacks of the neighbouring tribes. Secondly in an age when woman was considered as a mere article of luxury, some jealous people might have introduced Purdah as a means of guarding their women and keeping them in seclusion. But whatever may be the real or supposed causes for the introduction of Purdah, it is evident that in different ages, among different peoples, and according to the different stages of social development, it has served different purposes. Space will not permit me to give here even a short history of Purdah in different countries. I shall, therefore, confine myself to Purdah only in so far as it concerns India.

In ancient Indian society Purdah does not seem to have been so strict and widespread as it has subsequently become since the Mahomedan invasion. During the first few years of Mahomedan conquest, when the country was held in military occupation, there was not much love lost between the conquerors and the conquered. And this that natural. Racial hatred and political subjection embittered the relations between the 'Hindus and Muslims. At such a time and under such circumstances the Hindus could not, with any fairness to themselves, allow their women to move freely among

Mahomedan conquerors, their among soldiers, who were, as it is only too common to a victorious army, generally lawless and devoid of all sense of social decorum and moral influence. The superior Mahomedan officers also could not allow their women to move freely among the soldiers who were generally recruited from rude and barbarous tribes, nor could they allow their women to move freely among the Hindus whom they naturally looked upon as inferior beings Seclusion of women thus became a necessity both for the conquerors and the conquered Nor was this all Besides this well-marked distinction between the Hindus and the Muslims, as the conquerors and the conquered. there were many other differences of caste and creed, religion and race The differences in social customs and usages were only too many to be enumerated here. All these differences combined to create a gulf of separation between the Hindus and Muslims Living as the rulers and the ruled, the male members of both the communities could not but come in close and direct contact with one another, but the weaker sex was jealously guarded by both the communities Thus Purdah, which was once introduced as a necessity, when the Muslims held the country in military occupation, became a fashion when they began to look upon India as their home and settled as peaceful neighbours to the Hindus. To believe that the Muslims introduced Purdah in India with conscious efforts and religious zeal, is, I think, to misstate facts. It is rather interesting to observe here incidentally that the female members of the Arabian Prophet's family used. on special occasions, to move in public, and take active part in political discussions and in the fields of battle. It need hardly be added here that in Modern Turkey, Egypt, even in Arabia and other Mahomedan countries Purdah is not so strict as it unfortunately is in India today. It is a pity 'that a section of the Indian Muslims should look upon Purdah as a religious institution. The only thing that can be said in its favour is that Purdah as a system has been more sanctified by custom than sanctioned by religion. In modern India, among the orthodox Muslims,

purdah is observed with so much strictness that it looks like nothing short of barbarism and shows a complete disregard for the real spirit of the master's teachings relating for this custom. The general want of culture and progress among the Indian Muslims may, to a large extent, be attributed to the inhuman observance of this custom. Girls of the age of 9 or 10 are seldom allowed to stir out of the Zenana and from this tender age they are crippled in body as well as in intellect. Without education and culture they are absolutely of no use to their family and when they become the girl-wives of their boyhusbands they are compelled to undertake duties for which they are never trained. They generally produce half a dozen sickly and deformed children before they pass their teens Being themselves hopelessly ignorant, they do not know how to bring up their progeny. So, each succeding numerous generation becomes more ignorant and less equipped for the struggle of life than the preceding one. Living within the four walls of the zenana, these unfortunate creatures know nothing of what passes in the world outside and as a result thereof they cannot adapt themselves to the changed circumstances of the times. The only thing for which they are fit under the sun is to breed a race of pigmies.

The Indian Muslims should take a lesson from their more advanced Hindu neighbours, especially, from the Brahmo community of Bengal, who take as much care for the education of their females as for that of males.

Nothing can be more inhuman and barbarous than to deny women the enjoyment of light and air. To keep them in perpetual darkness under pretension of observing Purdah may be regarded as one of the many injustices done to the weaker sex from time immemorial.

A little reflection will make it clear that since the beginning of human society, man has been always more or less unkind and ungenerous to women. Even those who founded religions and established moral systems or social codes have vied with one another in inventing many pious frauds to hold women perpetually under undue subjection. In the Book of Genesis woman has been represented as an easy victim to the dictates of Satan or to evil desires. Our own Indian Manu and a whole host of others have characterised woman as more prone to evil tendencies than man. No attempts were made to compensate for her physical in-

feriority; on the other hand, this has always been looked upon as a sure indication of her intellectual and moral inferiority. Until more recent times, she was considered as a necessary evil.

Thanks to modern culture and progress that things have changed a great deal. Among the civilized people Purdah has been already done away with, and woman has been given a chance to try her luck with man in the race of life and their combined efforts have contributed greatly to the happiness of mankind. Women are now taking an active part in all the activities of the sciences and arts are daily increasing time has come when the civilization and general culture of a country are judged by the kind of education given to and freedom enjoyed by its women. It seems that at no distant future they will decide the destinies of mankind.

One of the many causes why the Indians occupy such a low position in the comity of nations may be sought in the cold neglect in which they hold their women and the Indian Muslims occupy a still lower place because of their practical discouragement of female education. Purdah, as it obtains in India at the present time, is the greatest obstacle in the way of female education among the Muslims and the sooner it is abolished the better.

Let us now consider the physical injury that Purdah has been doing to our womenfolk. As they are kept within the four walls of the Zenana with religious fanaticism, they are denied the light of the sun and pure air, and, consequently, they have to drag on an unhealthy life. They lose the strength of mind as well as of the body and fall easy victims to various diseases and temptations. They can hardly defend themselves in times of danger. Such is and temptations. indeed their miserable lot in their own sphere. But when they have to go to a distant place either on foot or by steamer or train etc., their sad plight can be better imagined than described. They have to be carried by a jealous guard like so many living luggages.

In these circumstances, let those who have the good of their community at heart seriously consider whether one should persist in continuing such an inhuman and barbarous custom as Purdah.

Before I take leave, I must apologize if I . have wounded anybody's religious sentiments.

KOHAT AND GOVERNMENT—A HISTORICAL PARALLEL

NE of the special features of the Kohat tragedy is the weakening of Governmental authority during and after the disturbance and its total mability to preserve peace and order in the disturbed area except by securing the goodwill of the aggressive The not a far cry from Kohat to Kashmir, though it may be from 1924 to 1721, but in the records of the events of the latter year, , we find a most interesting parallel to the Kohat situation in regard to the breakdown of governmental authority and perhaps in some other features of the tragedy also. The following extracts from Siyarul Mutakharin, the famous historical work of Mirghulam Hussain Khan, one of the counties of Delhi during the later Moghul period, may enable us to visualise the Kohat incidents It seems as if we were perusing the account of one of the recent Hindu-Muslim disturbances in

the country.

There one Mula Abd-ul-neby, a Cashmirian known by the appellation of Mohtevy-khan, a man who was celebrated for his prejudice against the Hindus, availed himself of the confusion of the times to give vent to this feeling. He assembled a number of idle, disorderly, inconsiderate Mussalmans, and went at their head to Mir Ahmed, the Lieutenant-Governor, and to the Kazy or Chief Judge of the province, to whom he proposed that henceforward Hindus of all sorts should be prohibited the use of horses, white robes, turbans and arms; and also that they should be forbidden to go out, except at stated hours, to gardens and bathing places. The Lieutenant-Governor and the Judge answered calmly, that whatever regulations his Majesty should think proper to promulgate, by the advice of the learned divines of his court, on those matters, as a standing rule for all the Hindus of his dominions, would of course find their way into Cashmire, where it would be their business as his special servants to carry them into execution. This answer being unsatisfactory to Mohtevy Khan, he, in concert withan number of low people about him, adopted the practice of attacking and illtreating every Hindu of rank he chanced to

meet in the streets One day as Sahib Rai. a Hindu of distinction was giving an enter. tainment at a Garden in the suburbs, that disturber of the peace, aided by his associates fell unexpectedly on these innocent people and killed and wounded many of them. Sahib Rai finding himself aimed at, fled to palace of Mir Ahmed Khan, the Lieutenant-Governor and while he Was there concealed, his house in town was plundered and sacked by They Khan and his followers. likewise plundered the whole Hindu Quarter of the City, after which they set it on fire, killing and dispersing not only all the Hindus; who came out to entreat their mercy, but all Mussalmans who attempted to intercede to Heated with this success, the mob marched down to the Governor's palace which they attacked first with stones and brick-bats and at last with arrows and musket-balls; and whoever came was insulted and plundered, if not killed and stripped, upon the spot The Lieuten ant-Governor remained besieged for a whole day and night, nor would it have been por sible for him to escape, had he not adopted several contrivances and exposed himself to the most imminent peril. The next day he assembled a few soldiers and some other people, mounted horses, and being supported by the Commander of the forces, by Shah Nevaz Khan, and by several other Military Officers he advanced towards the seditious insurgents but the latter, having received advices of his design, assembled a vast number of men of their own stamp with intention to stand their grounds, on observing that the Lieutenant Governor had crossed a bridge to approach them, their leader sent some of his followers set it on fire; and following up the blow he also burnt all the streets in his flank and rear, whilst some of his people getting amongst the ruins maintained incessant discharges of musketry, arrows, stones and brickbats; while the wives and children of the Mussalman mob strove to outdo them, by tossing baskets full of filth and every missile they could obtain from the houses into the streets. In a little time Syed Wali the

Lieutenant-Governor's nephew, and Zulficar Cotwals deputy were the Bog. number of others and many with were grievously wounded and more disabled, so that Mir Ahmed Khan saw himself almost alone. Unable to go back. and afraid of advancing, or stopping, he had recourse to entreaties and supplications; and after undergoing all sorts of indignity and outrage, he was suffered to escape. Mohtevy Khan, now fiercer than ever, returned Governor's house, where Sahib Rai had taken shelter with a multitude of Hindus Having entered it by force, he seized every one of them, killed some, cut off the noses of others, and circumcised all those he thought proper otherwise to save The latter operation was performed in so brutal a manner that some lost their organs altogether The next day he repaired at the head of a great throng, to the great mosque; where, of his own own anthority, he deposed the Lieutenant-Governor, proclaimed himself in his stead by the style and title of Dindar Khan and ordered that until the arrival of another Lieutenant-Governor, the Kazy should hear and determine all causes of complaint; so that for five months together, Mir Ahmed Khan remained a private man in his own capital, whilst Mohtevy Khan sat every day in state in the Mosque, hearing and determining all matters concerning finance and Govern-

An account of these disturbances having reached court, Momin Khan was deputed to Cashmire on the part of Enaiet-ullah-khan, governor of the province, but who resided at Court. The intelligence intimidated Mohtevy Khan, who by this time had repented of what he had done. In the first impulse of the moment, he took two of his small children by the hand and went with them to Khwaja Abdullah, one of the principal holy men of the city, with whom he had some acquaintance, and having heard that he intended to go out to meet the new Lieutenant-Governor at the head of the principal religious men and the citizens, he wished to accompany him. holy man answered that he had no objection but he thought he ought in the first instance to go to the commander of the troops, Mir Shah Newaz Khan, whose forgiveness he

ought to ask for what had passed. Mohtevy Khan accordingly went to the General's where the latter had by the quarters. Khwaja's advice, concealed a number of men (Mahomedans) from the Judbel, that muchinjured quarter of the city. On his entering the room, a few words were exchanged, when the general excused himself and went away. The concealed men rushed on Mohtevy Khan from their retreat and seized him; they first ripped open before his face the bellies of his two children, and then falling upon him, put him to death with all the tortures which their resentment prompted. Hardly had this event taken place, when the followers of Montevy Khan resolved to revenge his death, and running to the Judbel, they commenced killing, wounding, beating, and mangling the inhabitants, and eventually set fire to their houses. About three thousand men were hacked to pieces by these wretches. These proved to be mostly Mogul merchants, and other strangers who resided in Cashmire for the purpose of trade A vast number of women and children were likewise seized and carried away. Property to the amount of several lacs was plundered or utterly spoiled; nor is there any describing the treatment to which those defenceless people were subject-Having finished ed by those miscreants. what they called the first campaign of their religious war, they proceeded to the second, that is, they marched in a body to the house of the Kazy and the General Shah The latter found means to Newaz Khan remain concealed, the Kazy changed his dress and slunk away, and the mob, incensed at his escape tore up his house from the very foundation, and scattering the materials about, left not a brick on the spot. was some days after this occurrence that Momin Khan, the new Lieutenant-Governor, arrived. His first care was to send Mir Ahmed Khan to a place of safety, his second, to re-establish order and sub-ordination, a difficult task in a country notorious for the turbulent disposition of its inhabitants, a wicked race of men, among whom a man in power must contrive to rule as much by conciliation and concession as by rigour.

"Itihas"

A MEMOIR OF OLD DELHI

By C. F. ANDREWS

CHAPTER VI

THE NEW LEARNING

WUNSHI Zaka Ulla's great work in life is to be found rather in his work. in his teachings. It is true that he had great influence with his pupils and that they loved him as they loved few other teachers. But here his influence was shared by many others and there is nothing that singles him out from his contemporaries as one who seriously endeavoured to wrestle with an entirely new educational problem and to This he work out an entirely new solution. did through his writings. He endevoured to prove when nearly everyone was against him that higher western education could be carried on in the vernacular and through vernacular books without insistence upon English as the medium of education and of English books as the medium of acquiring knowledge. He fought at the time a losing battle in order to prove this, but he fought bravely to the end: and the sure and certain process of history is rapidly proving his solution to be the true one after all.

As the new western learning advanced, it became supremely necessary to find a scholar whose powers of expression in the vernacular were flexible and simple and intelligible. At the same time, he would have to be a master of the subjects which he would be called upon to explain lucidly in the vernacular for the first time. Hitherto no scientific and mathematical books on modern western subjects had been written in the languages of Northein India. The student was first required to master English,—a long and tedious process, almost impossible for some students and difficult for all.

Munshi Zaka Ullah was an enthusiast with regard to this educational method. He had himself learnt science and mathematics through the medium of his own mother tangue, Urdu: and he did not see why his children should not do the same. It is true, that he himself had learnt the new knowledge from lectures given by word of mouth in the vernacular: he had not learnt from textities at all. But he was quite 'certain that he text-books could be written, and he was

prepared to write them. His offer was accept would have been difficult at that the inthe whole of the North of India, to he found one more fitted for the work. Certally it would have been impossible to find a one with such contagious enthusiasm as such tireless industry.

Having once undertaken the task, gave up to it all his spare moments, laboured at it with a strenuous energy t would have exhausted one with less mer and bodily vigour and less dominant por will.

His first publisher was found in Aligarh Institute and the enterprise of t Institution in venturing upon this gr pioneer work is worthy of being record From its press, volume after volume vissued, on Chemistry, Physics, Light, Heat, a other scientific subjects, as well as eleme ary and advanced works on mode mathematics

There is an interesting letter from the Secretary to the Government of Bengwhich is still in the possession of Municipal Zaka Ullah's family. It shows the mind the Government of India at the time on the tweed question of vernacular education.

'It appears from replies received Government that little or nothing has y been done in translating works of mode science into the vernaculars of India. Wi has been done in Urdu has been chief effected through the instrumentality Aligarh Institute. The series mathematical works published by Muns Zaka Ullah of Delhi, which is highly spok of by the Director of Public Instruction, W. P., is believed to have been commenced the request and with the assistance of the Aligarh Institute. Munshi Zaka Ullah h evidently done his work in an excellent ma ner, and it is hoped that with some furth acknowledgment and aid he may agree carry out the undertaking and direct h attention to other branches of knowledg The Governor-General in Council is of the some means may be devised for further stimi lating the production of similar works."

Governor-General here referred to. was Lord Northbrook. It was a somewhat ardy and half-hearted recognition of an immense amount of work already accomplished. ts closing sentence was fully justified by the event. For Munshi Zaka Ullah went quite steadily forward with the undertaking which he had begun, and each fresh year saw some new book published which had come from his pen

The full record of his achievement appears. almost incredible until the number of years that he spent over the task is taken into account. It is probably not an exaggeration to say that he spent, in all, more than fifty years of his life in this one literary pursuit.

He soon abandoned the mere translation hf English books and launched out into writings that were either wholly, or in part riginal. At the close of his career, when I had become his intimate friend, he would show ne rows upon rows of volumes which he had entten. I have on my own bookself many f his chief works which he presented to me. hey are full of original information, written n a simple and pure fluent Urdu style, and bey cover a great variety of subjects. Their ublication and use in schools have done not little to set up a new standard for Urdu iterature, to make it lucid and clear and asy to understand by the ordinary reader, nd to free it from an overgrowth of Persian nd Arabic words, which none but the learned ould interpret.

As a Professor of Vernacular Learning nd Science, at the Muir Central College, llahabad, he was able to carry on, in an allost uninterrupted manner, the work of reparing these text-books in which he was by his time busily engaged. He won at the same me, the highest esteem and reverence from I his pupils. On his departure his old upils presented him with an address, which h this instance was no formal matter, but a pontaneous act marked by sincerity and affecon "Your kindly and just treatment of our pupils,"—the address runs in one of s paragraphs "your sympathy with them and our complete identification with everything hat concerns their moral and intellectual velfare, will long be remembered. Both as a eacher, and as a true friend and guide, we ave had at all times full confidence in you, nd were convinced that you would do your tmost for us and promote our best interests.

The honours that weree showered upon

We feel that the severance of your connection

ith our College will form a serious loss to

him at his retirement from active teaching work came as a surprise to him, as he told me modestly, and he felt that he had not deserved them. But the public felt very differently, and there was a general satisfaction at the recognition of his learning and ability. He had worked very hard indeed at his various duties. His educational experiments were new and untried he had to create new traditions he was called upon at every turn to act as a pioneer of the new learning. The course he took was not the one to win him popularity: but unquestionably from the point of view of educational theory it was pre-eminently sound. That it did not succeed better, was because the generation that was to be taught desired to learn English at any cost and recklessly threw away their mother tongue and its literature in order to accomplish the knowledge of English more quickly. Today the pendulum is rapidly swinging back, and the great work of Munshi Zaka Ullah may even at this late date at last come to its own and be appreciated at its proper worth.

His retirement, after thirty-seven years of service at Allahabad, was in no sense one of mactivity or idleness and ease. Indeed his best literary work was done in his later days. He was an indefatigable reader as well as writer and in a wonderful way kept abreast of the news and information of the times in which he lived, both at home and abroad. He took up. somewhat late in life, with remarkable energy and industry, the study of modern history and some of his most original work was done in this subject. He had a purpose at the back of this historical study. It was his one wish to show, that in India tolerance of religious opinion is the first and last end of good government. His ideal rulers, whether in Hindu, Moghal, or British times, were those that loved and practised tolerance and bound together the divided peoples into one, instead of separating them by religious and racial narrowness, bigotry and pride.

In his 'Victoria-Nama' the theme is the advent of British rule: and we recognise the extravagant hopes which were held at that period by the best men of the age who had not yet realised the fatal weakness of a distant government, which must inevitably remain foreign and could never possibly be assimilated simply because of that distance

of during this time It was greatest activity. that literary love and work for his own Musalman community was also demanding his attention.

s all"

His eyes used to light up with enthusiasm at the mention of the name of Sir Syed Ahmad Khan, the founder of Aligarh College. There could be no question as to who was Munshi Zaka Ullah's hero, It was Sir Syed Ahmad. Sir Syed's portrait had the central place of honour in his own sitting room, and books relating to Sir Syed, or else written by him, were conspicuous on his shelves, and constantly in his hands. He used at all times to speak about him with the greatest reverence and admiration. He would give me his lectures to read, and ask my opinion about them, saying that to him they seemed to point out the one true pathway of development for Musalmans in India. It follows from all this that Zaka Ullah was also from the very first an ardent supporter of the Aligarh Movement. As we have seen, the Aligarh Institute was at the outset responsible for the publication of his Urdu works He was on the Board of Directors from its foundation and remained a member of it up to the day of his death. It was on this Aligarh Movement that he himself, along with all the Musalman idealists of the North of India, based his hopes.

At a very grave crisis in the College. he came to me early one morning in Delhi along with his friend, Maulvi Nazir Ahmed, in order to ask me to go down with them both by the next train to Aligarh to help them with regard to some difficulties which had arisen between the English Professors and the Musalman students. The situation was a very delicate one and I had grave fears lest I might rather hinder than help in such a matter, but his intense anxiety overcame my fears. "The hopes of my whole life-time" he said to me, "are centred in that College It evil comes to it, the work of my life is ruined." His emotion as he spoke showed how deeply he felt it all and I went with him. That journey revealed to me, more clearly than anything had done before, the passionate earnestness of his convictions and ideals about Aligarh. He was ready to go to any length of personal sacrifice and even indignity, if only the work of Sir Syed Ahmad could be left intact. When we reached Aligarh the two old men laboured hard to compose the differences that had could of entreaty with the students. "This could of entreaty with the students. "This College," they said to me on the return journey, is the darling of our hearts: the light of our eyes: we could never forgive ourselves if anything happened to it, and we

had been able to prevent it, and had 1 tried to do so."

One of the most interesting features Munshi Zaka Ullah's whole disposition v his attitude towards the modernising Indian education. He was one of the f men who accepted whole-heartedly the ne for modernisation, especially the teaching modern science to the fullest extent; but the same time he insisted that the medi of instruction should be the child's o mother language and not English. Though hi self remaining to the end, in accordance w these principles, an Urdu teacher and wri only, teaching his own students through medium of Urdu, he recognised to the f from the very first, owing to his own edu tional experience at the old Delhi Colle that without a full acceptance of the resu of modern science and a full knowledge them also, the East must mevitably fall! hind the West and the door of all future D gress be closed. With the same principles view,—and it stands greatly to his credit he was one of the very earliest pioneers female education in the North of India. a time when the very idea of such this was foreign and outlandish to the general mind of the people. It cannot be mu too clear, that the one point distinguish Munshi Zaka Ullah from other Indian edu tionalists during the Nineteenth Center was his long cherished ideal of imparts this modern knowledge through the media of Uidu, a language which was the moth tongue of nearly a hundred million people the North of India. As the century advance he used to point to Japan as a signal e ample of the success of what he called tvernacular method. "The constant use English" he used to say, "even from 0 childhood, so that we begin to express o thoughts in it instead of in our mother tong will go far to denationalise us. If we wi to remain an Eastern people, we must 1 neglect the language which we learnt at mother's knee and become foreigners to c own population and practically to all womenfolk. Our mother tongue contains for all our hallowed memories and traditions 11 our first articulate speech which we employ speak with our mothers when we are your to forget it, or to despise it, is to lose of the strongest factors in the building of our character."

"For us, Musalmans," he would continue the Urdu languge has intimate association with our religion: its very script reminue.

us of our sacred language, Arabic: very many of its words are sprung from Arabic roots. To abandon Urdu for English; to bring up Musalman children so that they do not know how to write or read fluently in Urdu, but prefer to write in English, is the surest way to bring about the neglect of the Mohammadan religion itself. For who in the North of India, except a few scholars, will love the study of Arabic,—the language of our sacred Quran,—if the study of Urdu is despised in this extreme fascination for progress in English?"

While holding these convictions right up to the end and regarding them as unanswerable, in principle Zaka Ullah at the close of his long life acknowledged sadly that in practice the whole trend of events had gone against him. When he saw this with open eyes, and realised that whether he would or not, the study of English as a principal and not as a secondary language, must come in, he bowed to that inevitable. He did not merely stand on one side, but put himself in the forefront of the battle for the advancement of modern scientific knowledge and did not side with the reactionaries

As we have already seen, he was a whole-hearted admirer and supporter of Sir Syed Almad Khan and the Aligarh Movement, although, much against his own will and consent, it was frankly placed upon an 'English' basis. He did all he could to preserve whatever remained on the Oriental side, and to encourage the pure study of Urdu Literature in the College itself. On this side, he was partly successful But in the main thesis, he failed

Nevertheless, though he was humble and recognised his own limitations: though he knew himself as never before to be a follower, not a leader: a man who could carry out the ideas of others, not forcefully with the whole weight of personality carry through his own: vet it was always with a certain tone of regret that he bowed to the inevitable when it came. He knew, in his heart of hearts, that the second best course had been taken, not the best.

Sometimes, in moments of despondency, in his later years, he would tell me that he felt his own life-work of Urdu adaptation and translation for the use of schools had been wasted. He would blame himself and say: "If I had been born with the genius for Urdu Prose of Maulvi Nazir Atmad I might have succeeded: but I have failed". Then he would point to the number of volumes he had written,

which were lying idle on the shelf, with no one to take them down and read them He would say that they would only moulder into dust, and his name and his effort would be forgotten: the tide had turned against him.

In reply, I would urgo, that to be a pioneer in a great movement was a nobler task than to help forward that which had already made its way: and that he might rightly receive the credit of posterity for having been one of the very first to give the impetus to the spread of the new learning at whatever cost in the North of India, and that all his Urdu books had been written with that ideal in view. If he had not written at all, the spread of modern education might have been indefinitely delayed.

But though this was all true, it never really satisfied him. I think he felt that with a little more insistence at the first he might have carried his point. If he had had the volcanic personality of Sir Syed Ahmad Khan or of his life-long friend and companion, Maulvi Nazir Ahmad, he might have won the victory for what he knew in his heart of hearts to be true. He could see, before he died, the evils creeping into the system of modern education, which had been adopted and sometimes he wondered whether the whole effort had not been premature and whether more time should not have been taken and surer foundations laid, before the house was built.

Thus Munshi Zaka Ullah, in his educational work, was a remarkable combination of the past and of the present He was a man who himself refused to speak in any language but Urdu, if he could possibly help it Yet he read fluently and with ease the most difficult books in English and kept himself abreast of all that had been written in that language in philosophy, science and social theory. He had also a knowledge of modern European History which was rarely at fault. He was one who clung tenaciously to his own vernacular and encouraged it to the very utmost of his power; but at the same time he accepted the spread of English as a medium of school teaching, when he saw that the current of public opinion was against him. revered intensely the Islamic past with its great traditions of Arabic and Persian poetry and learning, yet he was the first to cognise the supreme necessity for progressive Islam, of modern science and modern knowledge. He took infinite pride in the great " achievements of Indian civilization, stretching as it did back to the times of the Vedas

and Upanishads, and studied the early history of his motherland with earnest enthusiasm: yet he was the first to admit the degeneracy and decay that had taken place, and the need of a fresh current of air from outside such as came with the 'English Peace'. He was old-fashioned, to the end, in his mode of life, his household arrangements; his dress, his outward conduct and deportment, yet he was most eager to discuss the latest scientific discoveries and to accept their conclusions.

His life, as he lived it, was true to his own educational ideal. It had a greatness and nobility of its own which differed in tone and quality on the one hand from the Englisheducated Musalman and on the other hand from the Musalman who had stood entirely aloof from the modern world of the new learning. It possessed the liberality of the former and the old-world refinement of the latter. It was all of one piece Every one who met him could feel and understand that he had kept

his own soul. He had not lost it in an artificial attempt to master another culture before he had been fully grounded in his own.

What he had accomplished in his own life. what he had worked out in his own experience, he was anxious to impart to others The dangers that he had been saved from in his own career he wished to guard others against in turn. The Was, pity gifts. with all his other he all not the greatest of that is needed in a pioneer, namely, the force of personality that could drive the conviction home to the minds of others and make them understand its burning importance He had all the 'sweetness and light' that were needed, but he was not a 'Boanerges', a 'Son of Thunder'. Perhaps, if he had been, we who knew him and loved him, might have loved him less. For it was the very gentleness of his goodness that made its poculiar charm

(To be continued.)

LORD BIRKENHEAD AND INDIA'S FUTURE

By St. NIHAL SINGH

I

THERE is not the least doubt in the world that India's rulers in Whitehall have realised the necessity of making some sort of a change in their policy towards India. No Indian who goes about London and the Provinces with his eyes and ears open can come to any other conclusion.

I came back from Ireland to the nervecentre of the British Empire towards the end of 1924, after an absence of a little more than a year. During the four months which have elapsed since my return, I have heard and seen more than enough to justify me in taking the view that howmuch soever bravely the "Tory regime" at the India Office may talk about its "stand pat" policy, it feels far from easy in mind as to conditions in India.

II (

At the behest of British reactionaries in India and Pritain, the Earl Winterton, while serving as the Viscount Peel's understudy,

before the Baldwin fiasco over protection drove the Conservative Government out of office, used to say, in effect:

"India must content herself with what she has got, and behave herself, otherwise she

will be made to behave."

Since coming into office once again upon the collapse of the short-lived, ineffective Labour-Socialist administration, Lord Winterton has taken up the refrain of the same song. His former chief has, however, not gone back to the India Office and, therefore the Parliamentary Under-Secretary of State for India has to sing a solo, instead of joining in a duet.

Ш

No one seems to have troubled to discover the reason why the Conservative Prime Minister did not send Lord Peel back to the India Office when he formed his present Cabinet. Having held the Indian portfolio during the previous Baldwin administration,

that Noble Lord, even if he be possessed of no more than the average intelligence, may be presumed to have learnt something of the "multitudinous races and creeds kept by the British Raj from flying at one another's throats," who dwell in that sub-continent called India". Instead of reappointing him, however, Mr. Baldwin gave India a new pilot—a pilot who had never cast eye on the Indian waters, let alone taken soundings in them. Why?

I cannot speak for Mr. Baldwin, or for Lords Peel and Birkonhead. It is, nevertheless, clear that if the Conservative Prime Minister was determined to force Lord Peel's will upon us Indians, Lord Peel would have been offered the India Office, and would have

accepted it with alacrity.

IV 🥆

The reputation which Lord Birkenhead made in the years when he came to be known as "Galloper Smith," sticks to him and he is still regarded as intensely conservative Liberals and Labourites openly speak of him as a reactionary It must, however, not be forgotten that the new Secretary of State for India possesses an acute mindwhich in a few years enabled him to push his way to the top of the British legal profession, to hold the highest judicial appointment in the gift of the British Crown at an unprecedentedly low age, to make a fortune, and, at the same time, to become one of the dominating figures in the political life of Britain. He furthermore had shown in the mittal year of this decade both the intellec-tual ability and the moral courage to readjust his point of view in respect of the Irish Home Rule problem. Beginning his political career as a fire-eating detractor of the ability of the Irish in "Southern Ireland" to manage their own affairs, he during 1921, signalised his holding of the first office in the British Government by signing away the 26 counties of Ireland which now constitute the Irish Free State and are, in every respect, ruled from Dublin by Irishmen who neither owe their position to any one at Westminster nor in Whitehall, nor take their orders in any matter or to any degree from there.

Any one who knows aught of Lord Birkenhead's record during the last six months of 1921, and yet says he is unchanging and unchangeable, either cannot see right, or has some purpose in misrepresenting the truth. In July of that year he, as indeed his then political chief—David Lloyd, George—

and their colleagues were crying themselves hoarse, telling Irishmen that they may do their worst, but the British Government would not give them Home Rule in excess of that granted in the Act of 1920. Before the first week of December had run its course, he and his associates had shifted their ground almost entirely—giving way upon practically all the points which the Irish delegates held to be crucial, though in some cases not going as far as the Irish demanded or wished.

V

Apologists for the Labour Government which, at its expulsion from "power," left India where she was when it came into office—so many of whom supply India with news" of Indian affairs in Britain—are, of course, interested in making an attempt to intensify the Indian mistrusts of Lord Birkenhead, and of the Conservative Party—a mistrust already deep-rooted. From a party of privilege, no move towards the relaxation of the British hold over jobs in India can be expected to come. That party, on the contrary, is bound to try to tighten its control over India. So they aver.

The new Secretary of State for India has done himself disservice by keeping his mouth shut, or opening it just wide enough to MacDonald for telling India praise Mr. that Britain would not be coerced into yielding political concessions. The ca-Labour Prime Minister, as also the present Minister for India, know too well the constitutional history of their own country and of their former Colonies-particularly of Canada-to expect to make Indians engaged in a purely constitutional struggle quail at such pronouncement to ask them to forgive their past sins, to promise to be obedient in future, and meekly to accept any crumbs which the British, in their magnanimity choose to give them.

VI

Lord Birkenhead may, of course, take it into his head to announce, any day, that he is convinced that the "stand pat" policy, is untenable. He may, on the contrary declare, even before these words of mine have time to travel to India and to find publication there; that no case has been made out for further constitutional advance until the possibilities of the Montagu-Chelmsford Act have been adequately tested and the Commission contemplated by that Act has

**

been set up in 1929 and has reported. Either way is open to him, and his hand may be forced by certain persons in and out of Parliament who are badgering him to make

a pronouncement.

If Lord Birkenhead takes the first course he would do so in spite of the national genius of his people. The British are averse from announcing to their political adversaries or even their political proteges—that they have had enough of constitutional dead-locks and are now ready to evolve a scheme whereby the agitators may get what they are clamouring to obtain. They, on the contrary go on protesting their determination to resist every demand which is made—and abusing constitutional agitators as if they were rebels"-down to the very moment they actually set their signature to the document accepting the demands, minus such items as their wonderful skill at negotiation enables them to deduct from the demand presented in the first instance. No nation can "higgle and haggle" politically and diplomatically so long and so effectively as the British.

In view of this consideration, it would be safer to assume that Lord Birkenhead would follow the second course, namely, tell India that she must content herself with what she has got and behave herself, otherwise she will be made to behave In so doing he would be repeating history—national as well as personal—and dotting the "i's" and crossing the "t's" of the Parliamentary Under-

Secretary of State for India

VII

Talk in such matters is, however, not so impressive as deeds. Every action taken by the hierarchy at the India Office, from His Majesty's Principal Secretary of State for India down to the most jumor messenger, shows that they are disturbed about Indian conditions, and are groping about for a policy which would make them easy in their minds.

The friction between British officials and Indians of every shade of political opinion is attacking (what the "Indian" administrators regard as) the vitals of the British administration of India, by making the British undergraduate chary of seeking an "Indian career," and threatening to cut down—or greatly to attenuate—the supply of India's rulers. He may elect to go in for trade, commerce industry or finance in India, but the old enthusiasm for entering the Indian Civil Service has largely evaporated.

The Earl Winterton and others of like views in power during Mr. Baldwin's first administration, felt that by increasing the emoluments of the "Services," they would add to their attraction. They are finding however—at least I believe they are finding—that though the Lee Commission has manufactured the proposals which they had at heart, the British under-graduate refuses to rush for the Indian Civil Service.

VIII

So signal has been the failure to accelerate by such means, the enlistment of British candidates for the highest paid service in the world, that the India Office has been compelled to seek the kind offices of Lord Meston to undertake a campaign to drum up recruits. The second-in-command among the permanent officials at the India Office—Sir Malcolm Seton—has accompanied the ex-Finance Member of the Governor-General's Council and ex-Lieutenant-Governor of the United Provinces of Agra and Oudh in some of histips to the British and Irish University centres while on such a mission

With remarkable felicity of language Lord Meston has drawn a roseate picture of the life which the "district officer" leads despite the changes which have been introduced in the Indian Constitution. He has stated, for instance, that that officer remains the "master" of the district—of his "small

kingdom '

According to the Noble Lord, the district officer rises "long before the hot dawn and is "off on horse-back, perhaps to the big head-quarters hospital or to some improvement scheme". After breakfast he at his office, the central courthouse of the district, to deal with a mass of vernacular reports from every corner of his small kingdom, and on every conceivable subject" He may "be interrupted by the superintendent of police with news of dacoits or a tribal feud, necessitating immediate action." the Courthouse door may be thrown open and in may stream "petitioners of every class and variety." There may be "rival religious factions about the hymns being sung outside a mosque or a procession." A proprietor may want "to partition his estate," or a village elder may complain against the schoolmaster; or a "sheepish-looking youth" may come "about the theft of 10 rupees worth of silver jewellery, his evidence producing the fact that what was really carried off was his wife, with the jewellery

on her—a little detail he had not seen fit to mention."

Elaborating the routine of the district officer, Lord Meston said that two "rival sects with blood-stained bandages might come from a village, each declaring that the other had trespassed upon their rice field, and had attacked them and killed an old man whose corpse was at the door." Petitions over, the district officer next sees "his English and correspondence." interviews departmental the police, engineers, or promoters of a political meeting, has a game of tennis, and after dinner settled down to his reports, writes his judgments, and so finishes a long day, "but one full of human interest and variety, and full of the sense that he was doing something for the good of the world and the people around him."

The district officer's life would brighten up in the cold weather Then he would live "almost all fresco". He would find that "however difficult it might be to extract the truth from a witness in the Court, he was, very much easier to handle in his own village, with his own people round him" He would probably find "that in the village dispute alluded to there was no rice field in question at all, but a Juliet, whose identity parties had agreed to keep out of the case, and that the old man had been run over by a bullock cart and had been further marked by his own side to make a better case for them" The district officer felt "that he had cained his day's pay, that he had done the best for his people, and that he had carried out the policy of the Covernment which he served."

The refrain of Lord Meston's addresses is that the reforms, as carried out during recent years, have "made no difference in the attitude towards the influence and power of the district officer"

In addition to assuring the young men just leaving the British Universities that in seeking an Indian career they would have the opportunity of domineering over Indians, he has been promising them that there shall be no further change in the Constitution until after the Parliamentary Commission provided for in the Montagu Chelmsford Act has been constituted in 1929, and, after due investigation, has reported, and Parliament has decided upon the action which, in its wisdom, it is prepared to take.

Only when that "far distant date" arrives at which all functions of administration would

COLO IN -

be transferred to Indian Ministers, India will "be left very much in the position of one of the self-governing dominions". In other words, for a long time to come the elements to the Civil Service will remain very much their own masters—and masters of India.

IX .

In addition to these recruiting speeches of Lord Meston, preparations are going on to introduce a measure in Parliament to give statutory effect to the Lee Commission proposals. That effect, it is considered by the men behind the movement, would inspire confidence in the young Briton which will impel him to assume an Imperial responsibility in the full knowledge—and assurance that the Imperial Parliament would itself honour any financial liability which India in a refractory mood, might sock to evade.

The Conservative Government has a large majority at its back in both Houses of Parliament, and, therefore, there is no doubt that its wish in that matter will be easily carried out. The so-called Liberals—a small minority possibly excepted—believe with their leader—Lloyd George—that the Indian Civil service constitutes the "steel frame" without which the "Indian" administration cannot exist, and may be expected to vote for any such measure.

Until quite recently Mr Ramsay Mac-Donald—if one were to judge him by the evidence offered by the written word—used to regard it as imperative to keep the Indian Civil Service and the "Imperial Police Service" predominantly British Services. He and his followers may, however, deem it politically inexpedient to vote with the Conservatives and Liberals on a motion which is known to have earned the hostility of the Indian Legislative Assembly. Their opposition, now that they are shorn of even the semblance of power, cannot, however, accomplish any purpose

\mathbf{X}

It is not entirely out of the range of possibility that the Earl of Birkenhead may, on the other hand, take the view that no action is taken by Parliament that does not remove the causes which are producing friction between Indians and the British officials, can possibly revive, to any degree, the confidence which made British young men flock to the Indian Civil Service in the happy days gone by. Whether he will come

that this cooling of the furnaces which produced fresh supplies of steel for replacing the recurring wastage of the "Indian steel frame," constitutes the motive power which is impelling the British statesmen to explore the Indian situation. Were this factor absent, the deadlocks in Bengal, the Central Provinces, and the "lower" House of "India's Parliament" might not, by themselves, have led the Socretary of State for India to summon, on leave, the Earl of Reading nor possibly have led to the gathering of the other Anglo-Indian class leaders in London.

That the men whom the Earl of Birkenhead is consulting are likely to discourage him from to embarking upon a brave attempt to win the Indian goodwill, may be taken for granted. Powerful organs of opinion are already at work pointing out to him that security in India can be had not by yielding to Indian agitators, but by repressing them.

The Times, in commenting on the majority and minority reports of the Muddiman Committee on the working of the reforms, has bluntly told the Baldwin Administration—or has it "intelligently anticipated" the view of that Administration,—that it must not go beyond a little tinkering with Dyarchy. To quote from the leader which appeared in the issue for March 17th:

"Dyarchy is at any rate in being: it is on its trial, and it must have a fair trial. Some of its defects may be remedied by a change of rules, some steps may, for instance, rightly be taken, as the Majority Report suggests, to strengthen the position of the Ministers in charge of transferred subjects by making their salaries equal to those of members of the Provincial Executive Councils and by providing more frequent opportunities for joint consultation between the Governor and all his advisers, whatever their status. The success or failure of dyarchy should not be left to depend on the mere letter of the law or regulation. A much more serious drawback is the impoverishment of the provincial treasuries in present cur-

steady improvement in the general financial situation of India, which has already been turned in the present Budget to their relief and will be hastened in proportion as order and confidence are re-established. But renewed suggestions of constitutional change will militate against that very spirit of confidence which is now being restored with such difficulty. The publication of the Report which, even in the Majority section is only tend in its approval of the present system, is, as we have pointed out, calculated to increase doubt, unsettlement, and uncertainty. It is the more necessary, therefore, that the British Government should take a very decided line at the earliest, possible moment. They should make it absolutely clear that, while minor amendments of procedure are admissible and probably desirable, the present system must be carried on for its appointed term, and must be fully tested as regards its possibilities both of educating the Indian people in democratic government and of maintaining stable government and law and order, in the interests both of the Indian and of the British peoples."

Will Lord Birkenhead be able to resist all the pressure which is being brought to bear upon him to persevere in the policy of denying further freedom to Indians? If he does, it will, in my judgment, be due to the fact that he has barely entered middle age: he is full of vigour—even more so of ambition; and having assumed that office regarded by every one as a tough proposition, he 18 anxious to discharge that responsibility in a manner which would redound to his creditaccelerate the pace of his political progresspossibly enable him to write his name in history. Being one of the Britons called upon to deal with the havoc which followed in the wake of the break-down of the constitutional movement nearer home, he is less likely to destroy Indian belief in the possibility of a peaceful settlement of their problem than some one who did not go through that harrowing experience.

Therein lies a glimmer of hope—an exceedingly faint glimmer, I must say.

A CHAPTER OF THE EAST INDIA COMPANY'S DIPLOMACY: THE BEGAM OF SARDHANA

(Based on Unpublished Records)

By BRAJENDRANATH BANERJI

I.

At the time when General Sombre founded the principality of Sardhana, the British, although well established in Bengal, were not in a position to contend with the Indian Powers ruling in Northern India and the Warren Hastings had the greatest difficulty in breaking up the confederacy of the Southern States organized by the Nizam with the object of destroying the growth of the English (1779). The only Maratha chief friendly to the British was Mahadji Sindhia, whose army was then being organized by efficers delegated by Hastings It was through Mahadu's mediation that the treaty of Salbai with the Poona Court was signed (1782), for which Hastings was really grateful to him This transaction greatly enhanced Sindhia's influence and his power grew rapidly His armes—commanded and mstructed bv generals-placed the hım position of a king-maker in Hindustan. The British did not interfere with the growth of his power, as in matter of fact they could not then afford to quarrel with such a formidable chieftain (Smith's Oxford Hist. of India. pp. 535-36). This friendly relation with Mahadji and his successor Daulat Rao Sindhia was continued throughout the administration of Lord Cornwallis and Sir John Shore

From the beginning of her career Begam Samru began to treat the English as a friendly Power, and did not hesitate to help them in their need. We learn from two Persian letters,* addressed by the Begam to the Hon'ble Charles Stuart, a member of the Supreme Council, that Col Stuart, a military officer attached to the frontier station of Anupshahr, had been taken prisoner to by the Sikh chief Bhanga Singh

and that the Begam had, on her own initiative, secured his release on 24th October 1791 (25 Safar, 1206 H) She advanced 10 miles to meet him on the way and escort him to her place. This demonstration of friendship on the Begam's part was welcomed by the British Government* and paved the way for a closer relationship between them. which was destined in the near future to play such an eventful part in the history of the British in Hindustan. Sir John Shore. in his letter dated 22nd May 1794, requested her help in capturing the deserters from the British forces at Cawnpur and Fatehgarh.+ At the time of her flight from Sardhana the Begam contemplated retiring into the territory of the friendly British, and her correspondence with Sir John Shore and other officials brought her into closer touch with them She remembered with gratitude the courtesy

two or 4 los to hunt The Sikhs, who kept news of it, sent 1000 troops (under Karam Singh) and captured him. The Englishman offered Rs 20.000 as ransom but the Sikhs demanded 1 lakh" (p. 145). "He has now been released and sent to Delhi after a bond (1218) with a promise to pay sixty thousand Rupees had been executed through the mediatic of Begam Samru. Four Englishmen and one Company of soldiers have come from Anupshahr to escort him back to English territory (p. 25)." Delhi-yethil Marathanchin Rajkaranen, n. 25 & 145.

* "..... It is with sensible pleasure that I learn this happy circumstance is owing to your friendship and exertions. I have to offer my sincere acknowledgments for this instance of your attachment, which will ever be remembered by me and all the Members of this Government as an additional instance of the good disposition you have on all occasions manifested towards this Government. I shall not fail to inform Earl Cornwallis of the circumstance, who will no doubt be equally gratified by it as myself. I have since had the pleasure to learn that the Colonel has safely arrived at Anupshahr."—Letter, dated 20th December 791, addressed by Hod. C Stuart to the Begam. See Vol of Eng. Trans. of Pers. Letters Witten, 22-12-1791, No. 234; also Pol. Con. 29-10-1832, No. 72.

† Vol. of Eng. Trans. of Pers. Letters Written, 22-5-1794, No. 166. In Refutation (pp. 358-59) this letter is wrongly given as "Dated 1797".

^{*}Both the letters are marked as having been received at Fort William on 15th November. 1791. See Abstract of Pers. Letters Received, 1791, Nos. 309 & 310.

^{† &}quot;April 1790:-From the English camp in Anupshahr an English officer named 'Istur' had gone

of the British and continued to exchange striendly letters with them.

TT.

After the retirement of Hastings the British Government followed a policy of non-intervention with the Native Powers and refrained from conquests and alliances except in defence of their existing possessions. They were, however, consolidating their hold on their possessions, and when Lord Wellesley took over charge in May 1798, he found

the British Power firmly established

The policy of the new Governor-General was mainly directed towards two objects. The first was the elevation of the British Government to the position of the paramount Power in India, or in his own words "to unite the principal Native States in the bond of peace under the protection of the British Power." And the next was, the fullest utilization of Indian strength to resist Napoleon's bid for world power which threatened the existence of British dominion in India. With these avowed objects he started "to make annexations right and left without any qualms of conscience." O. H. I., p. 580).

Begam Samru, who had been an interested spectator of the rise of the English Power, naturally felt alarmed at the rapid advance of the British and the fall of one Indian principality after another during the vigorous campaigns of Lord Lake in Northern India and of Sir Arthur Wellesley in the Deccan. The internal affairs of the Marathas at this period presented a scene of terrible confusion. Grant Duff, writing of the year 1799, describes a state of absolute analchy in the Peshwa's territory where the Peshwa, Sındhıa, the Bais or ladies of his family, the Rajah of Kolhapur. and other parties were all fighting one with the other.* The Begam clearly foresaw that a conflict between her overlord, Sindhia and the British was inevitable, and she had no delusions as to its result. Her friendliness towards the English had excited the suspicion Perron, the chief of Sındhia's of Genl. forces, who began secretly to disaffect the Begam's troops with a view to bringing about her downfall. She saw that if she remained an ally of the Marathas she would be equally ruined whichever side might win. Having notking to lose and everything to gain from the victory of the Britishs which seemed the more probable, she decided to throw in her

lot with them and started making secret overtures to them as early as January 1802* in order to safeguard her interests. In her letter of 4th August 1802 (4 Rabi-us-sam, 1217 H)† she offered to place her territory and troops at the disposal of the Governor-General in exchange for his protection. In a second letter, dated 1st February 1803, the Begam says:

"As I am from the bottom of my heart attached to the British Government, I feel an irresistible desire that your lordship should preserve me, the absent, in your remembrance. Adverting to these my declared sentiments, whatever plans your Lordship may have in contemplation, your lordship will in the first instance communicate them to me, that I may have an opportunity of manifesting the sincerity of my heart by affording the aid of my co-operation in your measures. I have a force stationed in the Deccan which your Lordship must consider as awaiting your orders."

This offer of submission and help was acknowledged with pleasure, but owing to diplomatic reasons the British were unable to avail themselves of her forces immediately was a submission and help was acknowledged with pleasure, but owing to avail themselves of her forces immediately was acknowledged.

Ш

After the political degradation of the Nizam, Tipu, and other rulers of Southern India between 1798 and 1800 a complete alteration took place in the relations between the British and the Maratha States. The policy of non-interference in Maratha affanhad ceased to be practicable, because the

^{** &}quot;But with regard to the situation in which Begam Samu stood, relative to Sindhia, her proposition, however desirable it might be, was unacceptable by reason of the peace and amity at that time subsisting between the British and Sindhia. That he might not violate public faith, the Governor-General had always refused her proposition; however, apprizing the Begam, that if an opportunity presented itself, the Governor General should be happy to have it in his power to accept "the proofs" of her attachment to the British Government."—Wellesley's Despatches to the Secret Committee of the Hon. Court of Direct ors, dated 12th April 1804, para 341.

Maratha chiefs always had claims outstanding against both Haidarabad and Mysore for the realization of chauth and on other accounts. and their troops were being maintained by the plunder obtained at the expense of their neighbours. Therefore, the only possible alternatives left open to the Governor-General were either the abandonment of all conquests. the adoption of such measures as would torce the Maratha Governments to acquiesce m a state of general peace and tranquillity. Lord Wellesley set about to consider the means by which he might attain the latter object. The prospect of success in such an not bright, as Maratha endeavour was institutions and ideas were fundamentally incompatible with Wellesley's policy of a confederacy of Native States under British (O.H.I, p. 595). In the course protection of his intervention in the affairs of the Peshwa, which ended in the restoration of Baji Rao II. under British protection, accordto the treaty of Bassein on 31st December 1802, the attitude of the Peshwa and the Bhonsle Rajah of Nagpur gave Lord Wellesley cause to expect hostilities from them in the near future. He decided to make use of the Begam's proffered help, and wrote to her on 22nd July 1803 in the following words

"The present state of affairs enables me to avail myself of your friendly offers of assistance and I am persuaded that your influence will be exerted with promptitude and effect to promote the interests of the British Government The detailed conditions on which I am disposed to offer you the friendship of the Honorable Company will be communicated to you by His Excellency the Commander-in-chief [Lord Lake] who is in full possession of my sentiments on this subject."

At the same time Lord Wellesley instructed Lord Lake as to the lines on which negotiations were to be carried on with her.†

Although by this time war with Sindhia had been finally decided upon, it was not declared until the 6th of August 1813. Exchange of letters between the Begam and the British Government went on, but nactual service was asked of her until the 7th of September 1813. In his letter of that date (Refutation, p. 362) Lord Lake required her to furnish bona fides of her overtures by providing him with some boats of the Dongah

(canoe) kind and by placing her troops, which were then serving with the armies of Sindhia, at the disposal of Sir Arthur Wellesley, or at least to observe neutrality by recalling them.

Shortly after this, the battle of Assaye was fought (23 Sept. 1803) where Sindhia's army met with a severe defeat. Five,* out of the six battalions of the Begam, and 15 guns under the command of Lt. Col. Saleur, had taken part in this battle on the side of Sindhia. As regards the demeanour of these battalions in action the following extract is sufficiently illustrative.

"It is a remarkable thing, and much to the credit of the Begam's troops, that some four or five of her battalions were the only part of Sigdha's army that went off unbroken from the field of Assaye, they were charged by our [British] cavalry towards the close of the day, but without effect, Col. Maxwell, who commanded, being killed in the charge by a grape-shot." (Skinner, 1. 286n).

The Begam issued instructions to Col. Saleur, in accordance with Lord Lake's request, early in October, but that officer experienced great difficulty and risk in giving effect to her orders The battalions, however, 'left Sindhia's camp at Burhanpur on 14th October 1803 (27 Jamadi-us-sani, 1218 H.)"§ "At the time they left the Maratha camp they consisted of five battalions and a party of horse '\$ under the command of Col. Saleur who, on his arrival at Deeg on 15th Decr. | received orders agreeably to which he joined Col. Ball's detachment at Kanoond. They served the British General up to 31st May, Col. Poethod having relieved Col. Saleur in their command, on account of his ill-health

on 13th February.* They afterwards "marched to Tuppul to join the Commander-in-chief, but returned to Sardhana without having" done so.†

In the meantime the Begam sent Hakim Muhammad Jafar S as her agent to Lord Lake Evidently as a result of the conversations between them a secret treaty was concluded under which the Begam transferred her allegiance to the British, who were at this time in possession of Delhi and the surrounding tracts, and she was allowed to retain her possessions and status as a jagirdar of the British Government. S Lord Lake also asked the Begam to write to her friend Ranjit Singh, the ruler of Lahor, to keep his troops out of the districts of Saharanpur, Boodecah, and others which he was then engaged in settling appears that at this time certain conquered parganas in the district of Saharanpur were temporarily committed to the management of the Begam; and that she was in charge of them during the continuance of the Maratha war **

IV.

Prior to these events Lord Wellesley had definitely formulated his policy as regards the relationship to be established between the Begam and the British Government. Originally his idea was to

"commute her jagir for a suitable stipend, the

extent of which must be regulated by the profits which she actually derives from her territorial possessions, and by the importance of the services which the British Government may derive from the exertion of her aid and influence."*

It was extremely important then that the whole Doab, including the territory occupied by the Begam, should come under direct British rule, but how this could be best effected was left to Lord Lake to decide. After a thorough study of the Begam's disposition and the power she wielded in the province, Lake recommended that it would be better to propose an exchange of territories, which arrangement was sanctioned by Lord Welleyley.†

Sindhia's forces having been overcome both in Northern and Southern India and the British being in firm possession of all his territories east of the Jamuna, Lord Lake wrote to the Begam on the 29th October, 1803

"Immediately on receiving this letter, and in accordance with the tenor of the deeds granted to you by the present (Government) you will come alone to my presence, as some matters are to be verbally mentioned to you, and keep your troop ready prepared forward, that there may be no confusion when an order is received." (Refutation, p. 412).

At this meeting Lake no doubt proposed that she should give up her present possessions in the Doab and accept lands to the west of the Jamuna to hold as a independent sovereign. She readily accepted this proposal, hoping thereby to attain a more exalted rank and other benefits as an ally of the premier Power in India. She was directed to see Lt. Col. Ochterlony, the Resident at Delhi, and arrange the terms of the proposed exchange. She visited Delhi on the 12th of November and in a letter written to Lord Wellesley, within a week of the visit, she says.

"It has been intimated to me by Col. Ochterlony that Commissioners have been appointed to settle the affairs of the Doab. It therefore occurs to my mind that as difficulties might arise between me and the Commissioners in the exercise of their authority in the vicinity of the mahals, which constitute my jagir, it would be prudent to provide against the occurrence of them since it is my primary study to promote your Excellency's satisfaction and I should be utterly unable to support the weight of the displeasure of the Commissioners. Under these circumstances I hereby

For the statement, showing the land and Sayer revenue and sundry other items collected by the Began exhibiting the difference between the accounts transmitted by her and those given by the qanungoes of zila Saharanpur, see Sect. Prosdgs. 21-11-1805, No. 52 B. The collections made by the Begam were chiefly on account of the balance of 1210 H. [1795-96] and 1211 H. [1796-97].

^{*} Letter, dated 28th July 1803, from Lord Wellesley to Lord Lake. Wellesley Despatches, in 242-44.

[†] Letler, dated 11th October 1803, from the Secretary to Govt. in the Sect. Dept. to the Agen of the Governor-General.

of my own free till and accord, relinquish my lagar, which I have possessed for the space of 30 years, and for which my partiality and affection is equal to that which I bear for my native land, and on which I have moreover expended large sums of money in erecting buildings for my own residence and the accommodation of my troops notwithstanding these powerful reasons, however, every one of which forbid the act, I readily resign it into the hands of the Company. ***Let territory be assigned to me in lagir on the other side of the Jamuna in lieu of the mahals, the possession of which I have relinquished. At the same time I hope that the territory which may be so assigned to me, may be compact and undivided, with a view to its successful management.

Although due to recent conquests considerable territories to the west of the Jamuna† were available out of which a suitable principality could be formed for her, the prevailing unrest greatly hampered the speeding up of the transfer. On the other hand, Lord Wollesley's policy demanded an immediate settlement of the Begam's territories and therefore on 23rd December 1803 he wrote in reply a letter to the Begam reaffirming the offer previously made and urging the immediate surrender of her estates under guarantee of compensation for any loss she might incur therefrom

"The sentiments expressed in your letter received on 5-12-1803] and the judicious and annable course of proceeding which you have adopted on the present occasion, have confirmed the sense which I have long entertained of your attachment to the interests of the British Government. * ** I am particularly gratified by your ready acquescence in the suggestion conveyed to you under my orders by His Excellency the Commander-in-chief, for the recall of your battalions serving with the army of Dowlut Row Sindhia and in the assignment of territory on the western side of the Jumna in exchange for your present possessions in the Doab. With a view to manifest the sense which I entertain of your meritorious conduct on this occasion and to afford you ample compensation for the relinquishment of your present lagir, I have resolved to guarantee to you the independent possession of the territory which will be assigned to you under the proposed arrangement without any other condition than that of affording to the British Government the and of your troops whenever it may be required, and of submitting to the arbitration of the British Government any differences which may eventually arise between you and any other State or chieftain.

H.E. the Commander-in-chief will adopt as soon as possible the necessary measures for transferring to you a portion of territory on the western side of the Junna equivalent to that which you have ceded in the Doab. I trust however that you will not delay the actual cession of your present pagir, to the authority of the British Government, until the assignment of an equivalent portion of territory, which must necessarily occupy some time before it can be effected. You will receive ample compensation from the Br. Govt for any loss of revenue which may be occasioned by the delay in selecting and transferring to your authority the districts to be assigned to you on the western side of the Junna.*

This letter had a very disturbing effect on the Begam's mind. She had seen promises made and broken every day of her life, and therefore it was not easy for her to believe that Lord Wellesley really meant to keep his word and was not trying to rob her of her lands by a trick

She had been under the impression that as soon as she would give up her former possessions, the English would grant her new territories, and she was therefore surprised that this was not to be the case. The bitter disappointment felt by the Begam on being thus summarily called upon to deliver up her possessions may be realized from the following letter, addressed to Lt. Col. Ochterlony, on 3rd February 1804.

"You have written to me to evacuate and deliver over the districts of Sirdhana etc which has been my residence for a length of years and on which I have expended lacks of Rupees in buildings and habitations, to the aumils of the English Gentlemen immediately on their arrival. My brother, it is proper you should consider that when I go away from here. I require a place to stay in, where I may reside with my family and dependants. There are near a thousand destitute persons and lame and blind people in this district for whom a place of abode is necessary. From the commencement until the present time no gentleman invested with authority in this country has disgraced me in this manner. At the period that the English Gentlemen have acquired possession of Hindustan I rejoiced that from a consideration of my being of the same race with theirs I should by some means or other be exalted in rank but the contrary has happened for they have required of me several districts possessed by me for 30 years. What may not happen to the rest? If it be the intention of the gentlemen by some means or other to dispossess me, what occasion is there for preserving appearances? Do you my brother come and having laid hold of my hand turn me out of my abode. The world is not narrow and I am not lame. I will sit down in some retired corner and pass my time in solitude.

Secret Prosdgs. 2-3-1804, No. 183C.

the territory placed at the disposal of the British Govt, by the glorious success of our arms at the battle of Delhi, furnished us with the means of assigning to the Begam a territory on the western part of the Jamuna instead of the jagir which she possessed in the Doab." Para 55, Wellesley's Despatches to the Secret Committee of the Hon'ble Court of Directors, 12th April 1804. Vide Refutation, p. 424.

^{*} Vol. of Eng. Trans. of Pers. Letters Written, 23-12-1803, No. 136; Refutation, n, 416 (wrongly dated 22nd Decr. 1803).

[†] Secret Prosdgs 2-3-1804. No. 252.

On receipt of the above letter, Lt. Col. Ochterlony hastened to explain matters to by dint of perseverance and her and frequent explanations persuaded her believe that the British Government meant her no harm. Her enemies were busy at that time trying to make mischief between her and the British. Of these attempts the most remarkable one was that of a forged letter which purported to have been written by her to Holkar.* She consented at last, although grudgingly, to surrender her provinces with the exception of the pargana of Sardhana.

In her letter accepting the British terms she vigorously denied the charge of treachery and secret plotting with Holkar

'I am willing to do according to your advice and deliver up my provinces: I only ask that until other countries will be allowed to me in exchange, that the Pargana of Sirdhana will remain to me; the revenue of which I agree to be deducted from the sum which will be given to me to pass for my troops and when other place shall be granted to me for my residence and safety, I will deliver it up at the same time. I would do it

* "I was gratified by the receipt of your letter the object of which became manifest to me letter the object of which became manifest to me from the writings of Shaikh Qudrat-ullah. It is fit that you consider me your sister, absorbed in a desire to gratify your inclinations, for the bonds of friendship have long acquired strength between us. I rejoice at your intention of marching to this quarter, but as they have military and artillery stores along with them in abundance, it is not proper for you to come to action with them, but you should encamp ten or eleven kos from them, harass them with a predatory war destroy the harass them with a predatory war, destroy the country, and prevent supplies etc. reaching them, that it may be difficult for them to provide for their safety. I am every way ready, and your Ally from my heart and soul. Consider all the Sikhs and Jats, who are united with me, ready to join you. Make me constantly happy by acquainting me with the state of your friendship, your designs, and the place where your army is encamped, that I may follow the same path. You designs, and the place where your army is encamped, that I may follow the same path. You will receive many letters from me (enclosed) in amulets."—Translation of a Persian letter [without date but with her seal affixed] from Zeb-un-nisa Begam to Jaswant Rao Holkar. Sect. Prosdgs. 12 April, 1804, No. 61.

Major Thorn's opinion on this letter also supports our contention that this letter was a forgery: "This document was calculated to create hostility against the Begam and thereby probably of

hostility against the Begam, and thereby probably of driving that extraordinary woman into an alliance with Holkar, out of revenge and self-defence."

(P. 332). Even Lord Lake, when forwarding this document to the Governor-General, ander cover of his letter, dated Camp Hindoun 28th Feby. 1804, remarked: "This letter, though her seal is affixed to it, may possibly be a forgery."—Sect. Prosdgs. 12-4-1804, No. 59. now, but I am sure that your and commanding the town and I remaining in the chounney always some complaints he would make against, right, or wrong.

I am very sorry to hear that it is reported that I am very sorry to near that it is reported that I do keep on correspondence with Jaswant Rao Holkar. I assure you, and you may inform yourself that since the formation of my party, which is for these 40 years past, no person yet can charge me of treachery, therefore, as I consider you to be a particular friend of mine. I hope you you to be a particular friend of mine, I hope you will make enquiries, and to inform yourself from whom this false report is given, and to persuade any person of the contrary, that does believe it. I enclose you 3 letters that I have received from Kabul, they are in my name However, I don't know their contents and I fear that some creames for my record characteristics. of mine would charge me also of keeping correspondence with the king of Kabul; this is the reason that I send them to you for to be read'*

The Begam appears to have taken offence at being charged with secret negotiations with the enemy. She had for a long time enjoyed great influence amongst the neighbouring chieftains and naturally their envoys attended her Court. But this did not necessarily mean that she was engaged in intriguing with them When, in the beginning, she had come forward of her own accord, to throw in her lot with the British, she was prepared to deal straight with them, expecting the same treatment at their hands. Had Lord Wellesley acceded to the request of the Begam for an immediate assignment of territories, instead of indulging in blundering diplomacy, he would have found in her at influential and strong ally and saved himself much trouble and anxiety, to say nothing of the cost of military operations in the province As a matter of fact, the obvious advantage of conciliating the Begam had long been apparent to the officers who were directly in touch with her and they had all along advised Lord Wellesley to adopt this course, but without success. Even as late as 10th December 1804 Archibald Seton, the Agent to the Governor-General, reported

"As the situation of the Began both from the geographical position of her country, and from the nature of her military strength, is or appears to me to be, such as to render her either a most useful ally or a very troublesome enemy, without the possibility of her ever becoming formidable as a neighbouring power, I should imagine that the conciliating her might in the present state of affairs be a simple and effectual means of restoring and preserving the tranquillity of the upper part of the Doab. Her force is said to consist of nine battalions of infantry and 40 guns. These, if subsidized by Government, and opposed to the geographical position of her country, and from the

^{*} Letter, dated 23-2-1804, from the Begam to Ochterlony. Sect. Prosdgs. 12-4-1804. Col No. 64.

Sikhs, might as far as I can judge, completely prevent their committing depredations in the British territories and, by insuring the realization of the collections, greatly enhance the value of the highly capable district now in question."

VI.

The indefinite delay in handing over to her the territories promised in exchange, and frequent accusations against her loyalty gradually undermined her faith in the British About the middle of 1804, Holkar, in conjunction with the Rajah of Bharatour and the Sikh chiefs of the Lower Panjab, started a vigorous campaign which imperilled the British forces in the Doab. thev great her assistance of: considered value to them, they played upon the fears of the Begam, hoping to receive active help from her The Begam though discontented did not dare to declare openly against the British, as she was still doubtful about the ability of Holkar and his confederates to stand against the British Power She therefore abstained from actively helping either party, and, although remaining openly an ally of the British, carried on secret negotiations with the enemy in order to remain in the good graces of whichever party might ulti-mately come into power The efforts of the Sikhs and their allies were attended with a certain amount of success In October 1804 Saharanpur fell into the hands of the Sikhs. and Col. Burn was forced to retreat. The Collector, Mr. G. D. Guthrie, was taken prisoner by Shere Singh The Begam took this opportunity of exhibiting her attachment to the British by her intervention which resulted in the liberation of the Collector.

Holkar and Ranjit Singh tried their utmost to induce her to declare in their favour, and even went to the length of exaggerating their strength and the advantages gained by Jaswant Rao Holkar over the British army, and alleging that he was going to receive reinforcements from Jodhpur, Jaipur and Kota. S Rumours of this intrigue reached the ears of the British authorities and caused much alarm. In his letter of 28th December, 1804 Archd. Seton writes:

* Secret Prosdgs. 7-3-1805, No. 424 † "The Sikhs in the Upper Doab, G. R. C. Williams, B. C. S., Calcutta Review, vol. 1x1 (1875), p. 54. "From my knowledge of what had taken place at Sirdhana and from what I had heard of the arts which had been practised to work upon the fears of the Begam and to impress her with a belief that the British Government had it in contemplation to reduce her power, annihilate her consequence, and degrade her from the rank which she has hitherto maintained, I was rather concerned than surprised at receiving intelligence last night that she had accepted the terms which were offered to her by Ranjit Singh, viz., the monthly payment of a lack of Rupees, and the delivery to her of one of his forts. The intelligence has this day been confirmed to me by Mr. Guthrie, with the additional circumstance that distrustful of the fidelity of her European officers, the Begam had given the command of her troops to native sirdars. I think it very probable that she will immediately march to Saharanpur in older to attack, or at least to harass and annoy Col Burn '*

She did not, however, actually march out of Sardhana, as she was evidently dallying with both parties till she saw the result of the siege of Deeg. The capture of the fortness of Deeg by the British on the Christmas morning of 1804, prevented her from making an open declaration against the British but she continued her threatening attitude which seriously hindered British operations.

When the troubles were at their highest, Col Ochterlony addressed a letter to the Begam requesting her to forward some stores from Sardhana to Saharanpur under escort of the Begam's troops, and in reply she promised compliance with his request. Ochterlony's reasons for the writing of this letter 8 were as follows

'I was the more induced to this step as in the event of their compliance it would appear to the public that she had at last made her election in our favour and this seeming declaration. I judged of importance, as her influence in this quarter is greater than can be well imagined and her indecision is certainly one great cause of the disturbances in the upper districts, if not the primary cause of the irruption of the Sikhs."

^{\$}Letter, dated 15-12-1804, from Col. Ochterlony, the Resident at Delhi to the Governor-General. Sect. Prosdgs. 31-1-1805, No. 236.

^{**}The Begam having written red descring me to send confidential points on my part to her, I have despatched Lat. Dhokul Sing to the Begam for the purpose of cathing affairs. If the negotiations with the Begam should be conducted to a favourable issue, I shall direct my march towards your district. On this point,

He strongly believed that the restoration of her former jagir during her life was all that was needed to win the Begam over and he urged the Governor-General to do so:

"By our success she is afraid of the loss of her paragase and of the disbandment of her troops and such is her desire of power that I am perfectly convinced she would encounter any odds to retain both in their present state; on the contrary, I believe that assurances of their integrity during her life would immediately induce her to declare in our favour, but at present she considers all assistance to us, as accelerating her own downfall."

In spite of these urgent representations, the Governor-General insisted upon speedy transfer of the Begam's jagir and her early removal with her troops beyond the Doab. Only in case of extreme emergency, should such arise, was the Commander-inchief given the power to confirm the Begam in her present jagir, and even then it would be necessary to stipulate for the reduction of her forces and the replacement of her French officers by British † The emergency referred to was probably an expected outbreak of fresh hostilities with the Marathas. encouraged by the failure of Lord Lake's As the Raiah operations against Bharatpur of Bharatpur capitulated in the beginning of April 1805, the emergency contemplated did not arise and the Begam's affairs were left in the same unsettled state as before. The root of the trouble can be traced to Lord Wellesley's obtuseness in not taking the Begam's natural thoughts into consideration; moreover, his policy of declaring war on the Native States on the slightest pretext in order to expand the British Empire, naturally led the Begam to put little faith in mere promises of future favours. If Lord Wellesley had not been recalled within a few months it is probable that the Begam would have been forced to deliver up her former territories.

VII

In July 1805 Lord Cornwallis came out for the second time as Governor-General, pledged to a policy of conciliation. His attention was drawn to the Doab, and Lord Lake, who was fully acquainted with the situ-

ation, gave his opinion that the new policy of preserving, the tranquillity of the country,

"it is particularly necessary to conciliate the Begam Sumroo, and to inspire her with a just confidence in the favour and protection of the British Government. Adverting to the reasons which are supposed to have chiefly caused the Begam to behave in the equivocal manner she has lately done, His Excellency is of opinion that the most likely means of retaining her in her attachment to the British State, will be to give her a most positive assurance that she shall during life remain in the possession of the jagir in the Doal on the same terms she now holds it."

Accordingly Lord Cornwallis wrote that memorable letter of 16th August 1805 which reinstated the Begam in her principality of Sardhana:

"I have had the satisfaction to learn that the general tenor of your conduct since you were placed under the protection of the British Power, has been consistent with the duties of fidelity, and I have been peculiarly gratified by the information of your prompt and successful exertions in rescuing Mr Guthrie, the Collector of Saharanpur, from a situation of imminent danger by the aid of your troops, and of your kind and liberal treatment of that gentleman, after his arrival at Sardhana. These circumstances, added to my recollection of your uniform friendly conduct towards the British Government, and towards British subjects, render me desirous of promoting your comfort and satisfaction by every means in my power. I have reason to believe that the late Governor-General, aware of your attachment we the territory, which during so long a course of years has been in your possession, had it in contemplation to refrain from taking advantage of your consent to the transfer of your jagir. At all events, I have great pleasure in apprizing you, that reposing entire confidence in your disposition to maintain the obligations of attachment and fidelity to the British Government, I have resolved to leave you in the unmolested possession of now jagir, with all the rights and privileges which you have hitherto enjoyed. As the condition of this indugence, I have a right to expect that you will not only abstain from affording encouragement to those turbulent persons who are disposed to exerte confusion and promote disorder, but that you will cordially assist in preventing their attempts to disturb the tranquality of the Company's territories.

I have directed Mr. Guthrie to proceed to

Sirdhana for the express purpose of communicating, in further detail, the sentiments and intentions expressed in this letter." (*Refutation*, pp. 363-64).

The Civil Commissioner, Mr. G. D. Guthrie, was deputed to the Begam and the final treaty or agreement with her was made in August 1805. Its terms were as follows

however, keep your mind at ease."—Trans. of a letter from Ranut Singh of Lahor to Sumbanaut Tahsildar of Saharanpur. Vol. of Eng. Trans. of Pers. Letters Received, 18-3-1805, No. 69, p. 227.

[†] Letter, dated 15th Feby. 1805, from N. B. Edmonstone Secy. to Government, to Lt. Col. Ochterlony, Resident at Delhi. Sect. Prosdgs. 28-3-1805, No. 157. See Appendix B.

^{*} Letter, dated Head-quarters, Mattra, 1t August, 1805, from Col. Malcolm, Civil Commissioner with H. E. the Rt. Hon. Lord Lake, to G. D. Guthrie Esq., Civil Commissioner deputed to H. H. the Begum Sombre's Camp. (Refutation. pp. 365-66.)

missib which cannot be altered. In despair he hinds solace in the thought that there is Providence of God's will which is exercising care and direction for and over him. He prays to the Almighty to take timely measures against misfortunes. For surely they do come in spite of our supplications on the other hand, there are times when fortune sintles upon us and good luck follows us at every step and crowns our endeavours with success. The unexpected do happen, and fate gets the credit. It is therefore wise to be fore-warned and fore-armed to look round, pry into every hole and corner and scrutinize the possible sources of information which are all hidden in Time.

Here is, however, contradiction. For, if a

Here is, however, contradiction. For, if a result is mevitable and predetermined, there is no room for action. Previous knowledge of what will happen cannot modify it. The reply is that though we have no hand in shaping our destiny we may be prepared for the worst so as to be able to bear the burden of sorrow with passive submission, and if good be in store for us we may be able to accept it without elation and make the best use of the favourable times for securing further

good

The desire to probe the unknown is natural and has made man what he is. His science and civihas made man what he is. His science and civilization, his progress in the spiritual and material world, are the outcome of his inherent inquisitiveness. Yet we cannot view with equanimity the mental slavery to which we have been reduced by multifarious doctrines promulgated by our ancestors borrowing the hallowed names of ancient Rishia. At one time, during the Buddhist period, the country appears to have suffered from a plague of fortune-tellars, who were called Nakshatrathe country appears to have suffered from a plague of fortune-tellers who were called Nakshatrasuch and denounced as out-castes by the wise leaders of thought, while shrewd statesmen like (hankya realizing the failings of the people employed them as spies. Yet soothe-sayers and ladkiels flourished as they do now in every country Garga (2nd cent. B. C.) was eloquent in his praise of the proficiency of the Yavanas in astrology, and not a few eminent astronomers both of the East and of the West believed in its truth It seems the desire to be duped is as strong as the desire to be fore-warned, and we commend the problem to psycho-analysts. The crowing of the clow, the tick of the gecko, the sneeze of a man the running of a fox, and the behaviour of other animals have been given meanings by the sorrow-ing and hesitating mind. The throwing of dice. the naming of numbers, the drawing of lots and a hundred other contrivances to determine events are purely gambling with chance. As in the medical profession there are a hundred quacks for one doctor, so there are charlatans in the realm of belief. Once the door is opened to the possibility of divination, there is no knowing where the sum may end. Heaps of rubbish have thus acumulated in the pooks and corners of the edifice inulated in the nooks and corners of the edifice which was merely a hut at the beginning, and though Railways and Steamers running every day at all hours, without heeding the malignant influences of the lords of the days and hours, and a lost of any location and hours, and a locat of any location and hours, and a locat of any location and any location a inest of the lords of the days and nours, and a lost of evil conjuctions are a daily and open proof of the absurdity of their claims as determining factors, it will take years before the apprehension from the supposed influences can be removed from even the well-educated mind which has imbibed the belief.

The author has laid stress on the importance The author has laid stress on the importance Daiva which we readily admit, but has hardly an thing to say regarding the possibility of divinir it, and through an analysis of the elemen of time as measured and expressed sor fifteen hundred years ago. These are distinguished in the propositions, and each has to be established in the dependently of the doctrine of Daiva before Jatal and dain to be a supposed. It does not matter can claim to be a science. It does not matter whether Lok Tilak or other eminent men believe whether LOK Thak or other eminent men believe in its truth, or whether certain predictions prove to be true. We have ourselves heard of startlir predictions made by a gentleman who studie Jataka out of curiosity But he haddoubts, since man were wide off the mark, and no sane man would be a predictions and guide his his life. depend upon the predictions and guide his haccordingly. The books on Jataka themselves affor numerous instances of doubt which is to be decided one way or the other according to the judgme and cleverness of the adept. At any rate the precepts are not mathematical formulas, but admit different interpretations. The early horoscopic were content with seven planets which we supposed to control destiny by their positions the signs of the Zodiac as they were supposed do the days of the week. The two nodes of t moon were afterwards added to the list about t moon were afterwards added to the list about to 7th cent A.D. (The author has added two mo Uranus and Neptune, lafter European astrologen There are various periods, and Parasaras Hous a voluminous work on the subject which will be wilder any serious student of the three at least are now recognized vizion which assumes the full span of life to 120 years another 108 years, and a third years (perhaps average duration of life), or which the planets exercise their influence it definite periods in succession Besides, there as the influences of the day of the week, month, years the influences of the day of the week, month, years the influences of the day of the signs the tithin nakshatra, yoga karana the signs of the codiac, the degree of the ecliptic on the horizontal transfer of the contraction of the horizontal transfer of the contract at the time of birth, and a hundred different kin of conjunctions, enmity and irrendship among the planets. Have the effects of each of these factor ever been verified? Where was the mathematical who analysed the vast mass of statistics which we necessary and calculated the effect of each factor To this question there is no answer

The book before us is meant to be a text bofor students who desire to learn the art drawing horoscopes, who, it appears, sit for examination, model questions of which have be appended. In Calcutta also there are bureaux to the diffusion of astrological lore, and examination are held to test the progress of students. Whave nothing to say against them Rather welcome them, for we believe spread of knowledge even of doubtful utility is sure to bring its train much which is true and useful winderstand there are committees, self-appointe whose object as to investigate the truth of the so-called laws. This is serious business, and got may come out of it if the committees are we equipped for the stupendous task they have unde taken, and the enquiry is conducted in a trul scientific spirit. This will of course require the labour of a body of competent men tog som years, but we campt imagine any other way to which the chaff can be sifted from the wheat an belief in astrology in all its branches placed on rational basis. It cannot be dismissed as a religible to the students of the dismissed as a religible to the students.

of mediæval superstition when it has built a strong citadel hallowed with age in the minds of the people. If there be truth, let it be purged of extravagance and trumpery, and another probability be added to those which guide our life. If on the-

contrary there is no truth in it whatever, let it be proclaimed by a competent authority and the people allowed to breathe freely and fight the battle of life like freemen.

J. C. Roy

THE SACRED KAVERI RIVER

By BETA

"Hail noble Kaveri of thee I sing.
Thy rolling waters to the valleys I bring.
A welcome succour, with a liberal hand
Bestowing plenty to a burning land.
Oh, could I flowlike thee and make thy stream
My great example, as it is my theme."

THE honour of second place among the sacred rivers of India is contested by several streams, but, whatever be the opinion of those who live on the banks or in the vicinity of the other claimants, that the claim of the river Kaveri, is second only to

A Bathing Chat on the River

that of the Ganges, is undisputed in the south. From its very source to its delta, it passes through lands which it fertilises, and all along its banks devotees offer their thanksgiving to the gooddess of the river. The river is supposed to have a divine origin as we might expect. The story of its origin is related in the Kaveri-Mahatmya of the Agneya and the Skanda Puranas. She was first Vishnu-maya, a daughter of Brahma. By his direction she became invariate in Lopamudra, a girl formed by Agastya (with a

۲,

view to her becoming his wife) of the most graceful parts of the animals of the forest. whose distinctive beauties, as the eyes of the deer, etc., were subjected to loss in her superior charms. Brahma gave Lopamudra as a daughter to Kaveri mum, whence she acquired the name of Kaveri. In order to secure beattude for her father, she resolved to become a river, the merit of whose waters in absolving from all sin and blessing the earth should accrue to him. But when she became of age, Agastya proposed to marry her. To reconcile the conflicting claims. Lopamudra or the mortal part of her nature became the wife of Agastya, while the Kaveri or the colestial part flowed forth as a river. There can be no doubt of the high place the Kaveri holds in the affections of the people of the south. It is even said that the goddess Ganga resorts underground to the all-purifying floods of the Kaveri once a year as at a cortain feast, to wash away the pollution contracted from the crowds of sinners who have bathed in her waters in the course of the year. We cannot imagine any greater claims to sanctity than that.

The river rises in Coorg, a small state contiguous with the Mysore State on its western side, at a place called Tala, on the verge of the western ghats. At the foot of a hill near Bhagamundala, the river is joined by the Kanake. There are several temples at this point, and here, on the occasion of the Kaveri feast, from eight to fifteen thousand people assemble. But the course in Coorg is short and tortuous. The banks are high and steep. The bed of the river is alternately sandy, pebbly, and rocky. In the monsoon it becomes a thundering torrent, and overflows the surrounding country. At Fraserpet, where there is a bridge 516 feet long, the river rises to the height of 20 or 30 feet on

these occasions. From its source to Siddarpur the river runs due east, but afterwards turns to the north, forming a boundary of 20 miles between the two States. It now passes into the Mysore State, and its course is full of interest for its passes through a most for the country and over several falls. A brief reference only can be made to the places of interest through which it passes. Before

Sagara Dam Below Kosshra Roya

referring to these important places it ought to be stated that the waters of the Kaveri are dammed thirteen or fourteen times in its course through the State, and from each of these dams long channels are cut to carry off the water for irrigation purposes. A very large area is now covered by these irrigation channels, and the value to the people of the district cannot be overestimated Reference to the great dam at Kanambadi, known as the kiishnasagara Project will be made later.

After passing through Saligiam, Yedatore, and Bhairapura, where it receives the Laksmantirtha, it reaches the famous island of Seringapatam, where it branches into two aims enclosing the island The story of this great fort is well known Here Hyder All and Tipu Sultan hold their Court, and for many years resisted the attempts of the British to dislodge them. But in 1799 the forces of the British general, succeeded in completely capturing the stronghold, and within a short time, the whole country was in their hands. The British forces, after a long march, reached the right bank of the haveri, opposite the fort. Here the stream shallow. After careful preparations, the order for the attack was given, and General Baird who had himself known something of the terrible cruelty of Tipp, led the British

forces across the river. It was a fine bit of work, and the soldiers were rewarded by an entry into the fort, after severe fighting. On this projecting piece of land a a monument has been erected in memory of the fallen soldiers. This place is frequently visited by the soldiers stationed in Bangalore.

From this place the river flows southwest, passing the village of Somnatour, where is to be seen one of the most perfect specimens of Hoysala architecture in existence. This style of architecture is well represented in the Mysore State, but, though smaller than some of the better known, it is a wonderful piece of work The building was completed in 1269 by Soma, a member of the Royal Family of the Hoysala king Narasinha III. The temple consists of three pyramidal towers surmounting a triple shrine. Round the base are portrayed consecutively, with considerable spirit, the leading incidents in the Ramayana, Mahabharata and the Bhagavata, carved in potstone, the termination of each chapter and section being indicated by a closed or halfclosed door Unfortunately this place is not very accessible and so does not receive the attention it would otherwise enjoy

The ruined town of Talkad is next passed. This is a town of great antiquity, the first

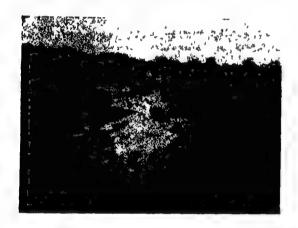

The Kaveri at the Electric Station of Sivasamudrum

authentic notice of which appears in the Sanskrit Dalavana-pura, in connection with the Ganga line of kings. It had a long and chequered history, but today the city is almost completely buried beneath hills of sand stretching for nearly a mile in length, only the tops of two pagodas being visible. The sand used to advance on the town at the rate of 9 or 10 feet a year, principally dur-

ing the south-west monsoon, and as they press on three sides, the inhabitants were constantly forced to abandon their homes and retreat further inland. As there is however, good provision for wet cultivation, by water from one of the channels of the Kaveri, the population in the neighbourhood is increasing. More than thirty temples are believed to lie buried under the sand. That of Kirti Narayana is occasionally opened, with great labour sufficiently to allow of access for certain ceremonies. The most imposing temple left uncovered by the sand is that of Vedeswara. The place finds mention many times in Hindu legends

From near Talkad the river runs northward until it reaches the island of Sivasamudrum, where two branches of the river encircle the island and form the famous falls of Gagana Chukki on the Mysore side, and of the Bar Chukki on the Combatore side The re-

The Falls of Sivasamudrum

united stream, with a bed 300 feet lower passes then eastwards through a wild gorge and receives the Shimsha and the Arkavati from the north. Sivasamudrum is a romantic spot, and though it was previously well known on account of the great waterfalls, it has in recent years been known to more on account of the electric works established there by the Mysore Government The principal island embraced by these two streams, is called Heggura, but is more generally known as Sivasamudrum. The falls are very fine, especially in the monsoon season when the flow of water is very great. On the western branch of the river are the Gagan Chukki Falls. The approach is by a steep path leading down from the tomb of an old

Mussalman saint. The waters of the Kaverr dash over the steep rocks with a deafening noise, so great that it is almost impossible to hear the sound of one's own voice when in the near vicinity. The cloud of vapour is seen at a great distance. In his account of these falls Buchanan states that they are grander than anything he had previously seen The Bar Chukki, on the eastern branch of the river, is a very grand and impressive They display a great volume of water which in the rainy season pours over the hillside unbroken sheet a quarter of a mile wide In the centre is a deep recess in the form of a horse-shoe, down which the principal stream falls, and having collected in a narrow channel, rushes forward with prodigious violence and again falls, about 30 feet into a capacious basin at the foot of the precipice. The Government of Mysore has taken advantage of this drop in the river. and by means of a dam, and long channels has brought the water above the power work-Here the force available is used for the driving of the turbines which produce the electric power for Bangalore, Mysore City, and the Kolar Gold Fields The place is therefore of interest, both for the natural scenery and on account of the way in which it has been harnessed for industrial purposes

Reference ought to have been made at a previous point to the very important project known as the Krishnaraja Sagar Project, whereby the Kaveri waters are dammed at a point before the river reaches Seringapatani For many years the Government of Mysone had been impressed with the great loss of water in the monsoon time when the heavy floods carried away to the sea millions of gallons of water. Then, too, they have found themselves in difficulties with respect to the supply of the necessary head of water for working their turbines at Sivasamudram. In order to meet the needs of this Power Station it was deemed necessary to dam the river at a higher point. This is now being done The work has already progressed very considerably and a dam over a mile wide habeen erected. The work has been in progress for about ten years, and though it is fall from complete, the dam is of sufficient height to form a huge lake when the monsoon floodcome. It is one of the biggest engineering schemes in the whole of India, and when it is completed, will provide irrigation facilitiefor thousands of agree of land, as well as the necessary power for the Electric Power tation The whole project has been carried it by the Mysore Government. There has been a dispute between this Government and he Madras Government, for the holding up f water here naturally affects the great plain the Madras Presidency, but it is likely a torking arrangement will be possible.

Old Hindu Bridge at Sivasamudrum in Mysore State part of which was recently washed away by the floods

The kaveri now leaves the Mysore State at what is known as the Goat's leap. In its further course it runs southwards, then enters the Trichinopoly District in an easterly direction, and spreads in a rich delta over the Tanjore District. The average breadth of the river in Mysore is from 300 to 400 vards, but after Sivasamudrum it swells into a much broader stream. In some places, the bottom of the river is used as vegetable gardens when the water is low, but in other places it is too rocky to permit of this. The first rush of water generally occurs about the middle of June but in August, the flow is more normal.

But we must briefly refer to one or two of the interesting places the river passes through after leaving the Mysore State The town of Trichmopoly is reached after a journey of many miles place 18 of great interest, especially a historic point of V10W. great rock is one of the best known physical features of South India, and is well worth a visit. The Kaveri passes by the city, and along its banks there are many ghats and temples. From the top of the rock one gets a wonderful panorama view of the "inding river with the hundreds of acres of land bearing heavy crops, all possible by the beneficence of the great river Truly this river goes sweeping over the plains bringing healing and life in its train

Next comes the sacred temple city of Srirangam, probably holding the premier place in South India as a sacred spot The temple there is the largest in India, for it is literally a town in itself, having huge walls and gateways, while inside every kind of life associated with a town is to be seen. The temple has even a municipality which regulates and controls the affairs of the whole Every year countless numbers of pilgrims make their way to this sacred city, and we may be sure that, at this part of it's journey the sacredness of the Kaveri is a very real thing to the devotees. Much might be said of this wonderful temple city, but it is sufficient to say that its sacredness is enhanced by its proximity to the sacred river whose course we have been tracing

The next place of importance is the town of Tanjore which is one of the most flourishing cities in the South Its wealth is mainly due to the extensive paddy crops which are yearly reaped in the great delta, watered by the Kaveri. We can understand the anxiety of the people of this district about the Mysore scheme which dams the water at a higher point, for their very life depends on the supply from this river. We do not see how this delta could be made truitful

The Monsoon floods of Kavetrat Krishna Rata Sagara Dam

were it not for the supply from this giver Can we wonder that the people living along its banks, right from the time it issues from the mountains of Coorg to the

time it reaches the sea, should look upon the Kaveri as sacred, and offer to it their

sacrifices of thanksgiving?

The Kavern is spanned by several bridges, the most important being those at Fraserpet, Yedatore, Seringapatam, and Sıvasamudrum. There are many alligators in the river, but it is said that they seldom attack, the fishermen being allowed to carry on their work without hindrance. Several varieties of fish are also caught in the river At several places the Brahmans feed shoals of large fish daily as a religious ceremony. We have stated that the sanctity of the Kaveri is ranked second to the Ganges. It is known in the South, as the Dakshina Ganga Though the main river enjoys such sanctity the tributaries do not appear to partake of the same measure of affection or sacredness

In order to supply the city of Mysore with water from the Kaveri, Dewan Purnaiya, cut a canal from a point about 30 miles above Seringapatam, which terminated, after 70 miles in Mysore. Immense labour was expended on the excavation work, and in many places cuttings upwards of a hundred feet were made through solid granite. this ambitious scheme was ineffectual, for the water could not reach Mysore City. But by means of modern science, the sacred waters have been successfully carried to a special reservoir at Mysore, turbines being used near Anandur for pumping the water. The water was first used when the present Maharajah was installed. If the sacredness of a river may be measured by its usefulness and life-giving power, then the Kaveri well deserves her high title

OUR RULERS AT HOME

I BRITONS IN LOWLY WALKS OF LIFE

(Illustrated with Photographs Specially taken by the Author)

By ST NIHAL SINGII

Ι

asked an Englishman who was sweeping the street I was crossing the other day if I might make a photograph of him.

The little camera which I held in my hand had powerful German (Zeiss) lens, and I could have snap-shotted him without asking his leave, but he looked so respectable in spite of his lowly vocation that I thought it would not hurt me if I asked him first.

"If you will wait just two minutes it will be 12 o'clock," he said, "then it will be my dinner hour. My time will be my own, and you can do as you please." While he was talking he held in his hand a silver watch carried in a yellow celluloid case which he

had put round it for protection
There you have the up-to-date English worker. His task is lowly—he occupies an humble station in life. He, however, carries a watch in his waistcoat pocket. He reports for duty punctually and finishes on the

stroke of the hour when his day's work is supposed to end.

 \mathbf{H}

Englishmen who sweep the streets in London and other English cities, like this up-to-date man, can read and write. almost without exception have passed through the primary school maintained by their 1expective municipality out of the local rates supplemented with a subsidy from the State

A daily newspaper is left at the door of these humble workers by the newsdealer before they get up in the morning, and they scan the head-lines while drinking their tea from large cups or mugs, which the "Missus" has specially risen to make for them. Many of them will buy an early edition of one or another of the evening papers to see if their favourite horse has won, or what the latest news is about a football or cricket match in which they are interested. Few of them can resist the national tendency to

out money"—be it only a penny or "tupence —upon a race or some other sporting cent, and the mid-day and the late extra litions of the evening papers are specially of out to enable the bettors to satisfy their uriosity about races and to know the rospects of their favourites.

A street-sweeper in South-East London

These men either read the picture papers which dish up the news in snippets, relying mainly upon illustrations to attract and to hold buyers or one or another of the popular papers with a large circulation—perhaps ten lakes of copies a day or thereabouts such newspapers are, generally speaking, owned and conducted by men who do not the late to stoop to serving news and printing articles of a highly sensational character or twisting facts to advance their political or other ambitions.

Since the street sweepers stayed at school only for a few years, and have, as a rule, taken little trouble to improve their knowledge afterwards, their intellectual horizon is quite restricted and their sympathies narrow. The truth reaches them in a very diluted or distorted form, and they are interested only in matters which touch their

An old man who has been sweeping the streets the best part of his life

pockets or the pockets of those persons who are near and dear to them, or in matters of local, parochial concern They nevertheleskeep in touch with what is going on about them, and some of them are fairly well informed

Ш

The street sweeper to whom I have referred in particular told me, in a burst of confidence, that he could read anything and enjoyed reading, everything he could get

hold of, though he never went to school a day in his life He was entirely self-taught. At the age of five he was engaged to scare away crows from the corn in a field belonging to his father's employer. At twelve he "changed over" and got a job on a railway When he was about 25 he "changed over" again and took to sweeping the streets, and has been at that occupation, I should say, for at least a score of years, for he cannot be far short of 55-possibly 60.

Why did you leave the railway and take up your present job " I asked the man when I was giving him a copy of the picture

I had made of him.

A street sweeper in the down-town district

"I like it better." the street sweeper replied. "It pays more. It is not so dangerous to life and limb Me hours is reg'lar I don't 'ave to wake up in the middle of the night one week and in the middle of the day the next. I like it (street sweeping) altogether, sir. I wish I 'ad never done anything else in me life" "How much do you make, may I ask

"We 'ad a bit of luck last week-end.' "The Council (that is to say t municipality) gave in to us-partly, v know-and we were given a rise of 'alf Crown (two shillings and six pence) a well Our wages now comes to just under 13 week."

1V

"That was awfully good of 'the Council said "If you did not engage in this we or if your job were not well done, the would be no London The stench and di from the unswept streets would be a bearable. It would breed disease and plagu of all kinds. I must say you do your wo Indeed, the Council looks at admirably

the cleaning of the streets exceedingly wel "But I do not think that the dust household refuse is called in Britain) collected as often as it should be. The du man comes only once a week He shou come once a day. When we first came London, if I remember aright, he used come twice a week-at least that was the ca in the summer During the war, on the score of economy, that service was cut dow Now onion tops, cabbage leaves, and peeling of potatoes and carrots and other vegetable must go on rotting and stinking for six seven days before they are removed fro

the backyard "
"There you ave it, Mister I think

too," rejoined the street sweeper.
"A little more money spent upon that it

would do it better," I suggested.

"Ah, Mister," replied the sweeper. "i not just a case of a little more money needs to be done in a different way. It me need more money at the start, but in t end it would save money and not cost more

"Case of better organisation," I said way of supplementing his statement, and al to make sure that that was what he real

meant.

"You may put it that way if you like "How would you go about it if you we asked to reorganise the service?" I aski "I 'ave me ideas, Mister."

"Will you tell me your ideas?"

The man's face beamed. A new hi e came into his eyes Words began to po from his lips in a steady stream. As nearly

is I can set them down, he said

"If I was asked to take on the job I would have buy a fleet of motor lorries, each with a trailer I would make each householder provide six bins. Instead of takin' the bin and emptyin' it into the van, as is done now, with the dust and dirt and filth blowing everywhere pollutin' the air, I would take the refuse, bin and all—that is why I would have so many bins. While three would be left for use

"After the motor lorry and trailer had been filled up with the bins, all carefully envered, I would have them drive straight to a farm which I would have some miles out of town, for burning the refuse I would not have the dust loaded into a cart, and then unloaded and dumped into a failway truck or a barge I would have the whole work done by the motor, and throughout the transit operations the dust would never be uncovered

to contaminate the au

"I would save all the money that is now given to the railway and shipping companies to handling the dust, and I would sell the ashes from burning the refuse on the farm to tarmers for manure. Between the money I would save on the transport and the money I would make off the tarmer I would soon make enough to pay for my mortor lorries and trailers."

VI

It sounds like a good scheme," I complimented the man, "but the railway, and shipping companies would be after your hide They are rich and powerful."

I know it, Mister, only too well. Didn't tell you that I was on the railway before

I took up this job?"

Besides, the vegetables would keep on notting for two or three days in the back vaid, even if you had your motor lorries and trailers. Why cannot the refuse be burnt everyday or twice a day by the householder of their servants? Incinerators can be had,"

There aint no need for incinerators," replied the sweeper-philosopher. "We never put no vegetable or fruit or meat refuse in the dust bin. Nobody didn't ought to do it We burn everything of that kind in the kitchener. We leave nothing for the dustman to carry away but ashes. Why cannot everybody else burn their garbage in the

same way, without no special incinerator? hasked.

"For the simple reason," I replied, "the kitchen ranges are going out of fashion Coal are dear Servants are becoming scarce Even when you can get them, they do not want to get up in the middle of the night to light up fires the gas-cooker is easie to light and to manage, and, taking everythin into account, cheaper to run."

These dustmen are highly regarded by the people whom they serve in their humble capacity

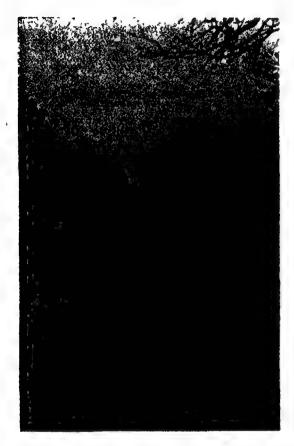

"There is that to consider," admitted the man "But I agrees with you that the refus should not be left to rot and stink in the backyard for a week before it is collected. The whole work of cleaning the streets and a cleaning the sewers needs to be done better.

VII

"I do not like them there machines the they have bought to clean the sewers. The may save a little money, but the work is no done well enough. If they was to be a eavrainfall, the whole district would be flooded the sewers is that stopped up with the difference working in the old-fashioned way to d the work thoroughly. They must let down the scraper, fastend to a long pole, and take wall the muck that has gathered down below. It takes more skill to do the work thoroughly than you would think

"I do not like all this cheese-paring economy in which the Borough Conneil is indulging, anyway." I ought not to say it, because they are me employers, but I do not like shop-keepers and estate agents gettin' elected

to the Council. Them is not the kind of people that ought to be on the Council. What do they know of the real work that needs to be done? They are too much interested in keepin' the rates down to get the municipal work done well, not to speak of payin' us well. They are always for stinting money"

Dustmen who take a pride in their work, and are not ashamed of their lowly vocation

"You ought to be on the Council yourself." I said. "You have got ideas and ideals. I dare say you would make a better Councillor than some of the men who get elected Owners of property, surely, are not going to be merciless in the way of putting up the rates so that their tenants may live in healthy surroundings."

"I believes in working men being put on the Councils. They would do the work a sight better than tradesmen ard propertyowners. They would know how much it ought to cost It would not be so easy for the contractors to cheat them. They would treat us better, too," the sweeper declared

VIII

"What are your politics?" I asked "Do

you vote Labour?"

"I don't vote at all—never voted in me life," was the surprising reply. "They are all a pack of swindlers, them politicians, Tories and Liberals and Labour alike The night before the election they will come to your house, shake hands with you, and kiss all your babies The day after the election if you was to go into their frontyard and pick up a stone they would have you summonsed. Little they care for us poor tolks once they get into Parliament"

I wished to tell that man that philosophy like his was really born of apathy, and that so long as it existed the few would con tinue to exploit the many, and politics would

remain a dirty game.

I could, in fact have talked with him to hours but already a chap with a hand cart full of dung had come round to hear what we had been talking about for so long. The odours rising from his wagon, even more than his inquisitiveness, made me realise that I was making myself late for going to my bank. I, therefore, took leave of the interesting street sweeper and went my way

IX

I never cease marvelling at the skill which Englishmen and English boys display in sweeping streets which, during the busy hours of the day, are congested with traffic They have to weave in and out among motor cars, omnibuses and lorries, horse-drawn and sometimes donkey-drawn vehicles and pedetrians, gathering up manure and other refuse When it is wet and slushy they use rubber squeegees fastened to long handles, pushing the muck from the street into the gutterat the edge. The traffic, be it fast or slowmoving, does not seem to bother or to hinder them in the least They miraculously manage so keep from being run over I have nevel known nor heard of one of these sweeper being maimed or killed.

As may be expected from persons who have enjoyed the advantage of schooling, and who read the daily newspapers, the English sweepers do not do their work in a dirty way. They do not use their hands to pick up the dung and the streets, but sweep it into a pile with a

long-handled broom fitted with a scraper on one side to be used for clearing away anything that stricks to the pavement. They lift it up with a shovel and deposit it in a small hand cart provided for that purpose, or into large vans which come around regularly to collect it. The boys who keep the streets clean at the approaches to bridges and in thoroughfares where the traffic is heavy, use short-handled brushes and dust-bins to collect the refuse, and deposit it in bins. The street sweeper has quite an array of implements, which he carries along with him in his little hand cart

Whether it be wet and slushy, as is generally the case during the winter and often during the spring and summer, or dry and dusty and windy, the streets, roads and footpaths are all kept scrupulously clean. Seldom is a banana skin or orange peel or bit of paper left lying about for long. The streets in the "City," as the financial centre of the British Isles is called, or in the West End, where the rich reside, particularly present a tidy appearance, whatever the time of the day or night, and during whatever season you may pass through them.

X

Now and again when I have chanced to leave a newspaper office late at night or in the early hours of the morning, I have come upon huge motor-driven cleaning machines sprinkling and sweeping the streets How fast they work! And how efficiently!

How fast they work! And how efficiently! With the Thames running through the heart of London, it is indeed surprising that the municipal authorities do not take greater advantage of water-flushing arrangements. They will perhaps wake up one day to such possibilities. Some day also, they will realise the utility of the incinerator and abolish the dustman.

M

The dustman is practically the only type of English sweeper whom I have seen at times doing his work in a nauseating way. I have, for instance, seen a stream of refuse leaking out of a dustbin as the scavanger carried it, half on his back, half on his head, to the van in the street, to empty it. This, to be sure, was fundamentally the fault of the careless housewife or servant rather than of the dustman himself. If it was not possible to provide a dustbin which did not leak, she might at least have taken the trouble to wrap up the garbage in other lates.

before depositing it in that receptacle, so as to make its removal easy and as little offensive as possible. I have never, however, heard a dustman complain when the refuse dropped or ran over him as he carried it. They seem to be quite callous to that sort of thing

One of the boys who sweep the streets with brush and dust-pan while heavy traffic is moving all about them

I have frequently seen dustmen pawing about in the muck in the vans with their bare hands to see it they can discover anything of the slightest value which they can sell to a "rags-old-iron merchant Empty bottles, bits of dirty rag suitable for paper pulp, or old mon utensits are picked out of the reeking mass and put into a basket or one corner of the van, to be disposed of as opportunity offers. In one district where I used to live, a "rags-old-iron man followed the dustmen in a fight trap, buying from them, as they went along, anything they might find in the dustbins they emptied."

Before returning the dustbin to the backyard or cellar wherefrom the dustman takes It to empty it into his wagon, he sprinkles a chemical deodoriser and disinfectant into it to destroy bad smells and prevent the of disease germs. The municipal authority which employs him supplies this disinfectant free of charge

The real "man in the street" in Britain. He is a great philosopher, and has ideas and ideals of his own

XII

The work the dustmen are called upon to perform being of a dirty nature it happens that though they may be perfectly clean when they set out in the morning, they are in a filthy condition by the time they leave off at night. When they are off duty, washed, and dressed in their best clothes, they look 80 different that it is difficult to single them out from persons who engage in other vocations. The metamorphosis ıs. ındeed. astonishingly complete

Who was that nice-looking man who just lifted his hat to us?" asked my wife as we were sauntering about in a park close to our London home.

"He collects the dust from our backyard every week," I reminded her

"Now that you speak of it, I recognise him," she replied "He looks so clean and respectable that you would never think that during the week he did the duty work that

he does,"
"No," I remarked, "This is not India The sweeper here is not an untouchable. He with his fellows without anyone thinking the less of him because he makes his living by sweeping the streets or carrying away the refuse from the house"

"Isu't that statement a little too sweeping?" she asked. "Dont you remember the conversation we had with Mrs-after we had been to see Shaw's "Pygma'ion?"

ПІХ

I did remember that conversation I had been very much struck by Shaw's audacity in making a dustman one of the principal characters in that play, and in putting the

Cleaning the street in front of St. Paul's

deep philosophy in his mouth that he had done. The friend to whom my wife referred had told me. shortly after she had seen the play, that though she considered herself unusually free from class prejudice, she could not bear to touch anything the dustman had handled

"In the summer," she said, "when they knock at the back door with their dirty book in which they ask me to write my name and the amount I propose to give them for then annual holiday fund (in spite of the warning written on their vans that they are not to 10ceive any gratuities they come regularly for this tip), I will not touch the book, nor can I bring myself to hand them the money in the ordinary way. I always half throw it, half drop it into their hand, or on the open book as it is held out, so that no actual physical contact takes place. They look so disgustingly dirty, and they do their work in such a filthy manner, pawing through the garbage and track to see if there is anything in it worth perhaps a farthing, that it almost seems to me that they are an order apart am sure that if I had to do work of that soil I would at least use a stick to search for treasure of that sort, and a bit of wood or the top of an old tin can to scrape out the dusthin, instead of employing my hands for that filthy purpose."

XIV

That conversation reminded me of a talk that I had had with one of the best educated Englishmen I know He had spent many years at Oxford, and had gone out to India as a missioner, and spent several years there. We were talking about caste at the time—of the tenacity of its tentacles.

"The thing that surprised me," my friend said was the hold caste was getting on me. We had some *bhange* converts in to a fete we were giving. Would you believe me, I could hardly bear to see them eating and drinking from the dishes which we ordinarily used I knew the feeling was wrong I conquered it. But there it was

XY

The English are not free from caste invidousness. They call it "class feeling," but it amounts to much the same thing in the last analysis. Even a person belonging to the lower middle class will not, for instance, invite to dinner the man who removes the retuse from his home, or wish to see his daughter married to him. Generally speaking, however, he does not look down upon him because he engages in that vocation. I doubt, in fact whether one man out of a hundred even troubles to think that the street sweeper of the dustman engages in a lowly form of toil.

I tomember, for instance, a case that came to my attention shortly after I first landed in England I noticed that a handy-man who had been working for my landlord, who was a builder by profession, no longer came to work

"What has happened to Harry?" I asked "Is he not working for you any more?"

Oh, Harry has bettered himself," was the

reply. "He is working for the Council now, getting more than I could afford to pay him."

"In what capacity is he working for the

Council's" I asked

"As a street sweeper He turns up here of a Saturday afternoon, when he has his half-day off, and does half a day's work for me, and sometimes even works of a Sunday, but his position under the Council is much better than anything I could offer him," said my landlord

So a man was considered luckier to work as a sweeper than as a builder's handy-man' That was an eve-opener to me

XVI

In a sense the apathy of the general pubhe in regard to the vocation of a sweeper or dustman, combined with the terrible pressure of population in so small a land-albeit a land which, until recently, was thriving upon industries many of which had to look to other countries for their naw materials-has prevented the abolition of the street sweeper There is little doubt that and the dustman if the scientists and engineers were to devote their attention to this matter they, in a short time, would devise means whereby such work could be performed mechanically and efficiently Until the mechanical age 11805 to that height, and human beings in England, as elsewhere, are compelled to engage in such work, it is just as well, however, that no social stigma should attach to them

We Indians who boast of being enlightened might teach our sweepers to learn from these lowly Englishmen to do their duty work in at least as clean a way as it is done in England. An exhibition of the brooms, scrapers, squeegees, and other implements employed by them might serve a useful object. Or the Municipal Corporations of Calcutta, Bombay, and other large cities might usefully import a few. English sweepers to instruct our bhangs how to do their work in a sanitary manner.

The classes which regard themselves as superior to the "untouchables' might learn from the English a sense of toleration, and cease to despise the men and women who until the mechanical age reaches its zenith, must perform this service to mankind

COMMENT AND CRITICISM.

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous rieus misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally no criticism of reviews and notion of books is published. Writers are requested not to exceed the limit of five hundred words --- Edilg, "The Modern Review."]

'Praja-Vishnum' and 'dhanurdurgam' in "Rajaniti-Ratnakara."

Professor Vidhusekhara Bhattacharya Sastrı of Santiniketan considers that in the expression praya-Vishnum sakshinam in the Rajaniti-Ratnakara

praja-Vishnum sakshinam in the Rajanit-Rathakara (p. 83), edited by me, praja and Vishnum should be read separately, and in his opinion, "Anyhow the whole sloka simply says that having Visnu as a witness he makes all the subjects hear" (The Modern Review, April, p. 435).

That this meaning is inadmissible can be seen by reading the preceding lines of the passage, where it is expressly stated that Vishnu (along with some other named gods) has been sent home (nigroug) just before. Hindu subjects occurred the (visraya) just before. Hindu subjects occupied the position of the Diety according to the coronation oath of the Mahabharata which I have cited in the introduction to the Rajaniti Ratnakara. It is, therefore, natural to find the subjects described as Vishnu in the coronation passage of the Rajaniti-

The sloka is edited by me in one place, i.e., at p. 83, and not at pp. s. bb, where it has been discussed. The latter two places are English and Sanskrit introductions At page s. praja and Vishnu have not been closed up but the reference to p. 83 which is

been closed up but the reference to p. 83 which is given there and the succeeding singular 'sakshinam' would obviate all confusion. Printer's prerogative to make such mistakes should not have been converted into 'three ways' edition of a text by me I suppose there is some difference between 'editing a text and 'discussing' it in the introduction. The other point dealt with by Mr. Bhattacharya is the reading dhanundurga (p. 26). He thinks that Manu's reading dhanundurga (p. 26). He thinks that Manu's reading dhanundurga ought to have been indicated by a note. But the very verse which Mr. Bhattacharya quotes is as a matter of fact referred to by me in the footnote. Pointedly I have drawn attention in the introduction (p. 4) that Mithila texts read differently in the time of Chandes-Mithila texts read differently in the time of Chandesvara from what we have got now and in other parts of India. The value of the text lies in show-ing what Chandesvara found it to be Not only in the verse cited he reads dhanurdurgam but also in his commentary he has the same reading What right had I to change it? My duty was to indicate the corresponding text in the printed editions of Manu, which I have carried out. It would have been gilding the gold to quote all the texts from the printed books in the foot notes in addition to references and not very respectful to my readers to go on emphasing resh obvious differences in readings after once having drawn attention to the fact in the opening pages. Mr.

Bhattacharya says that unchrunge of Chandestala has no sense. I respectfully point out to him that in Sanskrit it has a sense and a very good one (Seo Meghaduta, Purva 58) Chandesvara says that bow-shaped fortress should be surrounded with l'echraya cannot be a misreading for elevation elevation *I cehraga* cannot be a misreading for man u, as Mr. Bhattacharya supposes. Chandesyara had his own reading and his own interpretation Had Chandesyara been alive to-day, probably hinght have said that he would rathe profeto eir in the company of Medhatithi and read with his dhanurdurgam (ed. Gharpure, 1920, p. 530) to being wiser with Kulluka. Mr Bhattacharyas anthorite missing the missing authority. K P J

Reply

PRAJA-VISNU

As regards my esteemed triend Mr Jayasual-Praja-Visnu, he has offered two arguments against my interpretation of the sloka first, he appear to say, as "Visnu has been sent home just before (Italics are mine), he cannot be a witness of the declaration made by the old king or his puroling. This seems to me to be too weak to discuss let in order to satisfy him, I may say, following his way of thinking, that Chandesvara himself himself the god, Visnu, again after his dismissal (Visnu, min) the god, Visnu, again after his dismissal (Visni) and when he enjoins sprinkling (abhisectual) of the prince (Kuman) with different 'ands of water chanting the Saute-mantras for, in these saint mantras. Visnu, with other gods, is invoked. The auothor himself reters (p. 84, 11, 3-4) to the mantras, saying that they begin with "Let god sprinkle thee" These will be found quoted from the Visnu-dharmottara in the Visnu-dharmottara in the Visnu-dharmottara and the first line of them runs as follows "Let the gods, Brahman (the creator), Visnu and Mahesyara sprinkle thee"

Mahesvara sprinkle thee "

By Visarrana, which is a particular form of divine services (Vpacaras), not only the external symbol of a deity is removed—where that symbol is used, but also the deity is placed in one heart (hride devan sthapayet)

But apart from the question of Visarajami 1 it not a fact that, in any time or anywhere in taking oath or making promise, God is invoked at

a witness?

The second argument is that "Hindu subject occupied the position of the Deity according to the coronation oath of the Mahabharata". "It is therefore natural to find the subjects described as, Visnu in the Rajantiratnakara"

am unable to follow him here and I shall state l am unable to lonow him here and I shall state my grounds. In order to make clear the meaning of the verse of the Mahabharata referred to by Mr. layaswal on which his theory of Projn-Visnu is havel, I should like to quote it below.

Pratijnam cadhirohasva

manasa karmana gira Palisyamyaham bhauma

brahma ityeva casakrit. —Şantı parvam, 59, 106, The main point to be discussed here is bhauma brahma in the second half of the verse. J. translates or rather interprets it (p. s.) as follows "Mount on the pratyna (take the oath) mentally, physically and verbally (without reservation) I will see to the growth of the country considering it always as God (Brahma).

From the above it appears that according to J hhauma hrahma=Brahman (God) in the form thhum Bhumi=earth=country. Now as every thing comes into being from Brahman and is only flis maintestation, it would not be illogical to regard blums as Brahman or God. But is the phrase used here in that sense? If so, what is specially added by doing so when every thing

a- Brahman The text of the Mahabharata itself both before and after the verse, clearly shows that brahman her means nothing but the Veda. It is stated before (verse 20) that when confusion set in amongst men brahman, 1e, Veda (see Nilakantha) the appeared and owing to the disappearance of brahman, Veda (nasac ca brahmanah), duty (dharma) also disappeared. And both, the veda and duty, having disappeared ("naste brahman dharme ea"), the gods were frightened and came to Brahman, the creator (verse 22) and told him that, with the loss of the Veda, duty had also been lost, brahmanas in timisean dharmo vyanasad, verse 25. The creator gave them assurance of safety, promising to think over their well-being Compare these The text of the Mahabharata itself both before to think over their well-being Compare these terse with the one under discussion and it will be quite clear that the word bruhman in the latter, too means 'the Veda'. The next sloka (107) quoted below will also support it.

Yet catra dharmo nityokto dandanityyapasrayah

Tomasankah karisyami, svavaso na kadacana.

And fearlessly will I do that duty which is obligatorily laid down there with reference to dandanta, and will never be capricious."

Mark have the word atra "here"

Wark here in this verse (a) the word atra 'here' which refers to brahman in the preceding one (106d). It is thus only in the sense of 'veds' of the which is obligatorily laid down here (i. e. in the maning, 'Veda'). I will do fearlessly On the other hand, if the word brahman is taken in the sense of God it would be meaningless in connection with atra for one cannot think that dharma tion with atra, for one cannot think that dharma

is laid down in or on God. it may, however, be contended that atra refers it the palana, 'protection', of bhauma brahman, and not to bhauma 'brahman itself. And thus atra means 'on this,' 'on this subject' (asmin visaye), e, on the protection of bhauma brahman. But indiging from all and specially from what has been said above and will also be said below. I do not consider it to be reasonable.

It would have been better if we could consult all the commentators of the Mahabharata on this point. But unfortunately the only commentary at

present with me is of Nilakantha, who is silent here, evidently thinking the verse to be simple, the only doubtful word, brahman, in it being already explained as 'Veda' as quoted above I confess, therefore, the discussion pursued here is defective in this respect.

As regards the subsequent writers, Bothlingk and Roth, the authors of the Sanskrit Worterbuch. referring to the same verse of the Muhabharato take brahman (Vol. IV. p. 394, bhauma S. V.) in the sense of the Veda They are followed also by M. M. Williams in his Skt-Eny Dictionary (bhauma S. V). The same meaning is given also in the Bengali translation of Kaliprasanna Sinha as well as of the Vardhamana Raja-vati (Burdwan Palace) The same meaning is taken by Manmatha Nath Datta, too, in his English translation, which may be

quoted here.
"Do you also swear that you would in thought, word, and deed, always maintain the religion laid down on earth by the Vedas.

This translation is not literal, and very free in the last part vet it is clear that brohman means the Veda

Now, there remains one thing more to be discussed in this connection. What is the true meaning of the phrase bhauma brahman. As has meaning of the phrase bhauma brahman. As has already been shown, brahman is the Veda and bhauma literally means 'one of bhumi ('earth').' Thus bhauma brahman is 'the brahman of bhaumi that is, the Veda which deals with the bhumi, he which deals with the palana of the bhumi 'protection of the earth (Cf Arthasastra, Shama Sastri, 1909, p. 421, 1.17). Thus explanation is borne out by the word daudenti-representation. by the word dandamti-ryapasrayah in the next sloka (107)

It is to be mentioned here that in the Bengali translations referred to above bhumma is taken to

mean bhumi-stheta one on the earth
In passing one thing may be pointed out J
says with reference to the verse of the Mahabharata

that it is "the coronation oath But the fact is that there is nothing of coronation in that chapter.

Thus the Priya-Visini theory of J has no foundation whatever in our ancient text. He seems here to have been much influenced by the light of modern nationalism.

In regard to my remarks on editing the verse I meant to say only that anyhow it was desirable to get a text everywhere in one and the same form but it was not so

DEANA - AND DHANT R-DURGA

to dhanca- and dhanur-Now with regard durga, let me first try to find out which of these two was in fact accepted by Chandesvara himself I think it is quite clear from his own explanation of Manu VII. 70 He writes (p. 27), as we read in the edition

nechrayavestitam Asyarthah—dhanurdurgam Sarvadisam pancayojanam. Nirjalam mahi durgam Here the full stop is wrongly put between panca yojanam and narjalam, it must come after nirjalam, and the meaning will be clear.

As regards the meaning of ucchragarestate I shall come to the point later on. at present let at be left out, laying also as stress on the word dhanur-

durga.

Mark here in the above extract. Chandesvara's dhanur-durga, 'bow fort', is one which is waterless' (nirjala) in all directions up to five yojanas. Is it

not in fact a dhanva- or dhanvana- or maru-durga, 'desert-fort'? Compare here the description of desert-fort given by different authors, which refrain from quoting to avoid prolixity, giving only that of Kulluka. whom Chandesvara follows very closely. J. seems to suppose that he follows here Medhatithi, but that he does not do so will gradually be evident in the tollowing discussion.
On that sloka of Manu K. says:
"Dhanva-durgam maruvestitain caturdisam

panca yojanani anudakam

The meaning of the word ucchinga-resida, as found in the edition and for which K. has mary-, round in the edition and for which R. has marti-, is, according to J. 'surrounded by elevation'. In determining the sense of the word, let one first consider the use of vestine 'enclosed' or 'surrounded', which is employed not less than three times in the passage under discussion (p. 27. ll. 1-9), and one will find that the enclosing in all the cases, the words the little consistence there exists a consistence of the cases. as is right, is by some thing concrete, as a wall, etc., and not by an abstract thing Ucchrana, 'height', is an abstract thing and hence nothing can be enclosed by it. The idea that there was elevation on all sides could easily be expressed by some other word or phrase But, I think, strictly speaking, it cannot be done by ucchain mnless it is taken in inducet sense (gauna in tha) to mean something ucclinita, 'clevated', 'high' But why did not the author himself mention it mean something *neclerita*, 'clevated', 'high' But why did not the author himself mention it expressly? This consideration, coupled with that of so many mistakes in the passage which I am going to point out below, led me simply to suggest a reading which might have been missead or miswritten by the scribes.

After having dealt with the desert-fort Chandesvara goes on to describe the other forts and in every case he borrows from K. and that can be known at a glance on both the passages concerned J. appears not to have noticed the fact, otherwise he could easily have corrected the whole passage (p. 27, il. 1-9) under discussion, which is full of maccuracies. I may be allowed to point them out, giving the corresponding readings from K
L 2 vistara must be vistariad, as K reads

may be a printing mistake.

L 3. (1). dvadasa hastadyunnatena Here hastad nunatena seems to be a better reading as supported by K's "hastad urchitena and Kautilva's (Arthu-nastra prakarana 20-10), Jolly Vol I p 3a) hastad urdiam."

(11) Sadharanu-yaraksha What does the word sadharana mean here? 'Common', 'ordinary' It goes without saying that in a fort a special kind of au-hole (quakshu) is wanted and not a common one. Why then does the author recommend it? The fact is that the actual word used by him is Sararana, 'one with cover' and not Sadharana. K. has Savarana.

L. 4. Agadhayale ratu testitam. Here must be read palena K reads Ayadhodakena.
L. 7. Giridungam sarvalah pristham What does sarvalah pristham mean The actual form is parvala-pristham, as in K.
L. 9. Puram vicarayet The last word must be

read varacayet, as in K., meaning with puram, one should build a town, and not ricarayet one should think of a town.

In this connection, in order to show the nature of the three Mss. upon which the present edition is based, and how the readings therein are considered or discussed. I should like to point out two

other readings in two slokas connected here with.

In the sloka (Manu VII. 70) under discussion the edition reads (p. 26, l. 16) jala-durgam for abdurgam, which is an undisputed reading That jaladurgam can in no way be admitted here is evident from the simple fact that it spoil. the metre by increasing one syllable. Let there is not the slightest mention of it by the editor. None can believe that the mistake was committed by Chandesvara himself Undoubtedly is due to the carelessness of the scribe, whe seems to have copied the simpler form, inluding noted by some one on the margin as the meaning of ab-durga and in doing it he did not or could not take the metre into consideration.

The second reading is nri-durgantu for gradu gam in Manu VII. 71, quoted by the author paster the long passage (p. 27) discussed about That the reading is not admissible is obvious Could not the editor mention it, as he doesn many cases, even on the same page in lost

note 2

It will be noticed that as regards the reading discussed above there is complete agreement of all the Mss. utilised for the edition. The editors for notes, too, will tell us the same thing This gost to show that the Mss are copied either from the the same original or a copy made from it such being the case individually or collectively, the have little value in deciding the question of a separate recension when the readings supplied in them are obviously so full of maccuracies. I am fully aware of the fact that the question cannot be decided until and unless all the readings in the quoted passages in the work are critically discussed A textual criticism can reasonably be expected hun

an editor
We have seen that the description by Chandevara himself shows that he has spoken of dhannodurga description, though the word dhannodurga description, though the toy laters up. It has also is actually found in the text before us. It has also been shown that he has followed K. Now, let me try to trace the origin of dhannadarga on which

lays here so much stress

Originally in older texts such as Mahabhadt (xii, 86 5), Visnue-surely (III 6) matsqu-partie (CCVII, 6-7) Mann (VII 70), Arthososta (xii) etc, mention is made of dhanen-or dhan and day desert fort Later on also the words. 'desert fort' Later on also the words Main (Kamandaknya IV 55) and airma- (Samananya sutradhara GOS, LV 39) durya came into use t the most predominant of them all. The wordhanran is a Vedic one and it has two meaning desert (maru) and bow' (dhanns). Cf. dhann an thans bow'. In the course of time there are confision as a confision of dhanra-durya In other words, it might be the some wrongly took dhanra in the sense of dhanna pronounced the word as dhanna and then naturally took the word as dhanna and then naturally took the word as dhanna and then naturally took the some wing the word as dhanna and then naturally took the some of the word as down the sense of the word as down the word tha it took the form of dhanur in consideration of grammar, and consequently the meaning was how Owing to this confusion some of the passage referred to above containing dhanura-durin all quoted in some works with exactly the same would be not other with dhanura during. For ustance while in others with dhanur-durga. For instant see Matsya-purana ed Anandasrama, 1907, as Vangavasin, 1316 B. S., Vol. CCXII. 6-7, as Viramitrodaya, Ch., S. S., Vol. VI (Reyanti), p. 19 In the former the reading is dhamur-, while in the latter we have dhanvar. Manax VII. To, is quoted in the Parasara-Madhava. I. 62. Here the Bibliotheca Indica edition. Vol. I. p. 406. reads dhanva, but in the edition of Bss. Vol. I. Part I. p. 464, it is dhanur. This fact was noticed by Mitra Misra and he settled the question once for all in his Viramitrodaya, Vol. XX (Laksara), p. 240, II. 5—10 This will be found reproduced in English by Dr. Ganganath Jha in his Viramitrodaya, to a language of the saying that it is a fortification in the midst of a dhanvar 'desert,' and it is durya, because of its inaccessibility due to absence of water and other difficulties'. He gives another explanation, saying that dhanvar means a tract of land devoid of water and shelter, and a fort that is surrounded by such a tract of land is dhanvaluryi-Then he goes on to say that according to some that) dhanvar means a bow' and indirectly

indicates one with a bow', i. e. 'archer', thus a circle (mandala) of defence consisting of men armed with bows and arrows' is called dhanvadurga. 'This', he continues, is not right; as it involves the necessity of laving recourse to metaphorical explanation, and also because w have never heard of such a fort, again, because such a line of defence could be very easily broken through, and lastly because this would be the same as the nri-durga coming later'.

This is the story of divining-duran.

It may be noted further that according to J dhunur-durga is a bow-shaped fortress. (Italics are mine) But is there any foundation for this statement. In that verse of Manu (vii. 70) mention is made of the place of a fortress and not of its shape.

VIDBUSHERHARA BHATTACHARYA.

BEAM WIRELESS

By S. R. M. NAIDU, F. R. S., M. R. A., etc.

This method has always been a matter of great interest, and is now very rapidly coming to be one of paramount importance and commercial value. It is a very difficult problem, for the distance or location of a wholess transmitting station may be seriously misjudged it estimated by signal strength alone. More accurate results are obtained by employing two or more direction-finding stations, on the triangulation principle of

ordinary surveying practice.

Hertz, in his original, researches, showed that electro-radiation could be reflected by means of mirrors, and later, Marconi carried out various experiments, transmitting a wireless "heam" to a considerable distance by the use of copper parabolic mirrors For long wave-lengths, however, the use of a mirror was found to be impracticable, since the size of the mirror must be comparable with the dimensions of the wave-length employed. About 1899 to 1902 screen reflectors met with some success. consisted of These vertical wires spaced about the transmitting aerial in the form of a parabolic screen, and arranged so that the transmitting aerial was at the focus. Even now the modifications of this method are in use, but only for wavelengths very small in comparison those normally used for commercial wireless signalling.

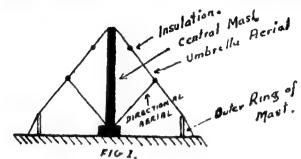

More accurate directional wireless depends upon the radiation of two or more aerials, the currents in which bear definite phase and amplitude relations to one another. Mr S. G. Brown shewed that a system of two vertical aerials connected to a spark-gap and spaced half a wave-length apart was found to have maximum radiating and receiving properties

m the plane of the two aerials.

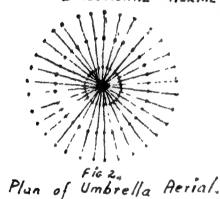

A mobile wireless station may find its bearing from a fixed transmitting station with a fair degree of accuracy by Belline-Tosi Radiophare. The method of operation involved is to arrange that the direction of maximum radiation from the transmitting station shall be continuously revolved at a constant speed in a clockwise direction. At given intervals corresponding to a known bearing, a distinctive signal is transmitted and any ship or other mobile station suitably equipped is thus enabled to find its bearing from the transmitter by noting the signal corresponding to maximum signal intensity.

The Telefunken compass makes use of a series of directional aerials radiating from a single mast as shewn in figures 1 and 2. At pre-arranged intervals a time signal is transmitted on the non-directional aerial, and this is immediately followed by a series of further signals sent at intervals of one second

on each of the directional aprials in turn. There are thirty-two of the latter corresponding to the points of the compass, and the direction of transmission will therefore revolve once in thirty-two seconds, and is so Ship stations using this system are provided with a special stop watch having the dial marked out in the form of a compass. the pointer of which revolves once in every thirty-two seconds. When the time signal is

TELEFUNKEN COMPHSS DIRECTIONAL AERIAL FOR

arranged as to start and finish in the direction of due North.

first heard, the listener starts his stop watch and as soon as the signal has reached its maximum strength, the watch is stopped The position of the pointer on the dual will then shew the direction of the transmission at that instant, thus giving the ship's bearing with regard to the transmitting

Directional wireless is possible to a certain extent by using the simple loop or frame aerial. When a loop aerial is rotated about its vertical axis the strength of the signal will be found to vary, being a maximum when pointing direct to the transmitting station, and at a minimum strength when at right angles to the transmitter.

INDIAN PERIODICALS

From "Stri-Dharma"

The following paragraphs are taken from Stri-Dharma :-

CHILD WELFARE IN BOMBAY!

We are very glad to hear that Mr. Wadia, a mill-owner in Bombay, has offered sixteen lakes of rupees for the construction of a Maternity Hospital for the purpose man in the north of Bombay. The Gottlemment is ready to give the necessary land for the purpose. Mr. Wadia, is well-a-wing for having the best regulated mills in Bombay, and he has already provided a Maternity Home for his own factory women. It is very much to be desired that other mill-owners in this great manufacturing city

copy the example of Mr. Wadia, as the condition among the mother labourers in the mills is indeed bad and sad, and at present very little is done to alleviate their sufferings at the time of child bearing. A Maternity Benefit Bill was recently introduced in the Legislative Assembly. But the fate of that has not yet been decided. We heartily congratulate and thank Mr. Wadia for his splendid gifts to mothers, and hope that many other millowners will consider following his splendid, and humane example. humane example.

Cochin, the Pioneer State

The Legislative Council in Cochin was inaugurated on April 3rd by the Maharaja. This marks a great epoch in the State and the beginning of a

Democratic Government and, what is more, real Democratic Government, for the Cochin Women have equal rights with men in the franchise, and also they are eligible for membership of the Council.

and the second s

THE CHILDREN'S HOME OF SAFETY

By the time our readers see this in print, the official notification of the appointment of a Provinsion Committee nominated by the Government, will have been published. This is the first concrete step towards the actual establishment of the Children's Court and Place of Safety. This latter will be staffed and run by the Women's Indian Association. We are hoping to get a house in Vepery or on Poonamallee High Road. This means that any child under sixteen, in need of help or rescue. who is destitute; or in any way in need, can be taken to this Home of Safety day or night, and, pending the consideration of the case by the court, pending the consideration of the case by the court, adequate care and protection will be provided for the child. Any child in future, instead of being taken by the Police to herd with ordinary criminals, will be handed over to the W I. A. at the Place of Safety, and will never come into open court as heretofore, but will be given understanding and sympathy. The aim of the Place of Safety will be to help the child and bring out the good in him for his naughtiness. Dr Pandnot to punish him for his naughtiness. Dr. Pandah, our Chief Magistrate, will give all his advice and assistance when required and finally dispose of children's cases, with the assistance of our women Magistrates, at the Place of Safety. Our thanks are due and most gratefully given to the Home Member—the Hon. Sir Arthur Knapp—for so speedily putting the necessary machinery into motion.

To RIGHT WRONG.

The Bombay Vigilance Association, after two years of good preparatory work, is now ready with a systematic programme to carry out. They have rented a room in the Brothel Area and Miss Dickinson and Miss Samules are in charge with a good strong Committee at the back of them and plenty of funds to carry on the plan as decided upon, and

the law as their right-hand-man of power.

The city of Madras has also just formed a Vigilance Association with The Women's Indian Association Commissioner for the Children's Court, Mrs. Stanford, as a Secretary and Mrs. D. Jinaraja-dasa as one of the members of the Committee Practically no work has been done as yet, as the Association has its preparatory work still to do, but it is expected that the crying need for the activity in Madras will soon be taken care of and a well-worked-out plan ready at an early date.

There are many wrongs to be righted in the world but this one of Prostitution, which is a crime against the home and its sacred childhood; a crime against womanhood and manhood, is one of the very worst, because it kills the very best in those who were the control of the worst. who use the prostitute and the woman herself. The Brothel is filled with disease which is carried into the homes of little children and pure wives who must suffer untold agonics because of the selfishness and thoughtlessness of others. We must remember that the Prostitute is someone's daughter and try and help her we out of her deep degradaand try and help her up out of her deep degrada-tion, to be a self-respecting being.

THE AGE OF CONSENT BILL. By Dobothy Jinabajadasa What right had the Government to bias the

Assembly at all on a matter that concerned the Assembly at all on a matter that concerned the Indian people only In no way can the marriage age of Indians concern an Englishman, except for him to rejoice, that a quite large body of Indian Legislators are ready to carry out a much needed reform, being convinced that the great mass of public opinion is ready to co-operate with and obey the law. Out of the 30 Englishmen in the Legislative Assembly 16 voted against the Amendment to raise the marriage age for girls to 14 from 12 We should have thought that an Englishman would think with horror of marriage being consummated we should have thought that an Englishman would think with horror of marriage being consummated on a little girl child of 12, one of the outcries of missionaries against Hindus is that girl children are married and often become Mothers at the age of 13. A great body of Indians all over the country have come to realise the sin against childhood and the race, that is committed in the continuance of this evil, and this Resolution in the Legislative Assembly was merely voicing the feeling of the people Had the Government and the English members remained neutral in the matter, instead of employing all their force against it the Bill would have passed

THE CHILDREN'S CHARTER

The Declaration, which was drawn up by the Save the Children Fund International Union, is a short document asserting that "mankind owes to the child the best that it has to give," irrespective of race, nationality, or creed, and sets forth in five clauses the Rights of the Child which should be recognised as a minimum programme in all civilised

It is demanded:—
(1) The child should be given the means needed (1) The child should be given the means needed for its normal development, both materially and spiritually (2) The child that is hungry should be fed, the child that is sick should be nursed; the child that is backward should be helped, the erring child should be reclaimed and the orphan and the waif should be sheltered and succoured. (3) The child should be the first to receive relief in times of distress. (4) The child should be put in a position to carn a livelihood, and should be protected against every form of exploitation. (5) The child should be brought up in the consciousness that its talents are to be used in the service of its fellow men. are to be used in the service of its fellow men.

TURKEY

Two Turkish women have been elected as representatives in the Angora Assembly. It is a striking thing, the remarkable progress that has been made by Turkish women since they threw off their purdah and became interested in the progress of Muhammadan womanhood.

Religion in Malabar

Writing in the D A V College Union Magazine on "Religion in Malabar", Principal M. Rama Varma says

Christianity remains here as a separate religion owing to the initial inistake of the early European missionaries who, according to Abu du Bois employed as managed as Pariahs, cows, and got themselves Mahommadanism keep itself its deep ignorance of the and the fanaticism born of such ignorance. Both these religions are in for conversion. The lower strata of society oppressed by the caste system which denies them the elementary rights of man of approach to his brother, the use of public roads, tanks and wells and even schools seek social freedom by conversion. Christian missionaries attract them by their schools and hospitals besides the usual propaganda work. Hinduism of Vedic religion alone not only remains idle but is ready to ostracise any one for the slightest breach of meaningless superstition. In Travancore the socialled depressed classes have been converted in hundreds and now the Thiyyas, a large, enterprising community, growing in culture rapidly, cager to continue Hindus, are face to face with the alternative of conversion or fight. Almost all the Moplas of the recent rebellion notoriety of Malabar are converts to Mahommadanism from the Hindus, especially the lower castes. The apithy the of Hindus is responsible for the frequent recurrence of these rebellions. Each rebellion adds a number to the ignorant fanatics because the Hindus refuse to reconvert the forcibly converted The blind Brahmin never realises the danger he is bringing upon himself. Even in the recent rebellion, but for the strenuous exertion of the Arya Samajists a large number of helpless fellows forcibly converted into Mahommadanism would have been added to the Mopla population. The so-called religious neutarality of the Government is in effect only a premium held out for the oppressed Hindus to become Christians.

Governments' Purchase of Stores

Prof. Manu Subedar's article on "Rupce Tender" in *The Indian Review* concludes with the following observations —

All countries in the world make their own purchase inside their limits and leave it to the merchants to ferret out the sources and to organise the supply. In India alone such a retrograde scheme prevails. Amongst the many links, which are used for ruling this country under the dominance of London, the purchase of stores in London is not the least important. The full significance of the change of policy involved in the calling of rupee tenders cannot be realised until the public are told that the total purchase of the different Departments of the Government of India and the Provincial Governments and the local and public bodies amount to between 25 and 30 crores of rupees a year. The day is perhaps very far, when all the material required by Government to the full amount of this large sum can be produced locally, but if the effort is never made to utilise such industries as have already sprung up through private enterprise, then those results will never be secured. Cases have been known where bona fide enquiries as to the nature and quantity of Government requirements, which were sent down to the Director-General of Stores in London from India, have been turned down and no information was vouchsafed. Money raised from the Indian tax-payer in this manner has been deliberately spent to support the enterprise all to provide employment for the people of alien lands when a substantial part of it could be spent in India with all the incidental gains not only to the people but

to the railways and to the revenues of the country. There are, however, too many vested interests in the existing practice of purchase through London and unless Indian opinion is informed on the subject and pressure put on Government, the deprivation of legitimate opportunities to Indian efforts must continue. While the more picturesque aspects of administration may excite greater notice the solution of this problem on right lines will undoubtedly secure lasting glory for Lord Reading and his Cabinet. The economic discontent in the country, of which more than one evidence has been given in different directions, could not be allayed more effectively than by prompt action in this direction, which will secure farrness in comparison, spread information as to public requirements and give a fillip to private enterprise in manufacturing which has hitherto shown itself quite ready to adjust itself on a reasonable basis.

Swami Turiyananda on "The West"

When Swami Turiyananda was living at Kankhal, a pilgrim wanted to know something about the Swami's experiences in the West, writes Swami Atulananda in Prabuddia Bhurata.

The Swami smiled and said "The West is inaterialistic, the land of enjoyment But there are many good things. The food is superior Everything is done in a scientific way, even cooking. And sanitation is much botter. They are strong and healthy people. The women have much more freedom, and they are all educated. There is more privacy in the West, and their dress is lit for action. Here everything is for machine We are not so energetic. Everyone in the West speaks in a subdued voice, and the servants receive much better treatment than with its Even the humblest servant is treated with respect Work is no disgrace. A man is man, no matter what his occupation is But he must obey the laws of society. There are no outcastes and no don't-touchum. Think of how we treat our low-caste people!"

Genius

Prof S G. Dunn observes in the Allahahad University Magazine —

Genius, as a faculty of the sub-conscious, is within the reach of us all if we have but the faith to believe it, that we too may receive the inspiration if we will obey our own hearts and let imagination go free,—free from the pressure of material-needs, free from the fear of height. Fain would I climb but that I fear to fall." Many a man never excels in anything because he is afraid of failure. In art, as in life, we must venture all, launch out into the deep. This is why, it seems to me, those men who have had a precarious hold on life, men like Keats and Stevenson who have heard ever at their backs "Time's winged charnot hurrying near," have, produced more that the world will not willingly let die than those who have felt themselves secure in their bodily

abitations and possessed a goodly heritage of eaith. The unknown sower scatters the seed of the liberal hand, but with too many of us the area and riches and pleasures of this life choke a growth that we bring no fruit to perfection of demands a complete surrender; he only that we up all for it shall enter into its kingdom.

Allahabad University Intermediate Colleges

The Magazine observes distributed by the Magazine distributed by the Magazine observed by the M

At the end of a few years' experience, our ell-considered view is that Intermediate Colleges are fulled Progress has been delayed by the itermediate student being sent back to school' omerly, after passing his Matricultion Examination he came straight to the College, he came in all and intimate contact with senior students, thereourse with whom widened his outlook He at the fact of professors, who were progressed. terrourse with whom widened his outlook He at the feet of professors who were recognised lasters of their subjects. He lived, moved and his being in an atmosphere of pure study, to learned to cherish the long-established traditions of his College, imbibe them during the years at he spent there, and hand them on to coming enerations. The feeling that he was a member of a olicge gave him a peculiar dignity of bearing, and it as constant effort to see to it that the fair name of solina maler was not in any way sullied. He might be dull he might be incapable of much learning, but a could not help being inspired by his surroundis alma male was not in any way suined it ingriedull he night be incapable of much learning, but
re could not help being inspired by his surroundigs. In the hostels, in the College corridors, on
he College lawns, he always mixed with his
emor contemporaries and unconsciously learned a
heat deal from them. He passed on from the
intering deal from them. He passed on from the
intering college. During these years he owned
in other allegiance, he had no other love, he
kenowledged no other mistress than his College,
and this profound affection, entertained so early in
ife, continued until the end, an everlasting joy
and inspiration. But the Sadler Commissioners
said, "Let the Intermediate students go down to
school, and to they have gone down. What is
the new condition of things? The young boy of
sixteen, on passing the High School Examination
enters the portals of an Intermediate College—
(College, forsooth—, the connecting link between
the High School and the University. He is there
for two years, and constantly each away never the ligh School and the University. He is there for two years, and constantly feels like a brief sojourner, constantly longs to get away, never content to be there, ever casting wistful eyes towards the distant gates of the University. He is at the Intermediate College for two years, and has hardly the time to know well his surroundings, his class-mates and and his teacher. He has no time to inherit the traditions of the institution: to esprit de corps he will be a stranger; the likelihood indeed is that the mistitution will neither have any traditions nor caprit de corps. Then when he comes to the University his fresh enthusiasm has been almost completely damped, his two years at the Intermediate College having fairly withered the tender feelings that alone enable him to make and keep friends. The objection that the In-

. . .

termediate students are not fit to profit by teaching of the college standard loses the little force it ever had when the quality of the batch of students now coming from Intermediate Colleges to the University is considered. It is the experience of most, University teachers that the majority of students, except from about half a dozen institutions, find it very hard to follow their lectures. The reason for that of course is that the High Schools are equipped with indifferent teachers. The evil does not stop there, the teachers who are available for the Intermediate Colleges are those who have failed to get employment at the Universities and are distinctly inferior in attainments. So that whereas in the past, the stage of inefficient teaching stopped at the Matriculation and that of competent guidance began at the Intermediate, now inefficiency is carried right up to the end of the Intermediate. We trust we are no pessimists, and we have certainly not attempted to draw too lurid a picture of the present state of education

Similar comments were made in The Modern Review years ago on the proposals for Intermediate colleges in the Sadler Commission's Report. But the educational reformers in the United Provinces did not take any notice of them.

The Peasant Triumphant

In H Mann contributes an article to the Bombay Co-operative Quarterly under the above caption and writes in the course of it—

Ten years ago nearly all Eastern Europe including Russia, Austria-Hungary, Eastern Germany, Servia and Roumania was an area of large estates. Some were worked by their owners more belonged to absentee landlerds and were worked by tenants on rents as high as could be obtained. Even then the peasants had gradually, in most countries, been increasing their interest in the land by legislation or otherwise. But the soil of each country was still dominated by the large proprietor—often an absentee landlord—and the worker on the land was usually a tenant (often a small tenant) cultivating the land with more or less control of his cultivation by the landlord or his agent. Towards the end of the Great War, a strong movement gained impetus in all the countries that I have named towards the acquirement of actual ownership of the land by the cultivators themselves. It was successful first in Russia, where indeed in the first years of the revolution it went further than the peasants wanted though this has been altered since. But from 1919 onward, the peasants in most of the countries have obtained possession of the land they cultivate, and laws have been passed in most of the new States created as a result of the War, granting the land to the actual cultivators, and dispossessing those who owned more than a certain amount of land. In most cases, except Russia and the Baltic States, it was the intention to compensate the land-owners thus dispossessed; but owing to the fall in the value of the currency mail these countries, the compensation has

人

amounted really to little or nothing, and the peacents have the land without giving very much for it.

What has been the result of this change on the prosperity of the countries concerned? When the changes described were in the course of being accomplished in the years up to 1921 it was freely stated that they would result in an economic decline in the countries concerned, in a lowering of production, and in general misery. We have now materials in several countries to judge how far these prophecies were true, and in Roumania. far these prophecies were true, and in Roumania, in particular, the figures are fairly complete. There they show that, however judged, the result has not been what was prophesied. Coming at the end of a ruinous war, the change found the country with less cultivation, with less domestic animals, and with general disorganisation. Now five years later the cattle are greater in number than before the War, while the sheep and pigs are nearly as many. Horses have declined, but this is to be expected as the number of horses, in a country where agriculture is carried on by bullocks, represents the luxury of the few rather than general prosperity. The total amount of cultivation has nearly reached the pre-war standard, and the area under grain crops is likewise almost equal to what it was before the troubles. On the other hand, the yield of crops per acre is now lower, though it is rapidly regaining the former standard. One point is very clear. The change from landlord to peasant agriculture seems to have led to a change in the character of the grain crops produced. Wheat grown chiefly for export, has gone far these prophecies were true, and in Roumania, Wheat grown chiefly for export, has gone down by nearly thirty per cent, the grain crops grown for local consumption, whether by men or by cattle, like barley and oats, have largely increased.

One result of the sudden development of pea-

sant proprietorship, which is of particular interest to us here, has been the rise of co-operative organisation, particularly for sale and purchase.

The Buddha Gaya Temple

The Mahabodhi writes truly, though with iustifiable feeling:

The Buddhagaya Temple is going to be convertrhe Buddhagaya Temple is going to be converted into a Saivite shrine by means of a public agitation. In India truth and justice have no value. The starving millions of India are illiterate and ignorant. The only way to upset the officials is to start an agitation. The Mahant has money, he has an army of sannyasis to do his bidding, there are starving pleaders and newsystener experience. has an army of sannyasis to do his bidding, there are starving pleaders and newspaper correspondents ready to do any evil. provided they are liberally paid. There are University professors who are ready to make history to show that the Buddbagaya Temple had always been a Hindu temple. One professor is preparing the way by writing articles to an influential Journal to show that the Mahant is the righful owner.

The Mahant does not know even the principal articles of the Buddha Dharma. Does he know that the Lord Buddha Dharma. Does he know that the Lord Buddha preached Excinst caste and animal sacrifices, against rituals, against a creating God, against a separate soul? As a Saivite would he be allowed to officiate in a Vaishnava temple? It is said that Vishnu came in the form of the

Buddha to preach against vedic sacrifices in or to send the Daityas to hell.

Whatever hirelings may try to prove. temple belongs by right to the Buddhi and we are sure when it comes into th possession they will be glad to allow Hindus who really consider Buddha an Ava to worship him there.

Sivaji's Mother

The Volunteer contains a biographi sketch of Jija Bai, the mother of Sivan, which the following incident is related.

Her sense of honour was superb. In 1627 wl Jehangir, then ruling at Delhi, found the harmy of Ahmednagar resisting his own power one again and again with the help of the stur Mahratha, he determined to win over the Mahratha chiefs. He succeeded in his designation of the succeeded in his designation of the Moguls was Jadhay Rao.

Rai's father. Very soon after this Jadhay Rao sent with an army against Ahmednagar leads to the son army against Ahmednagar leads to the sent with an army against Ahmednagar leads to the sent with an army against Ahmednagar leads to the sent with an army against Ahmednagar leads to the sent with an army against Ahmednagar leads to the sent with an army against Ahmednagar leads to the sent with an army against Ahmednagar leads to the sent with a sent w Bai's father. Very soon after this Jadhay Rao sent with an army against Ahmednagar I conscious of the son-in-law's strength he cause by secret conspiracies suspicion to be east Shahaji who had to flee with his wife and for years' old son. They were wildly pursued Jadhay Rao and his men. Jua Bai was in a decate state of health at the time but she brave kept up with her husband. She was finally lodg in a fort under the protection of Srinivasa R while Shahaji went on with his journey. In meantime Jadhay Rao coming to know of I daughter's state sought her immediately. Jua't turned her proud gaze on him and scornfully s turned her proud gaze on him and scornfully s "I have fallen into your hands instead of him. "I have fallen into your hands instead of him, towards me as you would have acted towal him." Her crest-fallen, father cowered under I blazing eyes and appealed to her to accept shelter of his roof "No. I shall not go with shelter of his roof "No. I shall not go with shelter of his roof "No. I shall not go with she mess and here she was living from day to day the most cruel uncertainty never knowing with she might be caught in the clutches of enemy. There was moreover the agony of see the little son sharing this stern fate with her sthe thought of how or where her husband milbe. But she preferred all this to the hospitality one who had turned traitor. For ten years where husband fought bravely on the battle-fic lija Rai fought her own domestic battles in little home. little home.

Marriage Customs Among the Muduvan

L. A. Krishna Iyer says in Man in Inthat among the Muduvans of Travanco an interesting hill-tribe,

Marriage generally takes place after pube. Sexual licence before marriage is neither recogn nor tolerated. All the unmarried young live together at night in a 'Bachelor's Hut' a

the married quarters. The young unmarried n live likewise separately in the company of vomen. Soon after supper both young und men and women go to their respective This custom finds its counterpart among vagas of Assam and the Oraons of Chota

among the Veddas of Ceylon, marriage place between cross-cousins, i.e. between the en of brother and sister, never between those prothers or two sisters. The union of such will be considered incestuous. The practice rrying a maternal uncless daughter is an old n. It was said to be universal among the dians at one time, and is considered to be rival of the mother-kin stage

e Twelfth Indian Science Congress

lessrs. N. L. Sharma and S. P. Chatterjie Benares Hindu University have conted to the *Educational Review* of Madras of and interesting account of the twelfth Science Congress, from which we the following extracts:—

e Benares session of the Congress has been and session this year. It was attended by 300 members, and more than 400 papers were itted to it.

SECTION OF MEDICAL RESEARCH President:-Lr.-Col. F. P. Mackie

- the told

e President in his most learned and interesteech mentioned the nature of the diseases I by insects, and gave an idea of the high lity due to them. He stated that deaths and dity caused in India by diseases known to been caused by insects, and the proportion of es in which insects played a contributory are enough to stagger humanity. He said, in.

sect-borne disease was an enormous burden on the financial, economic and social conditions of the Indian people. India like other Eastern countries was awaking from the long slumber, and the immense fatality from preventible disease was one of the most important problems she had to face. He added if they rid India of these insect-borne diseases, they would go far to bring her mortality into a line with that of temperate countries.

After emphasising the importance of preventive as compared with curative medicine, Lt.-Col. Mackie urged an expenditure of at least a part of the available money for medical purposes on preventive measures. He said. "Lowering of the death-rate, especially of the infantile death-rate, increased expectation of life and general increase of healthiness—such as have been brought about during the last half a century in the countries of the West—have been caused not so much by the success of curative medicine, but almost entirely by triumph of prevention. One of the most amazingly retrograde steps which has resulted from our recently-acquired methods of legislation is the demand from one province after another for the abolition of Public Health Commissioners, and a weakening of the services they control. That politicians should be found so short-sighted as to try to weaken the very organization on which the whole health and future depends, causes one almost to lose faith in the future of human progress." The President further added that if adequate measures are to be taken to deal effectively with the vast subject of preventible disease, it must be by strengthening and not by weakening the public health services. We look, and we believe not in vain, to the Supreme Government to stand against this rising tide of ignorance and prejudics. Lt. Col. Mackie said with great emphasis that it is their duty when the time comes to hand over the government of this country to its own population to see that they leave it with a strong, well-organised and efficient public health service, and that, he believes, is the greatest boon which the Western medical science can confer.

In this section several papers of academic interest were read and discussed, and a resolution was passed to the effect that members of the Medical Research Section of the Science Congress were of opinion that in view of the vast amount of epidemic and endemic parasite disease in India, the government of India and the Local Governments should be urged to enlarge and strengthen the public health and research departments throughout the country, with a view to reducing the enormous amount of invalidity and death-rate resulting from preventible disease.

SECTION OF GEOLOGY

President:—DR G. E. PRIGRIM, D. SC., F. G. S., Superintendent, Geological Survey of India.

The President gave a very learned and interesting speech on "The Past History and Migrations of Indian Mammals."

SECTION OF BOTANY
President:—Mr. D.S. INAMBAR. B. A. B. Ag.

The subject of Prof Irandar's address was "The Auto-Regulation of Physiological Processes in Plants".

•

...

ť

v.

SECTION OF AGRICULTURE President; -MR. R. S. FINLOW, B. Sc., F. L. C.

The subject of the President's speech was the review of work which had been done and of the progress which is being made in the improvement of Indian Agriculture.

SECTION OF CHEMISTRY.

President: -- Prof J. C. Ghosh, D. Sc.

In the past, the presidents of this section chose for their addresses topics of general scientific interest and organisation. This year, Dr. Ghosh departed from that precedent and spoke on modern theoretical developments in Photo-Chemistry—a branch oretical developments in Photo-Chemistry—a branch of chemistry in which he has been interested for some time. He defined this branch of Photo-Chemistry as one which deals with those groups of allied phenomena where radiant energy is transformed into chemical energy, and vive versu.

Of all the sections, this Chemistry section had the largest contribution of papers. The total number of papers was 108

ber of papers was 108

Animal Diseases and Public Health

Mr. K. Kylasam Ayyar writes in the Indian Veterinary Journal .-

For convenience of description the diseases communicable from animals to man may be classed under three groups, viz. (1) by ingestion of infectious material through meat and milk. (2) by actual contact and (3) by inoculation Group I.—Tuberculosis, Intestinal and other Worms, Foot and Mouth Disease, Diptheria, Sore

Throat, etc.

47.

Tuberculosis or consumption as it is popularly known is common to man and most of the domesticated animals throughout the world, but it is more widely prevalent in some countries than in others. For instance, it is more in evidence in England than in India at the present time. Some years ago, the disease assumed such alarming proportions in England in both men and cattle, that a Royal Commission on Tuberculosis was appointed. The imal report of the Commission was issued in 1911. I will quote a few salient points from the conclusions arrived at by the Commission.

"We have investigated many instances of fatal tuberculosis in the human subject in which the disease was undoubtedly caused by a bacillus of the bovine type and by nothing else. ticated animals throughout the world, but it is

the disease was undoubtedly caused by a bacillus of the bovine type and by nothing else.

Foot and mouth disease affects chiefly cattle, sheep, goats and occasionally other animals. Outbreaks of this disease frequently occur in this country. It is not a fatal disease. The disease can be conveyed to man by means of the milk of affected animals, by butter made from infected milk. Foung children are specially susceptible.

Diptheria is another disease which may be conveyed to man especially children, by milk. Some septic infections of the throat and intestinal discreters in human beings are undoubtedly caused by the germs contained in the lifts obtained from cows with inflammation of the udder

Some of the internal animal parasites or worm infectious in man are caused by eating improperly

cooked mest of animals, including fish, which serve as intermediate hosts in the life cycle of these worms. It is obvious, therefore, that the importance of an organised and thorough system of meat and milk inspection in all our large cities

of meat and milk inspection in all our large cities and towns cannot be over-estimated.

Group II.—I would here mention Mange of Scabies, Ringworm and Variola.

Mange or Scabies and Ringworm are common diseases of domesticated animals such as horse camel, cattle, dog, sheep, cat, etc. There are several recorded cases of these diseases having been transmitted from animals to man.

Variola in man is known as small-pox. It is contagious disease of animals affecting cattle, shee horses, goats, pigs, buffaloes, camels and monkey. Cow pox or Variola vaccina is largely connected

with public health consideration

Group III, includes some of the more important diseases not mentioned perviously, viz, Glander Anthrax, Rat-bite infections and Rabies.

Glanders is a highly infectious disease of the horse tribe, communicable to man and a warm-blooded animals except cattle, pig and whi mouse.

mouse.

Infections connected with Rat.—Rats have prove to be a real menace to public health, in various ways, some of which are carriers and transmitte of dangerous disease and as contaminators of to materials and water. Rat is the carrier of two serious diseases in man, known as Weil's disease Spirochaeteial Jaundice and rat bite fever.

The role played by rats in the transmission plague to human beings to fairly well understo and so I do not propose to deal with it here. Rabies is another most dangerous disease tiar mitted to man by the bite of a rabid animal usually dog.

usually dog.

Two forms of rables are recognised in the de Two forms of rabies are recognised in the determinant indicates is the more dangerous of the was the unprovoked attacks on man and beast made by dogs having it. No letter illustration the saying, Prevention is better than cure' if the one furnished by this disease, can be wishfor. It is possible to stamp out the disease stringent suppressive measures, and prevent re-introduction by adequate quarantine regulations has been done in Great Britain and Irela This was accomplished by the Rabies Order 1899, and other accessory orders dealing with importation of dogs. In this country destruction for the street dogs has been in vogue for some your, but, in order that it may produce the des on street dogs has been in vogue for some yonow, but, in order that it may produce the deserted, it needs to be carried out on a large sustained scale. Killing dogs in the streets clubbing them is generally condemned method now recommended for adoption by mulmcipalities and large towns it to catch the and pass them through a lethal chamber.

Manufacture in India

1 1 1 2 2 ...

We read in The Indian and Eas Engineer, a monthly review owned edited by Englishmen:—

Few of the numerous Home and American n facturers' representatives who call at these o

during the cold season tours omit to raise the all-important problem as to whether it would pay to establish their works in this country. The problem is a most important one and the most careful consideration has to be given to it. One criterion and one criterion only can be applied and that is "Will

It is necessary, in order to appreciate the present position, to realise that though the legislatures of this country, both provincial and imperial, are de mere merely debating societies yet de facto they are

pure merely debating societies yet de racio they are capable of, and do exercise, a great influence on the policy decided on by the Government.

Will it now pay Home manufacturers under present conditions to come out here? It may be taken as a sine qua non that the nationalistic spirit, a very right and proper spirit, which has folded the Government. ment to protect Indian industries will grow stronger as time goes on and our own considered opinion is that in time India will be a country protected by a very high wall of tariffs. This will not be for many years yet, but the manufacturer who contemplates coming out here has to consider not only immediate conditions but what they are likely to be in the future.

be in the future.

There are certain points for and against the proposition. Against the proposition we have the fact that the demand in India at the present for most engineering commodities, taken individually, is not so great as to justify the building of large works and without large works and a steady output the cost of production must be high. Manufacturing costs in India are in any case high, due to the expensiveness of the labour.

Where expert European supervision is provided in factories (we are not, it must be understood).

in factories (we are not, it must be understood, dealing with textile factories of any kind, overhead charges become more than usually heavy and frequently even efficient Europeans imported into frequently even efficient Europeans imported into India lose their vitality and are not always a success with the labour they have to handle. The last point against the proposition, which we propose dealing with, is the high freight charges made by Indian Railways. It is actually cheaper to import goods from almost any continental port in Europe to Calcutta or Bombay than it is to move goods from Calcutta to Bombay or vice versa. Future years may see a considerable reduction in freight charges, but certainly there are no immediate prospects of this state of affairs arising.

In favour of the manufacture of goods in this

prospects of this state of affairs arising.

In favour of the manufacture of goods in this country we have that very strong nationalistic opinion which is determined on giving every support to Indian enterprise. Again, while labour is to-day inefficient, there is growing up in the country an industrial force born to the work and the use of fool-proof automatic tools has lessened the period of great inefficiency to a considerable degree. Numerous Indian engineering enterprises run on most economical but usually hopelessly impossible lines, have helped to build up a labour reserve which has passed its first stages of ignorance, and this source of labour will always be available as the wages and opportunities offered by bigger firms are greater than the Indian mushroom enterprises can provide.

In the manufacture of paints, firms in India have against strong Home and Foreign competition succeeded in establishing themselves. Agricultural implements are also being turned out in competition with Kanopean products and are helding their own. Other lines are struggling along some of

whom will go under while others will see

whom will go under while others will see way through to happier times.

The manufacturer who contemplates comi India to manufacture will need to study problem both from its political and economic in the former he would be wise to enlist the port of influential Indians on his directorate the economic side he would do well to ded third from his most conservative wrofits and third from his most conservative profits and turn estimates in order that if even the wors realised he will be able to carry on.

Other than in the heaviest types of engine products India, we consider offers a fair retu that manufacturer who keeps low his initial c ontlay and expands accordingly as the de arises. To that manufacturer who comes to country, as several have already done, and bug works with an enormous capital outlay he to create a demand, to that type India offe disastrous venture. The British type of man turer rather than the American type will pros India.

A German Lover of Ahimsa.

In Current Thought, Mr. C. F. Anc tells of Mr. Albert Schweitzer, a Ge lover of ahimsa, and relates the follo anecdote:-

In the morning, as we hurried to the S I witnessed a perfect example of Ahimsa i own case. We were carrying between us, walking stick, his bundle which was rather I Each of us was holding one end of the stick. Each of us was holding one end of the stick, road was very slippery owing to the frost, denly he pulled himself up very quickly it and I nearly fell over at the sudden wrench was given to the stick. He apologised to me, took up from the ground a worm, which was frozen with cold and put it carefully on the gat the hedge side. He said to me tenderly, it will be quite safe. Here, in the road, it is to killed". It is difficult to describe the bot that action, but it will remain ineffaceable my memory, as a perfect example of the spir gentleness toward all created life.

The Test of a Picture

journal Mr. Mani In the same Bhushan Gupta gives a translation of a Bengali article by the great artist Nan Bose on the test of a picture, in which read :-

A great difference lies between the picture an object and the photograph of it. In the p besides the form of the object, we perceive. besides the form of the object, we perceive outarly the joy of the artist in the object, in a photograph we see only the material form not the artist's joy. It may be argued that one take pleasure in a photograph, just as one finds sure in Nature. But that is not necessarily for an individual that y see nothing in an individual that y is not not yet in the perceive of the artist in the object. Then we may say, that a picture is the expression or embodiment of the heightened jcy and emotion of the artist. There are two worlds in flod's creation—the world of phenomens and nountens. The eternal world consists of the sun, the most, stars and all other material things, while the mental consists of impluse, feeling, joy eto. To sixpress the joy of mind, man has created 64 times of Kalas (Fine Art). The impluse finds outlet be give expressions to our personality in songs, in the sun procession of the sun procession? Joy demands expression. It does not matter, whether others need it or not, a lamp will shine, when kindled; when a flower blooms, it must exhale its iragrance.

fragrance.

Saadi on State-craft

The passages which Sheikh Abdul Kadir quotes from Saadi on state-craft in an article in The New Orient are all worthy of attention. We extract two at random.

of attention. We extract two at random.

"Do not say to the king: go and place thine honoured feet on the skies, but say: prostrate thy sincere face on the ground."

Thus he places before his king the motto that kingship means service and this is a truth which he emphasises again and again in his writings. In a story given in the first chapter of Gulislan he iells us of a poor Dervish, who had retired into a desert and was free from all greed of gain. The king passed by, but the Dervish took no notice of him. The king resented this and sent his Wazir to question the man why he did not pay due respect to his Majesty. The Dervish told the Wazir to tell the king that he should expect service from those who expected to get anything from him and added that the kings were meant to guard their subjects but the subjects were not created for the sake of the service of kings. The goat, he said, is not for the shepherd but the shepherd is for the service of the goat.

In conclusion, I do not think I can do better than give a translation of a little story relating to Alexander the Great, with which the first chapter of Gulistan ends. Saadi observes:

"People once asked Alexander: By what means fid you acquire so many countries of the East and the West? There were monarchs before you who lived long, had larger territories, armies and treasures than you have and yet their conquests were not so great. He replied: Whatever country I resonquered with the help of God, I made a point of the country. I also kept up any good work and therefore the country. I also kept up any good work and therefore the country. I also kept up any good work and the reverse than you have and those people from the

times of the monarchs of old and I always cherished the good memory of past kings. Whenever I mentioned them I referred to their virtues. The wise do not regard him as great who gives a bad name to the great men who have lived before him. All things mundane come to nothing as they are so transitory, whether it be the throne, or the authority to order and to forbid, or the power to take and to control. If you wish that your good name may be preserved, the best way of doing so is that you should preserve the good name of those who are no more."

The British rulers and historians of India stand badly in need of always bearing in mind the anecdote told above. They generally paint all previous rulers of India in black colours.

"Moral Education—India's Greatest Neeed"

Mr. C. N. Zutshi writes in The Vedic Magazine :-

"Education" according to Prof. James "consistsing the organisation of the resources in the human being, of powers of conduct, which will fit him to his social and physical world." The present system of education viewed in the light of this statement, has been a failure; it has failed to develop and organise the powers of conduct in our youngmen who receive their education in the present-day schools and colleges. The education which they receive has been too secular to inculcate any sound morals in Indian youths: I mean, it is not encouraged the formation of character in them. The result is that our youngmen do not possess stamina, moral courage—either of action or conviction—honesty of purpose and consistency, and very much lack in strict adhesion to truth. These effects of an epicurean morality on the moral development of our youths have been of too disastrous a nature to be exaggerated. Our youths are always taught to regard pain and pleasure as the lords of life and Mammon the only god to be worshipped. The present education has unnerved their character and dwarfed the possibilities of their moral growth. The result is that the present enteriors and over-sensitive to the slightest touch their moral growth. The result is that the present generation of Indians has become very ease-loving, luxurious and over-sensitive to the slightest touch of pain; and so it is that the hardinood of the older generation is gone and a sort of moral effiminacy has come to predominate our national character. The result was inevitable, Indian gtudents being constantly fed on an doctrine of eat, drink and be merry" without being subject to any moral discipline.

FOREIGN PERIODICALS

The Mothers We Want

In the coarse of an article in the Century Magazine on "Revaluing Motherhood." Anne Sturges Duryes observes:-

Men are as big as ever they were; bigger by so much as that they have irretrievably welded together by trade, radio, airplane, and a new international spirit the hitherto separate parts of a world which must henceforth be regarded and dealt with as a unit. We are to-day handicapped not by necessarily smaller men, but by more extensive and complex situations, which call truly for a new reduct in the art of man-making, and nothing see product in the art of man-making, and nothing so abnormal as some monster superman will meet our

requirements. requirements.

In some way, coming mothers must learn to get larger outlooks, wider inspirations, deeper values of the immense significance of the human spirits committed to their care and of a mother's relation to them. They will look upon themselves as temporary custodians of these lives which belong first to themselves and then to the future. They will not see their children as of interest in relation to themselves, but themselves as of an only temporary interest in relation to their children. The physical love will claim less emphasis: personal sensibilities literest in reaction to their children. The physical love will claim less emphasis; personal sensibilities even moral ones, will be submerged; they will be looked upon as subservient to the higher love—the love which regards the individual rights and potentialities and achievements of the child as the really significant values to be devoted to world-wide ser-

Will they not, then, create a race of beings who need never seek their coveted joy in unusually perfect methods of killing, but in richer and completer ways of living and of fostering the life of others in its world-wide, as well as in its more restricted relationship?

If we cannot seem to develop this sort of being from the human specimens produced by the good old mothers of the past, why not look to a new and revalued motherhood for the hope of the

and revalued motherhood for the hope of the future?

Mothers of the coming day will find thrown into their crucible by rapidly changing modern conditions about every element needed for not a new chemistry of manhood but the new alchemy of motherhood. If old-time mothers will empty out their stale decoctions, if they can wash away their early Victorian sentimentalities, their standly virtuous, though essentially selfish, crystallizations, they may distil some, new and potent magic of motherhood, some spiritually utilitarian essence, in which the coming world-infant may grow and take on some sort of world proportions and with which he may in safety "primarily identity" himself. Such a mother would in a truly abaggating catalysis, by eliminating herself, precipitate for the young Narcissus of the future a separated and independent self-image worthy of his own regard, because expanding to the dimensions of the normally balanced and finely adjusted in the coming words and travailing to bring forth.

Poverty and Elected Assemblies

The Living Age says:-

Baron Saito, the Governor-General of Korea, has made a contribution to political philosophy that may help to explain why the United States, the British Dominions, and some of the less impoverished. Powers of Western Europe are blessed with democratic institutions—at least in form. He tells the people of Japan that elected assemblies are a luxury suitable only for wealthy countries. The poor Koreans over whom he rules could not afford such an indulgence. They would be unable to stand the cost. And all this before he had an opportunity to cite the last salary-grab in Washington to point the moral of his tale!

It may be pertinent to enquire in this connection whether our legislative bodies are not too costly for the service (or disservice?) rendered by them to the country.

Exchange of Populations

In explaining in the Nineteenth Century the effects of the exchanges of the populations in the Balkans during the past few years, A. A Pallis gives some figures, which are to be found in the following extract:-

To take Turkey first. In Asia Minor the Greek and Armenian population have completely disappeared, except for a small number of Roman Catholics who do not come under the exchange. In Eastern Thrace, before 1912 there was a mixed population of Greeks, Moslems, Bulgars, Armenians etc. The proportion between the various races, according to the Turkish official figures of 1902, was Greeks, 45 per cent., Moslems, 39 per cent.; Bulgars, 9 per cent.; Armenians, 4 per cent.; others 3 per cent. To-day the Moslems compose 95 per cent., of the population, the Greeks and Armenians have completely disappeared, and Bulgars do not exceed 1,000. The rest are Jews. Gypsies, Europeans, etc. . . . Turning to Greece, we find that Macedonia has been hellenised to an extent which, without the exchange, would have been hardly possible in so short a time. In 1912 the proportion between the various races inhabiting what is to-day Greek Macedonia was—Greeks, 43 per cent.: Moslems, 39 per cent. Bulgarian Exachists, 10 per cent., others, 8 per cent. To-day, after the settlement of the Greek refugees in the country and the departure of all the Moslems and part of the Exarchists, the proportion is—Greeks. 88 per cent.: all others, 12 per cent.

In Western Thrace, where the Moslems are excempted from the exchange, the proportion is as follows: 1912—Greeks, 3, per cent.; Moslems, 47 To take Turkey first. In Asia Minor the Greek

in Western Thrace, where the Moslems are exempted from the exchange, the proportion is as follows: 1912—Greeks, 3. per cent.; Moslems, 47 per cent; Bulgarian Exarchests, 14.5 per cent. others, 15 per cent. To-day—Greeks, 62 per cent. Moslems, 26 per cent.; all others, 10 per cent. The conclusion to be drawn from the proceding figures is that the engignations and exchanges, it spite of the area thering and loss of human lift they have entailed, have at least had the compensating advantage of creating a more homogeneous

ing advantage of creating a more homogeneous population where before there was a perfect tangle of races and religions. It is to be hoped that man

causes of political friction between the countries concerned will thus tend automatically to disappear.

Date of the Koran

The Bulletin of the John Rylands Library in Manchester says that a very important Syriac manuscript has recently been deposited there for purposes of investigation. It contains portions of a previously unknown translation of the Kur'an into Old Syriac.

More than two-thirds of the important Surahs of the Kuran are involved in this translation, which is of the utmost importance, for the fol-

lowing reasons:

1. It contains some new verses of the sacred text of Islam, which are not found in the standard text which has been in use by Muslims for many generations. Some of these verses have been traced by Dr. Mingana in the works of Muslim traditionists, as having been actually uttered by the Prophet, whilst some of them cannot be accounted for, and are unrecorded even by the numerous compilers of Islamic tradition

2. Even in the verses that are actually in the Kuran of to-day the Syriac translation offers a considerable number of variants. Some of these variants are shown by Dr. Mingana to have arisen from an Arabic text similar to the one we possess.

and others seem to be completely foreign to it.

Furthermore, the Kur'an is shown to have been spandardised in the form in which we now know it, not by the third Caliph Othman, as has been universally believed hitherto, but more than forty years later by Hajiaj, the powerful lieutenant of the Umayyad Caliph Abdul Malik.

Beauty Aids for Men

The Women Citizen says:-

We rise to protect against discriminations, against men in advertisements of modern cosmetic we have to protect against discriminations, against men in advertisements of modern cosmetic Leaf through the big magazines and you will find appeal after appeal directed to women to use this or that in order to get a husband or to make sure of holding one already captured. All sorts of advice are issued to the wife for preserving her complexion, hair, figure, her youth, to the one purpose of having and holding. But, with the axtention of the afflicted gentleman whose engagement is abruptly broken off because "his best friends won't tell him." almost nothing is done to help a man win a girl or keep his wife's affections. The texture of his skin is apparently only a matter of his cwn physical comfort; hair tome ads never ask him if his wife's illusions are damaged by his haldness; and his figure may bulge grievously to the complete loss of a wife's pride in him, for all the controlled holds. It has advertisers care. It isn't fair. Men have a right to aids to beauty too. If the advertisers are in the cusiness of keeping homes attacher, they really should work from both sides.

The Quality of Women's Greatness

We read in the same journal:-

At a dinner given in honor of Mrs. Edw MacDowell as a recognition of the *Piotorial Revie* \$5,000 award to her as the American woman made the most outstanding contribution to Ame an life during the year, Mary Austin drew interesting distinctions between the contributions of the contribution of the contr interesting distinction between greatness in a rand in a woman. Greatness in a woman, she s will always carry with it a quality of mother In whatever a woman does, there are involved maternal qualities of fostering, developing, protect and comforting. This instinct has always been the service of man and has undoubtedly b responsible in considerable measure for his graness. Nearly every man who has achieved githings has had some woman to make this comfortable for him, to shield him, to take on own shoulders all the petty, irritating, time-consi interesting distinction between greatness in a r own shoulders all the petty, irritating, time-consi

ing details and leave him free to create.

Many think that this is woman's chief function life. Whether this is true or not, there is question that the creative mind needs this mother are and it is contracted that the creative mind needs this mother. care, and it is quite possible that one of the reas why women have not equaled men in crea achievements is that they have not had any to give them the freedom of mind and body wi-most men have had. Mrs. MacDowell's achievem through the Peterborough colony, is to give a of this protection to creative minds working in various arts. It is a service given to men women alike, and may be responsible—who know for developing some unknown woman's genius i would otherwise be smothered under the press of ordinary life. In this it is unique. It will interesting to see if the achievement of a wor which wins the next award will have this simaternal quality.

The Future of Art

Herman Epstein observes in The Wo $To ext{-morrow}:$

Today vulgarity surrounds us everywhere in Our doings and in most of our art, and only protest rings burning and vital. Tomorrow the will be inspiration in the air always, everywhet when we awaken, when we labor, our minds abodies and souls will sing with the joy of live and our hands will easily do their bidding.

Art is not a resting or antertumment, but the fig.

It is not a pashine or entertainment, but the flow and purpose of our being. Today it is hard realize what this means for art has been so putituted for entertaining, merely filling the we hours, for commercial advertising, for ostentate display, that we have forgotten its source is function.

function.

Of all the reasons for which the new wo should be hailed with greatest joy and hope, most important is this that art will then co again into its own: and we will all be artists some degree. We will have songs to sing, pictu to paint,, images to carve, beautiful things isshion, and our hands will have the necess comming to express our ever very puls vitalized, responsive, simply human, god-like

Well-ordered Adult Education

We read in The Play-ground:-

It is probable that very few minds are ever again at alert or as active as they are at about twenty-two or twenty-three years of age. When the pressure of formal instruction is removed and the pressure of formal instruction is removed and when the early stimulus has passed, the vast majority of human intelligences plod through life on a dead level. Only now and then is there evidence given in later years of real initiative, of mental alertness, and of productive intellectual power. The number of human beings, even those of some conspicuousness, who continue to grow in knowledge and in power after forty years of age is very small indeed. Observation indicates that those ledge and in power after forty years of age is very small indeed. Observation indicates that those who are continuing to grow at forty will, in all likelihood, maintain that power of growth and achievement throughout life, however long. Well-ordered adult education might easily come to the rescue of vast numbers of those men and women who are, under present conditions, unconsciously sentenced to a life of dismal conformity to type without any genuine interest or intellectual activity. No one supposes that the methods of home study can displace the personal relationship of teacher and taught, or that it can compete with the closely planned schemes of educational work that have stood the test of generations of use. What home study can do, however, is to carry the sparks of scholarship to the dry place of adult life and light here and there a fire that will give both brightness and warmth to otherwise weary and shut-in lives. It is a noble and a splendid type of service which will well repay whatever effort may be spent in perfecting it.

China As She Is

The Japan Magazine contains an important article by Marquis Komnra on the actualities of China and her relations with Japan, from which we make two extracts.

1. The General Situation.—Not a few people, who observe China superficially, speak pessimistically of her future as well of the past 14 years of republican government, during which she has been in a state of complete chaos. We must not overlook, however, many things, which have been progressing and developing constantly behind the scenes of disturbances. These inside facts must not be formuten by those wishing to coexist or coscenes of disturbances. These inside facts must not be forgotten by those wishing to coexist or cooperate with China either politically or economically. It is true that China is extremely disuntied but that is simply political; and socially and economically, she has been making steady progress and development. The masses have been gaining in power steadily, step, by step, while the political men have had constant ups and downs.

2. Economic Progress of Development.—The Chinese Republic has thus been in chaos since its loundation, and its unification and facilication cannot be hoped for in the near future. Despite

1 15 21 3

such political idisturbances, the economic conditions in China have made yearly progress and development. This is note-worthy.

"Europe Drifting Backward"

Georg Brandes writes in Tilskueren, the Copenhagen Literary and Political Review:

The ideal of political liberty that obtained in the nineteenth century is almost forgotten. In conservatively governed countries popular rights are thrust aside by dictators. In revolutionary Russia and her satellite States like Ukraine and Georgia, there is freedom neither for the individual nor for The entire education is Communist and the press. antiliberal

Since looking at the dark side of life is both unpleasant and unfruitful, let us conclude with one word of hope. It is that out of our present travail and apparent backsliding something better may be born.

"China's Campaign Against Missionary Education"

We read in The Living Age:-

Last October an annual China Educational Conference was held in Kaifengfu, the capital of House Province. At this Conference a committee of Chi-Province. At this Conference a committee of Chinese educators, who had investigated missionary education in that country, presented a series of resolutions which were adopted and expected to receive the approval of the Ministry of Education, in Peking. These do not represent the snap judgment of a meeting that, we are told. 'included the most responsible body of educators in China,' but a matured programme that has been under discussion for a year or more. They demand in substance that the Chinese Government shall henceforth control all educatoral work in China. Foreign control all educational work in China. Foreign schools shall be required to register with the Government, to follow in their curriculum and administration the national and provincial regulations, to employ teachers having Government certificates, and—here comes the most controversial point—to observe the following prohibition. Foreigners shall not use their schools or other educational agencies for the propagation of religion. To be sure, the Chinese Government cannot enforce these resolutions under existing treaties, nor would these measures have the unanimous support of the Chinese people; but they are very significant as expressing a state of mind

Alcohol in the Tropics

The following article, extracted Abkari, will be found instructive:-

The distinguished physician. Sir Leonard Rogers who was for many years in the Indian Madical Service, contributed to the Special Alcahol number of the Proceeding (Ictober, 1924) a most useful article on "Alcohel in the Tropics." He pointed out, firstly the predisposing effect of alcohol towards heat and sunstroke, and to the liver complications

of dysensery. Its value in the treatment of tropical disease he sums up as follows:

"There is thus weighty evidence that the administration of alcohol as a drug in many of the most important tropical diseases is positively harmful, while I do not know of any serious tropical disease in which its regular exhibition is of value, although it may be required in individual cases, especially in such patients as have become habituated to its use."

He answers the question, Has alcohol any prophylactic value against tropical disease? with a quotation from Sir Ronald Martin, writing on "The Influence of Tropical Climates":—

finduction from Sir Ronald Martin. writing on "The Influence of Tropical Climates":—
"We hear much amongst habitual topers of the enposed prophylactic influence of spirits and cigars against night exposure, malaria, and contagion: but no medial observer in any of our numerous colonies has ever seen reason to believe in any such delusive doctrine, nor is there in reality the smallest foundation for it."

He replies to his final question Is alcohol neces-

He replies to his final question, Is alcohol neces-sary or beneficial in the tropics? by quoting the happy result in his own case of abstinence during twenty-seven years of strenuous work in India with only one year spent in the hills, and with no complete year of leave, in spite of the warning from advisors whom he met at the start, of the risk he was running. Whilst he knows of no definite evidence that drinking a very moderate amount of well-diluted alcohol after sunset and only at the evening meal, does any harm, he infers from at the evening meal, does any harm, he infers from statistics drawn from temperate climates that ab-stinence would result in longer life and less sick-acts in the tropics, and commends to the considera-tion of insurance companies a reduction to abstainers living in the tropics.

The writer further says:—
Unfortunately, there is no doubt that the consumption of alcohol by Indians has greatly increassumption of alcohol by Indians has greatly increased in recent years, especially in large towns, while liver abscess is still rare in the Indian Army the men of which are rarely addicted to its use. Once more the rarity of liver abscess in women and children in India has been attributed, and rightly so, in my opinion, to the infrequency of their use of alcohol as compared with men."

Finally, he quotes Sir Edmund Parks, the famous Professor of Hygiene at the Netley Army Medical School, who had studied the subject closely, and who wrote in 1873:—

"The common notion that some form of alcoholic

The common notion that some form of alcoholic beverage is necessary in tropical climates is, I firmly believe, a mischievous delusion. On this point the greatest Army surgeons have spoken strongly (Jackson, especially and Martin), and yet nothing is more common even at the present day than to hear officers, both in India and the west Indies, assert that the climate requires lightly is most hurtful."

[Six Leonard Rogers is Physician and Lecturer at the London School of Tropical Medicine; Member of the Medical Roard, India Office; late Professor is Pathology, Medical College, Calcutta, etc.]

Records of Two Halves Humanity

Dr. Sudhindra Bose writes in The Cosmoditan Student:-

It is often supposed that the record of one-half of humanity is a record of continuous political freedom and democracy, while the record of the other half is one unrelieving midnight of barbarism and oppression. Is this true?

The fact is that abcient and medieval Asia, for instance, passed through the same political and institutional experiences as did Europe until the French Revolution. City-states, republics, jury system, divine right of kings, Machiavellian statesmen are to be found in Europe as well as in Asia. If it is true that the East has been the home of Timurlane and Zenghis Khan, it is equally true that the West has been the breeding ground of such libertines as Caesar and Alexander, such tyrants as Louis XIV and Alva of the Spanish Netherlands. Not every conqueror in the Orient was a bloodthirsty murderer any more than every invader in the Occident was a William the Conquerer who after taking the leading citizens of a captured who after taking the leading citizens of a captured city, skinned them alive and hung their skins on the city walls.

Impartial historians will bear testimony to the fact that Mongolian rulers, like Jenghis and Kubia, "were at least as understanding and creative monarchs as either that flamboyant but egotistical Alexander the Great" or, "that energetic but illiterate theologian, Charlemagne."

After all history are not made up of all campaigns

After all, history is not made up of all campaigns and massacres. Even amidst the benevolent despotism of Asia, we see that life, through all its ups and downs, went on progressively. We find that vast sums of money and effort were spent on arts, industries, architectures, roads, schools and colleges, academies of literature and science.

Take this matter of education. In ancient Industrial scholars and teachers were supported in early times by the State. They were maintained by gifts of land or proceeds of taxes. "Under Brahmanism education was mainly confined to the higher class of society, but Buddhism proclaimed the equality of all mankind, and Buddhist monarchs thought it necessary to make arrangements for the instruction necessary to make arrangements for the instruction of the multitude."

The British Government and the Opium Trade

With reference to the withdrawal of the American delegation from the Opium Conference at Geneva, The New Republic observes :-

A particularly regrettable aspect of the matter is the amount of ill-will engendered between British and Americans. If the latter have failed to take into sufficient account the problems of the Empire, the former have also been guilty of equivocation and misstatement. We regret to find in so intelligent and honorable a journal as the New Statesman (London) such observations as

New Statesman (London) such constructions these:

"In Persia, Turkestan, Arabia and India opium is eaten—as a stimulant, a febrifuge, a narcotic, the most universal and well-understood of medicines. In these countries it is very rarely, if ever, abused and the almost universal verdict of expert opinion is that it does far more good than harm. What right in any case has America or even Great Britain to attempt to interfere with the ancient

AND LANGE

shits of countries time Persis and India? Even he more victors use of opium which obtains is him is a Chinese not an Anglo-Saxon affair.

".....In America the use of morphia and heroin as increased of late rapidly and dangerously; and it is easy to understand why American public printed score not mersive to prevent the manufacture.

is increased of late rapidly and dangerously; and it is easy to understand why American public pinion should desire sweeping measures of worldwide scope not merely to prevent the manufacture and sale of these dangerous drugs, but even to prohibit the cultivation of the opium poppy from which they are obtained."

With no desire to fan a flame already too hot, we submit that there is no scientific basis for hese observations. The best opinion of British nedical men who have studied the subject in the field is that the use of opium in any form whatever is invariably harmful; that it is not a food, and that its effects of stilling the pangs of hunger and relieving such conditions as dysentery are only temporary and illusory. The latest edition of the Encyclopedia Britannica, in its excellent article on opium, says flatly that eating the drug "s much more deleterious than smoking," and that "to break off the habit of eating opium is exceedingly difficult." Because of its effect on the spinal cord in infants it should never be given to young children "under any circumstances, in any dose"; yet it is constantly fed to babies throughout the countries mentioned by the New Statesman, to keep them quiet.

The other statements quoted above are equally incorrect. In view of the fact that the East India Company virtually created ovium addiction in China, that Great Britain fought a war with China lending in 1842) to compel her to import Indian opium, and that the trade was developed for many years thereafter with the help of the Indian government, the observation that Chinase addiction "is a Chinese, not an Anglo-Saxon affair," seems about as cynical as could well be offered. Finally, the statement about the growth of the habit in the United States is far too strong. It is based, no doubt, on a wild misstatement which appeared several years ago in an annual report of the Secretary of the Treasury which declared that there are a million drug-addicts in the United States and that their number is increasing rapidly. States and that their number is increasing rapidly. States and that their number is increasing rapidly. Similar statements have often been made by yellow journalists, and one and all are without scientific verification. There are no reliable statistics of drug addiction, the Secretary of the Ireasury was just guessing. While the traffic a very serious problem, those who know most bout the matter believe his guess was a great leal larger than the reality. It is altogether itsely that drug addiction in this country is diminshing, and has been for a long time. The inericans in their attitude at Geneva may have moved themselves impractical idealists: they may by rejecting half a loaf have brought the conference to a result of no bread; but it is absurd to raue that their self-interest lay at the bottom of ndeavors. ndeavors.

In this connection Rabindranath Tagore's rticle in our present issue, translated from thorati, will be found illuminating.

"Collective Hypnotism," and Indian Jugglers' Tricks

John Dill Ross writes in Chambers's Journal:-

I recently read a novel in which the heroine possesses the faculty of collective hypnotism, by

I recently read a novel in which the heroine possesses the faculty of collective hypnotism, by means of which she creates a variety of remarkable episodes to the utter undoing of the villain of the plot. I do not know whether such a thing as collective hypnotism really exists, having had but little time or disposition to study this and other phenomena connected with hypnotism. But during my long residence in Singapore I saw three performances given by Indian jugglers which I wish to describe, as I could never obtain any satisfactory explanation of them.

(1) I was on board the Russian Volunteer Fleet troopship Kostroma, lying at Tanjong Pagar Wharf, Singapore, busy arranging her despatch to Odessa. While I was on the quarter-deck an Indian juggler with a woman assistant begged permission to give a performance. A space was cleared on the upper deck so as to make a stage for them, and the Indian began by putting the woman into a course net, which he fastened securely. He then folded the woman up and put her inside a small oblong basket, trampling her body with his feet until she exactly filled the basket, which he closed with a tightly-fitting cover. It would have been hard to believe that the compact little basket really contained a human body, had we not seen the brutal way in which he packed the woman into it. He next took a long, sharp sword and ran it through the basket in every direction. When he had had been eagerly watching the whole thing, which took place in broad daylight on the teak deck of the Kostroma before some hundreds of spectators. I got the juggler to repeat the trick at my house next day for the benefit of some of my friends. This time he worked on a floor paved with large excent of the paved. my house next day for the benefit of some of my friends. This time he worked on a floor paved with large squares of polished Italian marble, but with exactly the same result as on board the Russian steamer.

We witnessed an exactly similar performance by an Indian juggler, at Santiniketan, many years ago, in which the jugglers's son was thrust into a basket, etc., etc.

After describing two other performances,

Mr. Ross asks:-

How are these things done? I have an idea that certain Indians know much more about hypnotism and things occult than any European. Is it possible that those various jugglers willed that we should see exactly what they intended us to see? If so, in the case of the experience on board the Kastroma they must have hypnotised some the Kostroma they must have hypnotised some hundreds of strong men simultaneously, which seems to be beyond the bounds of credibility. Perhaps some of your readers may have a theory.

I have stated whatel have seen quite correctly and truthfully, without the least effort to colour

or exaggerate effects.

Civilization and Spiritualization

Swami Paramananda writes in Message of the East:

What is civilization? What are the distinctive marks of a civilized man? How does he differ from the uncivilized? It is right that we should have defiuncivilized? It is right that we should have definite answers to these simple questions. To-day almost everywhere we hear the loud cry to save civilization. It is seldom that we can pick up a newspaper or a magazine of any worth without reading something along this line. We might attempt many superficial answers to these outstanding questions. We might say it is easy to differentiate a civilized person from an uncivilized by his manner of apparel or through the mode of his living. Richness does not make a person civilized living. Richness does not make a person civilized nor can poverty make one uncivilized. It does not consist in building up of trade or commercial exploitation, or any of these superficial means, even though they may have certain outer glamour. The distinctive mark of differentiation is in the standard of conduct. Perhaps we would better use the sumple translation of the word "civilization," which from savagery. If we have not risen above the instinct of brute passion, hatred, treachery and other low instincts common to all uncontrolled animai nature, although we may live in fine houses surrounded by great luxuries and material splendor, we are far from being civilized.

"Swami's Teaching Reaches the Blind"

We are glad to read in the same journal that Swami Paramananda's book, named "The Way of Peace and Blessedness" has been recently put into Braille by the Clovernook Institute for the Blind, in America, and that on a recent occasion Helen Keller read the book in Braille. A correspondent writes to that journal:-

Then we laid your book in her lap, and I wish I could picture her as she sat there in the big chair reading aloud to us as she slipped her fingertips along the Braille lines. "Through the blessings of the Supreme, may our life be fruitful," and so on to "May we serve God alone with our whole heart and soul," where she stopped to say, "Ah, this book is my creed." (The book referred to is "The Way of Peace and Blessedness," by Swami Paramanda, recently put into Braille, by the Clover. mananda, recently put into Braille by the Clover-nock Institute for the Blind.)

The Secret of Democracy

"The following is from Philips Kerr's lecture on Democracy published in the Indus:

The real, the ultimate, secret of democracy is the leadership of moral wine. For unless democracy can throw up enough people who will take moral principle as their guide, at whatever cost democracy releases passions and animosities which destroy it, and drive people back to some

kind of absolutism as the one means of tranquilli and peace. It is not very easy to describe he moral principle operates in public life. It is used in the selfish fidelity to what one believes to be right not surrender to political animosity in any form. It is fearless readiness to face facts as they as and to deal with them as they are, and not fanate all disregard of everything which seems to runcounter to one's own preconceived ideas. It is a unselfish readiness to forgo personal ambition. unselfish readiness to forgo personal ambition of profit, place or power, for the sake of the commo good. It is determination to do what one believe the public good really requires and not merel what is popular or what the crowd demands, is readiness to face abuse and unpopularity, no from one's opponents, for that is easily sustaine but from those whom you seek to help and o whose support you rely. It is wisdom, unselling ness, self-control in the face of temptation and pressure to short cuts and easy ways,

Organized Society's Hate

Clarence Darrow writes in The Century Magazine .-

The whole life of man on the earth abounds in the record of the cruel vengeance administered on the record of the cruel vengeance administered by the State. It is a record of killing in the most ghastly way—killings for what are still crims and what are no longer crimes. Only a very small fraction of the victims put to death have suffered for acts that the world punishes to day. Deaths for sorcery, witchcraft, and heresy multiple to a far larger number of victims, and in punishment has been meted out in a far mer odious and horrible way. All this shows the society punishes those whom it hates, and my fanaticism, religious or social, claims its with by the thousands. Death is administered by the congenized society hates and gets joy in billing the ones it hates.

the ones it hates.

Those of us who believe that all conduct is the result of law, and that all men are controlled by their heredity and environment, are as anxious as the rest that crime should disappear. We, however, the control of the control ever believe that it can be diminished, if not finally obliterated, only by finding the causes and intelligently treating these causes rather than rending and destroying in anger and hate.

The Most Weighty Problem in Spain To-day

In the opinion of John Langdon-Davies, as recorded in an article in The Century Magazine.

Catalan separatiom is the most weighty problem

in Spain to-day.

To understand the Catalan question it is essenting to understand the Catalan question it is essenting to the catalan question it is essentially to t To understand the Catalan question it is essential to remember that the geography of Span bears some resemblance to that of Greece. Green unity was always prevented by the mountainous nature of the country; and in Spain also like physical features have produced and perpetuated like disjunity. When the Moors were slowly pushed back from the Pyrenees three new Christian settlements advanced in parallel columns

wn the Iberian Peninsula: the westernmost com-nity gave rise to the Portuguese, the center to e Castilians, and the Mediterranean to the stalans. In course of time Catalonia became lited with the kingdom of Aragon, and thence ith Castile itself, but dynastic union could not thing an amalgamation between the very divergith Castle usell, but dynastic union could not hieve an amalgamation between the very divergat cultures. Catalan nationalism has always een kept alive by a series of armed revolts, and atalan language and culture remained as distinct om Castilian as did the Portuguese.

During the earlier years of the nineteenth centry a renaissance of the Catalan language as a terary medium was the prologue to a tremendous ational revival. The peasantry had never samed Castilian and had always remained true to arned Castilian and had always remained true to sown national customs: throughout the eastern yrenees the traveller to-day still finds the scarst cap, which on the heads of French Catalans ecame the cap of liberty and the eternal emblem of France and the Revolution. In these valleys ervants and shopkeepers must be addressed in heir native tongue, for though Barcelona and the reat centers are of course bilingual, there are housands of men and women to whom the lanuage of Madrid is as foreign as Italian or French. In the villages by tradition and everywhere as part of the conscious nationalist revival, the Sariana is danced in the streets at every fierda, and latalan folk-songs are on everybody's lips. The latalan culture is indeed separate and distinctive wen in architecture, its genius has worked out ven in architecture, its genius has worked out new forms for itself; no one who has visited northern Spain can forget such cathedrals as those of Barcelona, Tarragona, and Gerona, and their listinctive central spans, widened until the side sisles have become, as it were, rudimentary.

The writer concludes .-

The writer concludes.—

From every point of view the observer is cored to decide that the future of Spain depends upon the future of the Catalan provinces: the distinction between the energy, the enlightenment, and the wealth of Barcelona as a community, and the apathy and obscurantism of Madrid, is too remarkable to permit a perpetuation of the present state of affairs. At present most of the Catalan eaders are exiled, two of them, Masso Llorens and Nicolau d'Olwer, have presented, fruitlessly of course, the claim of Catalonia before the League of Nations; an active propaganda recalling the Irish propaganda of a few years ago is acquainting the world with the internal affairs of Spain; housands of young Catalans are migrating across the Pyrenees to escape conscription; many others are drilling in their native mountains; a tremendous public opinion has been aroused. Meanwhile, in the student of politics, the pity is that so fine an attempt at democracy as that instigated by the man comunitat from 1914-24 should have suffered such an eclipse. It is one of the elements which we continuing to drag Europe back to what beorges Duhamel has lately called "a new and chious middle age."

Chinese Education

T. Z. Koo writes in the International Review of Missions: In the olden days government or state education 87-11

as such, hardly existed in China. Education was largely a private undertaking, the Government merely providing a system of imperial examination which was the only road to official appointments. The scholar group has always been the ruling group in China. The aristocracy of China has never been one of rank or wealth, but of learning. The modern system of government education is of comparatively recent growth, going back not more than twenty years. It owes its origin directly to the contact between the Chinese people and the West. At the time when the modern system began we were eager to acquire that training which would enable us to meet with the West on terms of we were eager to acquire that training which would enable us to meet with the West on terms of equality: we especially wanted education leading to material equipment for war. The first five modern schools established by the Government indicate this trend of thought very clearly. They were the Imperial Technical College, the Army Medical College and the Pei Yang Engineering College. This list shows with sufficient clearness why the China of those days wanted modern education. Later it was realized that training along these lines was not sufficient, and training along broader lines has gradually developed.

The actual beginning of a modern system of education for China did not come until about 1904 when the old system of imperial examinations was practically abolished. Two decades of work provided school facilities for about 5,183,400 boys and airls That is a very small proportion (four hundred million), but we simply have not been able to overtake our educational needs in these twenty years.

twenty years.

Britain's Rivals in the Textile Industries

In his article, entitled "Pros and Cons in our Textile Industries," contributed to the Financial Review of Reviews, S. N. Anderson quotes the following passages from the speech delivered by the chairman of the National Provincial Bank at the recent meeting of shareholders of that Institution :-

The fierce competition emanating from the Conthe nerce competition emanating from the Continent, which this trade (cotton industry) experienced during 1923, has continued, owing to a large extent to depreciated currency, and the lower wages and longer hours worked in many of the continental factories.

"The competition arising from the manufacturers in some countries, which in pre-war days depended to a large extent on Europe for textile fabrics continues to increase. The number of spindles both in India and China is increasing, and the same process is taking place in South America. In Brazil, for instance, it is estimated that over 80 per cent. of the cotton goods consumed there are produced in the country, and the number of spindles compared with 1905 has been more than doubled. Net rightstanding this, however, our share of the cotton goods imported into Brazil has somewhat increased......

"Our trade with India has also been considerably better, but here again the native productions." "The competition arising from the manufacturers

compete in all the lower grades. We have in India, as in other parts, to face considerable competition from Japan, for whereas the share which this country had of the imports to India in 1922-23 was 91 per cent, and that of Japan was 7 per cent, in 1923-24 this country's share fell to 89 per cent, while the Japanese proportion rose to 8 per cent,

of the tetal. Italy also is becoming a serious petitor in this market.

"China has been passing through very distimes, and the trade that we are doing with country in textiles is at present very small. again, the Japanese competition is a distinctor."

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed: Assamese, Bengali, English, Gujarati, Kanarese, Malayalam, Marathi, Nepali, Oriya, Punyabi, Smdhi, Tamil, Telugu and Urdu. Newsp periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magaricles, addresses, etc., will not be noticed. The receipt of books received for review will not be acted and general sections. The review of any book is not guaranteed. Books a be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer according to the language of the books. No criticism of book-reviews and notices will be publis Editor, M. R.]

ENGLISH

FREEDOM AND UNITY: THE RUSSEL LECTURE, 1924.
DELIVERED AT THE PATNA COLLEGE ON THE 5TH FEB-ETARY 1924: By R. Coupland, M. A., Professor of Colonial History in the University of Oxford.

Colonial History in the University of Oxford.

This lecture appears to have been delivered in the interests of British Imperialism. Professor Coupland truly says that "for nations, as for men, isolation in this close interlocked modern world of ours is quite impossible". Sinn Fein, ourselves alone, is according to him, a delusive battle-cry. He quotes a writer on Nationalism as follows:

"Nationalism has been exalted to the dignity of a universal religion, and in its defence the armies of Europe can boast, on a peace footing, of one and a haif million more men than in 1913. The spirit of Nationalism is insatiable; no sooner has it made political boundaries coterminous with those of race than it is driven by a restless fever to absorb alien peoples."

Nationalism being thus put out of court, what is more simple than to fall back on Imperialism as the

Nationalism being thus put out of court, what is more simple than to fall back on Imperialism as the passes for all the ills that political humanity suffers from? And of the nations living together in anity and unity, which can approach in perfection the British Commonwealth of self-governing nations, living "in intimate cooperation under one or one commingled, yet distinct, united, yet free"? and then the politician-professor breaks forth in the following strain, so characteristic of his nation, and the happiness and prosperity of this poor Indian dependency, of whose degraded position in the glorieus commonwealth there is not a word of mention, although it alone gives the farfung empire on which the sun never sets all its value and imperience:

The same and the state of the same and the s

ful, solemn pride in it; regard it "as a achievement of the human mind in p science.

Professor Coupland, it may be assumed, di want to insult his audience, the major por which must have been Indians, but all the which must have been Indians, but all the for the latter we cannot conceive of a deeper than to have to listen to this outburst of vanity on the part of a member of the gov nations of the Empire, set to rule over brown and black peoples who furnish the ground of this fascinating picture. We defined in the colonial gentleman who presides the destinies of the neighbouring province inhabitants have no access to his own cowas among the audience, but if not, we fee his presence was the only thing wanting to plete the picture and serve as a practical hallstop of the lecture. OF THE THEME of the lecture.

THE GEOWTH OF INDIAN CONSTITUTION AND ALTERATION: By Professor B. G. Sapre. Poona, 1

This is a fairly exhaustive compendium of stitutional administration from the days of the India Company down to the Government of Ind It is a closely written book of nearly 500 with a small bibliography and an index. As a of reference it will be found highly useful students of political science may profitably as a text-book.

RESTORATION COMEDY: By Bonamy Dobics (C University Press)

One expects much from a book issued by Oxford University Press. In the first place it variably published in an attractive form and publishers are careful in their choice of subject author. Mr. Bonamy Dobice's brilliant book attains the high standard demanded by the and its get-up is very acceptable. Except for so and advanced students of the drama the west the writers of the Restoration had been is neglected, until a few years ago when a si

ecrudescence of instant. In them began to arise if. Dobice's best has therefore been published at a very opportune mement at a time when the spirit of enquiry and research is very much abroad. The author gives a general view of comedy in the period from Etherege to Farquhar (1860-1720) and tries to shed new light on certain aspects of the movement. The introduction is most interesting and gives a clue to the criteria the writer adopts in this study. Though he is ready to admit that there are periods in the history of dramatic literature that can be labelled 'tragic' just as there are others that can be labelled no less preponderatingly 'comic', he deplores the notion that comedy is the direct antithesis to tragedy; indeed what he describes as great comedy such as Volpon or Le Misanthrope or according to G. B. Shaw Coriolanus is perilously near tragedy. The author divides comedy into three classes-critical comedy, that is to say, comedy in which the manners and foolish practices of the age are held up to ridicule on that is to say, comedy in which the manners and foolish practices of the age are held up to ridicule on the stage--Free Comedy, such as the plays of Etherege and Regnard---in which there is no appeal to the critical or moral faculties. There are no rules of conduct, hardly law of nature. It is careless and completely unmoral and lastly there is Great Comedy

completely unmoral and lastly there is Great Comedy reference to which has already been made.

The author is much opposed to the view that Restoration comedy does not represent the life of the times. Indeed he is at pans to show that what was depicted on the stage was merely a representation of that which was going on in every-day life amongst the very highest in that land. The author perhaps goes too far in his broad view of the 'impurities' of such comedy. It is true that he does not agree with Lamb that it is altogether a speculative scene of things which has no reference whatever to the world which has no reference whatever to the world that is. He acknowledges that "impurity' was its most important subject." "Restoration that is. He acknowledges that "impurity was its most important subject." "Restoration its most important subject." "Restoration comedy expressed not licentiousness but a deep curiosity." One cannot help feeling that it was patronised at the time as much becaus its impurities and its sex problems tickled the palates of the audience as because it represented a criticism and enquiry with regard to the life of the times we can however feel the force of this argument when he counsels us without associating ourselves with the life of the time to "derive interest and pleasure from the observation and understanding of men whose outlook on life died with their erring bodies some two centuries died with their erring bodies some two centuries

In tracing the Descent of Restoration Comedy the author with a wealth, of quotation disproves (it seems with great success) the theory that it owes its origin to French influences and shows it to have been appropriately development of late. to have been a natural development of late Elizabethan work. The rest of the book safe from short conclusion is devoted to a description and criticism by the work of the chief writers of the period period.

Etherega he describes as a 'creature without much depth but of an extraordinary chaim and a marvellous surety of touch'. His three most important plays are 'Lore in a Tap'—'She Would it She Could' and 'The Man of Mode.'

There is a fascinating study of Wycherly which is rerhaps the most masterly thing in the book. It should be read at length with care and it is impossible to sum up its contant in a few words or show how the author comes to declare that

Wycherly would not be subdued to what he worked in and he achieved his result and means of not critical but philosophic laughter. But what a struggle it was to get these.

Mr. Dobice then treats of Dryden and Shadwell in one charter for the propose of contrast.

Mr. Dobice then treats of Dryden and Shadwell in one chapter for the purpose of contrast. Of Congreve he has much to say and from him much to quote. The reader will find from this chapter why Congreve was "too much a poet to accept the surface of life.....too little a poet to find beauty in the bare facts of existence." Chapters on Vanburgh and Farquhar and a short conclusion bring this very interesting and instructive book to a close. It is very valuable contribution to the subject with which it deals by a List of Plays, a brief bibliography and an adequate index.

R. C. B.

GLIMPSES OF DAYANANDA: By Chamupati M. A. of the Dayananda Seva Sadan. Published by Arya Pustakalaya, Anarkali, Lahore. Re. 1. Pp. 158.

The centenary of Swami Dayananda, which the Arya Samaj celebrated recently with due pomp, saw the publication of various treatises dealing with the life-history of that great mastermind One of them is Glampses of Dayananda, which opens with a neat little Foreward by Mr. Vaswani. The author divides the life of Swami Dayananda into several chapters and deals with the prominent events of his life with a fresh style. About Dayananda's vision of world unity, the author writes—Dayananda wanted to found the author writes—Dayananda wanted to found world-peace on the basis of religious unity. To that end he made his proposal to the religious leaders of the country. They listened to him, but were not prepared for an answer. Those who want to know the life-history of Swami Dayananda would do well to read this interceptor religious. would do well to read this interesting volume.

INDIAN EDUCATION IN 1922-23: Calcutta, Government of India Central Publication Branch, 1924. Price Eight Annas.

It gives a brief survey of education in India with statistics for the period April 1st, 1922 to March 31st, 1923. The author truly remarks that during the year 1922-23 there was a marked recovery from the effects of the non-co-operation movement on the attendance at schools and colleges in British India. It deals with the University Education, Secondary Education, Primary Education Female Education, Professional and Technical Education and Education of special classes including tion, and Education of special classes including the Europeans, Musaimans and backward classes. Those who want to study the question of Indiag education will find the statistics given in the book very helpful. PHANINDRA NATH BOSE.

THE MIMARRA SCTRAS OF JAMINI: Translated by Pandet Mohanlal Sandal, M.A., Ll. B. (The Sacre Books of the Hindus, edited by Mojor B. D. Bas I. M. S. retired, Vol. XXVII Part 6. July 1924 No. 181) Published by Sudhendra Nath Vasu at the Pannis Office Pharman In Robady Committee Pharman Robady Comm Panni Office, Bhuvanesware Asram, Bahadurgan Allahabad. Pp. 769-822. Price Re. 1-8. Annua Subscription Rs. 13.

This part contains Jaimini sutras from X. 6. to X. 8. 7.

It is well edited and translated.

THE EVIDENCE OF THEISN: THE FOUR-FOLD PROPERTY OF GOD'S EXISTRACE: By Pandit Standh Taite bhusan (210-3-2 Cornicallis Street, Calcutta). Pp. 6 Price -4the control experient of the four-fold proof as the control proof as the four-fold proof as the four-fold proof as the four-fold proof as the following proof and first publication and is recommended assumed as the following proof as the following proof

The Message and Ministrations of Dewan Rabbits Sie R. Venkara Rathau: Edited with an emphasiotory note by Ramkrishna Rao. Principal, supper Raja's College, Cocanada. Vol. III. Pp. 459-1506 Re. 1-8 or 28. 6d.

The book is divided into four parts. The first part contains addresses and articles: the second into services and sermons; the third part, prayers and meditations and the fourth part, appreciations and reminiscences.

The subjects dealt with are educational pol-tical social and religious. Dewan Bahadur is a practical reformer and his ideas are very high. The book is worth reading.

KRISHNA: A STUDY IN THE THEORY OF AVATARAS: By Bhagavan Das. Published by the Theorophical Publishing House. Adyar Madras. Price Re. 1. (Board) and -12- (paper cover).

Lis an attempt at re-interpeting and modernising the orthodox theory of Avatars and also a short study of the life and precepts of Krishna.

THE BEDECK OF EDUCATION: By G. S. Arundale, with a foreward by James H. Cousins Published by the Theosophical Publishing House, Adyar Madras (1924)—Pp. vi + 109. Price Rs. 1-8 cloth, Rs. 1- board bound.

In this book the reader will find four essays on education written from the Theosophical point of view and some jottings from an educational Note Book by Dr. Arundale. The author is a well-known educationist of the Theosophical Society. In attempting to answer the question, whence Rook by Dr. Arundale. The author is a well-known educationist of the Theosophical Society. In attempting to answar the question, whence has the child come? the author writes of the child seeking admission in his school—"the first knowledge I possess as a Theosophisist is that the child before me has been in the world before, probably not so very different from what he is at present. It is liberty, too, that his relations and friends are more or less the same relations and friends he has had before. At least there is a certain tie between him and them. It may also be true that his teachers and school companions are root in reality unknown to him, or he to them. All this that I note of him, I note of everybody like as well. We have all come out of the past and if the Theosophic investigations are true, we have all come out of the past was all come out of the past we have all come out of the past have all come of or less together. We come to move in sets. This fact should help in removing any element of strangeness between the trucker and his new pupil. Only those who take this view of life will appreciate fully all that the author has written in his essays. Taking his attend on this belief the author says—"the child's task is to find himself, well and truly set in the sternal, in the Real, as he lives in time and in the Unreal. While he plays, he must be at work, the universe is at play while it is at work, If we are to believe the seconds on this world the world their are second to decide anything real. All education in this world therefore because meaningless an

SELECTED MODERN ENGLISH ESSAYS: No. 280 of the World's Classics Series published by the Oxford Unversity Press, price 2 sh. net. This is the the anthology of essays in the World's Classics and covers writers of the twentieth century. Thirty three writers of distinction have found place in the book which is quite up to the standard see up by the famous publishers.

GHOSIS AND MARVELS-The World's Classics Serve of the Oxford University Press.

It is a selection of uncanny tales from Danie Defoe to Algernon Blackwood made by V. H. Collins with an introduction by Montague R. James The stories will appeal to the public, but the pedantic comments can be safely omitted without any loss or injury in certain places. But leaving aside this short-coming, the book is highly interesting and some of the incidents narrated in the book of the property of the Lovers of Ghost Stories will find a treasure in the volume. The get-up leaves nothing to be desired the price is the same as that of other volumes of this series, 2s.

STORY OF SWAM RAMA TIRATHA (THE POH MONK OF THE PUNJAB), Ganesh and Co. Madrus

Rs. 3.

The Swami Ram Tiratha "was essentially a apostle of the life of the Spirit." He lost his on self in the Lord. Puran Singh, the Swamis with great Swami, with sen in the Lord. Puran Singh, the Swami's diciple gives an impression of the great Swami, with whom he came into contact for the first time in his life in Tokiyo. This life-sketch throws a considerable amount of light on the great personally of the Swamiji. There are several pages in the book on which are recounted the great and pregnant thoughts of the Swami. Several letters of the Swami are also reproduced in the system. volume.

The name of the Swami is a household world in Northern India, and is gradually becoming in the South also. He was born of poor Brahmi parents but by sheer iron will and perseverant rose to the highest rung of the ladder in highest rung of the study of the Wedanta. His whole life was spent in preaching the Vedanta and he visited Japan and America to propagate the gospel of the Vedanta. Success, he gained to a considerable extent. He could have done much for the mission of his life, had he not departed from this world, unfortunately for India at the early age of 33 only.

This book is the most authoritative biography of the great Swami, and is enriched by an original collection of the Swami's letters and poems. In umber of illustrations add to the beauty of the biography. The get-up does credit to the Publishers and is in no way inferior to English publications. The price (Rs. 3) is certainly ver modest. The name of the Swami is a household work

Outoo: By Herman Melville, The World's Classit Series, published by the Oxford University Press.

The title of the book is taken from the dialect (the Marquess Islands—and the word Omoo mean

person was some than the short to should be sh

The novels of one of the greatest writers of England need no introduction. The present edition of the famous novel is well got up and the modest price of the book should enable every lover of good novels to possess this neat volume.

The House of the Seven Gables: By Nathanel Hanthorne. The World's Classics Series of the Conford University Press 2 sh

Hauthorne. The World's Classics Series of the Oxford University Press. 2 sh.

MISS MACKENZIE: By Authony Trollope. The World's Classics, published by the Oxford University Press. 2 sh.

The book was written with the intention of producing a novel without any love affairs in it and with that end in view an uncouth old maid was chosen as the heroine of this novel. But the most desire of the author was not fulfilled and the old maid had to fall in love in the end—and that with an old man whom she could not help marrying. an old man whom she could not help marrying.
The author makes a strong attack on charity
bazars, which has a certain amount of force and

may appeal convicingly to some readers.

Book lovers should take advantage of the low price and high quality of the hooks of the World's Classics Series and should profit by including the series in their home libraries. We have much pleasure in recommending this series to everybody.

Social Life in Ancient Egypt: By W. M. Flinders Petric F. R. S., F. B. A. Pp. X+210. Constable & Co. Ltd., and Oxford University Fress, 1923.

RELIGIOUS LAFE IN ANCIENT EOYPT: By Sir W. M. Flinders Petrie. F. R. S., F. B. A. Pp. X+221. Constable & Co. Ltd., and Oxford University Press, 1924.

The above two books are companion volumes from the pen of the famous Egyptologist and explorer, Sir Flinders Petrie. Although the first named work has been before us some time, it has been before us some time, it has been

named work has been before us some time, it has been considered preferable to review the two together, for the sake of completeness.

The two books are described by the author, in his preface, as popular summaries of parts of the materials gathered in the "Descriptive Sociology of Egypt" which will soon appear in accordance with the will of Herbert Spencer.

The volume on social life begins with a consideration of the economic forces that regulated

The volume on social life begins with a consideration of the economic forces that regulated the growth of names and their interrelation. Next comes a chapter, showing how with the growing complexity of exchange and the greater co-ordination of the smaller village or city-states, came the need of an administrative machinery of an elaborate type, with a monarch at the head, whose power was however limited by the necessarily large number of compromises that had to be made with the different monarchs. Next follows as chapter on rights and wrongs in which the ethical and

legal aspect of the Egyptian's life is considered.
This is succeeded by the chapters on private life, supplies and commerce, constructions of defence.
These practically comprise all the general details of the Egyptians' life, in private as well as in public in the different periods of the history of that land. A good portion of the work is drawn, naturally, from the author's original work, published, and in some cases apparently, unpublished.

In the volume on religious life the author has

In the volume on religious life the author has attempted to indicate the different strata of Egyptian culture, starting from the gods and their temples. The succeeding chapters on priesthood, the faith in the gods, belief in future life and lastly the two chapters on the modes of disposal of the dead and folk belief, all arise naturally out of the discussion in the first chapter and follow each other in a regular order, filling in the details of the culture nicture of Egypt sketched out in the of the culture picture of Egypt sketched out in the

beginning.

Although professedly popular summaries the two volumes take for granted certain amount of general knowledge of Egypt in the reader. The treatment of the data is also not exactly "popular." This will, however, cause no difficulty to the lay reader who will find in the two volumes an excellent introduction to the study of Egyptian society. We can recommend the books alike to the general reader interested in Egypt as well as to the student intending to begin a serious study of the subject later on. the subject later on.

GUZARATI

YAJNA-RAHASTA: By Mahashankar Indraji Dans Pp. 215. Price Re 1-0-0.

HISTORY OF INDIAN PHILOSOPHY: By Normada-shankar Devshankar Mehla B. A. Pp. 259. Price Re 1-0-0 Sachutra Sharir Vidya: By the late Gangashankar Manishankar Vaishnal B. A. B. Sa. Pp. 192. Price Re. 1.

All printed at Ahmedsbad, and published by the Gujarat Vernacular Society, cloth bound (1924). The Yama Rahasya is a translation of Ramendra Sundar Trivedi's Bengali treatise on the subject and is a very informing book. For writing a history of Indian philosophy the Society could not have elected a more qualified person than Mr. Mehta, who is familiar with the subject in all its aspects,

the only drawback being the highly technical style. The Sharir Vidya being illustrated with diagrams is likely to prove useful.

THE EXPRING LIGHT: By Kaoakbhad Kothari, Pp. 128. Price Re. 0-6-0.

THE TEARS OF RAJFUTANA By the same. Pp. 120. Price 0-6-0. Two Plays: By the late "Kant." Pp. 95. Price Re. 1. All printed at Ranjur. Kathiawad, paper cover, published by the Saurashtra Sahitya Mandir. (1924).

The transe life and fate of Bahadur Shah the last of the Moguls, have been vividly pictured by Khaja Hasan Nizaun in Urdu. The translation of that book into Hindi is the basis of the first book and the melancholy interest of the story as narrated there never flags. Pathiku's trails and tribulations in Raise and have been perpetuated in the second book, which the two plays written by the late "Kant" (Munishankar R. Bhatta), Roman Swarajya and Guru Govind Singh, which had The tragic life and fate of Bahadur Shah the last

red in retainents in per official have now tion preserved took form a great advantage.

Regs Variable Charters: By the late Lallubhei P. Pareidi, printed at the Gujarat Printing Press, Appendiabled, cloth bound, p. 402. Price Re. 2 (1924).

This life of Shri Vallabhacharya, a greatly respected religious Guru of a very large number of Gujarati Hindus is the only one of its kind written in Gujarati. The very fact that it has passed through three editions in the course of a few reareshows its popularity. Besides a detailed biography of the Acharya, it gives a very well-thought-out sketch of the philosophy of his creed and that makes it the more valuable for the use of enlightenment of the followers. The author's worthy seen has brought out the present edition with many additions and emendations.

KAHANAD-DE-PRAVANDH OF PADMANABH; By Dayabhai P. Derasari Bar-at-law, printed at the Prajabandhu Printing Works, Ahmedabad. Cloth bound. Pp. 114. Price Re. 1-8 (1924).

When the text of Padmanabh's poem, was sublished in 1913, we congratulated Mr. Derasani on the extremely useful work he had done by publishing it. He has now added to it by supplying

the defect in that work by translating the original text into frajarati. The verses in the original are as spirited and stirring as those in the original, and the form in which they are cast transports the reader to the stormy days, about which the poem has been written, so vivid is their glamour and so appropriate has been the selection of words. The map at the end adds to the worth of the book.

THE LATE MR. CHUNILAL SHA: By Brigating. lal J. Akkad, B.A., S. T. C. Printed at the Sunder Printing Press, Surat. Pp. 80. Cloth bound. Press, 0-12-0 (1924).

The late Mr. Chunilal Ghelabhai Shah, the founder of the Sarvajanik educational institutions in Surat furnishes an example of self-sacrifice which calls for nothing but admiration and praise. In this short biography those who knew him will find all the noble traits of his character recorded Vasant-Vilasini and Bharat-Kirtana by Vallabhy: Bhanji Mehta (1922-23).

We generally notice fresh publications. Therefore we work the constant of the con

fore, we regret we cannot note this one.

We have also received a periodical,

Vyasodaya from Surat; We do not do not notice periodicals.

K. M. J

NOTES

The Hindu Mahasabha

Ç,

The casual impressions of a mofussil visitor to the eighth session of the Hindu Mahasabha, held in Calcutta on the 11th and 12th April last, may be of interest to some readers of the Modern Review The splendid reception organised for the president-elect Lais Lajpat Rai, on the 10th April, at the Howrah railway station and along the route of his journey to the heart of the city, was a most impressive sight. The arrangements in the pandal itself were certainly not perfect; but this may be due to the inexperience of the Marwari youths who served as volunteers, and other causes beyond the control of the organisers. The huge pandal was packed to were classified according to the province to which they belonged, much as is done in the case of the Congress. Most of the Marwari visitors were given seats in the Bengal bloc. an indication of the fact that these wealthy and powerful settlers in Bongal were learning to identify themselves with the indigenous people of the province. The tickets, the

names of the different blocs, the programme, songs, speeches and pamphlets for free distribution on burning questions of the day, such as untouchability, &c., were all printed in Devanagri, and the speakers, with the single exception of Sir P. C. Ray, who read his speech in English, which was however circulated in a Hindi translation, all spok in Hindi. The President spoke for over hour without referring to any notes, an his speech was punctuated with frequen and loud applause, showing that it we keenly appreciated. It was indeed an ab performance, closely reasoned, moderate y vigorous, replete with wisdom and far-sight statesmanship, and full of patriotic ardo and a passionate love of India and cf t ancient people inhabiting the land al known as Hindus. It was worthy of t trained veteran, who looked his best in] khaddar achkan and pyjama, and who claim to lead the Hindus, as Sir P. C. Re the Chairman of the Reception Committ said, was second only to that of Mahat Gandhi. Indeed, it would not be wrong say that 'there are' many who would !

hesitate to give him the first place, regard to the fact that he is free he idee fixe of the Mahatma. And as only other person who could dispute the Lalaji the leadership of the Hindus, t Malaviya, he is too orthodox in riews to command the allegiance he advanced section of the Hindu unity.

the selection of Lala Lajpat Rai as lent was the happiest that could be that 'of Sir P. C. Ray as Chairman of leception Committee was no less happy: it proved that Hinduism had not lost daptibility, which had enabled it in the to tide over many a vicissitude of ine. Sir P. C. Ray said in his speech his right to be called a Hindu was enged in some quarters. That is perhaps rtunately true; and, but for his particion in popular political propagandism, all earnest labours in the cause of India in eral and the chemical science of the dus in particular would not probably earned him his present position in du society, for nothing but politics counts h the public in these days, however great 's contribution may be in other and her fields of work. But to leave out a of the stamp of Sir P. C. Roy, who not only animated by a sincere desire serve the Hindus, but have the brains d the capacity to do so better than most those whose title to be called Hindus is disputed, would be the height of folly, d it is a healthy sign of the times that is is being recognised, as the prominent ace accorded to him in such a representa-'e Hindu gathering as the Mahasabha goes show. The time has gone by when mere ikering with social reform, slightly to unose the chains here and express a patroning sympathy there, and with practically thing done in the result, could command lmiration. A diplomatic move of this kind ight still win temporary applause at sociolitical gatherings, but it would not hold heart in fee or confer on the astute illower of the doctrine of expediency the ndisputed leadership of the great Hiudu toe. We have learnt from experience that, John Morley has said in his Compromise, small and temporary improvement may cally be the worst enemy of a great and ermanent improvement, unless the first is n the lines and in the diffection of the second and unless it be made with reference to

But the state of t

some large progressive principle and with a view to further extension of its scope.

And it is the glory of the Hindu resurgence that it differs from other communal movements primarily in this, that while others preach orthodoxy, sectarianism, and the unreasoning authority of the scripture, the former is mainly a spiritual movement of emancipation from the trammels of custom, prejudice and ritualistic obsession, and is inspired by a large humanitarianism. The Hindu race is responsive to world-forces; for it is intellectually mobile, it breathes a native air of philosophic freedom, and it is too cultured to move away from the direction of universalism. Any movement which finds favour with the advanced section of the Hindu community, which is the section which is bound to come more and more into prominence, cannot but be a movement of liberation, in this differing essentially from other communalist movements.

This universalistic and liberalising trend of the movement must not however be mistaken for weakness. It is precisely with a view to raising the Hindus from the sad pass at which they have arrived by too close an observance of ancient texts and local customs that Lala Lajpat Rai exhorted the Hindus to move with the times, learn to be efficient, and make themselves racially fit for the struggle for existence. Imitate the good, assimilate what you imitate, protect your racial individuality by such assimilation, give up your absurd pride of birth, learn to love your brother man and serve him, be strong and survive, or else die-that seemed to be the sum and substance of his message. It is ap to the Hindu race to take his advice to heart. and remember that in union is strength and that the fissiparous tendencies of Hinduism, fed by foolish conceits and prejudices, and van dreams of isolation and exclusiveness, tend to keep the Hindus, heirs to a mighty culture though they are, eternally disunited and weak; and bereft of an ally in religion among the nations of the earth, this disunion, if continued long in the face of virile oreeds among whom the bond of union is strong, is bound to lead to its total disruption, as it has already undermined its numerical strength.

It is true that the present session of the Hindu Mahasabha was not an united organisation of all Hindus; the Marwari element was overwhelmingly predominant, the autoo thonous Bengalis were few; no was it representative of the entire Marwari community

F. C.

for the strictly orthodox section kept aloof, and the Brahmins of Bengal, unable to bear the dry light of reason that illumined the speeches of men like the Lalaji and Sir P. C. Ray, deserted the sacred banks of the Ganges for the more secluded precincts of Burdwan to develop their 'frog-in-the well' antediluvian "theories of exclusiveness. To a Brahmin like the writer, this degeneration of the ancient intellectual leaders of Hindu society, who gave it all its laws and changed or modified them according to necessity, is excruciatingly humiliating. But the enthusiasm displayed by the Marwari community, and the large numbers in which they flocked to the gathering, indicated at any rate that among this rich and powerful section of the Hindus a new spirit had begun to move on the surface of the waters and orthodoxy was on the wane, and that they denied the right of a certain section of the Hindu community to appropriate that name exclusively to them-selves, as if they alone had a passport from the ancient Rishis of this sacred land, some of whom were themselves of rather promiscuous origin, to use that honoured name.

The resolutions of the Mahasabha were all conched in a liberal spirit and were in the direction of emancipating the spirit from the incrustations of tradition and soulless custom and blind adherence to scriptural texts, with one exception which, as the Laliji hinted in in his speech, represented, not his own opinion, but a compromise between the advanced and conservative sections of the Hindus. But it seems to us that it is altogether a mistake to suppose that such compromises please any section of the community, or can have any effect on their opinions. It were far better for an august assembly like the Mahasabha to take its stand boldly on Truth, and point the true ideal in unmistakable language, for that is the purpose which these resolutions are really intended to serve. The imprimatur of the Mahasabha would not have made truth more true, but by setting its seal of approval it would have made it easier for the mass of the Hindu community to pursue the progressive ideal in the face of the opposition of reactionary obstructionists. The exception referred to is the prohibition of the teaching of the Vedas to the depressed classes and of interdining with them. Now in these days of the printing press and mass education it is too much to expect that the Vedas will remain a sealed book to the "lower" orders of society. If the Vedas contain the highest

wisdom of the Hindu race, it is manifest! unfair to withhold it from those who need most. If they are revealed scriptures, the revelation must have been meant for th classes as well as the masses. The Koran for the high and the low alike; its study gives wonderful solidarity to Mahomedans in ever rank of life. The Bible is the great box from which Christians of all classes demi consolation in hours of tribulation. Jes said, "Come unto me, all ye that labour at are heavy-laden, and I will give you rest What a wonderful solace passages like the give to the poor and lowly, and what a treme dous influence they have over the minds a hearts of Christians! And yet the strick soul of the Hindu must forego the comfo of religion as they occur in their most e vated form in the Upanishads, unless he claim affiliation to one of the higher cast The great European Kenaissance owed its o gin to the earnest efforts of men like Erasn to replace the Vulgate of the Roman Catho Church by the native translation of the Bi with the object of making the scriptures ave able to the masses. Instead of shutting the depressed classes from our sacred boo we should, like the Brahmos, translate th into our mother tongue and use these trans tions for sacramental and devotional purpos Hinduism would stultify itself by denying t scriptures to some classes, and lose its 10 on numerically the largest section of its lowers by thus unnecessarily humiliating the sense of self-respect. Those who in the m of religion preach such pernicious doctri cannot with any show of reason claim a mocratic equality in their form of government

To prohibit interdining is an equ unpractical and mischievous measure. may and does dine with a Christian Mussalman now-a-days without necess losing his caste. Should his own corelis ists alone be excluded from such social tercourse unless they happen to belor the higher castes? The argument is advanced that people may fraternise wil dining at the same table. Granted tha possibility of such fraternisation absolutely excluded by the hypothesi isolation at meals, who can deny that fraternisation becomes infinitely more and practicable in the absence of restric on interdining? Indeed, exclusiveness of kind breeds mutual distrust, and hurts self-respect of the excluded sections u community. Free intercourse is the

ray to elevate their status, and give them hat equality of opportunity without which here can be no real uplift of the masses. Restrictions as to food also create unnecesary difficulties in practical life, and make or national inefficiency Compliance with absurd customs in such matters undermines bur reasoning faculty. Such restrictions prevent the fusion of the Hindus into one mited and homogeneous community, and ause avoidable irritation by antagonising he excluded castes and creeds without prolucing any earthly benefit whatsoever except eeding our empty religious vanity. We herefore deeply deplore the adoption of his resolution by the Hindu Mahasabha, as t is unworthy of the great people whom the Mahasabha represents, and does violence to one of the elementary canons of human protherhood. If the spirit underlying this resolution prevails among the upper classes of Hindu society, and so long as it prevails. it is idle to hope that the Hindus will form united community; for with increasing self-consciousness the excluded classes will oppose this attitude with growing resentment and very properly proclaim their hirthright to be treated as human beings, and not as eats and dogs, which, as domestic pets, are however, often allowed a seat at table with increasing persistence.

The writer was unable to attend the second day's sitting of the Mahasabha, and is not therefore, in a position to comment on the resolutions passed on that day. It is to be hoped that on such important topics as intermarriage, widow-marriage and the like, the Mahasabha was able to give the country the

lead it so urgently requires.

A HINDU.

Opium Control and Geneva

The following resolutions have been passed by the Representative Board of Persons and Agencies interested in the control of Narcotic Drugs,' London, England :-

1. While we note that the British Delegates at Jeneva definitely recognised British responsibility maler the Hague International Opium Convention or systematic reduction of the output of Opium British India, it is deeply to be regretted that british action in this matter was made conditional pon the action of other Powers, specially of linina.

It should be a recognised principle, in approaching the subject, that Great Britain, in pursuance it its duty, cannot afford to allow itself to be governed by the source pursued by other Govern-

7 619

ments : and it is essential to British credit, dignity and interests that this reduction of India's Opium-output should be made to commence at a definite

and early date.

2. That while welcoming improved methods for restricting the traffic in Dangerous Drugs to Medical and Scientific purposes, as provided by The Hague Opum Convention of 1912; the Committee regrets that no definite period is prescribed for the "effective suppression" of the trade in Smoking-Opium, as contemplated by Chapter II of the Convention and deplores the circumstances which had to the withdrawal from the Geneva Conferences. led to the withdrawal from the Geneva Conferences

of the American and Chinese Delegations.

3. We beg respectfully to point out that the British Government and the House of Commons repeatedly declared that the opium traffic with China was "morally indefensible"; and we affirm our belief that all trade in opium, except for our benefit that an trade in optum, except for medical and scientific purposes, is equally indefensible: and therefore urge, as the only way of coping with this evil, that the cultivation be suppressed.

In a personal letter sent to me from Geneva by one, who was present at the Conference on the day for receiving petitions from societies and corporate bodies interested in drug control, I learn that great resentment was felt by delegates at the action of Mr. John Campbell in asking that the statement of the Rev. E. J. Dukes, about his (Mr. Campbell's) only representing the Government of India and not the people of India, should be struck out of the minutes of the proceedings. The chairman's action allowing this to be done was criticised, and wonder was expressed at such a curtailment.

It is very greatly to be hoped that Mr. Campbell will not be sent again to Geneva on the Opium Question at the expense of the Indian people, whose views he does not

represent

C. F. A.

The Roman Catholic Church and Opium

It is a matter of very great thankfulness and congratulation that the Roman Catholic Church has now thrown the whole weight of its influence throughout the world into the Anti-Opium Campaign. Monseigneur Beaupin came to Geneva specially for that purpose. He represents the Catholic Students' Union and is secretary of the Society for Promoting the Welfare of French Subjects who are Resident Abroad'. The English Representative of the Society for the Suppression of the Opium Trade' who was present at Geneva writes in British Bulletin no. 21, that he had an interview with him during the Conference and found that he had already organised his

A STATE OF THE PARTY OF THE PAR

Anti-Oping Campaign within the Roman Catholic Church with much detail and that he was prepared to cooperate with all. those who were working to the same end. The Bornan Catholic Church, has such a worldwide range of influence and is the paramount factor in the South American countries where the coca plant, from which cocaine is manufactured, is grown. As the abolition of cocaine and opium (beyond the legitimate the abolition of medicinal use) hang together it is an immense benefit to have the mind of that international body now openly expressed on this sub-

C. F. A.

The Crusade Against War

The following letter written by Count Leo Tolstoi on December 10, 1910, not long before his death has now been issued for the first time by the 'War Resisters' International':-

"The state of darkness in which mankind is in-volved would indeed be dreadful were it not that amidst this gloom there are scores of people who comprehend life as it should be, and cannot but be comprehended. Such people do exist, and, notwithstanding threats and punishments of every kind from the authorities, they are anxious to become free and to fulfil not that which is commanded by the senseless authority, but the commands of the Spirit which speak loudly and distinctly to every

"Nearing death, as I now am, it is with great joy that I observe a daily increasing number of such men who value life not of the body but of the Spirit and who in response to the demands of the Government authorities that they shall join the ranks of those who kill, quietly refuse and joyfully accept all external bodily suffering that may in

consequence be inflicted upon them.

"There are already many such people in Russia,
as yet quite young and undergoing the most painful conditions of imprisonment; these men, as they
declare in their letters and personally to those who see them, experience the most happy and peaceful state of mind. I have the joy of being intimate with many of them and receiving letters from them."

The War Resisters International has recentby published in Holland its Manifesto which is given below. While in 1915 the promoters of this Manifesto were prosecuted, now the Government of Holland has allowed it freely to be published to-day and 100,000 to be circulated:

We men and women anti-militarists, see with joy that amongst the so-called conscripts the tendency to form peace groups is growing and that the number of these who refuse to become soldiers more allowly but constantly.

We see ourselves called to openly side with the conscientions objectors.

Westers of Williams

ŧ

We declare that we are firmly suctived to refuse military service of every decemption, not only in barrack rooms, trenches, meh-of-war, services, but also in munition factories, other to tories, transports—in short to do no work which is connected with war or the preparation for it.

"We also intend to prevent by this manifesto, possible mobilisation of war forces.

"We invite all who wish to work for peace to immediately co-operate with us, and when wa should threaten, to stop it by their action."

C. F. A

Scandinavia and Military Conscription

It seems almost certain that the two Norway will set an example to Europe is the matter of Disarmament and War Resist ance. Sweden will probably follow later I the same direction.

In Sweden a law exists providing to alternative civil service instead of conscription Throughout the country the general attitud is such that if a referendum were taken then would be decidedly a majority in favour o abolition of conscription, which is decided unpopular. The Free Thinking People: Party' in Parliament are almost entury against conscription. Yet the fear of Sons Russia makes the Disarmament Movement and the anti-conscription movement not so entraly popular in Sweden as in Denmark ud Norway.

The following account of the opinion is Norway is given by a Norwegian come pondent:-

There is perhaps no country in the wowhere the workers are so decidedly anti-militar and anti-conscriptionist as Norway. The le and anti-conscriptionist as Norway. The less ituation is much like it is in Sweden, there is a large and ever-increasing num of war-resisters, not only of those who ob against war service from a religious standpo but also of political and moral war-resisters. The political war-resisters do not altogether all the political war-resisters do not altogether all the political war-resisters. The political war-resisters do not altogether stour absolutist views as regards the use of viole in civil war. Yet their endeavours to organise effective general strike against military constition is of great interest for us and deserves spenention. Their propaganda against conscriptioning the past years has been so effective public opinion has been entirely changed in faroff the anti-militarists, so much so that a few mo ago the law courts did not dare to sentence war-resisters for refusing military ser ago the law courts did not dare to sentence war-resisters for refusing military ser but released them altogether. The anti-milit movement is so strong among the Norwegian y that next year Norwegian prisons would be small to hold all the war-resisters, should they called up and sentenced to prison. It is, how expected that the military will try to concess exact numbers of C. O.'s by not calling them

not a state of the

millitariat committees are keeping regisi the young men lable to recruitation next rder to extend their propaganda to every erned in the matter.

Denmark and Conscription

s Ulrich Wolffel writes thus about k:--

ark is the first country ready for total nent. It also was the first country to a special law providing civil service for an alternative to military service. This passed as early as 1917 and was applied. passed as early as 1917 and was applied. However, a closer examination shows a schievement was by no means a perfect any disadvantages became evident very that been settled that he who from conus reasons wanted to refuse armed service be released if he was willing to do civil instead. But in order to prevent a too tapplication of this law, it was settled that ervice should last twenty months, whereas service of all kinds only last six to eight. This method, which of course is a sort of neat, naturally exercised a great practical se. As, moreover, to every recruited soldiering offered unarmed military service (as servants, clerks, artisans, etc.) instead of trained as a soldier, the majority of C. O.'s this way out. It further eases their contact that it is most unlikely for Denmark to war. Further, the law providing civil service war. Further, the law providing civil service is generally known to the people, as it is not lied by the military authorities.

Is it is explained that since the alternative elaw has been in force, only a very few men, altogether about Forty persons, have doing alternative corriect. men, altogether about Forty persons, have doing alternative service. It must, however, naidered that some young men who wanted civil service were never called up. is generally known that the present Social cratic Government of Denmark, proposes lisarmament, i. e., transformation of the army avy into a police force, considerable reduction present forces, and abolition of conscription. bill, which was brought in by the War ter, Rasmussen himself, is also supported by eft wing of the demograts and is almost a to pass in the current year. is a strange phenomenon today in that just at the very time that the minds in the most pacific part of pe are turning against conscription, r effort is being made to introduce ulsory military conscription into our in Universities!

Aviation in India

The following report on commercial tion prepared by the official of the United

States is of great interest to those people of India who are anxious to see that their country does not lag behind the civilised nations in any field of human achievement :-

> COMMERCIAL AIRLINES CARRIED 62,000 PASSENGERS DURING 1924.

Survey by Army Service Investigator in Europe and America of Airways Shows Experi-mental Stage Passed and Traffic Expanding Rapidly

WASHINGTON, Dec. 29—Data regarded as demonstrating that commercial aviation definitely has passed the experimental stage are contained in a report just submitted to the War Department by Lieut. John P. van Zant of the army air service, after a study of its development in Europe involving 6000 miles of travel over commercial

The army officer reaches the conclusion in his report to Dwight F. Davis, Assistant Secretary of War, and Maj. Gen. Mason M. Partick, chief of the army air service, that "under suitable conditions mail and goods may now be transported by air with equal or greater safety and reliability than by train and with greater saving in time."

TOTAL MILEAGE 20,110,700

Picturing the development of commercial aviation in the period since war, the report gives the aggregate of air transport miles flown in all countries, including the United States, as 20,110,700, up to this year, and estimates that 1924 will add 8, 500,000 miles to the total.

The figures represent only regular air transportation services over established routes, carrying passengers, mail, or commodities. During the same period the development of passenger air traffic has increased from 2585 passengers in 1919 to 62.000 passengers in 1924.

AMERICA FIRST IN MAIL TRAFFIC

America First in Mail Traffic

In the development of air-mail traffic, the
United States leads the world, according to the
report. In 1922 an aggregate of 1,930,177 pounds
of air mail was transported, of which 15,12,197
pounds was United States mail carried over the
transcontinental route between New York and San
Francisco, Last year 2,466,279 pounds of air mail
was carried of which 752,009 was European traffic.
Air-freight transportation increased from 269,600
pounds in 1919 to more than 5,000,000 pounds
in 1924.

The army investigator said, the men abroad
in air transport was shown in the regular consignment of air freight commodities now ranging
from automobile parts to perfumery and silks.
The fact that insurance rates are actually less by

between England and the Continent is said to
have played an important part in convincing business men of the stability of the new form of
transport.

transport.

The people of India know and many of them have seen that American, British, French, South American and Dutch fliers recently crossed the sub-continent of India during course of their world flights. Recenity the

一大学の大学の

British Air Ministry has decided to connect India with other parts of the British Empire by the most effective and powerful air service in the world, for political and strategic reasons. Does it ever occur to Indian leaders engaged in party-quarrels that there is not one Indian pilot in the British air force? Does it ever occur to Indian leaders, who are loud in denouncing mechanical civilization of the West that with the advent of "Air Service" and Indian backwardness in this science, her people are lagging behind all nations even Afghanistan, Siam, China, Persia and others in the matter of national defense.

Most Indian politicians generally assert t India will allow Britain to conthat India trol her foreign affairs and national defense, they only want fiscal autonomy and some kind of limited Swaraj, others talk about Dominion Status within the Empire and still others talk about Indian Independence; but mighty few, are taking active interest in rousing the Indian people to take steps for training men in the most advanced methods of national defense. National Aviation Corps and officers Training Corps should be organized in connection with every college and technical institution. If the people of India want Swaraj they should be prepared to take full responsibility for national defense and foreign affairs.

Steps for education of Indians who would be able to serve as officers of the Indian national General Staff, Indian National Army, Indian National Navy, Indian National Aviation Corps and Indian National Diplomatic Corps should be taken by the Indian people and the Indian Government. The Indian Government may not take the lead in imparting such education as mentioned above, but there is no earthly reason why there should not be private enterprise by Indians. even by Indian National Congress to further the end.

TARAKNATH DAS.

The Cotton Excise Duty

The removal of excise duty from Indian cotton goods has been demanded for years. The British Government is not interested in siding Indian industries which may rival British ones, and so there has been no response from the Government regarding the removal of the excise duty, which checks named growth of the Indian cotton industry.

The Tory Government in England is seeking to introduce protective measures in England and Imperial Preference within the Empire. It is needless to say that India neither requires nor likes Imperial Preference but she needs "protection." It will be of great interest to all in India to note that in spite of great strides made in America in mechanical development, in spite of the fact that America has the richest home market where the purchasing power of an individual is at least 20 times greater than that of the average person in India, the American cotton industry is demanding higher tariff than what is in force now, as the following extrac from an American paper will show :-

HIGHER COTTON TARIFF SOUGHT

President of National Association Says 1922 Schedule is Inadequate

New Bedford, Mass., Dec. 29—With the statement that the cotton mills of this city are dependent on the tariff to maintain their prosperity, affecting both the investors and employees, Mong Butler, treasurer of the Butler Mills and preside of the National Cotton Manufacturers Associates said the tariff bill of 1922 had proved inadequation their protection.

It was added that only reduction in the or of production or an increase in the tariff on h cotton goods would adequately protect Amena standards, and that the community must suggest "every endeavour to make the tariff adequals protect our textile business."

The statement by Mr. Butler, who is the and William M. Butler, United States Senator, we made in a summary of the past year of the unindustry here, and an estimate of the prospects 1925, written for local publication.

SUBJECT TO DEPRESSIONS

"Since the World War the textile industr "Since the World War the textile industry the world has been subject to several depression. The world has been subject to several depression to emproon the most severe and longest depression of the less soft that of the great majority of mills.

"Its product, however, is subject to the petition of some eastern mills located in the cost of production are other items in the cost of production are

other items in the cost of production are favourable to successful and continuous open and for the most part the product of New Bo with the produ

and for the most part the product of New Minils is in competition with the production of the European in considerably below that of American fine mills chiefly on account of the superior strong obtaining here which necessitates a wage scale. New Bedford is dependent tariff, to maintain her prosperity as affect vectors in her industry, and even more defon it as affecting the prosperity and wellbe the larger number of her people who are en in the mills.

INADEQUATE FOR PROTECTION

"The tariff bill 1922 has proved to be inadequate for our protection. Since Europe began to recover from the immediate effects of the World Warr there has been truly appalling increase in the volding to the goods coming into the country. According to downment statistics, this volume in 1923 was shoot equal to the production of all New Redford's

lines could to the production of all New Bedford's linest equal to the production of all New Bedford's lich mills at full capacity. It is but little less in 1924. It is approximately equal to 25 per cent, of the total normal full time production of all the mills in the United States equipped to make 'New Bedford goods.'"

"This situation for New Bedford is a serious one and must be met by common business sense and the application of every energy we can exert. It is obvious that New Bedford costs of production can be reduced or that the tariff on fine cotton goods he increased to adequately protect the American standards we have established. The community must grasp the importance of the tariff community must grasp the importance of the tautified support whole-heartedly as a common cause every endeavour to make the tautiff adequate to protect our textile business."

If the American cotton industry needs protection the case for "protection" of the Indian industry is clear to all who have India's

interest at heart.

We ask not only for "protection" of the industry but we suggest that there should be living wages for Indian workers in cotton mills and other industries. The wealth of the nation is in the health and prosperity of the masses. We advocate protection to revive Indian industries and not for giving a secure chance to Indian industrial magnates to make abnormal profit at the cost of poor Indians. In this connection we wish to note that some of the Indian cotton mills have made enormous profits of more than 100 per cent, in recent years; but they have not done anything extra to improve the condition of the people of India in general. Let us hope that the cotton excise duty will be removed from India and the Indian merchant princes will show enlightened self-interest by furthering Indian interest.

TARAKNATH DAS.

January 11, 1925.

The Wall of the Control of

Britain, Afghanistan and Nepal

The British Government allows Afghanistan and Nepal to transport through India all the arms and ammunition she buys from Europe, but denies the Indian people the opportunity of having military training. The Government also refuses to repeal the Arms Act and spends more and name money for British soldiers in India, talking all the while of possible trouble from the side of the frontiers.

The Singapore Base

The British Government is determined to have a naval base at Singapore, and Britain is willing to make arrangements with other nations for her strength, but she opposes the development of an Indian Merchant Marine or Navy.

A Political Exile's Return

Dr. Bhupendranath Dutta, who left India in 1909 after serving one year's imprisonment as editor of Yugantar, and who has obtained the M.A., degree in America and the Ph. D., degree of Berlin University in Anthropology, has arrived in Calcutta.

He has been engaged in public work abroad on behalf of India. in a literary capacity, and during the last few years has devoted himself to the study of Anthropology at Berlin University. Dr. Datta is now a man of 44, having been born in Calcutta on September 15th, 1880. After returning to India it is his intention to devote himself to scientific teaching and to work in the cooperative movement which he has been studying in Germany during the past year.

We are credibly informed that the British consulate in Berlin in giving him a passport expressly stated that that passport was valid only for the journey from Berlin via France to Colombo, and that the British Government wished it to be distinctly understood by him that it was issued without prejudice to any steps to be decided upon by the Indian Government

We think Dr. Datta is entitled to be a free man in India. If he committed any offence seventeen years ago, he was punished for it at the time. And from his articles, published in this Review and other journals, it is clear that he no longer belongs to the

Yugantar school of politics.

Nevertheless, there is apprehension in some quarters that the Government may arrest him under Regulation III or some other "lawless law," and thus deprive him of an opportunity of defending himself. We hope any such fear will be falsified. But should any steps be taken against him, the least that his countrymen would expect would be an open trial; for he 13 voluntarily coming home, and, as it were, handing him; self over to the British authorities.

We are certain that, if the Government be so feelish as to arrest him, there would be an added in in the Press to show the injustice arrest and to provide him with all the ary legal help.

In addition, what we have gathered about his present political views from his articles, we learn from a trustworthy source that he has long since abandoned all belief in terrorism and believes in open educational work. He is in no way connected with Moscow or Mr. M. N. Roy or any secret party or

organisation.

We have thought it necessary to write what we have done, because Dr. Datta is showing great courage in coming back home in spite of the fate that may await him, and because his self-sacrifice is intended as a test case as to whether political exiles may return home or not. There are dozens of exiles in every country of Europe and in America whose future decision will depend tipon Dr. Datta's fate; and it is therefore processary for the Indian Press and public leaders to use the opportunity to establish case for all the right of the exiles to return home without being prosecuted, even if the Government should be unwilling to declare an amnesty. There are several instances of men who took active part against the British Government during the war having obtained passports either to go home or study abroad.

Re. Indian Mercantile Marine

The recent development of German mercantile marine is remarkable, if not phenomenal. Since the signing of the treaty of
Versailles when Germany was stripped of
her mercantile marine as well as her navy,
through the persistent efforts of German merchants and the Government she has now a
mercantile marine larger than that of Japan.
History does not know any parallel to this
activement of German industry. In spite of
this success the German ship-building interest
is seeking "ship-subsidy". India's mercantile
marine has been destroyed and at present
time serious efforts are being made in India
to revive Indian shipping. We believe in a
Treater India," which involves commercial
expansion, colonization, entrance in world
political as well as assertion in the intellecmal world.

that world.
The following news from Germany, indicating application for securing whip-subsidy, will be of interest to all Indians who wish to

secure from the Government of India t necessary aid to develop Indian Mercant Marine:

GERMANS ASK SHIP-SUBSIDY

Mercantile Fleet Unable to Cope With Foreign Competition

Berlin, Dec. 15 (Special Correspondence)—I declaration made by Dr. von Schinckel, the che man of the Hamburg-America Line, at the gene meeting of that company recently held at Hambuto the effect that Germany could no longer compagainst her state-subsidized maritime oppone unless the Government granted relief by reduct the high taxes at present imposed on German shipping, may be regarded as the inauguration a new phase in the development of German mercantile marine.

The constant complaints that have been utte in recent months in the German shipping presencering the State subsides in vogue and Germany's competitors long ago led the obserto surmise that the German shipping companintended, sooner or later, to bring forward an ments demonstrating the need of their own shipping for some form or other of state aid.

ping for some form or other of state aid.

Although Herr von Schinckel, in his search some effective method of defending the Germ mercantile fleet against foreign subsidized comption, refrains from advocating in so many we a state subsidy for German shipping it is never theless evident as the Fremdenblatt points of that the German shipping companies as a whole now deem that the time has arrived for them receive some kind of subsidy either direct or direct if they are to develop the industry.

A SUDDEN CHALLENGE

Herr von Schinckel, in his remarks at the gens meeting of the Hapag, has suddenly and challer ingly thrown this vital question into the arena public debate, and in doing so has evidently act as the spokesman not only of the Hapag but

all the other big German lines as well.

The Hamburg press urges that the Gern shipping companies can no longer depend on schelp, and says that although in the post-war per the German mercantile fleet has done its best make its own way by scientific internal organizat by strictest economy, by means of a system fusions and agreements concluded not only wother German companies, but also with forest shipping lines—e.g., the Hapag-Harriman agreement —the time has come when it can no longer realtogether on these methods of independent effin view of the heavy burden of taxation the copanies now have to bear.

It is further more pleaded not without a tou of sophistry that the increase of German expowhich it is the object of the Dawes Agreement achieve, will make it doubly necessary for trans-oceanic German shipping lines to enlarge a develop their parks on a large scale lest a considable portion of the outward freights should lack of German tonnage have no choice but be carried in foreign bottoms. It is contend moreover that as the German shippiniding yat are now fast coming to the end of the work the have on hando it will be necessary for them dismiss large numbers of their men miness the are provided with new orders for German tonnage.

In connection with this latter argument, it is interesting to note that not long ago the owners of the big shipbuilding yards brought forward similar arguments when the board of arbitration declared in favor of a rise in the men's wages. The employers accepted the verdict, but that the wards in completing the The employers accepted the verdict, but, pointed out that the yards, in completing the orders they have on the slips are already thought so at a loss and that a further rise in wages necessarily means an increased loss. The firms urged that to compensate for the rise in wages the Government should without delay reduce the heavy taxes now levied on the yards. employers duce the heavy taxes now levied on the yards.
In commenting upon Herr von Schinckel's sug-

In commencing upon herr von Schinckers suggestion, the Hamburg press expresses the opinion that it might be advantageous for the various nations interested in shipping to arrange an international compact with regard to the question of subsidies. The case of the sugar premiums and the Brussels Convention of 1902 is quoted as a translation of the compartage attraction that compartages are convention. somewhat analogous attuation, the embarrass-ments of which were regulated by an internation-

al agreement.

If, however, no such international agreement should prove possible in the case of state subsides, Germany, says the Fremdenblatt, would then sidies, Germany, says the Fremdenblatt, would then have to have recourse to some system of national aid, "either in the form of greatly reduced taxation or by the grant of special Government loans to the shipbuilding industry or by means of a direct subsidy to the shipping lines."

It need hardly be pointed out that this question is not a purely German affair, but that it has intricate and important international aspects in connection with the reparations policy of the

Romain Rolland on 'Open Sesame' to the Doors of Nature

The following letter from Romain Rolland is published by Chicago Tribune. The eminent author being asked what book he would rather have written than any other, replied:-

"I have a great fondness for great books, but I have not the slightest desire to have written them. They are written. I have them. I have them much more than those which I have myself them much more than those which I have myself written, for each of my works, as soon as it is written, leaves me. I deliver myself in it of part of my being which from that moment detaches itself from me for ever. I am not envious of other artists. I know their enjoyment. Rather would I envy certain scientists and the joys of their discoveries. I should like to have tasted that of Sir Jagadish Chunder Bose, in the hour of the geniusful experiences which he has described in his famous book, Response in the Living and Nonliving, his 'open sesame' to the doors of nature."

A German Indianist: The 75th Anniversary of Hermann Jacobi

On February 11th, the pensioned professor of Indian Philology at the University of Bonn, Privy Councillor Hermann Georg Jacobi celebrated his 75th birthday. Hailing from Cologne, Jacobi studied in Bonn and Berlin, worked thereupon one year in London and then undertook a scientific journey to India. In 1875 he settled at Bonn, became in the following year assistant professor at Muenster and in 1885 professor in ordinary at Kiel, in 1889 at Bonn. During the winter from 1913 to '14 he lectured at Calcutta University and travelled once more through the country of his studies.

The venerable gentleman, who has just celebrated his jubilee, has developed an extraordinarily productive activity and promoted science on different lines, his numerous essays published nearly all in journal, devoted to his line, and as separate Academy Reports, deal principally with the history of Indian philosophy and literature He deserves, first of all, great credit for having thrown light on the Religion of the Jama. He was the first who found that the Jamas are not, as everybody believed before. a Buddhistic sect. but the follower of a doctrine of faith, quite

-independently established prior to Buddhism, a long time ago, and representing a third religion of ancient India, which stands inde-pendent of Hinduism and Buddhism and is in the same rank with both. Through his translations of Jaina Texts and by his investigations, devoted to their system. Professor Jacobi has laid the ground for our present knowledge of this line, so little cultivated as yet. His endeavours met with the deserved consideration and appreciation even from the Jainas in India. To do him honour, there was held, on December 23rd of 1913, a large Jaina Meeting at Benares, in which he was solemnly presented with the diploma of his appointment to a "Jaina Darshana-Divakara" (Sun of Jaina Philosophy).

Prof. Jacobi is a member of numerous Academies and of scientific societies at home and abroad. In order to celebrate his jubilee, his friends and pupils have prepared a festive publication, showing by the number of its articles the high appreciation, which all colleagues pay to the senior of the German Indianists. The unusual vigour of the gentleman who has now come to age, and has published even last year important articles, gives us the hope that he may be allowed to work a long time still to the benefit of German science.

The British Cabinet and Mr. Das's "Gesture"

It has been made abundantly clear in the British Parliament that the British Government in London will not carry on any direct negotiations with Mr. C. R. Das in spite of the latter's "friendly" "gesture." Perhaps it would be more correct to say that the British Cabinet will not treat with Mr. Das because of his latest pronouncements.

In spite of Mr. Das's "Victories" in the Bengal Council, we have not been able to resist the impression that his latest manifestoes, etc., are a confession of failure and defeat;—he has not been able to force the bands of the Government, and that is why

he has held out the olive branch.

The British Cabinet seem also to have becity put a similar construction on his latest pronouncements, though they are too sindemnatic to say so in so many words. They have, therefore, said in effect that Mr. C. Das must give further proofs of a single desire to co-operate with, c. e., submiding to himself to the policy of, the British agreemment and that his future "gestures"

must receive the approbation of the Bengal and Indian Governments before they are conveyed across the seas to the arbiters of India's destiny in London.

"He Won't Be Happy Without It"

Sir Robert Horne has said that the British rulers of India have no desire to leave India, unless they are beaten to their knees. Considering that there is no example in history of foreign rule being permanent in any country, it would have been both wise and graceful for Sir Robert's countrymen to prepare for a speedy and gradual withdrawal from India before being forced by circumstances to do so.

But tastes and aspirations differ.

If Sir Robert's countrymen will not be happy unless they are bundled out of India a kind Providence which has met the wishes of "the lords of human kind" in so many things will no doubt grant this latest desire of theirs also in due time;—whether the instruments chosen for the fulfilment of the desire of the Britishers will be principally Indians, or some independent Eastern of Western powers, does not matter much.

"Tagore and the West."

Dean Inge has contributed to the Lordon Morning Post an article under the above caption. It is a sort of commentary on Rabindranath Tagore's lectures on "Nationalism." Says the Dean:—

Tagore is unquestionably one of the greatest men of our time; as a poet and thinker his position is unique; and he has never delivered his soul with more force and passion than in these lectures.

more force and passion than in these lectures,
Tagore here shows himself a proud and ferrid
patriot, who is wounded in his most sensitive feelings by what he calls the insults of Europeans to
Asiatics. The soul of India, he says, has been
humiliated by the English occupation. At the same
time he must not be classed with the seditions
plotters who are giving our Government so much
trouble. He knows that India could not stand
alone, and that our withdrawal would leave the
country a prey not only to civil war, but to some
other Western conqueror. He also likes and
admires the English character. "I have a great
love and respect for the British race. I know that
these people love justice and freedom and hate lies.
They are clean in their minds, frank in their manners, true in their friendships; in their behaviour
they are honest and reliable."

Perhaps the poet himself will feel inclined to be "classed with" the seditions plotters rather than with the Dean and his ilk who

d patronisingly give him a certificate political respectability. It is true that ingland were to withdraw today from suddenly, our country may fall a prey civil war and to invasion by some tern or Eastern nation. But there are many pendent countries which also would have gilar fate if their existing Governmental and personnel were suddenly nnery them. Hence what from drawn Inge writes of India is mess or point of inferiority peculiar to a In fact what the Dean says is a ble indictment of British rule. For toindigenous India-India standing alonefar loss able to adjust her affairs or to foreign invaders than she was before land established her supremacy on the so of Indian virility What England it to have done after the establishment British supremacy is to prepare India to d alone. But this she has never yet and is not doing even now.

What Tagore has written regarding the lish character is his sincere belief. Our of is, however, different. But as we have ed with the British people to a far less nt than the poet, we cannot dogmatically that he is wrong and we are right. At same time we must say that what we read in history of Englishmen's dealings

the princes and people of India has luced in our minds exactly the opposite ression of the English character to that eved by the poet's words. By this we not mean to say that there are not any many Englishmen answering to the poet's ription:—there certainly are such English-

Our impression is about the generality lose of them who have had anything to with India either in India or in England n other countries.

Dean Inge proceeds to observe:

n may therefore consider this Asiatic philosophy story without any animus against the writer, thoughts are those of an Eastern prophet symg the good and the evil of Western civilian. Tagore is not a Christian; but the attitude and in that there are a time in the Christian it. nds us that there was a time when Christianity an Asiatic creed—it was the time of the ral Gospel. Again and again he seems to be Christian than the Christians.

Here the Dean betrays that conscious or onscious spiritual arrogance of Christians ch leads them to dub everything good as stian. There was, has been, is and will nuch, however, which is very good and invaluable, but which is also quite inendent of Christianity.

In the following passage the writer pays a somewhat left-handed compliment to Indians and other "sheep races of Asia" -

Men and nations may choose a course (but Men and nations may choose a course (but the nations, at least, have not much choice!) which for a time is successful, but which ends in a death-trap History has provided several instances and we may trace the same law in the animal world. The sheep has the last word against the wolf. Predatory animals and races of men are at last destroyed because they are a musance, and it is noted is interest to save them. men are at last destroyed because they are a nursance, and it is nobody a interest to save them from their enemies. The sheep, on the other hand, though they cannot protect themselves, are useful and indispensable; they pay their way and something more. The sheep-races of Asia, in the same way, may outlive all their oppressors, they have a survival-value. This is not quite Tagore's argument, he appeals to the eternal laws of right and justice, but I think he has science on his side.

The passage quoted below is on the whole an accurate reading and interpretation

of one aspect of Indian history.

Europe has had acute national rivalries but no race-problems like India. The fact that races ethnologically different are in close contact is the great problem of India. India has tried to solve it by the social regulation of differences on the one hand, and by the spiritual recognition of unity on hand, and by the spiritual recognition of unity on the other. She has made grave blunders by setting up the boundary walls too rigidly between races, she has crippled the minds and narrowed the life of whole classes in trying to fit them into her social forms. But behind all this she has fostered a lofty spiritual idealism which sets at nought all human distinctions. The history of India has been only superficially a history of the rise and fall of kingdoms; the real history has been that of social his and of spiritual ideals. life and of spiritual ideals

The paragraph quoted above also shows wherein lies India's weakness, and of what achievement she can really feel proud

The Dean continues:

Upon this congeries of races which has never been a nation descended a real nation, organised through and through for self-defence, conquest, and exploitation. This was for India a very different conquest from the inroads of other Asiatics, with their elephants and kettledrums, mosques, palaces and tombs. This was the invasion of a scientific and tombs. This was the invasion of a scientific machine driven by the law of its being to increase its power and wealth with an impersonal ruthlessness, a dehumanised efficiency. "We had to deal this time not with kings, not with human races, but with a Nation—we who are no nation ourselves.

The Nation, Tagore says, is the organised self-interest of a whole people where it is least human and least spiritual. "Our only intimate experience with the Nation is with the British Nation, and there are reasons to believe that it is one of the

with the Nation is with the British Nation, and there are reasons to believe that it is one of the best." But, he adds, "we have felt its one of the best." But, he adds, "we have felt its nor grip at the root of our life, and for the sake of Lumanity we must stand up and give waring to all that this nationalism is a cruel epidemic of evil that is sweeping over the human world of the present age, and eating into its moral stality. "It is like a hydraulic press, whose pressure is impersonal and on that account completely effective."

باردي توي يون المالي المالي المالي المالي

So he charges us with choking and stifling the mental and moral life of India, although he admits that the spirit of the English people loves liberty. "We must acknowledge this paradox, that while the spirit of the West marches under the banner of freedom, the Nation of the West forges its iron chains of organisation, which are the most relentless and unbreakable that have ever been manufactured in the whole history of man." This is an Indian view of the British Raj, which we picture to ourselves as foolishly lax and lenient, a weak and easygoing government resting on the acquiescence of the governed!

Indian patriots who are striving to win self-government may feel aggreeved at Tagore's declaration that we are not a nation, because that is exactly one of the grounds on which British imperialists would deny us the birthright of self-rule. But if patriotic Indians take note of the poet's definition of a "Nation" and also remember his own untheatrical spirit of independence, undemonstrative fearlessness, and unquestionable love of perfect freedom, they will have nothing to complain of against his declaration.

So far as Nationhood goes, it may be true, as Tagore says, that the British Nation is one of the best. But when we consider the definition and character which the poet has given to the organised entity called the 'nation', we cannot consider it much of an eulogium. It is very much like saying that so and so is one of the best scoundrels in existence—though, of course, the poet himself does not say so or suggest any such explanation of his words.

What has been spoken of as a paradox is seen on a little reflection to be no paradox. Wolves, tigers and hons all match under the banner of freedom; but the freedom which they appreciate is freedom for themselves—the liberty to do what they have Freedom for their prey they would not in the least appreciate.

The writer then dwells on the poet's characterisation of the last big war as a war of retribution.

And now, he thinks, our sins have found us out. "Europe's wealth is bursting into smoke, and her humanity is shattered into bits on her battle-fields." "You ask in amazement, what she has done to deserve this? The answer is that the West has been systematically petrifying her moral nature in order to lay a solid foundation for her gigantic abstractions of efficiency. The war of nations is a war of retribution. Europe must know in her own person the terrible absurdity of the thing called the Nation. The West stands face to fage with her own creation, to which she had offered her soul." Disillusionment and repentance will come and then Asia will thank God that she was made to wait in silence through the right of despair, holding fast

through all to her trust in God and the trust the human soul.

The poet's views on the "nationificat (if we may say so) and "modernisation' Japan are thus summarised:—

Our prophet goes to Japan, and finds its propering to pass its children through the find the same Moloch He warns them that true more ism is freedom of mind, not slavery of taste, dernism is not in the dress of the Europeans, the hideous structures where their children interned when they take their lessons, or in square houses with flat straight wall-surfapierced with parallel lines of windows, withey are caged, certainly not in their labonnets, carrying on them loads of incongrue Alas! when Tagore was in London, he looked a benignant mystic, with his head in the clot but the chief was taking notes, and faith printed them!

We do not know how many men the still are who think, as Dean Inge of fesses to have thought once upon a tothat Rabindranath Tagore is a harm dreamer, neither observant nor cute, possessing an eye to reality. If there is be any such, they have our sympathy, as I the Dean in his disillusionment regard Tagore's mysticism.

To the Americans the poet says .-

Beauty and her twin-brother truth requirement and self-control for their growth. But I greed of gain has no limit to its capaciousness one object is to produce and consume. It has a neither for beautiful nature nor for beautiful has beings. It is ruthlessly ready to crush beautiful life out of them, moulding them into money. It trampling into distortion the humanity upon what stands. Man is deciding his human sentiment because they stand in the way of his machines.

The writer concludes by observing -

The glowing eloquence of the great proper carries one away. But Tagore is partially Wester is additional that the first and outrate patriotism owe not a little to the European involutill our light chains begin to gall those who have not interest the either with the caste system or with the spirit idealism of India—the two things which, he sale contain the real history of the country. If Indians care so little about political institute that they allow a few thousand white men to gove 320 millions of their own race, have we robbed the of much after all, as the price of secure peace, hand order and sanitation? If they want nationly—the accursed thing in Tagore's philosophy—the can have it.

Still, there is a terrible truth in his indictme. The nation is an inhuman machine, and we are its grip. We look wistfully at a higher ideal, we ther it comes to us from the Galilean lake or in the banks of the Ganges. But our environment turned us Europeans write wolf-packs, surround by other packs as flerce as ourselves. "Who she deliver us from the body of this death?"

Dean Inge appears to derive great consotion from the thought that "Tagore is artially westernised after all". Englishmen sem to think that in their mental constitution to the set is they are a blend of Greek, Italian, rench, German, and even Indian, too. There nothing unusual, surprising or wrong in ne people being influenced by other peoples. Is only fossils and stocks and stones which o not imbibe extraneous influence or adapt temselves to their environment.

The Dean seems to have the ignorant ancest that it is only Europeans who rebel r have rebelled under the impelling motive f the spirit of freedom. But the fact is int there have been wars of independence in Il continents throughout the ages In India self there have been such wars. To give one sample of the working of the spirit of redom and rovolt, when Sivaji unfurled the anner of Maratha independence, he did so ot because he had read any English literature r because he was a disappointed "failed" or assed B. A. but because the spirit of cedom is inherent in man. It was his min Ramadasa who declared in his Dasaudha, I. 10.25, that man is free and cannot e subjected by force (Naradcha ha stadhin, thusa na hra paradhin). Even after the ountry had come under the British flag. iere was the great rebellion of 1857, which ras not the work of men who had any nowledge of any European literature of any escription Chains are chains and, as such, alling to all men in their unsophisticated ondition, whether they be nourished or not ounshed on any literature of revolt Chains 10 chains, whether they be light or heavy, ilded or plain. Dean linge has not to bear 10 yoke of the stranger, and may therefore e pardoned for considering the British yoke, orne by Indians light.

That even an educated Britisher like the lean should say that Indians "have never nown freedom" is not surprising. With a ery small number of exceptions, Britishers to woefully ignorant of the past history and resent condition of India. They ought really be pitied for the darkness in which they well.

It may be true, speaking generally, that it caste system and the spiritual idealism t India contain the real history of India 1 one of its aspects; but that does not mean 1 indians have never cared for politics in 10 past or do not care for politics today. Or can we say whether Dean Ingo has

correctly summarised Tagore's views in this matter. Our opinion is somewhat different. The rise and fall of sects, dynasties, tribes and peoples and the many revolts for freedom in the past show that Indians have been political, and not merely other-worldly and spiritual. The excessive emphasis laid on India's spirituality has produced the wrong belief that the Hindus have been a peculiar people. But the truth is that they have had quite as much to do with worldly affairs as any other people It would, in fact, be difficult to find in the ancient and mediaeval history of any country any form or machinery of government which did not exist in some part or other of India during some period or other of her history

It is a curious argument which the Dean uses when he asks

"If the Indians care so little about political institutions that they allow a few thousand white men to govern 320 millions of their own race, have we robbed them of much after all, as the price of secure peace, law and order and sanitation."

From the rebellion of 1557 and the speechifying, "resolving, and petitioning of the Moderate, to the non-co-operating of the Gandhites and to the teriorism of the bombthrowers and the rebellion of the Moplahs, there has been every variety of protest against Butish dominance in India It cannot, therefore, be correctly said that the Indians passively allow Britishers to domineer over them in the sense of silently and passively acquiescing in their despotism. But perhaps to the Dean, as to most other Englishmen, nothing can be a convincing argument to prove our non-acceptance of British dominance except a successful knock-down blow. That, however, is a kind of argument which we do not stock in our journalistic The Dean and his compatriots will have to enquire elsewhere for it Sir Robert Horne also wanted to be beaten to his knees, before leaving India to her fate. If a demand of this description becomes general in Britain, those alone who deal in such goods can say whether there will ever be an adequate supply; ue are unable to say, our line of business being different

From the fact that Indians have not yet thrown off the British yoke. Dean Inge concludes that the British people have not "robbed" Indians of much after all Following this fine of argument, all usurpers, so long as they are not overthroun or expelled, may claim that they have not robbed their victims of much after all. The Dean and

これのないいからしま あんかんか

.

other Britishers of his way of thinking ought to be able to perceive that it is a dangerous line of argument,-it is an incite-

ment to rebellion, passive or active.

Dean Inge prates of secure peace, law and order, and sanitation. Peace implies that there is not as much loss of life and property as in times of war. But it is a fact that famines and epidemics have killed in India during British rule more men than all the wars in Europe during the same period. There has also been consequent loss of wealth. Moreover, pax Britannica is in India a a peace of lifelessness and emasculation, which greatly discounts its value.

In spite of "secure peace," dacoities and outrages on women are of frequent occurrence

in many parts of the country.

As to "law and order," there is much of it, except when the myrmidons of law and order themselves become lawless order themselves become lawless disorderly, and \mathbf{or} secretly instigate others to commit breaches of law and order, or connive at their doing so Let Kohat alone bear witness; other witnesses need not be called to give evidence. It cannot be admitted that the prevention of non-official breaches of law and order alone, when such are not desired or connived at by the powers that be, is equivalent to the maintenance of law and order. The existence of official hooliganism and of non-official hooliganism under the direct or indirect protection of officials, must be held to disprove the maintenance of law and order.

As to sanitation, the less said the better. The death-rate in India is more than double that of England. The average duration of life in India is only 23 years, about half of what it is in England. Coming to an oriental country we find that in Japan the average age of mortality of Japanese is 43' 97 years for men and 44' 85 for women. Having taken charge of the welfare of India, Britain was bound to remove whatever insanitary conditions existed in the country previous to the British occupation, and in addition, to remove the insanitation arising out of the British administration cum exploitation of India. It cannot be claimed that, judged by this standard, British sanitary achievement has been in any way remarkable. On the contrary, Western industrialism has increased infant mortality in industrialised centres, railways have produced or increased malaria in various parts of the country, and in the pre-British period of Indian history,

ated the country for thirty years at a stretch, or of influenza carrying off millions

during a single year.

It would be charitable, therefore, to assume that Englishmen can think of present-day India without their self-complacence being disturbed, only because of their ignorance and thoughtlessness,—though there is the other hypothesis that Englishmen hold the record for pecksniffian hypocrisy.

Dean Inge declares that if Indians "want nationhood—the accursed thing in Tagores philosophy—they can have it". But we do not know of even half a dozen Englishmen who would allow India to assert her inde-

pendent nationhood unopposed.

We are very thankful to the Dean for his condescension in conceding to us the right to nationhood. But it seems that he would much rather that we did not strue to be a nation; for nationhood is an accured thing ! It is not our intention to discuswhether Dean Inge accepts the poet's defintion of a nation and his conclusion that nationalism (in his acceptation of the word) is an evil. But assuming that the Dean is a sincere convert to the poet's views, why doe he not try to persuade his countrymen to give up the fruits of organised greed and robbery?

If a dacoit professed belief in otherworldliness and the evils of riches and for that reason pursued his calling of depailing others of their property in order that their souls might not be damned by the possession of riches, his profession and practice would produce the same mingled feelings as a comfortable English imperialist's characterisation of nationalism as an accursed thing.

It is probable that Dean Inge is no such an imperialist. But his reference to "plotters" who "trouble" "our Govern ment" makes one suspicious. In any cas there is hope for him, judging from the la few lines of his article quoted above.

P. S. In what we have written abo with reference to the study of the literatu of revolt making the light chain of Briti rule galling to educated Indians, we did I mean to say that English education has 1 had anything to do with rousing in us feeling of patriotism and the spirit of firede -it certainly has produced that effect some extent. What we contend is that spirit of freedom is innate in all men, that, even if we had not read any Euror literature, the desire for liberty would t been awakened in us somehow or othe

r deplorable economic and political con-

India and the League of Nations

In a series of articles published in the ess some time ago, the writer exposed the al position of India in the League of ation. These articles were based, not on earsay, but on a careful study of the situaon on the spot at Geneva. The numerous papered on the humiliating position of dia in the League that have appeared in e press since then, bear ample testimony the interest and attention that the disussion has aroused. Our main complaints, by the present, are that India's contributions the League are quite out of proportion b her comparative ability to pay, and that of Il the contributors to the League exchequer, he receives the least benefit from that rganisation. In view of the importance of the he question and of the recent interpellations n the Indian Legislative Assembly, it eems desirable once again to review the nain facts.

Until 1924, India was the third contributor o the League's funds. Of all the Great Powers, only two-Great Britain and Francepaid contributions larger than India. She paid four units more than Japan or Italy, and only thirteen units less than France, and 23 units less than (freat Her contribution was 25 units in excess of that of Spain, and thirty units in excess of that of Brazil. These figures in themselves seem sufficient to demonstrate that India's contribution is unjustifiably high. A good indication of capacity to pay is the not revenue of the various member-states of the League. The pre-war net revenues per head of population of seven countries, who Were now members of the League, were in the following proportion: France 23, United hingdom 18, Australia 15, Italy 14, Canada 14, Japan 6, and India 1; and of these, all but the feet of the second secon all but the first two were paying substantially lower contributions than India.

As a result of Lord Hardinge's representation at the head of the Indian Delegation last year, India's contribution has been reduced by 5 units for 1925. The reduction might easily have been 15 units like China but for the fact that, at the time the claims for reduction were being considered, while the Chinese delegate ably argued his case in person, according to newspaper reports, the

delegate appointed to represent India by the British Government, practically the India Office, did not put in an appearance at all. Now, therefore, India ranks fifth among the heaviest contributors to the League, Italy and Japan taking precedence over her in this respect. But the position even now can hardly be acquiesced in by India; any system of allocation, under which, for example, countries like Australia with an annual per capita income of 490, and Canada with about £100, have to pay less than India, whose national income per head per year could not by any calculation exceed Rs 100, which amounts to less than £8,-stands self-condemned. The statistical dilettantism of the League of Nations will have to be succeeded by a more careful and comprehensive study of economic data, if the aim is to arrive at results which the world will not deem prima facie ridiculously absurd. As Lord Hardinge points out in his memorandum, reproduced in the Gazette of India, dated the 27th December, 1924, India does not appear before the League as a suppliant for relief from the burden of an excessive contribution on the ground that she is unable to obtain the necessary funds to meet that demand India has invariably recognised and met all her international obligations, however great the sacrifice which they may have entailed. Her claim is based solely on the ground of equity, and the fair name of the League in the eyes of her people-about a fifth of the total population of the world-depends on the manner in which it solves this veved problem.

From the question of payments to the League, we pass by a not unnatural transition to the correlative of the benefits India receives or ought to receive Certain members of the Indian Legislative Assembly interpellated the Government of India on the representation of India on the Council and the Secretariat of the League: and the answers they elicited, as seen from the records of the Assembly debates of the 22nd Jan last, make very distressing reading. It is permissible to doubt whether Mr. Graha. Secretary to the Government of India in the Legislative Department, who referred the Members to the official journal of the League, had ever cast his eye over those pages himself. The information given there is of a most confusing character, and is likely to lead the finwary reader astral, as salaries, nationalities and posts are not shown in any corresponding sequence and order. Even this

•

information is now withheld from the public, for the 1924 Journals do not give any details of the staff of the various League organisations at all; and judging from the analysis of the 1921 and 1923 staff lists which the writer referred to above has so carefully compiled, the League, it appears, has best consulted its interests in suppressing information likely to reflect so much discredit on its sense of equitable treatment of the various nationals. It has been shown how about three-fifths of the entire staff are composed of English, French and Swiss nationals, and how, in the limited sphere not yet appropriated by them, the other countries struggle with varying degrees of success to obtain

some sort of representation.

An India, what about her? The country which till the commencement of this year paid one-fourteenth of the entire expenses of an organisation which counts among its members 54 States, had to be content with a single national of hers in the Palace of Nations in 1923, and 1921. And what was his position, what his salary? The widely known Antwerp journal "Echo du Soir" in its issue of the 18th February last, published an article by the well-known English writer, Mr. Hılaire Belloc, who says that the personnel of the League consists of types the most suspicious and the most contemptible", "who enjoy salaries out of all proportion to their worth or their work", "that the salary-bill runs up into ridiculously high figures paid by the various taxpayers without having a voice in the administration of the League", and that "the sole topic of discussion is that such an intriguer managed to secure such and such a post". In an atmosphere where, according to Mr. Belloc, nepotism and intrigue are the only gateways to lucrative and influential positions, it can well be understood that our solitary representative at Geneva found himself out of his natural element. The position, as it is, is too humiliating for words.

India, certainly, has a right to obtain adequate representation in the Secretariat. and to insist that these representatives are adequately remunerated; and we would be failing in our duty to ourselves and to our countrymen in these trying situations abroad, if we do not press that right to speedy recognition. Our demands are reasonable; we do not want shorthand typisis from India to be appointed Financial Controllers in the League or jobberies of like nature to be perpetrated. The selection of unsuitable candidates can only result in inefficiency in the office, and in bringing India and Indians bad name abroad. Mr. Joseph Baptista, ın his interview to the Press on his return from the International Labour Conference last year is reported to have said that he did not want a large number of Indians at Geneva, but he would insist that they should be of our best and that the treatment and salary they got at Geneva were well in keeping with then attainments and efficiency. Indian labour, intellectual or manual, should not be allowed to be sweated. We would point out to the Secretary-General of the League that India is not wanting in men of high educational attain ments and administrative experience who could fill with honour and distinction am post in the League and its affiliated offices

Mr Graham ostentationally dissociates him self in the Legislative-Assembly from the view that India derives less benefit from the League than other members; and in so doing he somewhat out-Herods Herod. For the League itself has perforce had to admit the justice of the complaint. The Allocation Committee of the League definitely sought to make the degree of benefits accruing to the values States from the League a factor to be taken into consideration in fixing the amount of contributions. Is it possible that Mr. Giaham. who is so prolific in his references to the League's official journal, has forgotten in own official journal, the Gazette of India, which reproduces the Hardinge memorandum already referred to? Lord Hardinge them quotes the opinion of the Allocation Committee, the substance of which has been set out above, and continues to observe as follows :-

"It is obvious that while the benefits which European countries derive from the League are not European countries derive from the League are not only remote and contingent, but also immediate and direct, the benefits which India obtains from the League's activities fall almost exclusively into the former category. If this question be examined in somewhat greater detail, it will be found that India is not represented on the Council of the League although her contribution is 65 units a against 88, 78, 61, 61, 40, 35, 18, 15, 7, for the countries represented on the Council India has no permanent representative on the Court of International nent representative on the Court of International Justice, although the leading exponents of Hindu and Mahomedan Law are Indian nationals; and both and manomedan Law are Indian nationals; and bold these systems of law govern the civil and personal relations of well over a hundred million individuals each... Lastly in considering this question of benefits received, it may be noted that India is represented by two of her nationals only in the combined staff of the Secretariat, the Labour Bureau and the International Court of Justice. One nation paying 23 units more than India is represented by over 200 of her nationals: another paying 13 units NOTES

e than India is represented by 145 of her nalais, a third paying 50 units less than India is exented by about 130 of her nationals. Com-

In replying to a question asking for informan as to what representations had been made the League about India's inadequate reesentation at Geneva, Mr Graham referred Assembly to the League's official journal e have perused and reperused the pages ed by Mr Graham; but there is not a brd anywhere there about the efforts, if ly, made in this behalf. Official replies. te the League's official journal in this spect, divulge no more information than

mld be helped

India is asked to pay through the nose id she must insist on getting her fair lare in the game. As it is now understood that e Indian Delegation are to address themselves monsty to this question in the next Asmbly of the League, we need say no more bout it, except to add that we shall be refully watching their activities in Geneva 'it September.

The Real Meaning of Steel Protection

The Industrial and Trade Review for idia of Berlin dated 1st March, 1925 conins an article on the Indian Steel Protection which we find a new point of view

are quoting portions from it:
The principle adopted by the Tariff Board in ommending protection for this Industry was that need for protection was to be measured by difference between two prices: (a) "the price at uch steel is likely to be imported into India an abroad and (b) the price at which the Indian mufacturer can sell at a reasonable profit". We are further informed that the prices at which steel is likely to enter India without duty have been found to be as follows

	Pe	er ton
D		Rs
Bars		140
Structural shapes		145
Rails 30 lbs & over		140
Plates, ordinary		150
Sheets black		200
Sheets, galvanised	•	300

and that the average price which gives the Indian manufacturer a fair return on his capital has been found to be Rs. 180 a ton

We see therefore that the protective duties imposed as well as the bounties paid to the Tata Co., out of Indian revenues are aimed solely at assuring a reasonable profit to the manufacturers, and no mention whatsoever is made of the wares and general conditions of the workers in this connection nor of the effect on the agriculturists. The workers are not in the least likely to receive higher payment or even an infinitesimal fraction on the "bounty extracted from them and the peasants to feed their social oppressors. And the peasant will be forced to pay higher prices for his implements and demand higher prices for his produce It is the vast masses of the people, therefore, that will have to bear the burdens of protection for several years, enabling the handful of capitalists to live meanwhile in luxury palaces on Malabar Hill.

If the intention of the Protection Act is to facilitate the Swadeshi struggle against treat Britain, it can easily be shown that it is a failure It is true that British makers will suffer some loss on black and galvanised steel plates on beams, girders, beamwork, and to some extent on structural steel, but this loss will be easily compensated for by increased British exports of fabricated steel such as bridge work and parts of steel buildings Even the British Report sav- that there does not seem to be any ground for immediate alarm and adds, what we all know that the Government of India are not likely to sanction any creme measure of protection. Moreover all the chief technicians of the Tata Company are Englishmen and all machinery is purchased in England Art as Indian public works are based on British standards, all the plant machinery and stores will continue to be of British origin, and, as the British Report points out, "renewals and spare parts must be purchased from the original suppliers. No indeed is there any difficulty in supposing that British steel capital, will follow the same course as Manchester cotton, capital, for according to the recommendations of the Fiscal Commission, there are to be "no obstacles to the free inflow of foreign capital" into India and Governme monopoles or concessions are to be granted of to companies incorporated and registered in Ir ha with rupee capital such companies being required to have a responsible proportion of Indian directors. In other words a cooperation etween British and Indian capital in the exploitation of India will probably result and it was be joined that protection for Indian steel is no protection against the British capitalist.

It may be said that the ability of a group. of capitalists to exploit labour for any

considerable length of time is a doubtful thing. When the millionaires of Malabar Hill commence their period of bounty-fed existence they may be at an advantage over those who supply the sinews of the bounty; but after some time the workers are bound to organise themselves into a powerful enough position to secure their just claims. Bounty or no bounty, protection or no protection, capitalists will practically in every case try to keep wages as low as is compatible with keeping the workers normally fit for work. This is nothing new. The labourers in the protected industries like all other labourers shall have to obtain higher wages by increasing their own efficiency and bargaining power. working-men will have to struggle in order to get justice is a question which is distinct from those of Free Trade or Protection. It is no doubt in keeping with Social Ethics that the interests of the workers and the poor should receive proper attention; but their interests receive proper attention nowhere; so why should we expect things to be different in the case of granting protection to industries?

That British Capital will not stand and suffer to see India prosper is a thing much too wellknown here. We never had any illusions in this field. The British Capitalist has always had a free entrance into India on the strength of political control of India. He is in no way in a weaker position to-day. So what is there to make him a foolishly

virtuous person?

We next find that Britain perhaps wants to develop India industrially in order to prepare for an Eastern War. We are not sure that Britain is manœuvring for such a War. But if she is, an industrially advanced India will be a great asset in view of the increasing efficiency of submarine crafts. The article in the Berlin paper says in support of its suspicions:

It is obvious that a far-seeing nation like the British, with a highly consistent foreign policy, is not likely to sanction any measures in India that may ultimately damage its commercial integests or its world position. And we may take it that in granting protection for Indian steel there are other more serious motives at work than the development of the steel industry in India for the sake of India. In the summary of the Tariff Board's conclusions relating to iron and steel the very first paragraph states not only that "the trial industry satisfies the three conditions which the Fiscal Commission considered should be satisfied in ordinary cases by all industries before a claim to protection is entertained", but that it is "also an essential industry for purposes of self-opfence and of great importance on national

grounds. It might therefore claim protection end if the ordinary conditions were not fully satisfic. Further light on the motives of the Government thrown by an article contributed by an English to the important English economic journal light of Calcutta, in its issue of the 28th January points out the urgent necessity of saving the Too, at all costs and he calls upon the Government of India and the great Indian financiers to operate in averting the disaster of a liquidate With regard to the bounty of 50 lakes that with the being discussed by the Legislative Assems and which has since been sanctioned, he express the hope that "it will be decided to pay bounty for three years in recognition of the sensitive hope that "it will be decided to pay the country during the world war." He finances the very significant statement that if makes the very significant statement that if the country during the world war." He finances all doubt of the immense of the State owes to the Tata's would be dispelled. In these words we have the real secret of the protective legislation. Tata's steel supplementations for the Government during the Wall Tata's rails helped among other things in

In these words we have the real secret of new protective legislation. Tata's steel supplementations for the Government during the Wall. Tata's rails helped, among other things, in building of railways in Mesopotamia to strength Britain's economic and political grip on that count and we cannot help thinking that Indian steel intended to play a similar role in the war that inventable in Eastern Asia in the space of a key years. Whereas at the present moment the toconsumption of steel in India is estimated at 6 000 tons, of which no less than 481,000 tons amported and only 46,000 tons are produced India, the effect of the protective tariff will after a slight decline in the total consumption during the next two years, to revert in 1920-27 the present figure of 627,000 tons, of which have ever, only a little more than half, i. e., 363,000 m will be imported and as much as 264,000 tons to be produced in India. The importance of this steep orduced in India in the event of an Asiatic Western the produced in India. The importance of this steep orduced in India in the event of an Asiatic Western the steep of the steep of the steep of the steep of the Arana of the Munitions Board understand how Britain's imperial policy has he made to coincide with the interests of the India capitalist class.

A. C

Production in India

Prof. Rajanikanta Das, M.A., M.S., Ph. who is at present attached to the Visvablara is an economist of distinction. During his prolonged stay in the U.S.A., he had served as lecturer to the New York University. The North-Western University, Chicago at to the College of the city of New York, at as special agent to the Department of Labot U.S. Government. His book "Production India" published by the Visvabharati Booshop, 10 Cornwallis Street, Calcutta, is qui worthy of its distinguished author. In the book Prof. Das makes a study of India

ductivity and works out his thesis that tional prosperity depended more upon the ustrial efficiency of the people than the ural resources of the country". He makes comparative study of the productive reproces of India in order to arrive at a pro-· understanding of India's economic posin and of the weak points in her industrial . He takes a comprehensive account of lia's Land, Labour and Capital; but he gembers that minus the human element. ural resources, however abundant are of use In the introduction Prof. Das savs labor is the creative principle in the productprocess. It is labor which conquers nature, avers laws, invents machinery, devises arts, ordinates land and capital and organizes indus-I systems Labour is the dynamic factor and ver unfolding itself in both intensity and exaity It now produces a thing in a day which neily took a year to finish and makes the tage of yesterday the resources of to-day. The wth of its efficiency is the most important cause increase in productivity.

When we come to analyse the value of at we call useful articles we find that of usefulness of most things by far the gest portion is composed of labour. The re specialised complicated and manufactured hing is the more labour value we find in In the modern world, of the things which npose 'Wealth' the majority are such as itain a high percentage of labour value at is why a skilful labourer is such an et to a country. In fact want of skill d efficiency in the population may all its abundant natural resources ealth is mainly potential in nature, it is mur that gives it life So Prof. Das is the right track. In the proper economic n to its dependence upon natural wealth. hatever may be the resources of a country always has an endless storehouse of wealth the work-power, skill and intelligence of people. In India the human element proverbially useless. And any economic vancement must move along the line sugted by Prof. Rajanikanta Das. In his mon our "low productivity could not be t of the resources is wasted at present 1emains unexploited for productive pur-Lack of capital is partly responsible our poverty but as capital is but the ult of past prosperity we cannot place it the cause of economic progress. Hence e lack of capital could not be regarded as the fundamental cause of insufficient production in India". This is more true in view of the inefficiency we have displayed in the field of banking and mobilisation of national capital

He concludes --

......

'Insufficient production is the result of in-Insumcent production is the result of in-efficient labor, i.e., lack of capacity on the part of the people to mobilise the physical, intellectual and moral forces of the country and to organise land and capital effectively for national production. The fundamental cause of India poverty, is, therefore, her industrial inefficience

There are some interesting facts and figures in the book such as the following

Out of a total potential arable area of 960 million acres only 2% million acres or 31% were utilised for productive purposes and 664 million acres or 69% were wasted Viewed from the standpoint of efficiency, this wastage becomes still larger. India's yield being only 85 per cent of the average yield of the principal countries of the world the area utilised for cropping becomes 26% instead of 31% as above and wastage 74%.

It might be safely said that one half of the forest land is wasted in India.

forest land is wasted in India.

70% of the fisheries must be regarded as an

annual waste

India possesses water resources of 27 million horse-power, of which only one half of one per cent has been utilised for production up to the present time. Thus 995% of the water power resources are annually lost to India Through inefficient mining a large part of coal mica and other minerals is also wasted."

Prof Das gives us other and numerous instances of waste which we are unable to reproduce here through lack of space The book is a notable contribution to Indian economic literature and deserves the attention of all students, teachers and social workers

"Lungs' for Cities

In the Welfare of April, 1925 Mr St. Singh describes how the London Council provides health for its citizens He opens his well-illustrated article as follows

Some wise forefather of ours ages ago created the tradition that he who plants trees smooths for himself the way to heaven. We Irdians of this generation look upon such a heritage as superstition

People in the West are however finding out to their cost that the health of the community deferiorates as trees are ent down fields and waste areas are cleared and houses are parented to crowd against one another Failer generations in their ignorance and greed, converted fool's open country into city slums. Absence of light and an and overcrowding resulted in bltn disease and crime, which

overflowed the bounds of the "poor quarter" and attacked the rich, who dwelt in spacious surroundings near by. Municipal corporations have therefore, been condemning property in towns in every part of Europe and America during recent years, and spending money upon providing parks and playgrounds—or "lungs" as they are significantly called.

London, the largest city in the world, is fairly well served in this respect. Large and small parks, common and open spaces, enclosed islets of green and playgrounds are speadall over the metropolitan area. In whatever neighbourhood one lives, therefore, it is easy to obtain a whilf of "fresh air" and to take exercise in one form or another, according to incligation or to the mood of the weather.

How They Drug Themselves

Mr. C. F. Andrews' Memorandum on opium in the Welfare of April contains the following figures.

Figures showing consumption of opium in

verious nlease

Mr. Andrews says.

It is not difficult to see that on the whole the mass of the Indian village population remains remarkably free from excess in opium consumption (except in Assam and Burma). But the town population, where the religious sanctions of the village life have broken down, has begun to succumb to the insidious opium habit and the danger is very great indeed of still further increase of vicious community of opium. I have already mentioned great indeed of still further increase of victors consumption of opium. I have already mentioned the daily doping of babies. This leads to chronic constipation and children who are thus habitually doped suffer from debility and intestinal weakness for the rest of their lives. We are in danger of producing a weakly and debilitated industrial population, which will be a terrible drag on the prosperity of India in the future. ty of India in the future

British Income Tax Refunds

We have received the following communication from Mr. Wilfred Fry of 18 Buckingham Palace Jardens, London S. W. 1. It will be found interesting to those derive incomes from investments.

For the benefit of any Indian gentleme may be unaware that they are entitled to a considerable sum of money should they any income from English registered con may I be permitted to point out the fo

salient facts:—
(1) Every Indian gentleman of British ality is now entitled to recover either the w

a proportion of any British Income Tax d at source from his dividends

(2) This includes dividends which are s be paid "free of tax", or even when no de for tax is shown on the dividend voucher case of a British registered company

(3) No liability on income not derived Great Britain can be incurred by putting in claims.

(4) The amount recoverable varies small amount to hundreds of pounds, de upon the amount and source of the income (5) These claims can be made in resincome received from 5th April 1920 to date (4) The

A Students' Home for Calcutta

The Ramkrishna Mission have beer known for their charitable endeavour the new Students' Home which the organising deserves public sympathy some time they have been running a for the benefit of poor students who to carry on their education in Ca Here the students do all their own wor lead a life of quiet Brahmacharya. We had occasion to visit the hostel which pressed us by its contrast to the a run of students' messes in Calcutta everything was orderly, methodical and in hand. The organisers are trying to a larger hostel in the suburbs where intend to give the students a chance t their own living by work of one ku another. Those desirous of learning m the scheme should write to Swami Shiva Belur Math. Dt. Howrah.

The Economic History of Ancient

We are indebted to Prof. Santosh Das M. A., of Tribhuban Chandra C Nepal, for a splendid and compact little on the Economic History of Ancient India's economic life was fairly conven as early as the Rig-Vedic age ct is not acknowledged by some people tho have written on the ancient history of ndia. Very little is also known of the conomic life in ancient India even among he highly educated people in our country. We expect that this book will be welcomed by all who desire to acquire knowledge of this muoitant subject. Prof. Das covers the Economic History of India from the earliest imes down to the age of Harsha in about 100 pages. This is concise enough considering the amount of information we get in the book. The price, Rs. 3, is not high. The book is published by the author from 1-2 Ananda Dutt Lane, Howrah.

Gandhi's Moral Greatness

Mr John Haynes Holmes, Minister of the Community Church in New York City, recently delivered an address from his pulpit in which he considered the question as to whether Mahatma Gandhi had failed in his great adventure, namely, "to restore his nation to its ancient freedom and native culture by disciplining its people to the technique of non-violent coercion." In the course of the address Mr. Holmes dwelt on the Mahatma's moral greatness in the following words.

If "he that ruleth his spirit is better than he that taketh a city," then Gandhi is indeed the ricatest man of our time. During the last three cars, he has endured punishment at the hands of his enemies, he has met humiliation and defeat it the hands of his friends. He has seen his movement disrupted and its forces scattered. He has seen his followers refuse to follow. But he has not fallered in patience, nor swerved in courage. He has lost neither hope nor faith. Best of all he has lost neither hope nor faith. Best of all he has kept sweet his soul from all anger, vindictiveness and hate, and, in his darkest hour, has held all men as his friends. "If I have equal love in ne' he cries, "for No-Changers, Surmajists, Liberals, Home Rulers, Independents, and for that materials also for the cause."

The Secret of Sun Yat-sen's Influence

In the opinion of the Japan Weekly

The devotion that Dr. Sun Yat-sen was always his to command was largely due to his refraining tom the pursuit of wealth. High office has so ong been regarded in Chips as a means to amass sches on behalf of one's family that the testing has been very severe for those who have risen to lower since the revolution, and all that a few have

forgotten their grand ideals when they found the spoils of office within reach. When Sun's cause seemed hopeless after his expulsion from Canton, his followers still stood staunch. Some would answer all criticisms with the plea, "He has not grown rich. He is still a poor man," ... Few people doubted that he maintained his personal integrity. His published will declaring that he has no wealth to leave and that his house, clothes and books are to go to his wife, while his children are old enough to fend for themselves, seems convincing.

In a leading article the same paper observes that "few people will withhold admiration from a man of such concentration of purpose and such self-devotion." An article in Asia enables us to form an estimate of his personality

Sun Yat-sen and His Wife

A guard of two officials and twelve soldiers, the story goes, once surprized Sun Yat see in the Canton room where he was secretly his z, with a price on his head. They could kid fem and claim as large a reward for nim dead as abve-altho the Chinese Government was said to be anxious to get him alive, so that he could be fortured, in accordance with the customs of the times, before being executed. Sun, reports In Canthe, one of his biographers, "took up a volume of the classics dealing with the ethics of thovernment, and began to

read aloud. His captors listened and then asked questions. Discussion began, and Sun reasoned with them. After two hours the officials and their guard departed. They had been convinced." China might never have been a republic if they had not been convinced, for they held in their hands that day the life of the future creator of the new China

His best achievements, his highest aspirations, have frequently resulted in benefits for others, in trouble for himself. More than to any other Chinese, credit goes to him for the formation of the Republic called "one of Asia's three great moderns," head of the anti-foreign movement in China, as Gandhi is in India and Mustafa Kemal in Turkey, he brought Western civilization to China, but he opposed the domination of the agents of that civilization, "foreigners" all, and foreign influences helped to take

away his power.
Sun Yat Sen no less than the other two is entitled to his place in the triumvirate that may truly be said to have fired with new spirit, the aged

soul of the East. Indeed, he was the first of the three, and made the task of the other two easier. Dr. Sun Yat Sen became a factor in history, we are reminded, while still performing major operations in Macao. There he became affiliated with a group of young men discontented with the inefficient, corrupt and yet autocratic rule of the Manchus, the alien conquerors of China. These young men were pledged to work for reform, not revolution, but reform in the spirit of the times. He organized a branch of what could already be

He organized a branch of what could already be called the "Young China" party and entered on the career he has never abandoned

The work of the mission he had chosen is best illustrated by the fact that of the eighteen men originally banded together in Canton, Dr. Sun Yat Sen alone survived the first few years. The others Sen alone survived the first few years. The others were all discovered, caught and put to death. Such were the penalties of Progressivic in China then. No compromise was possible. Those who began with petitions and hoped for reform took to direct action and aimed at revolution. They had no

China's ignominious defeat by Japan in 1894-1895, a defeat caused largely by corruption in the imperial entourage, fanned popular resentment against the dynasty, and the time was thought propitious to strike a blow. A coup was planned. Canton, the richest provincial capital in the South, was to be seized and declared independent. Arms and munitions were stored; men loyal to the cause were organized; an hour was set for the attack, At the last minute, when rebel bands were started on the march, the details of the plot were revealed to the provincial officials by a traitor, who turned over to them papers incriminating the leaders. over to them papers incriminating the leaders. Such of the latter as could not make their escape were caught, tortured with exquisite cruelty, and beheaded.

Among the few who evaded capture was Sun Anong the lew who evaled capture was our Yat Sen. In disguise he got over the city wall at night under the noses of the soldiers, who were searching for him. Hiding in native huts, canalbants and the fields on the canal-banks, he made his way to Macao. Next he went to Hengkong, to Japan, to Honolulu, to America, and later to England. Thus began fifteen years of high adventure, thrills and romance unparalleled outside vellow. thrills and romance unparalleled outside yellow-back fiction. Back and forth across the earth he iourneyed, appearing in now this and now that

Chinese settlement. He was the living link chinese settlement. He was the living link to bound Cantonese emigrants in all quarters of globe—bound them to one another and to to native land. He united them into a world-we band of revolutionaries, whose part was to supfunds and maintain lines of communication with the settlement. others kindled enthusiasm and recruited man-po-

others kindled enthusiasm and recruited man-po-for the final struggle within China.

"With a price on his head amounting sometic to hundreds of thousands, hunted as an arch-cri nal and dogged by spies", relates Mr. Peffer, a would turn up in China suddenly, garbed as co-fishermen or travelling reddler, and go from to fisherman or travelling peddler, and go from to to town, preaching revolution, organizing, rais-funds. In the dead of night in some abandon

temple-

A group of men would steal in singly, com in response to a summons spread no one knew h Then the one time doctor would appear, talk the or four hours in semi-darkness and disappe while his audience scattered in tense siler Death by the most fiendish of tortures would here. been the portion of each of them, had they be discovered. Over Sun Yat Sen it hovered alwall but closing upon him again and again.

It was in 1896, after his first flight from Cant

that he was kidnapped in London Spies hav notified the Chinese Legation in London that had come there from the United States, Chinese were sent out to inveigle him into Legation. They did so, and he was immediat put under lock and key. His arrest was kept set He was allowed to see no one. It was intended anywered him on board as attention for the Chinese was allowed to see the contract of smuggle him on board a steamer sailing for Chi and there deliver him to the authorities for puniment. Of this Sun was himself apprized by a of those who had trapt him. With doom hand over him, he tried desperately to get word to friends. He entrusted notes to servants, who prom ly turned them over to his captors. He this notes, weighted with two-shilling coins, out of barred window in his room. They fell into courtyard. Finally he persuaded a man-servant take a message to Dr. James Cantlie, his for teacher in Hongkong, and his intimate friend Cantlie set to work feverishly, knowing that min counted: for the ship on which Sun was to be was in port, loading. He went to Scotland Yard the newspapers, to the Foreign Office. The st was so bizarre that it did not gain credence investigations were made. The officials of the later detailed in the standard of the later details of the later details of the later details. tion denied all knowledge of Sun's wherealo When denial was no longer possible, they me tained that Sun had come to the Legation voltarily and that since it was "Chinese soil" and was a refugee from justice, in China, they ha right to make him prisoner. The Foreign the was stern in its demands, however, and London press took up the issue, Dr. Sun released after twelve days' confinement.

There are numerous stories of similar call in the years when he was being hunted. At time a man came aboard a small boat in which was hiding, and informed him that he had hoffered \$5,000 reward for him. Sun reasoned his captor, and the man, after listening a while on his knees, so it is said, and implored standard on his knees, so it is s pardon. On yet another occasion, on the island Hainan, also off the southern coast the milit authorities became suspicious that Sun was his in a certain compound. They posted a guard alit, and for six months Sun did not stir. Then

NOTES 605

e challenged fate, walked out in disguise, went ard a small boat and got away.

Last Big War and European Prestige

We read in the Japan Weekly Chronicle: propeans in Asia have long enjoyed a standing hwas taken for granted. Perhaps it was less agly accorded in China than in any other counceause the Chinese had always a good deal ntempt for everything foreign. However, it been enforced, and was becoming a habit. But of the results of the war is the complete discreme of any idea among the Chinese that the arance of any idea among the Chinese that the pean has any sort of superiority. There can be pean has any surt of superiority. There can be out that this is chiefly owing to the behaviour iropeans themselves, and the exhibition that have given to the Chinese of the fact that, gh desiring respect, they are quite willing that w Europeans whom they do not like should be ed with contempt and contumely. Africa has jed the same lesson. Where at one time a susplay of force was sufficient, the spirit of age demands aeroplanes and live bombs. These at measures, when adopted, not only arrive aere, but bring peaceful intercourse to an end which it has no resurrection. Moreover the violence of the measures precludes their emnent except where the operations can be conducted nd the reach of criticism. The disappearance ny happy mean between bombs and impotence make the maintenance of a privileged position oreigder. In China a very difficult matter Superly things are much they were, but beneath the we the changes have been profound. The Great was lost in Asia by all the belligerents, and here more completely than in China.

"Love Thy Neighbour as Thyself"

In the course of his presidential address the Surma Valley Students' Conference. C F Andrews said .-

then I was quite young, I was told by my ser the Golden Rule of life to 'love my God all my heart and soul and to love my neighbour as myself' She used to impress upon me this was the whole duty of man and that all years of my own life would not be too long to to fulfil it. When I grew older, I used to le over the last part of the Golden Rule, and I never fully understood it until I came out to a For I used to ask myself: "How can one another person only just in the same way that loves one's own self?" I used to take the see as myself to mean te love other people like olf, and taking the world in that sense. I could teel that this was quite strong enough. For incre, my own mother loved me evidently more she loved herself. Was that extravagant love y mother for me, her child, wrong? Was it a chof the Golden Rule? Ought she to draw to somewhere in the extravagance of her love? ehow, this idea of limited love used to vex and I had an unquiet feeling about this quantity estand-point of love. But when I came out adia the truth was suddenly revealed to me

through the l'panishads, that I did not know truly the meaning of the original passage in my own scriptures. The true meaning was this That I should love my neighbour as myself, because he truly was myself. There was, therefore, no mere limited measure of love, no mere likeness between him and me. but identity.

I heard only recently a very beautiful story about the saint Ramkrishna Paramahansa, how when he had realised this supreme truth of the Advaitam, and wished to carry it out in action he used to go out at night-time and do the sweepers' work in the neighbouring places, removing the very filth-iest things and the most repulsive, in order that he might truly identify himself with the sweeper and not merely talk about unity.

Stoning to Death for Apostasy or Heresy

Khwaja Kamal-ud-din has written to the Moslem Outlook to say,

(1) That the Quran prescribes no punishment

for apostasy.
(2) That "stoning to death" is not among the

provisions of the Quran.

provisions of the Quran.

(3) That though many cases of apostasy did occur in the days of the Holy Prophet, yet no one was punished solely for it

The Quran admittedly allows freedom of conscience. It respects personal judgment in religion.

"No compulsion in religion" is the golden rule promulgated exclusively by the Quran. Apostasy after all is a change of opinion in religion. If it is punished, it is compulsion in religion, and, therefore contrary to the Curan. contrary to the Quran.

We hope the Khwaja is right in his summing up of the attitude of the Quran towards apostasy and in the matter of freedom of conscience. But even if any scripture enjoined the storing to death of hereties or apostates, such an injunction would deserve only to be rejected.

We do not think that it is the Quran alone which teaches "no compulsion in religion `

Unopposed Election of Mitra and Roy

It is the Government which prevented Babus Satyendrachandra Mitia, M L. C., and Anil Baran Ray, M L C, from attending the meetings of the Bengal Legislative Council by depriving them of their liberty without any trial And yet it is the same Government which declared their seats vacant because of their absence from duty for more than two months. This declaration was made, too, months after the period of two months had elapsed.

Nothing is known to the public as to the offence committed by these two gentlemen, who represented \oakhalı and Bankura in

the Bengal Legislative Council. As they have not been brought to trial, the public would be justified in considering them quite innocent of any offence even against any bureaucracy-made law. The public would be justified also in holding that they were deprived of their liberties and then unseated because they had proved obnoxious to the Government. It is a curious sort of progressive responsible government which allows the executive to remove by such tricks legislators who are not in their good graces.

As these gentlemen had been removed from their office of membership quite arbitrarily and deliberately, the electors of Noakhali and Bankura owed it to themselves to return them again unopposed. This we

are glad they have done

If the Government persists in not setting them free, and again declares their seats vacant two months hence, it is to be hoped Bankura and Noakhali will return them again unopposed. And so on and so forth to the end of the chapter.

Modernism

Living Religions. A Plea for the Larger Modernism, by Victor Branford, published by Williams and Norgate, makes stimulating reading. We are told in the preface -

Modernism has to be conceived not merely, nor even mainly, as a movement of critical scholarreadaptation between old and new. Viewed in this wider way Modernism is by no means confined to the Catholic religion. Kindred endeavours toward readjustment have long been stirring in Hebraism, Hinduism, Mohammedanism, and other yenerable religions. All these movements are infined by a common nursuse. It is to renew in tused by a common purpose. It is to renew, in the light of current knowledge, yet also of con-temporary aspiration, the eternal verities enshrined in ancient faiths. So viewed, Modernism in religion comes into relation with Modernism in science. The latter is concerned with endeavours, science. The latter is concerned with endeavours, now widely beginning, towards putting our whole body of verified knowledge to better use and finer purpose than hitherto. The aim is no less than to unify, spiritualise, and thus consecrate, our sciences at present too isolated, and often profuned by their outcome in practice. These two movements which seek, one of them to modernise the religious, and the other to consecrate the sciences by integrated the other to consecrate the sciences. and the other to consecrate the sciences by integrating them in the service of life, will be the more fruitful the closer their union. That idea informs this volume in plan and detail."

"A General View of Hinduism"

In the general view of Hinduism which Mr. Branford gives in his book, he tells the reader :--

"As befits the mother-religion of the (in East, and therefore giver of Faiths to more than third of mankind, Hinduism is compact of heave third of mankind, Hinduism is compact of heave qualities; Yet it also shows corresponding determines; The noble and the rude, wisdom and folly. The noble and the rude, wisdom and folly, magnanimous and the trivial—all seem to immingle in its writings, teachings, practices. It exhits too, with exceptional clearness, the phases rise and decline, of reascent, yet fall, of renew also, which each religion of aspiration to Universality is seemingly fated to undergo in the pass of time. The pageant of Hindu Religion shows royal line of initiators, continuators, re-initials moving in stately procession through acome moving in stately procession through acons fluctuating development. It shows an incompable array of bardic sages, with life-giving characteristic matter as a sage of the sages and sages as a sage of the sage superstitions and touches of dark magic. They followed by the measured tramp of an intermable priesthood, rich in melting litany and cano and prestited, her in thering many and canoling ritual, yet also fertile in formularies of the tion that cage, and even wither the soul. There saints, sages, pilgrims, missionaries, in count thousands. Prophets and epic poets file past is see the pomp and pride of sacerdotal jurists maculate in aim, turbid in effect. In the wake this priestly company of law-givers go bands scholars and grammarians, often profound see ingly always erudite, yet wooden!" [The italies are ours.] surely someth

As the author is not a carping critic Hinduism, but is rather an appreciat the defects referred to by him should recei the attention of us Hindus. For it is alwa good for individuals as well as communit to pay greater attention to the faults point out by friends than to their wordpraise.

"A Synthetic University."

Of Rabindranath Tagore's University Santiniketan, Mr. Branford speaks thus

"Between these extremes of Brahminist a Buddhist orthodoxy the North and South Po of the Hindu mind come modernising movemer of which Rabindranath Tagore's new Universat Santiniketan in Bengal may be taken accutting edge. It is perhaps to be viewed as foremost development of an order endeavous once religious and educational, which, a general or two ago, obtained wide vogue under the floof Brahmo-Samaj. But new qualities and at of a very distinct kind distinguish Tagore is dation. Thoroughly Indian, in spirit and tradit it is yet world-wide in outlook; and with neglect of specialisms, its face is resolutely towards synthesis."

Coming to details, the author write-

"Attached to this University are various callary institutions, amongst which a School of Ar College of Rural Reconstruction, and a Reschool, exhibit notable instances of initiative impression of the School, picture the boys at the first exercise, repeated twice in the course of day. You see them in the early morning sum

park and playground, robed in white linen, ig Buddha-fashion, silent and absorbed, each is his own tree. So they remain, in unbroken lation, for some twenty minutes. It is a point mour not to let their thoughts wander to al, base, or selfish, topics. Some may find the lha's "noble path" to inner peace, serene yet ant. Others may fail Yet all doubtless are better for this systematic exercise in spiritual name The complementary exercises, of externlaptation to nature's modes, are also practised. In "Tagore's School."

Communist Propaganda in India

Router has cabled to India a piece of showing that the communists in Russia nd to help Indian revolutionaries in ous ways to establish a republic in India. munistic propaganda in India cannot do good But this item of news has lessons for the people of India and the British ernment The British Government ought 1810 concluded the understanding with 1st Russia negotiating for which had been ned on by Mr. Ramsav Macdonald's ernment, Bolshevic propaganda in India ld thereby have been stopped, at least imised. But now affairs have come to h a pass that Anglo-Indian (old style) itarists will take advantage of the Bolshevic ey to increase wasteful military expendian the North-west frontier, as their preessors did by taking advantage of the ey of Czarist Russia. The greater the itary expenditure the less would be the is available for economic, sanitary and cational progress. Thus will the cause of people suffer, there will be growing distent and the Government will be unpopular. shevic agents will not then be wanting to in the resulting troubled waters.

The "upper" classes of Hindu society ought ago to have done justice to and fraterd with the masses, including the soed depressed and untouchable classes. It is be regretted that they have not done so be classes have now become self-conscious. Solshevic propaganda reaches them, and is be any social or political revolution, or it, the fate of the Indian "upper" classes not be dissimilar to that of the Russian regeoisie and aristocracy after the revolution. It would be wise for us therefore to our house in order betimes. There is time, but soon it may be too late.

Self-Government and a Stable Empire

Mr Harold Spender, of Westminster Gazette fame, writes thus in The Contemporary Review:—

After all, it is nothing else, this extending grant of freedom to our children across the seas, but the repetition, on a larker scale, of the process which has made the efficient of these British islands a loval and obedient people. Is it not the same virtue which does everything for us here in England? If we keep that beacon light shining clearly in view, we cannot go very far astray. Each extension of the franchise in Great Britain has been heralded with prophecies of woe. Each grant of British Self-Government was going to be the end of all things. On the contrary, with each enlargement of these powers, England has grown more steady, prudent and conservative. Even from Ireland the rumour now comes that the heroic grant of complete Self-Rule, made in 1923, has already miraculously changed the temper of Irish feeling towards. England. If Ireland, then what of the other Dominions?

What of India, which is not a Dominion? We are not Britain's "children across the seas", nor want to be. And it has been said in the bible that the children's bread ought not to be given to the dogs.

Lord Olivier on the Anglo-Indian Community.

Lord Olivier has contributed to The Contemporary Review an article on the Memorandum which the Anglo-Indian (new style) community prepared for members of Parliament. The Anglo-Indians claim therein to be treated with special favour on the ground that "The British Nation has called them into being." If Britishers consider this claim valid, they ought to show the Anglo-Indians the special favour asked for, at their own expense,—not at ours That is what Lord Olivier also says in his article

Surely, if "the British Nation" is responsible for these people, and they require special emoluments and privileges, it should discharge that responsibility itself, and not rivet it as a special relief charge upon the Indian community

For this just observation, Lord Ohvier has come in for a bitter attack at the hands of the Chowringhee Statesman

Afghan Amir Declines Allowance from State Funds

Simla. Apr. 20—It appears from lithiad I-Mushruls that funds in Afghanistan are ample, and that the Amir's Council of State signifying approval of the new Budget, pointed out to the Amir that no provision had been made for the personal allowance of the Amir and the Royal Family, and requested the Amir to sanction some suitable allotment for his personal household use.

His Majesty, however, while thanking the Senate for the kindly thought, pointed out that his private income from his estates was ample for the simple life he leads, and refused to draw upon national funds.—(Special cable to Ceylon Daily News)

Good But please do not stone people to death for their religious opinions

The Turks and the Kurds

Poles, Germans, Russians, Austrians, etc., are all Christians. But as they are distinct nationalities, it has been always held by lovers of liberty that the partition and subjection of Poland was wrong and its emancipation during the late war was right Similarly the freeing of Ireland from British dominance must be welcome to freedomloving persons.

Following the same line of thought, we think that Arabs should not be under Turkish rule, nor should the Kurds be enslaved by the Turks, though all these peoples are

Musalmans.

It is, therefore, greatly to be regretted that, though the Turks have won freedom for themselves, they would not allow the Kurds to be free. They have crushed their "rebellion", which was really a war of independence, and are going to hang their leader, Sheikh Said.

Whatever their religion, the powerful think that freedom is meant for themselves alone, and that what is sauce for the gander

is not sauce for the goose.

.

"The Review of Reviews" on Lord Curzon

In writing a note on the late Lord Curzon, the London Review of Reviews does not make even a passing reference to his works in India. This is a characteristically British imperialist achievement-to ignore the country but for whose possession Britain would not be what she is.

Resolutions of the Hindu Mahasabha

At its Calcutta sittings,

adopted resolution The Hindu Mahasabha urging the checking of the conversion of lind to other faiths by means of religious propagament the formation of Sangathans and the amelioration

the formation of Sangathans and the amelioration of the Condition of the Untouchables, The Mahasabha favoured the admission of boys of Untouchables in all public institutions.

The Mahasabha viewed with regret the convision of lakhs of Hindus, particularly in Beng Bihar, Assam, Guzerat and the Frontier Proving to other faiths and in order to counter this to Sabha suggested the formation of a Hindu Piole tion Longing.

tion League
The Mahasabha condemned communal rep sentation and believed in the establishment peace and tranquility and Swara, Comm nationality was of vital importance. It pointed a that communal representation in the past h proved dangerous to the nation. The Mahasah was not opposed to any agreement reached with the other religionists in order to work harm mously for the attainment of the political goal. Further resolutions adopted by the Him Mahasabha included an appeal to the ham Sabhas for the establishment of orphanages at the control of the control of orphanages at the control of orphanages

asylum- for unprotected orphans, widows at urging the Government for the release of person convicted in connection with the Katarpin Riv as was done in the case of those convicted Malabar

The Mahasabha concluded its session all adopting a resolution for raising five lakker tupees, out of which one lakk would be divote Sangathans and four lakks for the uplift of the depressed classes and for the relief of him Hindus

Pandit Madan Mohan Malaviva referred to the pittable condition of the Kohat sufferers.

Promises of nearly Rs. 1,75,000 were made?

the spot and a large sum was collected. Mr Just Kishore Birla promised a donation of Rs 10,00 Mr. T. C. Goswami, M. L. A. Rs. 5,000, and Pand Ramkumar Jha, Rs. 10,000

Resolutions were also passed urging the pahibition of cow slaughter and the circulation of the

Gita" throughout the country.

The present book gives an account of the formation of the East India Company, its territorial expansion in India, the system of Double Government under the Company, the Bureaucratic Government, and finally Responsible Government. It deals exhaustively with the Reforms of 1919. It also contains adequate treatment of subjects like Indian Defence, Finance. Education, Fiscal Policy, Local Self-Government, Land Revenue Policy. The book also contains in an abridged form the consolidated Government of India Act of 1919.

PRICE Rs. 4-0-0. Pages xxviii+457+80. Copies can be had of the author, Willingdon College, Sangli.

EXTRACTS from Opinions and Reviews on Prof. Sapre's "Growth of Indian Constitution and Administration"

which seems to be a realty "Your book meritorious production.

Dr. D. R. BHANDARKAR, M.A., D.LITT, President, board of Studies in History University of Calcutta.

"It seems highly useful, and likely to be of great utility as a work of reference.

DR. PROF. RUSHBROOK WILLIAMS, M.A.,

Director of Public Information,

(iovernment of India, Simila.)

I have read the book with great interest and I congratulated you on the way in which the subject has been treated.

DR. SIR CHIMANLAL A. SETALVAD, KT., Vice-Chancellor of the University of Bombay

"Mr. Sapre is a master of this intricate subject and of the English language. He writes with a clarity and conciseness that are worthy of high praise."

-The New Statesman, London Oct. 11, 1924. "Mr. Sapre has unfolded the story of constitutional

evolution in a book which is evidently intended as a text-book for history students and he has done so on the whole sympathetically".

-Times Literary Supplement, London, 18-9-1924

BY SITA CHATTERJEE

THE

KNIGHT ERRANT

"A story of Bengali life, old and new, in town and country
... 16 well told in simple and excellent English."

"...... The plot is simple but grand The authoress has painted very artistically the home-life of an enlightened Bengali family preturesque The English style is delightful and grave, a calm easy flow, and can compare alone with the authoress' own mimitable vernacular style. The English-reading public will have another opportunity of having another glimpse of another aspect of Bengali life—modern Bengali life. The Knight Errant will rank with her finest trophics. We wish her still greater success."

—THE RANGOON MAIL.

THE CAGE OF GOLD

"The Cage of Gold Out of its Calcutta cage this pleasant love tale by a Hindu Lady comes fluttering to our window-sill. A touch of Western style lightly marks the story which yet is Indian in atmosphere and heart and is superior to a good many European novels."

WONDERFUL REMEDIES OF EVIL INFLUENCE OF

ii you be not benefited by the Kavacha, money will be retunded. We send a letter of quarantee with each Mavacha.

Nabagraha Kavacha—Its wearer is sure never to lose any lawsuit and will easily secure good jobs and promotions. He will not die heirless. Price Rs 4-4.

Arice Rs 4-4.

Sani Kavacha—It will save you from adversity and misfortunes, and while lengthening your life, will increase your wealth, fame, peace of mind and success in undertakings. Price Rs 3-6.

Shyama Kavacha—It is many in one While making you free from debts it will give you plenty a harmy band of revense children.

of wealth with a happy band of joyous children at the same time, make you proof against all attacks by enemies Moreover, as the goddess Shyama is the spiritual-guide of saturn, it is sure to make its wearer free from the wrath of Saturn and avert its suit influence. Prince Be 0.111

evil influence. Price Rs 9-10,

Ohanada Kavacha—Its wearer carns immense wealth with little struggling. Whenever a wearer thinks of something he gets the result without delay. The goddess Lakshmi always resides at his house and gives him son, wealth, long life and

fame In conclusion, it will give even a beggar the wealth of a king. Price Rs. 7-10

Shatrubashi Bagalamukhi Kavacha—It will help. you to overcome your enemies and to take revenge on them. Moreover the wearer gets his desired object and a Bhakta or Sadhak is released from the court when he is prosecuted as an accused or is a planning through some accident. Price Rs 9-2

Akshoy Kavacha--It is unparalleled in the world, (It is beyond the power of the gods even to sing of its utmost excellence. By wearing it a man can conquer the three worlds. The unfunited power of this Kavacha, scarcely attainable by the gods even is described in the Mahabharata.) By wearing this Kavacha Mahabharata one gained the reputation of barrier processed of all the the reputation of having possessed of all the resources of the world. India the king of the gods had to come down to earth from heaven, and beg of Karna for this Akshov Kavacha in his hand (in order to save the life of his own son Arjuna) Any person wearing it has not to suffer from any kind of want. On the other hand being free from disease and en my, he can be possessed of intherise resources and attain a long life. Rs. 29-10.

Surjya Kavacha—Its wearer is sure to shirte off the most obstinate of diseases. Price Rs. 5-3.

Mahamriyunjoy Kavacha—It will ward off all serious diseases and wardants that night otherwise.

serious disasters and accidents that might otherwise

Kavacha comes out winner in disputes and lange And even a fool becomes learned as an effect

Mahakala Kavacha—By wearing this even men who are hopelessly barren will get child and those whose children never live will be most of children who will live long. One wearing this kavacha Price Rs. 11-9.

and enable them to bear healthy and long-in children. It is sure to save you from the milue of bad spirits. Price Rs. 7-5.

santi and Raksha Kavacha—By wearing above-mentioned Kavacha, all kinds of for disease such as Leucorrheta, Hysteria, Battenna birth of dead child etc can be cured \(\frac{1}{2}\) birth of dead child etc can be cured \(\frac{1}{2}\) minfants and the women giving birth to child can be got ind of the influence of five gluo wizards and giants upon them. The woman hing this Kavacha in her body when she is in family way, has no apprehension of the death child in ner womb or pain at the time of deligible to the latter of this kavacha, the child becomes healt stout, lovely and bossessed of long life in By virtue of this kayacha, the enilg becomes main stout, lovely and possessed of long life in case of a woman whose child does not live highther mother and the child should went kayacha. There is no apprehension of evil it could had woman with her husband living worths beneficial kayacha. Price Rs. 29-7 as only

Graha Santi Kavacha - Persons upon whom planets cast their evil eve suffer in multilar ways. They have to suffer from want of food i clothing, financial culturassment, physical di-mental agony, downtall or failure in works hi death, useless quartel, loss of stored-up was being deprived of the money expected to possession, being involved in debts and the life

On the contrary if the evil influence of pla can be got rid of one being free from all ke of sorrows due to prequiary physical of the circumstances can attain happiness, comfort i One wearing our Grahasanti Kayacha is attain the desired object being free from the influence of planets. Because the planetic series are the fountain of a man's happiness, and soft. Those who being much devoted to the wear Grahasanti Kavacha will, through their less end in prematine death. Price Rs. 8-2.

Nrisingha Kavacha—It will cure Leucorrhoa.

Barrenness Hysteria and other diseases in women of getting the feet of Vishnu. Price Rs. 32-9 a...

Besides the above we prepare many other Kavachas which are not mentioned here to a space and a detailed description of which may be had on enquiry.

Our Kabachas have been circulated through all the lands from Hongkong on the lands are the same been circulated through all the lands from Hongkong on the lands are the same been circulated through all the lands from Hongkong on the lands are th Pacific ocean to Baghdad situated almost in the westernmost country of Asia, a crossing the boundary of Asia they have run to the different provinces of the citinent; of Airlea, Australia, Europe and America. We have always been received numerous unsolicited testimonials regarding the citicacy of our kabachas as as our astrological calculations, from those quarters, which are not published by for want of Space. A copy of them may be sent, it asked for with one anna star for some of them yide the May Issue of Modern Review, 1925.

The biggest Astrological Society in India with magnificent library, containing Astrobast and Astronomical works. For Hofoscope, Thikup, and foretelling of all

1895-1924

We have been making Half-tone blocks since 1895 by our own original methods and scientific processes. Colour-work and Art-Printing are also our specialities.

An experience of more than a quarter of century, backed up by constant attention to accurate workmanship has enabled us to maintain our reputation for standard of quality and given us the unique position which we hold to-day in the Photo-engraving and Printing world.

Jotly-Your valuable work. The understanding of the S greatly furthered by your remarks I think

Dr Charpenter -You are on the whole quite right Only I feel quite sure you will always have to meet a sturdy opposition from scholars to whom the letter is every thing and the spirit nothing

In Sten Konon Shown excellent teason to disagreeing from the lamented Pischel- my own Guru on many points Di G. Mingensheria -Treated a very fascinating question in a happy was. Dr Lannan-Helps as to a clear under-

standing of the problems and shows the way to a reasonably good text

Vedu Magarine and Gurukula Samuchar June 1922 A distinct service to the cause of higher literary entreism. Displays complete mastery of the subject

Rise of the Christian Power in Indi

Major B. D. Basu, I.M.S. (Retd.) In five Volumes.

R. Chatterjee, CALCUTTA.

What Does the PREMIER LIBERAL MONTHLY Say?

The author's surprising industry and research have enabled him to out-rival professional study of history in the amount of his out-put and in the thoroughness with which the historical material been gathered and sitted. He has given us a connected and continuous narrative of the use of British power in our country, the central theme serving as the backbone of the whole work the exposition of the real nature of the methods and working by which British supremier has to be built up. He is full of quotations from original sources, like the State-papers of Government the Despatches of the Compuny and the letters and records of the English officials themselves. If Basil tries to show up the real callousness that marked the conduct of the greater number of Empire-builders (so-called,) of British India then land-hunger, and then Machavellian policy——the Indian Police.

What Does that Great Friend of India, Dr. J. T SUNDERLAND, San?

'I received the five volumes of Major Basu's scholarly, and valuable history. I prize it very and an making use of it. It seems to me, by far the most important history of British Rule, i.b. that we have

WHOLE NO.

GETTING AND NOT-GETTING

(Translated by the Author from paragraphs written by him while on his voyage to the West)

BY RABINDRANATH TAGORE

HE practical man takes to proces the hundred-petalled lotus, and as he priesup its fragments, one by one, he says have it. The sceptic pulls out the petals, is them up, lets them wither, and says have it not. The simple man of wisdom tes on the blossom, wonder-stricken. The aming of his wonder is, that he is at the ne time conscious both of having and not ring. The lover says in the poem of lyapati. For innumerable ages I have held you my arms, yet my heart remains unappeased at is to say, he has crowded into a moment of getting, and yet the age-long notting clings to him still. The relativity of the has always been asserted in the language feeling, it has only to-day been at last moviedged in the diction of science.

I remember how, when I was a boy, the rid would be born afresh for me, every roug, from the womb of the darkness of night. The familiarity which breeds ifference, if not contempt, because it gives to a delusion that we know, was not se enough at that time to be able to hide in me the fact that the knowledge of a horney illumines the surface of a tery. In those days of my childhood I had set out on life's journey, and my quest not of any goal at its end. At every I looked for some fulfilment of my travel, felt that something might suddenly be alled out of the obsqure, a communication of an eternal secret by the read itself.

I had heaped up some garden mould in the corner of our verandah, and planted in it a custard apple seed. I waited for the miracle of the sprouting of a plant out of a seed—an evident fact and vet an inexplicable truth. At that time I had the wisdom to be able to wonder at the commonplace world, somehow knowing that it was a pilgrimage-place of truth where known and unknown meet in a perpetual confluence.

He who looks towards Truth and says I know loses it as much as he who says I know not, thus taught our Rishis He who avers that he knows, foolishly lets slip the treasure, as he greedily knots fast the wrap, and he who avows that he does not, loses the wrap as well. That is what I understand the Ishopanishad to mean. When knowing and not-knowing come before us tied together in hallowed union, then does the mind feel that reality has been reached, completed by its surrounding atmosphere of the infinite. There is no losing so absolute as his who is certain of fully having

That is how England has come to lose india more hopelessly than any other Western nation. The mystery of truth in the heart of India has eluded the Englishman. For India has no feeling of wonder, his indifference is expressed in his caunty of possession. Triumphantly he fancies that India has totally been comprehended in the thing which he has made fast in the tightened grip of an organised force. Owing to gross feeling of

. we will a subsequent to the subsequence of

77-1

satisty India occupies less space in his thoughts and studies than in those of some

other great countries of Europe.

The only reason for this is, that for England her need of India is overwhelmingly The satisfaction of need, like predominant the gorging of food, has the one-sided vision of getting, with no immensity of not-getting for its perspective. So it cannot be a true vision; and because it is not true, there is no joy in it, no wonder, no respect Because the relation of need fails to inspire one with a disinterested spirit of sacrifice, Englishmen show such an amazing lack of personal generosity towards India I am not making a complaint of this, but only noting its inevitableness. The India which has been captured by England's greed has been lost by England's soul And so, while out of it the Englishman makes profit and in it feels pride, India remains for him a burden heavy with regret

Therefore is it so difficult for individual Englishmen to make any offering for the sake of giving India help, education and freedom, and so easy for them to flare up in the wrath which calls for dealing punishment to her The British Capitalist whose callous profit, thriving upon the utter ignorance and poverty of the people, does not allow the least fragment out of its multiplying prolific percentage to go out to their help in reducing the ravages of famine, flood and pestilenceit is he, seated on his swelling money-bags, who is the first, when red-eyed authority adopts vengeful measures of repression, to

applaud it as a return to sanity

I do not wish to speak as a partisan. I admit that for all government, law and order is a necessity. Even where relation of affectionate kinship holds undisputed sway, chastisement has its place. When popular excitement is in excess, the ordinary law may perhaps be excused for becoming extra-

ordinarily lawless

But to judge a government truly, the system has to be considered as a whole. And if we find that the interest of law and order is crowding out all other interests, devouring the revenue till very little of it is left for assuaging the thirst that tortures, or preventing the disease that decimates; if we find that the store of generosity is nearly exhausted in the decorations, the comforts, the largesses of these guardians of peace; when, be they on the Civil or the Military

shilden

of the soil are in extremity, the only they get is to be reminded of the m that God helps them who help themsel then does this disproportion, in its enorgive to these favoured watchdogs the arof emissaries of some malignant plane acquisitiveness presiding over India's dep

The palatial edifice in which friends, lations, and helpers are inordinately numbered by guards and warders, is in villanguage called a gaol. We know that pethink it proper to fence round a garden thorns; but why should the gardner far see the point if we lack in enthusiasm a magnificent enclosure which mounts gover a tragic barrenness of flowers fruits? So, if our rulers ask us whether do not want Laic and Order in the land, reply is we do, but we object to Life Mind being bled white for their sake

There is nothing wrong in piling tons one of the scales, weight on that we have a sufficient interest in goods which are being weighed in the of But when we discover that the arrangen is meant not for enhancing the value of country for those who live in it, but ensuring permanent possession for those live away from it, that our portion e sists mostly of a growing load of brickly while a great part of the valuables is reser for the opposite side, we cannot look this beam of the scale set up by an force as anything but a rod of punishment Our complaint is not against the police against the extravagant indulgence wh they emov. We do not object to the being kept up, but to the absence of a cooking pot over it And when the cost the blaze becomes so exorbitant as to be nothing over to fill the pot, then, if in and to our tears which spring from the gnav emptiness within, the question is thund against us, "Are we not then to light your hearth?" We have to falter has Yes, yes, no doubt, but not for our

The evil to which I am referring is which has spread over all the world, or where has the profiteer's bushel hidden light of the truth of the man. Thus politics, which represents the worldines the people, usurped the highest place activities of the West, and it has become asy for man to cheat and be cruel to In other words, man's starved heart is ridden to death by his corpulent racing over a path of profit that is

nus. Never in the history of the l has all-devouring avarice organised a universal orgy for its own repletion. The passions which are the enemies of oul work their purpose by hiding from the wholeness of man. Lust makes us on the flesh to the exclusion of the

Greed draws our attention to possesto the exclusion of the owners. Pride es the self to ignore all others. There no more of these enemies which is negative to aspect. This is feebleness of vision. The mist does not destroy the landscape, wipes out its sky, shutting the Infinite of sight. The delusion born of habit or

of sight. The delusion born of habit or physical possession is a mist of the mind, ich beclouds the faculty of wonder and eens off the ineffable. It smudges the coff truth with the coarse touch of a istantly dusty use, and prevents the mind in entertaining it with due regard, for inder is the respect paid to Truth

Nature keeps life active by contact with er new accidents. Even if any accident ould cause pain, it only provokes a more grous response of vitality. The accidental the messenger of that which is beyond the ounds, it comes with a message from the

unusual and frees our consciousness from the encroachment of inertia

In our country a pilgrimage is one of the most important of religious functions. When the divinity is lost to sight behind the screen of custom it is the screen which appropriates our worship. Those who are utilitarian by temperament have more regard for the material results even in their religion;—it is they who worship the screen to the exclusion of the divinity. In making a pilgrimage the mind thrusts away the screen. Then the limited objects of every-day knowledge appear on their background of the unlimited unknown, the simple finds its place on the bosom of the sublime.

So this time, as I set out on my pilgrimage I again looked about me on both sides of the road It was my hope that the Eternal Stranger who, though before us, cludes our vision in the world of habit, might be revealed to me, somebow, somewhere, bedecked with some garland of unknown flowers, under the light of some unknown star Habit cites "It is naught, it is nowhere" The deep beyond replies "Of course, it is, you do not see, because you think you have seen."

MEMOIRS OF OLD DELHI

By C. F. ANDREWS

CHAPTER VII

Portical In 88

JURING the closing years of his life, Munshi Zaka Ullah became one of the most deeply respected figures in society the city of Delhi. He served faithfully and egularly on many committees and took his lace on every occasion in public when the ading citizens in Delhi were represented. He as deeply honoured and respected by the lindus and Musalmans alike. Any doubt hich had been held by the latter conceining is religious beliefs in earlier days had for the lost part passed away, and he was regarded ith natural pride by Delhi Musalmans as an mament of the faith he professed.

Until the time of his last long, illness, he

could be seen every afternoon in the Public Library in the Queen's Gardens reading the latest books and reviews. It was there, as I have mentioned earlier in this book, that I hist came to know him as a friend, and therefore that reading room will always to me be associated with his memory. He used to occupy a favourite chair near a sunny window during the cold weather, and during the hot weather he would come after sunset and sit on the roof of the Labrary in the coel of the day, and there we would hold our disease

It would have been difficult to find in the North of India a more distinguished intellectual circle than those elderly mens who used to gather round him each evening in the Library. There were members of all creeds

present, and as long as that circle remained intact it was always possible if any religious controversy arose or any outbreak of mob violence was feared, to reach a kindly understanding on points of difference of dispute.

What attracted me, first of all, and drew me into the circle was the extraordinary kindliness and cordiality of Munshi Zaka Ullah He seemed to be able to reveal to himself. me the heart of India and to express the greatness of the traditions of the past in his own person It was not merely an attraction towards the dignity and greatness of Islam that I felt though his presence helped me much in that direction also. But it was rather a respect and reverence for India as a whole,-its majestic history, its poetry and romance, its colour and atmosphere so different from the West The West indeed was appreciated by him, and here was our original point of contact. He, on his side, never despised or underrated the culture and the spirituality of the West, but at the same time he gave me in his own person an understanding, and a true appreciation, of the culture and spirituality of the East.

In Calcutta, and in other Indian cities, 1 bave found the same cultured atmosphere again and again, but I have never felt the old world of India blending with the new so impressively as I have done when talking with my old Musalman friend in Delhi Later on, when the national movement in India, with which I was in whole-hearted sympathy, began to develop in the North, it became my custom to write in English for the different magazines and reviews Munshi Zaka Ullah, as I have related, was an omnivorous reader and on account of our friendship with each other he would make a point of reading any article of mine with special care whenever it appeared. He would wait for me in the Library eager to discuss the subject with me. Usually he was both critical and conservative at the same time, and he would warn me against impetuous haste in reaching conclusions Then he would suggest and sketch out for me new subjects, on which I might possibly write, and give me an outline of the direction he would wish me to

Munshi Zaka Ullah's mind was wonderfully lert right up to the end of his long life. I was continually impressed by the wide range of his information and the breath of his point of view on all religious and social questions which we discussed. Curiously enough

take.

ly indeed; and many of our talks togeth were about my own country and its me recent historical developments. This was pa ly due to the fact, that he had been call upon to write text-books, in Urdu, on Engli and Indian History. The study he had ma of the Nineteenth Century in England h absorbed him. Queen Victoria was his ide monarch, and Mr. Gladstone his model State man. For Mr. Gladstone as a man, he h. an unbounded admiration. On one occasion which I remember very well, he said to me "When you get a deep and sincere religion nature combined with a strong intellect and high sense of moral justice, and the man we possesses these great gifts rises to heem Prime Minister of a country it is the higher gift that God can bestow on any Politics divorced from religion is altogether evil'

He found it very difficult to fathon the ideas underlying Socialism, and he very often asked me questions about it But whenever I tried to explain them he would shake be head and tell me that he could not under stand them at all Every country, he would agree, needed a king or ruler. No countr could rule itself for any length of time merly by a system, however complete that system might be in theory The personal mlet was always the chief need far more than the correct system. When the true personal rule was found and the people were ready to the his personal will, then good government w to be found. Without strong personal m good government was, he thought, impossib Socialism he regarded as oliminating this # found personal element in lite and inculcat a mere system in its place This point view was interesting, but I felt that tun mentally he could not grasp the subsequence his mind was so entirely wrap up with loyalty to a king.

The rise of the Labour Party intereshim most of all during the closing to fine life, and he was never tried speaking about it. He knew that I had very closely attached to the Labour I in England and this added to his inte "You are an extraordinary people", he way to me, "you take those who are in dust and set them among princes. Of the if you can ensure the right people of into power by this method, you will proved the wisdom of your politics. Emperors used to do much the same in the past, when they chose their Viziers from the lowest ranks of sociel

en from among slaves. But then they nld depose them at a single word il you do when the Labour Party comes o power and oppresses those who are ble by intellect and birth? You cannot en depose them at a glance as our nperors could, and they may do infinite schief."

I used to explain to him, as far as I ald, that nowadays, since education was mpulsory and universal, times were changed. was very often found by experience that nch of the most bulliant intellect and such of the truest nobility of birth came om the bottom ranks of society out of ames that would never have had a chance rising in the olden days. I also tried to rove to him the strong moral trend which e Labour Party had already given to politics e listened to all that I had to say, but he ad grave fears about the future What ruck me so much was this, that he felt for ie destiny of my country as if it had been

In Indian political affairs, he was strongly ad instinctively conservative Indeed, conarratism was his inheritance, while his inellect made him progressive. Not only was is own nature drawing him to a conserative attitude, but his own tragic experience I the Mutiny drew him also in the same frection He had seen with his own over hat most terrible upheaval of the Nineteenth entury. He had witnessed the wild passions at loose on either side, and therefore his aind was steadily et against change when endangered the public peace.

The national movement interested him ery deeply indeed; for he was a true lover f his country. But he drew back in horior hen he saw anything approaching to viomee; and he spoke with anguish concerning priam acts of assassination "Can hople, he cried, believe in God" Have

ley forgotten God?"

It was to education, first and last, that he oked for all political and social advance a this theme he never grew tired It was ways uppermost in his mind The backardness in education of his own Muhamadan community was a great distress to m. "Without true learning," he would say me, "there can be no foundation You ay build and build, but your building will tumble into ruins. Some new superstition ll arise; some new popular clameur will ring up, and then all the edifice which you ve been slowly building will come toppling

down to the ground" Once he said to me suddenly and very earnestly "Remember in my young days, I had to pass through the Would the Mutiny ever have taken place at all, if there had been universal edu-. cation? What was it that the mutineers fed themselves with and fed the common people with also, - both Hindu and Musalman alike' Superstition' Blind superstition' A little knowledge might have dispelled it. but the knowledge was not there I do not think that a single one of the students of the old Dellii College was found, who sided with the mutineers. They realised the madness of it all, and the misery in which everyone would be involved

Munshi Zaka Ullah v opinions on one point were very strong indeed. He objected strongly to Musalmans, whose forefathers had been in India for many generations regarding themselves as foreigners or making a separation between their own interests as Musalmans and the interests of India itself "India", he said to me with impassioned accents, that I can still recall,-India is our own mother country, the country which gave us buth We have made our homes here, married here, begotten children here, and on this soil of India, we have buried our sacred dead India, therefore, must needs be dearer to us than any other country upon earth. We should love the very soil which is mingled with the dust of our ancestors. For a thousand vears, our own religion of Islam has been intimately bound up with India and in India Islam has won some of the greatest triumphs of its own We should peculiar form of civilisation love its history and government, which have been shaped by Akhar the Great, and his successor- I cannot bear to hear Indian Musalmans speaking without reverence and affection for India, the land of their birth ' It is a new fashion now springing up, which did not exist in my younger days. The fashion is a bad one and should not be encouraged Musalman By all means, let us love our brethien in other countries and feel their joys and sorrows, but let us love with all om hearts our own country and have nothing to do with the encouragement of those who tell us that we, Musalmans, must always be looking outside India for our plagious shopes and ideals and their fulfilment

There Rere few subjects on which Munshi Zaka Ullah in his old age bezame more , eloquent than this and he never wavered? for a moment on this point throughout the

1000

1

whole of his long life. His heart was bound up with India, and it was India's history which he studied with the devotion of a His nature was rooted like a tree in Indian soil, and no storm or tempest from outside could shake it.

His son, Enayat Ullah, told me once that he had gone to his father and had asked his permission to study the history of Spain in order to learn about the greatness of Islamic rule in that country. His father had replied to him: "Why should you begin to study the history of Spain, before you have mastered the history of your own country? Is not the Islamic civilisation in India great enough for you to study?

as there ever, in the history of the world. greater Mahamadan Empire than that of e great Moghuls? Study that first and um to love your country truly and thoughtlly. Only then will you be able to appreciate

wie greatness of others."

Indian history, Indian poetry, Indian art, Indian music, were all precious in his eyes and he made no line of distinction between what was Hindu in it and what came from Islam. He was proud of every part of it and cherished as his own.

I come now to the point where my own views tended to diverge from his own I will state it as simply as I possibly can. He had ardent hopes that owing to the spread of education and the growing enlightenment of the common people, the relations between Hindus Musalmans would be greatly improved At the same time, he could look forward to no period (and here I differed from him) when the mediating influence of a third and neutral factor, such as the English. would be rendered unnecessary. He therefore regarded English in India the place of the

permanent and not temporary.

He never for one moment swerted from this position; for he somehow regarded at as an inevitable inference from all his reading of Indian History. "Believe me" he would say to me, with very great earnestness, when I used to argue that British rule was temporary only, "Believe me, I know India from by babyhood in a way you can never know it; for I was born here and I have always lived here. As you are aware, I love India with the love of a son for his own mother, I know also my own people I know my Musalman community. At the same time, I have close friends among the Hindus and "T vesnect them as my fellow countrymen.

surer of it the longer I have I difference between Hindu and Mus too great for any permanent union, shall always have the need of

balancing power."

"But suppose", I said, "that should be universal and comput both communities were taught at schools and read the same boo not the present ignorance tion with regard to religious es vanish, as it has practically between Roman Catholic and Pri England? We have no intervening our own country. Does not the of an intervening power in I stir up greater strife? Have no communities got to learn to so own differences without the inter an outside party?"

The old man would shake his say to me: "You younger men mi dreams Perhaps we dreamt dr selves, also, when we were young. perience is a school-master, that to hard lessons that cannot be forge my own experience has shown me is a permanent place for the Englis just in the same way as there is a place for the Musalman and the Hihave one destiny to fulfil in In Musalmans have another destiny 1 and Hindus have a different destin own. India is large enough a enough for all of us, we are all tl and all three are needed."

"What destany do you mean?"

"Our functions are not the s would answer, "the country can o peace by utilising all three. Look History, which you know has special study. First of all, in Ind was the Hindu only : and for a ti was great peace and civilisation. at last followed dissolution and dec-God sent the Musalman First of was bloodshed and fighting. Then another era of great peace and c Then in turn came the dissolution t After that God sent the English there was bloodshed and fighting. in turn there has come great P It may be that you civilisation in turn, will decay and dissolve. then your work in India, will ren just as we Musalmans have gr

all within the Will of God. He does

"What are the dangers," I asked, "to the

sent peace and civilisation?"

"First of all," he replied, "you who are which may cease to make your own interests moide with those of India. You may y to use India ontirely tor selfish ends on may say in your hearts I can do ackedness, but God will not see it.' ever you cease to be humble before Him. plieve me your full will be greatest of all nen the second danger is that the Musal-an should say in his heart. India belongs as We will make the Hindu again obey as in the past.' The third and last inger is that the Hindu should say We. ne numbers, wealth, knowledge We are ore in number than the sands of the sea t is drive out the Musalman and the

Christian alike and keep the country to ourselves.' All these voices are the boastings of pride They do not recognise the Will of God working out His divine purpose in the world."

I have tried as nearly as I possibly could to reproduce these conversations. They made a deep impression on me at the time, but the impression was due more to the spirit of intense earnestness with which he spoke than to any newness of the thoughts that he uttered.

When I asked him one day, what he regarded as the one thing of greatest importance in India at the present time he rephed without any hesitation, "Religious Neutrality". The answer was unexpected and it struck me very much fully indeed I had fully expected him to say 'Education', but his answer was more striking than that

(To be continued)

WILLIAM JAMES-THE MAN AND THE AUTHOR

By A. K. SIDDHANTA, WA

HE life of William James may be divided into three periods

I The Preparatory Period (1842-72)

If The Psychology Period (1872-93)
Iff The Philosophy Period (1893-1910)
In the first period we see James in his
yhood and youth: when invalidated for
out four years (1869-72) he 'read much,
ought much' and so prepared himself for
active life of later years.

In the second period, James is first seen the chair of Anatomy and Physiology at arrard, after his marriage in 1878, he writes two books on Psychology, is appointed a sprofessor of Psychology publishes from psychological articles and becomes promoter of Psychic research.

In the third period, James is seen turning Philosophy: he is now afraid of being flied a 'Psychologist' and gets back his title Professor of Philosophy: delivers his Gifford cture at Edinburgh: publishes most of his periods books in this period and dies in ace on Aug. 26, 1910.

All students of contemporary Philosophy ow Harvard (Mass.) through its three

jowels. William James, Josiah Royce and Hugo Munsterberg How James helped his two associates, Royce and Munsterberg, may be noted with interest in the course of this essay

In America all the ancestors of James were Protestants they were all people of education and character. William James the senior, James' paternal grandfather was the last ancestor who went to U.S. A. in 1789 from Ireland. Henry James, the father of our James the Pragmatist was the second son of William Henry's mother was a most democratic person by temperament and she managed her husband's household very credit-Mary Walch, hved ably Henry's wife, entirely for her husband and children, who were all devoted to her in return. Her first son, our William James, was born in New York on Jan 11, 1842. The son resembled the father in many striking ways the character, manners and beliefs of his father influenced him Henry, though a man i wardering habits, lived churrely with his books his pen, his family and his friends. He was so sociable, so independent and lively a talker that wherever he went he entered into hearty. interesting personages: with relations

٠."

έ.

Thackeray, Carlyle and Emerson may be named among his friends and, visitors.

After spending more than a year with his brother Henry at 8 school William entered the Boulogne. Academy in Geneva in 1859 and during the next two years he studied painting under W. M. Hunt in Newport. He then joined Lawrence Scientific School and studied chemistry and comparative Anatomy there for two years. President Eliot of the school wrote of James, -"I received a distinct impression that he possessed unusual mental powers, remarkable spirituality and great personal charm."

After joining the classes in the Harvard Medical School for a year or 50 James accompanied Louis Agassiz (see "Memoirs and Studies" p. 1-16) and party as an assistant on their expedition to Brazil, they sailed from New York on April 1, 1865. He saw Brazil with the eye of an adventurer and a lover of landscape rather than that of a geologist or collector and in one letter to his brother Henry from Brazil he wrote, "when I get home I am going to study

philosophy all my days"

Returning from Brazil he resumed his studies in Harvard Medical School but owing to ill health he was compelled to interrupt his course. He started for Germany both for a 'change and for studying Physiology in German laboratories. After spending the summer in Dresden and Bolivia he found his health getting worse instead of better This illness which began in 1867 and which limited James' activities and occupations for several years, had another important effect He was then a youngman of twenty-five the illness defeated the plans of his youth and it clearly developed and deepened the bed in which the streams of his philosophic lire was to flow.

Though he attended some Berlin lectures in the Autumn of 1867, his ill health prevented him from working in the laboratories. The water cure at Teplitz was a failure and in the spring of 1868 he repaired to Heidelberg to hear Helmholtz lecture. Thence he went to Divonne in Savoy where he handed a writing by Charles Renouvier, that French philosopher who influenced James' thinking in later years. James was greatly impressed by Repouviers' vigor of style and compression: In his "Problems of Philosophy" (page 165 factnote). James speaks of him as "one of the philosophic character." When character discussed James discussed

his turn. Renouvier paid James his trib by publishing the translations if the latte various papers in the "Critique Philosophiqu after a fortnight's stay at Paris he emball on November 7, for America "disappoin in the chief hopes with which he had land in Europe eighteen months before, but mi matured in character and thought, and solved to seek his health and career

home." ("Letters.")

After his return to Cambridge, Mass November 1868, he spent four outwait uneventful years he was for the most p of the time an invalid. In 1869, he obtain his M. D. During this period he read in on Neurology, Physiology of the Neive System and on Psychology. In this prepa tory period' he read portions from Ka Schiller, Goethe, Jacobi, Schelling, Heid Humboldt and a number of other autho Whenever possible he wrote summaries his readings and made marginal notes the Perry lists seven book-reviews of James' this period (1868-72).

James was then a youngman-still in h twenties. But he was suffering so constantly He was tormented by misgivings which almo paralyzed his naturally buoyant spirit i was almost plunged into a state of months depression. He had even an experience of the kind of melancholy which takes the form:

рапіс

When James wrote the chapter on the 'sick soul'" twenty years later (1902) put into it an account of this experience On page 160 of "Varieties," James writes if a French correspondent is giving him # report Mr. Henry James states that subs quently his father admitted to M Abau that the passage was really the story of own case

The first six years of the second per in the life of William James, may aptiv termed the 'first years of teaching.' Dai these few years he acted as Instructol Anatomy and Physiology (1873-76) began to give instruction in Psychology well

In August 1872 at the proposal of sident Eliot, James was appointed Instru of Physiology at Harvard College. Dr Th Dwight was given charge of Anatomy. these two posts were combined into of 1873, James was re-elected and was of the combined chair. He was very po

^{*} See lecture VI, VII, of "Varieties of Re Devenience."

ongst his students;—all of them were ted with their luck in having him. Before tually accepting the post he sailed for uppe in October, 1873. In a letter from ome (December 17, 1873) to his sister lice, we find that James totally abstained om spirituous liquors. Eight years later, hen delivering a lecture on "Temperance" efore Harvard students he showed evidences from Physiology and general experience in upport of total abstinence.

After his return to U. S. A., his college luties proved both absorbing and stimulating He was then in charge of both comparative inatomy and the physiology of the vertebrates to this he added a course of physiological psychology in 1876. It was lames who ounded instruction in experimental psychology in Harvard in 1876 or thereabouts. About lifteen years later, in 1890, he raised several housand dollars, fitted up Dane Hall and atroduced laboratory exercises as a regular aft of the undergraduate psychology course

In 1874 he published an article* in the Nation" wherein he criticised the speculae scientists for using the authority of once when dealing with speculative proms Specimens of his contributions of ' years following may be found in "Collect-Essays" (1921) And when in 1876, Di uley Hall, the celebrated author of "Senescence" dolescence" (1921)and ote an open letter to the "Nation" comunng of the inadequacy in teaching of dosophy by the best American institutions the day, it was James who strongly supted him with the remark, If a minister the gospel takes charge of a philosophical it is natural that sufeness becomes the in characteristic of a tuition.

Early in 1876, James had been introduced Miss Alice H. Gibbens and the next day wrote to his brother Wilky that he had to "The future Mrs. W. J.". On July 10, 18, after a short engagement, James and in Gibbens were married in Boston. Marge brought a happy change in James. This the twenty one years that followed his rriage, James did much in the way of ching and writing, all of which was due to wife's constant care and watch. Mrs. Hes was really an ideal-wife. She managed household and looked after the physicand intellectual comforts of her husband Josiah Royce (1856-1916) was then a

The Mood of Science and the Mood of Fauth

.....

young man from the "intellectual barrens of California". Royce writes of James.

"He found me at once ... accepted me with all my imperfections used his influence not to win me as a follower but to give me my chance It was upon his responsibility that I was later led to get my first opportunities at Harvard"

The opportunities did not come before 1882-8 however. Though antagonistic in philosophical principles. James and Royce were perfect friends. In his letters to Royce, James addressed him as 'My dear Royce, Beloved Royce,' 'Beloved Josiah'.

James loved Nature, his sylvan home at Chocornor was his most favourite resort. Two years before his death (in 1908) he wrote to Henri Bergson,

Why should life be short? I wish you and I and Strong; and Flourney McDongall and Wards could live on some mountain top; for a month together talking on philosophy and then feasing on the scenery.

In 1880, he was appointed as an Asst Professor of Philosophy Two years later, he took a year's leave of absence from college and sailed for Europe -for taking 'rest' and for meeting Europeau fellow investigators there-He saw ins brother in London and in Prague he met with the mighty Ewald Heimg (Lecturer of Physiology) and Prof Einst Mach (of Physics) came to his hotel and spent tour hours with James. Wundt received him very kindly after his lecture in his laboratory Wundts agreeable voice and reads tooth-showing smile and his able lecture made an impression on James. Before sailing back home in March, 1883, James remained in London for some time and among others he met there S. Hodgson, Leslie Stepher Carrette Read and Francis Galton

Prof Perry records in his precious little book—the "Bibliography"—the names of at least twenty eight contributions of James' to the various papers during the years 1878-82 Of these seven have been reprinted in Collected Essays (p. 43-243). Of his 1881 writings a most interesting one was on "Temperance therein he pleaded for total abstinence."

After forty years of struggle and preparation James was now clear about his sams and abilities. His scenario of "Psychology" was

^{*} Quoted from Harvard Graduates Magazini (June, 1910)

f Author of Course of Consciousness. Whe

^{\$} James Ward author of Naturalism an Agnosticism "Realm of Ends" Psychologica Principles" etc

now.-after years of hard work,--complete and he had begun to fill up the dotails: materials he got from his European friends and from his own students. He proceeded slowly with his task because he had, to use his own words, to—forge every sentence in the teeth of irreducible and stubborn facts it is like walking through the densest brushwood."

The English society for Psychical Research was founded in 1882 and in 1884, James, who was in deep sympathy with the announced intention of the society, became a corresponding member and in the same year he organised an American Society of the same name in Boston. When at last the American branch was finally amalgamated with the English society (in 1890) James became a vice-president of the latter. He continued in this honorary office until his death. In 1889 he undertook the task of conducting the "Census of Hallucinations" in America

The three lectures on "Some Omissions of Introspective Psychology" delivered in concord, near Boston, together with many of his 1886 and 1887 contributions (they were mostly Psychological in nature) were later incorporated in his "Principles of Psychology'. It was the year 1885 when James got the full professorship of Harvard that very year he wrote an introduction to his father's "Literary Remains" and favorably reviewed Royce's book on "The Religious Aspect of Philosophy" in the Atlantic Monthly. When in 1886 James read Bradley's Logic-three years after its publication-he spoke of it as "surely epoch-making in English Philosophy".

In Oct. 1888 he wrote to Editor Robertson "I am teaching Ethics and Philosophy of Religion for the first time, with that dear old duffer Martineau's works as a text ". The next year he proceeded to Paris to join the Physiological Psychologists' Congress there as a U.S. A. delegate; he was very well received there and was impressed

with the proceedings.

In the spring of 1890 James finished the remaining chapters of his Psychology; this book won him reputation both in the scientific world and beyond the scientific circles as well, the two volumes were remarkable for their style, their colloquial directness, the

humor and the moral depth and appeal. Jame was himself conscious of the popularity of he book and when he wrote to the publisher "The larger books seem his language was, to be a decided success. I begin to loo down upon Mark Twain."

But as the size of this book (two vol. 689+701 pages) was an obstacle to its min versal use James spent the summer of 189 in making an abridgement which appeared in autumn under the title "The Briefer Course" Prof Howison,* when informed of abridged volume, protested against the me veient irony with which the author treater

the Hegelian dialectics in the bigger hook (Vol 1 p. 369——footnote So Howison has expressed a hope that such passages would be omitted from the "Briefer Course" In letter to Prof. Howison whom he addressed as 'My poor dear Dailing Howison,' he assured him that the smaller volume which

was boiled down to possibly 400 pages will be "free from all polemics and historic from all metaphysical subtleties and dimes-

sion, all quotation etc ...

The greatness of James is shown by his attitude towards his opponents; he advised the young Psychologist, Hugo Munsterberg not to mind Muller's unjustifiable review of himself; further, in 1909 when James and Munsterberg (1863-1916) were terribly attacked by their Psychological opponents he pilsunded the 'Young Psychologist' to withdraw his protest. He declared that Harvard people should cultivate rough hides and should ad

seem 'touchy'

James was then fifty By the year 15th the inclination of his mind was more and more strongly toward philosophy and the experimental psychology laboratory was becoming a burden to him. He wanted some one to take charge of the laboratory as its director. The Harvard laboratory was hi that time on such a solid basis that an able experimenter could be invited to its solv charge. Much impressed by the originality and promise in Munsterberg's experimenta works at Ereiburg (Germany), James 100000 mended the latter's appointment for this years. Munsterberg was then only 28 Th same year, James persuaded an America millionaire, who had founded a new chart o psychology applied to education" to acce-Royce as the right man. Royce was the

After · Munsterberg's appointment Jam

w it easier to take a long leave of absence om college duties. He sailed for Europe th family and spent his vacation succesvely in Switzerland, Florence and near Lake eneva. From Florence he was very glad to ear that Royce had obtained the professorship ed that Munsterberg was an immense success. hat Hugo in his turn was grateful to James id that he loved the Harvard people is evienced by the fact that in later years he delined two important posts of Germany,-the hilosophy chair at Konigsberg and the Imerican Civilization' professorship at Berlin Vhile at Florence, he met (in Dec 1892) lark I wain in a villa outside the town and a an necks later invited him to a small dinner arty

James and his wife were back in U S A n Sept 1893 and one afternoon after their etuin the great Helmholtz and his wife ook tea with them; perhaps, Helmholtz was hen in U. S. A for the Chicago Psychic

Jongiess.

James was getting aged 'And with age be pined to philosophy Really speaking, the lente of his interest had always been relipous and philosophical. The psychological abotatory was no longer in his charge, is now called psychology a 'nasty little ubject and he tried to avoid the Harvard beeting, where he was to get an honorary legice under the fear that President Elot would perhaps name him there as "psychologist, psychical researcher, will-to-believer

eligious experiencer".

In 1896 James offered a course on the hilosophy of Kant for the first time and he next year he was again called 'Prof of Indosophy after passing as Prof of Psychopgy for eight years (1889-97). In 1898, he chvered a philosophical address in Caliprina This year he displeased his medical olleagues by appearing at the State House Poston) to plead for the spiritualists and bristian Scientists He opposed the State ills which included clauses attempting to bolish the faith curers by requiring them become Doctors of Medicine; he wanted em to continue their experiments on that ne, why should the State kill them through faminations? Eleven years later (in Sept 109) when Trend, the Psycho-analyst was ported to have condemned the American chgious Therapy as very 'dangerous' because Was so unscientific, James exclaimed, "Bah " he James of 1909 was the same mail who pported and defended the logical position of e mind curers in 1898. .

The next four years were mainly occupied by James for the preparation and delivery of the first and second series of Gifford Lectures at Edinburgh, during this period be retired from active duty at Harvard and suffered from illness for about two years. For this constant illness he could not begin his lectures in time, he resigned but the Gifford Committee refused to accept his resignation. In James's own words, "I have word from Sethsthat the Senate will be sure to grant James any delay he might ask for. He delivered the Tenth Lecture (1st series) on June 17, 1901. All his lectures, were attended by a record number of keen audience.

James returned to U.S.A. in early September and by the end of winter he finished writing the last half of his difficied Lectures. When his lectures were successfully delivered he was offered honorary degrees at Edinburgh, Durham and Oxford His Gifford Lectures appeared in book form in 1902 and its immediate popularity was very great.

The last eight years of James's life may be roughly divided into three periods — (1902-05) (1905-07) (1907-10)

In the first period the chief mesdents were his forced acceptance of an honorary LL D at Harvard and the statement of his own religious beliefs in a letter to F Pillow He states.

'My philosophy is a radi al empiricism a phiralism. It is therstic but not ossentially so, It rejects the doctrine of the Absolute. It is limited.

Prof J > Pratty of Williams College sent James about ten big questions. We select two or three of these.. (James answers are in Italies)

1. What do you mean by God (1) confirmation of Ideality and springly efficient

2 Do you believe in God - Is it from digitment - (I inpliatically in

Never hermin but man strongly as Lyran older)

In September 1904 Dr. Pierre, Janet, of Paris, Prof. C. Lloyd, Morgan of Bristol and Prof. Harold Hoflding of Copenhagen, visited James; they had all come to U.S. A for attend the International Congress

The chief incidents in the years following

Andrew Seth (Pringe) Pattison) author of Kant to Hegel "Hogehams a and Personality Idea of God 'etc, etc

(1905-07) were his visits to Italy, Greece and

to Sanford University.

While he was at Italy, a Philosophical Congress was being held at Rome. Though invited he had previously declined to join but was subsequently involved in its proceedings; he had to fill the vacuum left by Flournoy (Geneva) and Sully (England) who could not come.

In January 1906 he accepted an invitation from Sanford University to give a course of lectures there. His lectures were however interrupted by the famous earthquake* of San Francisco: the materials of these lectures were later utilised in the last Harvard class On May 6, 1906 James wrote a letter to W. Lutoslawskit in which he says that W L was wrong in giving excessive value to Yoga discipline. In supporting his own opinions, James mentions his three interviews,the first, with a Yogi who spoke of its 'power' the other two were with an Indian Christian with scientific training and with a professor-both Brahmo Samai whom said that Yoga was less and less frequently used by the more intellectual.

In January 1907 his book on "Pragmatism" was published and in the next month he sent his final resignation to Harvard Corporation. His undergrade students presented him with a silver loving-cup and the Graduates and Assiatants with an inkwell It is a pity, no record has been kept of his final parting

speeches.

The most important engagement durn the last three years of his life was his conset to deliver the Hibbert Lecture at Oxfor In spite of failing health he went straight to Oxford and delivered eight lecture there. This very year (1908) appears the "Essays Philosophical and Psychologous in honor of W. James"——an appreciated by nineteen members of Columbia University

In Sept. 1909, he went to a little International Congress at Clark University when Stanley Hall was acting as President Jame met Freud (Vienna) and Jung (Zurich) therethey made a pleasant impression on James

It was for two main reasons that Jams left for Europe in the early spring of 1918 He wanted to cure his heart trouble besides, his brother Henry was then lying in London. Mrs. James accompanied him James consulted Parisian specialists, visible places like Nanheim, Lucerne and teneral but these changes produced no good effects his health. He was fast declining So will wife and brother he turned homeward Landing at Quebec they went straight to Chocorna, their sylvan home and reached to a Aug. 19 in the afternoon. James had been clinging to life only to get home.

Death without pain occurred in the sal afternoon of Aug. 26. His body was take to Cambridge (Mass.). After the funeral vice in college chapel he was cremated ashes were placed beside the graves of parents in the Cambridge cemetery.

Thus ended the life of a man wh truly the pioneer of many modern than movements.

THE OCCIDENT AND THE ORIENT.

By DR. TARAKNATH DAS, M. A. PH.D.

THE most important problem facing the world to-day is the future relations between the East and the West. Prof. Herbert Adams Gibbons of Princeton University, a world recognised

world authority on International Politics write New York Times to the following effect. The world-wide supremacy of the Wischield during the nineteenth century result of the use of force. Titles may his staked out by explorers and enterprising and missionaries, but they were made have been maintained by violent means. We have justified to ourselves treating the supremann origin in a way that

American co-operation to solve world problems. The activities of these statesmen can be regarded as the continuation of the work started by Cecil Rhodes, Andrew Carnegie, John Hay, Joseph Chamberlain, Joseph Choate, Whitelaw Rend, Lord Balfour, Lord Bryce, Earl Grey, Walter Hines Page and other distinguished Britishers, and Americans. Lord Sydenham of Coombe has of late struck a new note to the effect that for her own safety America must and the British in holding their present imperial possessions in Asia particularly India. Sir Valentine Chirol has for active service the group of aident British leaders working for formal crinformal Angle-American Alliance of co-operation to solve the problems facing the world, particularly the problem between the East and the West

of solve the problems facing the world, particularly the problem between the East and the West. Sit Valentine Chirol is a very well-known British Imperialist. He has travelled extensively in the Orient and studied conditions with great intelligence. He is a recognised authority on World Politics as influenced by the Orient and the British Government used his expert services during the Peace Conference at Paris. During the summer of 1924 he was invited by the University of Chicago to deliver a course of lectures in connection with the Norman Wait Harris, Memorial Foundation. These lectures are embodied in a handy volume. "The Occident and the Orient," in which the author has discussed the present-day problems of North Africa, the Near East (territory which used to be the Asiatic realm of the Ottoman Empire). Persia Algharustan and India.

He has tried to show that Great Britains relations with the Orient are a part of the wider relation between the Orient and the Orient During recent years due to the awakening of the spirit of nationalism in the Orient such new conditions have arisen as make it impossible to ignore the aspirations of the peoples of the East Hepoints out that the peculiar position of France and Metocco and the British position in Explicit side to Anglo-French a soperation. Britain lately conferred independence on Explicit as a matter of experiment and with reservations sufficient to safe-guard British Imperial interest. He strongly supports the policy of establishing mandates in Pulesting. Strike But to him the key to the future relation between the East and the West is centred in what happens in India. He says

I pon the success or failure of an experiment conducted on a vast scale involving the future Cf a sub-continent inhabited by nearly a fifth of the human race depends more than anything else u the thient the peaceful adjustment of its relation with the Occident.

due more to the inherent weakness of the people than to British torce. He says — There are only 120,000 Englishmen in India including the British garrisons the merest handful among a population of 320,000 (00)—and it is certainly not by the sworf alone that they can hold the fort for the western civilization, not in India alone but throughout the Orient." The real history of the British conquest of India is not well known to the world, even to the Indian public. We are glad to say that Major B. Basu of the Lamin Office. Allahabad, India has done a very valuable service to the people of India and the world at large by publishing his recent work on 'Rise of the Christian Power in India' in five volumes. Dr. Bose's work discloses that intrigue tres hery, and violation of treates by

237

-E.,

the British on the one hand, and on the other hand disunty and lack of real patriotism on the part of the Indian ruling class brought about the subjection of India by Great Britam.

Sir Valentine Chirol is quite explicit about the weakness of the people of India and he says;—
"Nothing can be more undemocratic than the Hindu caste-system, which still holds a great part of India in its grip, and Mohammedanism has never risen beyond the conception of brotherhood in the faith within the Mohammedan world—a brotherhood that has constantly broken down in practice—and of the whole ron-Mohammedan world as an irreconcilable world of war According to as an irreconcilable world of war According to the author the relations between the Hindus and and Mohammedans of India are more strained than ever before, and this condition has been produced by the aftermath of Khalifatism, and his remarks on this point supply food for thought to all who are anxious to see Hindu-Moslem unity in India for the political progress of the people. He says.—"Gandhi, without stopping to probe the merits of the case bestowed his blessings on the Khalifate movement as a great demonstration of religious faith on the part of his Mohammedan fellow countrymen. He, of course, did not fail to preach to them the duty of non-violence But he had reckoned without the militant spirit of Islam, and the Khalifate movement was responsible for more ever before, and this condition has been produced the Khailfate movement was responsible for more outbreaks of violence than Gandhi's own Hindu revivalist campaign. It is true that Gandhi supported the Khailfate movement to help. Turkey in her struggle for preserving territorial integrity. But it is also true that the Khalifate movement has made the Moslems of India more Islam-conscious than India-conscious. It cannot be demed

scious than India-conscious. It cannot be demed that it has given new impetus to the l'an-islamism of Indian Moslems and has dragged religion into Indian politics, more than ever before.

Sir Valentine Chirol in the past belonged to the Curzon School in matters of Near Eastern problems and always opposed any increase of Russian or German influence in the regions of the Persian Gulf on the avowed reason of defense of India. He is not favorable to the present of India. He is not favorable to the present Soviet policy in Asia. He condemns the Bolshevik propaganda in Turkey, Persia Afghanistan and India, because it is against the interest of both the Occidental and Oriental civilizations He says: "Bolshevism itself is neither of the Occident nor of the Orient, for while it seeks to undermine nor of the Orient, for while it seeks to underlime the foundations of our Western civilization, it has no affinity with any of those types of Oriental eivilization, upon whose antagonism to the West I have dwelt in some of my preceding lettures It has so far increly been a destructive force and in Europe it has only triumphed in Russia." In in Europe it has only triumphed in Russa." In the past Soviet Russia extended support to Turkey, Persia and Afghanistan to assert their independ-ence, and this was due to Russian self-interest ence, and this was due to Russian self-interest of rousing the Orient against the Western European nations, particularly Great Britain, which were opposing her in Europe If Turkev Persia and Afghanistan were allied with Great Britain and France in overthrowing the Soviet regime in Russia, it would have been far more difficult for the Bolsheviks to hold their own against that combination. However the situation has changed and Sir Valentine Chirol thinks that Russia is bound to clash with the Central Asian States, particularly Tilikey, because of conflicting interests.

British Labor Imperialism, so it is not imposs that ultimately Soviet Russia's foreign not towards Asia may take the form of 80 Russian Imperialism. It is worth while to a note of what Sir Valentine Chirol has to say al Russo-Turkish relations. He says:—

"So long as a state of war existed bety Turkey and the Western powers it was easy Moscow and Angora to parade their friendsh solemn treaties of amity and alliance. But he them have separate ambitions which tend to them asunder Nationalism, often of the extravagant type, has been the great driving in Modern Turkey since the revolution of and Soviet Russia herself has been rapidly to ing to the Czarist policy of expansion in and not least in those regions which have been a battleground between Turkey and R or must eventually become so, if the Pan-Turdream of Turkish nationalists are ever fulfilled.

"Already at Lausanne there was a slig

"Already at Lausanne there was a slig within the lute. The representative of M and of Angora did not at all see eye to a the questions of the Straits and the Black and though in this case it was Moscow had to yelld, its last word has assuredly in the multinum and important of Saviot Russian and Indiana. the unlitarism and imperialism of Soviet Ru today from the Czarist Russia of yesterday"

Regarding the policy of Soviet Russia Caucasus, and Central Asia, the author we'As in the Caucasus, the various nationa Central Asia, were encouraged to conthemselves into Soviet republics, e.g. the republic of Khorezim, once the Khanate of the Soviet republic of Turkestan, with Tas its capital, the Soviet republic of Bokh formerly a Khanate. Moscow allowed the time to enjoy the illusion of independence very soon Soviet Russia reverted to the old of Czarist Russia, which it had originally rewith its mission of world liberation. The old agencies as well as the political oxides were. agencies as well as the political oxiles were to preach close affiliation with the Russi of Soviet republies. They were speedily i by commissars from Moseow accompanie lowed by Red Armies and sooner or later to called, of alliance, imposed upon the new republies, brought them once more u domination of Soviet Russia which wa effective and far more tyrannical than tha ist Russia had ever been. Risings follow were ruthlessly crushed, and devastating and wholesale rum. In the Soviet is Taskhend, Kokand, the charming, a ct 80,000 inhabitants which had become under the flourishing centre of the great co ing area of Ferghana, was taken, pil burned by the Reds, and 10,000 Mol were massacred, not of course as Mol but as counter-revolutionists. Repeated a but as counter-revolutionists. Repeated I nary rebellions and repressions ravaged State of Bokhara, and the Ameer, who Russia had always recognised as a sement feudatory, had to take refuge in / Before death carried him off, the fam Pasha flitted-across the blood-stained stan ally of the Bolshevists and then as of a Mohammedan revolt against them. of Central Asia during the last five combined and still largely obscured recombined and still largely obscured recombined.

tion and anarchy, with Bolshevism, however, triumphantly riding the whirlwind."

If Valentine Chirol pleads that western powers ld not weaken themselves by fighting as in the Orient. He points out that Turkey really come out victorious after the world war really come of her own strength but because the because of her own strength, but because the ern powers could not agree on a common y against her. It is interesting to note that he y against her. It is interesting to note that he hasises that the future of the western civiling which is common both to America and to ope "is threatened by the awakening of revolt of the Orient. In the Orient to-day changes have come to pass and they profoundly transformed the former tionships between the Occident and the nt based upon the claim of the Occident ization to inherent and indefeasible superiority the civilizations of the Orient and they already the civilizations of the Orient, and they already the Civinzations of the Visin, and they are all the to raise a still more dangerous issue of all conflict between the white man and the ured peoples who constitute the vast majority nankind." He appeals to America not to be oncerned with what is happening in the Orient to co-operate with the West in solving the pro-

to co-operate with the West in solving the prons on the basis of the superiority of the
lization of white men. He says —
In this country you have the color problem in
1 midst. You have it again at your doors in
3 shape of Asiatic immigration. We in Europe
4 controlled with it, as I have tried to show
5, along the great borderland of the Occident
6. Orient extending through Northern Africa
6 across Western and Central Asia, from the
6 th-Western Atlantic to the shores of the Indian th-Western Atlantic to the shores of the Indian an, even beyond. Its solution bristles with enthes, but for my own part. I refuse to miss it as insoluble I will say this at any e that the more firmly ne our select behave my superiority of a civilization which so far it to been the privilege of the nink man to build in his condestable weakers. in his occidental homelands, the more we are aid, by its principles and the principles of muon Christianity, which are its one sure indation, to do all in our power to temper bitter-65 of racial discord which, if it spreads and opens, may threaten the fature of the whole man race?

To Sir Valentine Chirol the solution of the sent strained relation between the East and West largely depends upon the ability of the of the East to adjust themselves to new aditions and ideals. But he is not very hopeful of future of the Orient, because he asserts without ervation that the receipe of the Orient in general ervation that the people of the Orient in general

tharacter He says:— The fundamental issue is whether the Orient can rought to adapt itself to that democratic type of nan society which the most progressive nations of an society which the most progressive nations of Ocident have gradually evolved as affording the est opportunities for individual and collective possibility. If one seeks to define what the ent chiefly lacks, and has always lacked, the practice of freedom with the sense of onsibility, or, in one word character. Almost only forms of Government it has ever with have been theocracy and autocracy with this somewhat amusing to us that men like

t is somewhat amusing to us that men like Valentine Chirol, Prof. Rameay Muir and otherwish historians are at this late hour trying to action the absolutely false notion that the idea of "law and order", "liberty and justice".

etc. was foreign to the people of the Orient until the advent of the conquering European nations had spread their sway there It is sufficient to say that lately much has been published about the political institutions of various oriental countries to refute the sweeping statement of Sir Valentine Chirol and others of his type

Some of the western historians with their pecuhar prejudice often lorget that India alone is as large as the whole of Europe except Russia and the popuas the whole of Europe except Russia and the population of India is equal to that of ad of Europe except Russia. If we compare any historical period of Europe with the same period of India or China, we find that Europe had more bloody wars and legalised anarchy and disorder than India or China. In the past Europe had not been free from invasions as Asia is subject to European invasions. In this connection it may be said that the World War, due to pure greed and rivility among European nations, is the best example of a form of civilised barbarism of the twentieth century. It may not be out of place to point out that the democratic form of government, and the modern conception of nationalism of which the western nations are so proud are of very regent origin, they did not even exist before the days of the Frinch and American Revolutions. In this connection it may be asserted that if India has failed to develop democratic institutions, the fault for that hes not only with the people but possibly hes more with the British rulers who even today are determined to perpetuate a most autocratic form of government in India to carry out their scheme of subjection and exploitation Sit Valenting Chirol is an apostle of white

superiority. He sees the menace of 'conflict of color' and like Lothrop Stoddard and others advocates white solidarity' to maintain their superior position but there are many people who will disagree with him and confain the opinion of Prof. Jesse H. Holmes, that 'as a matter of fact the race problem' is the modeling of a resence people and professional and pro problem of a mean-sprinted and un-Christian pre-indice on the part of the whites. If the white men stay away from the lands of the black brown and verlow and do not attempt to enslave them then there will be no color problem who hathe men mere will be no color precient with the author emphasizes so much. But in this age it is not possible and if it is passible it is not desirable that peoples of the world should try to lead the exclusive tribal life of the ancient times. There is not the least doubt that the Western nature are now more powerful than the people of the East. It is also true that the Orient has much to their them that the third of science. But fearn from the Ocudent in the hold of science. But the people that have given Confucus Buddha Jesus and Mohammed to the world and have a past history of brilliant a hickernets are not potentially inferior to the people of the Occident However, it is evident that unless the people of Asia can assert themselves in a way as Japan has done they will never be recognized by the Occident as civilized. It is needless to add that tapan before her vietrov over Russia in the Russo-Japanese her victroy over Russia in the Russo-landings War was regarded as a semi-criph. I manor and treated with uttor contempt. This we are convened that when the subjugated them asserts its independence and proves the inherent strength latent in the people then there will be better understanding between the Fast and the West on the basis of equality. To Sr Valentine Chirol and others the problem of the East and the West incars preservation of white superiority on the status one preservation of white superiority on the status quo

basis but to the people of the East the problem has the supreme meaning of recovery of national severeignty through many-sided activities as a stepping-stone towards establishment of huni brotherhood. "Above all nations is humanity"

AJUNTA-AN APPRECIATION

By MISS G. M. COLES

THE first general impression of Ajunta, stronghold of India's ancient religion and art, is that of a curved sweep of grey-green granite cliff, a pool of limpid waters at its base dividing it from the delicately tree-studded hillside 'en face' Over all, the blue, blue sky, the golden sun and around a 'peace that passeth under-

standing'.

Now in December two paths are availalle, one to the right by a series of steep modern steps leading more directly to the Cliff Temples; the other through the riverbed, just now a rivulet. This, the old old path of 2,000 years ago, strewn with greenslashed, grey, cream, and bronze stones, continues up the cliff face, by the old, renewed old path, until, halfway between earth and the cliffs' sharply defined ridge, the ledge leading right and left to the temples on either hand is reached. From this central spot the eye rapidly focuses a series of seemingly austere pillared entrances. then, as information or inclination directs. proceed! Of all the caves, is there one minteresting? Finished, unfinished, damaged (and all are damaged) with a crowded record of the masters' handiwork or with none, with little or much remaining, all in lesser or greater degree stimulate and invigorate the imaginatice. In some, the why and wherefore, where nothing remains, or has never been. In others "what has been, what was, what is", but never alas! a joyous anticipation of 'what will be': and where more complete frescoes still reign in the later caves, their wealth of living, loving, vital life, sway sofore us in all the superb abounding arrogmee of life, lived each day to its fullest apacity.

The carlier frescoes (Cave 9, Cave 10),

Whether with foot charmingly poised on the blue lotus, form completely framed in given haloed background; or in black and white and white and white and black, line-drawing only, here is the Buddha, simple screne portrayed by the Buddhist devotee, as distinguished from his less single-minded followers who every

cuted the later paintings.

Some centuries have passed before in the later caves) the full wealth of sculp tured Buddha, Bodhisattwa, Gandharva. and other known and unknown graceful forms, singly and gorgeous assemblage begin their enormous carved Buddha, with appropriate attendants, generally in the inner shime of shrines: himself and his teachings relegate as it were to a definite place. riot of pictorial pageantry on temple ## processions, floral and fantastic tigun device on roofs, begins, as if the bounds pulsating life these artists knew had to h a more comprehensible interprotation th "lifeless timeless, peace" Woven in ! around the Jatakas, tales of the Buddi former incarnations, the wealth of glow living life depicted, holds the spectator of bound. Of all the wonders of these artis the hands, the lines, the curves, the grac turn of limb, the revelation of mind, dominant are the laughter-loving eves often, too often only the eyes remain, yet the dainty madames glide before resplendent in their bursting vitality perious, joyful, these women. None o often tiring humility of the Moghul d or the melancholy musing of the Chimaiden. Never sensual, always sensual that ugly word for a beautiful mer The lovely unthinking joy of life live day to the full. Its radiancy revitthe onlooker of to-day, so forcefully foyous creed declaimed. Is love at 1944dha asked. To

later followers have given their answer with sure and certain affirmation

M Foucher, with a devotion, and untiring zeal, for which we can never be sufficiently mateful, has discovered to us many of the otherwise unintelligible frescoes The enotmous character of this task can only be fully appreciated by those who have seen their vast damaged areas, and experienced the chill of disappointment at the hopeless mability to connect satisfactorily the seemingly meaningless surviving lines Lake the eader of old, M Foucher with his keen intelligence and patient persistence has struck the all but lifeless rock and forthwith caused to spring and greet the observer scenes of intensely vivid splendom

To separate from then - surrounding context any group or groups, and give them greater acclamation, can be only a matter of Some are more individual temperament twomred by the majority than others as in the well-known Adoration liere the wondering gaze of Mother and Child before the Buddha displays no sentimental subordination of itself, insistent is the individuality even in the Presence The Naga King's announces ment to his wives, of his intended submission to the monastic order, reveals con fernation not despondency and the genial bonhommie with which his cheerful ladies surround his departure suggests a sunny tempered womanhood, delightfully refreshing Even the Dying Princess he the might half-sleeping beauty of out -childhood s days, and almost irreverent is the curious peoping gaze of the young minxes usually described as Womer Worshipping Buddha 'Worshipping' would seem more applicable to the struggling adoration of the male figure kneeling with hands outstretched, breathless tense to attain understanding in "The Buddha Preaching Scene" Most wonderful she who knowls to receive the executioners flow vibrant as is her figure with surrender compelled but proud. So realistic is the famous Temptation Scene that the feminine mind deels a momentary annoyance with Impassive Buddha! Truth compels the little lade themselves appear anything but discomposed at their chilling reception, nav. lack of reception. Joyful lovers abound the apotheosis of artistic handling, they love, they live not unduly concentrating on the state of t amon, but giving it its well-appointed place in the harmonious whole of life.

"veil after veil will lift" before the

observer, as the glorious frescoes reveal themselves, until the mind is permeated and the body glows as if bathed in an unknown elivir. Little wonder, the oriental mind ascribed these paintings to divine agency if the prosare European senses an unknown magic.

Curiously persistent through the centuries has been the ill luck attending these trescoes and sculptures. What but and bird, and ereoping thing could not effectively damage, the Sadhu with his cooking thies hastened. mediaeval Mohammedan maliciousness magnihed exceedingly and Christian mistaken artistic real perpetuated Followers of the three alien religions seem each in turn to have been an unconscious or conscious agency impelled to destroy, if human agency could destroy the wonders on these valls Possibly it is left for the modern tourist to concentrate the vandalism of all three croeds by his irrespressible desire to impress an inhis different world warh adventurous spirit.

Can we moderns who subconsciously appraise achievement by rapidity of execution ever sufficiently appreciate these first Ajunta artists of all, who stacing the towering cliffs, and seeing with wonderful foresight, the supreme asset of the long path of sunlight from sunrise to sunset-conceived these peerless galleries of Art whose minds in magination pierced the mass of living granite modelled the dim cool hills, carved the magnificent sculptures, and decorated wall and roof with the final triumph of the painters brush These the very first Ajunta Artists, with an abiding faith in the ability of their descendants finally to execute worthily what they could only prepare and plan with no hope in their lifetime of seeing even an approximate fulfilment it there marvellous conception the very humin desire of rapid achie ement subordirited, in order that the final attainment centuries later should be supreme Must not these colour artists too have longed to experiment and demonstrate from the edem fore or and around the river bed the suprers also to execute even trilling masterpi ces from the boulders lying wound have True wrists indeed, denying themselve to a coxpression content to Itho hard at the first crude essentials show the too not share the encommums it is bear on the finished production

Rarely does a case of glowing colour.

leap to welcome the observer The eye has to pierce the sickly brown of kitchen chair varnish so liberally applied and thus compel to life many, too many, of the all but frescoes What a triumph of obscured supreme artistry is then revealed. Masters of line-drawing so pregnant with vitality that almost the living vein itself might be there, coursing with the rich red wine of life. Petty questions of superiority, or interiority, over other frescoes seem utterly alien at Ajunta. The magnificent tributes of Professor Lorenzo Ceccom and others competent to distinguish and decide, suffice the amateur

mind. Whether Ajunta will be found Europe, China, Japan . or Europe, Chin Japan at Ajunta, cannot add to or detifrom the appreciation of those who find the Aunta frescoes a subject which compa not mere liking but loving admiration

Casual reading since seeing suggests, too often has the European la the Pilgrim Robe before him and then so the paintings. Leave the Robe in the im shime, as the later artists (if they held it at all) undoubtedly did, and partake of the delectable in divested. provided

ROLLAND ON TOLSTOY

(A HITTER)

By DILIP KUMAR ROY

wrote a letter to Rolland on 11th March, 1922 from Berlin in which I had expressed my admiration for Tolstoy's Confessions The problems which this great book has raised rendered my previous doubts on this same subject all the more pougnant. Thus, I asked Roland if one must needs renounce art for service, since artists often become prone to have a contempt for those who do not understand then art. They are often found to become egoists, caring to little else than their so-called high mission to humanity through art, which however renders them callous to the latter's sufferings and eternal aspirations. Must one therefore (I asked) forego the comparative exclusiveness of artistic ecstacy in order to live a life of daily sacrifice for the suffering humanity it was possible (1 suggested) that an artist might do comparatively little lasting work in walks of life other than that of art for which he may be said to have been cut out. But does it matter after all Is a life to be valued for and measured by the amount of the so-called lasting contribution it has made for the pleasure, of a handful,—or is it to be valued for one's being true to one's convictions no matter if the condi-tions lead the artist to a life of comparative barrenness? In brief, what, I asked, 1- to be preferred—a life of productivity in art or a life of service, trying to the best of ones poor ability to

alleviate the widespread miseries of mankind Rolland replied to these questions with his characteristic kindness illuminated by a touching responsiveness which reminds one of a remark of his wortly, hiographer when he writes apropos Tolstoy's long reply to Rolland when the latter was yet a mere stripling. "Rarely has history produced a more beautiful example of the truth of the principle of conservation of energy in the

hours that Tolstoy devoted to answer an unknew correspondent have been revived in a thousa letters which Rolland has written to so mar people unknown to him. An infinite quantity seed has thus been scattered throughout the world-day by the sowing of this single grain of kind.

ness by Tolstoy.*

That this is not an exaggeration will be show by the following translation of the letter Roll. took so much pains to pen for the benefit of a insignificant student like me]

Monday, 20th March, 1921

Dear Mr D K Roy.

Your generous letter has touched me hasten to reply thereto, though not at great a length as I would have wished, sp I am hard pressed for time just now

I understand your difficulties very " I was myself troubled with them once is a similar forment, which made me " to Tolstoy when I was a young man day my troubles have quieted down of trials and tribulations, of solitude

from Romain Rollahe, Der Mann und da by Stephan Zweig.

^{*} Selten hat die Geschichte schoener al diesem Beispiel bezeugt, dasz in der mondi Welt wie in der irdischen nie ein Aton: an verloren geht, Die Stunde, die Tolstor Wei an einen Unbekannten ist auferstanden in tal Beiefen Rollands an tausend Unbekannte u liche Saat weht heute durch die welt von einzelnen hingestreuten der Chiefe."

hard fights has enabled me—especially of late years—to elucidate the enigmas which

once seemed to me insoluble

The confessions of Tolstoy are admirable His auguishes ris-a-ris the miseries of the world are poignant But it must be said that Tolstoy is a bad guide. In the midst of his forments his genius was always incapable of finding a practical way out His great, fraternal pity goaded him to condemn among the privileges of the clife, even things like art and science without which however he would never have the strength to renonnee either art or other privileges less essential to a country-gentleman. He could only suffer from this antinomy One ought to try to know what one wants And what one wants, one ought to do

It was not his circumstances alone—his wife and family—which were the the root-causes of Tolstov's indecision, although he made them out to be responsible for it. The real cause was in himself. He obstinately desired to claim as the whole truth what his instinct in his heart of hearts refused to acquiesce in. And his instinct was not at fault, for this truth was insufficient

mcomplete

The grave mistake of Tolstov (and of so many others) is to want to simplify human nature too much -- to tiv to make it uniform Every human being is, in reality, composed of several beings, or rather every human being moves on different planes simultane-He is a polyphony. The arguing wason which has become a sort of tyraunic mania with the civilized man would have it that we transmuted our rich complexity to a simple, clear, neat and abstract formula like a syllogism. This is possible only with the mediocre who, possessing little life-force suffer little from this dwarfing of the spirit But the men who are really living cannot lend themselves to this mutilation, without grave detriment to their whole organism Such a procedure is termed repression teloulement) in the language of psychoanalysis. The person is then unhappy the at-case, perpetually dissatisfied, a prev to the abilitations and despondencies.

the must not only not mutilate any of the great healthy impulses of one's nature, but one should on the contrary stimulate then levelopment. And first of all to learn to requaint oneself with the essential elements of one's nature, one must place above all.

(1) The social man, the man in society.

with his duties towards them and his moral needs

(2) The individual man,—with his private needs and spiritual duties

None of the two is less essential than the other. It is an abeliation of mind which prompts the sacrifice of the one at the altar of the other. It is simply a question of giving to each the place which is its due.

Be sure that your artistic gifts cannot but impose on you corresponding duties which are not less imperious than those of charity and brotherly service. For one has duties to do not only by one s contemporaries, one's neighbours, but also by the Man Sempiternal who, emerged out of the lower depths of animality, has ascended resolutely for centuries towards the light. And the price of this Eternal Man is his conquest of the spirit. All the efforts of the savant, the thinker, and the artist have joined hands in this herore campaign ('campaign in the sense of combat RR1 Whoever eludes this responsibility be it for a motive however noble, is a traitor to his essential duty

This is not to say that pure passa with this duty there cannot be any others. Far from it. His special task accomplished, man should every day find the time and the force for acquitting himself of his universal human duty. He should serve the spirit (that is, arr science and thought) and humanity parallel I say parallel and not on the same plane for the two activities are best ranged on two different planes. When the spirit is in quest of beauty or fruth no practical consideration should thrust itself " the former's free and disinterested research and when humanity has to be served the self must be for otten. The thirst for beauty and fruth should then for the time better yield place to the thrist for lose and active 2 adhess. Why set one in opposition to the other. Fuch has its proper place and one should endeavour to harmonise the two

Thus the problem resolves itself intofinding the proper equilibrium the fullharmony, where the diverse pares may meet. It is perhaps easier to solve for a musician than for anybody else for his basiness it is to resolve as says the old Periodius even the dissonances into the set heautiful harmony. And it is streasier for the Indian soal whose thereby, continues old, knows the secrets of the barmoniens wisdom far better than the wind of Furope can divine Everyone should in his turn seek for the equilibrium which is peculiar to him alone, out of the diverse elements. For everyone must be—as he is at bottom—a different choid. The interest of life consists in a life-long research after this realisation. And whoever realises this has not wasted his life maxmuch as he is what he ough to be. It may be said to be the very definition of joy on earth.

FAILURE OF THE INTERNATIONAL OPIUM CONFERENCE

By DR. SUDHINDRA BOSE

Lectures in Political Science, State University of lowar

A MERICA won the sincere gratitude of the entire Orient, especially of India, when its delegates at the recent International Opium Conference at Geneva, put up a brave fight to wipe out the netarious traffic in opium

The American delegation went to the Conference with a single purpose in view the complete suppression of the opinm traffic, without its and buts. This the United States delegates failed to accomplish because of the European political rivalry and commercial greed. The chief offender that blocked America was no other than our familiar, self-righteous England

I have before me an American cartoon, entitled "Pounds of Flesh". Uncle Sam is represented standing on one side of the fence, and on the other, representatives of European civilization carrying huge sacks of pound sterling labelled. "Opium Traffic Blood Money. Uncle Sam looks in amazement at the greedy money-grabbers and exclaims." Pardon me, gentlemen, but did some one call me Shylock?

The Opium Conference ended in a tasco, because America would not condescend to drive a bargain with those who put money profit above human welfare. For once the American position absolutely uninfluenced by economic consideration, was logically and morally sound. England, the professional moralist, stands revealed before the world as the chief bulwark of the infamous traffic in narcotics.

For two months the five American dele-

opium poison see the wickedness of the ways, but in vain At last the American delegation withdrew from the Conference in sheer disgust. Congressman Stephen G. Poito the chief of the American delegation in is using a memorandum to the President of the United States, explained.

Stephen G. Portor, who Headed the U.S. A Be nation to the International Opium Confer ac-

The joint resolution adopted by the Congressor the United States on May 15, 1921, authorizing out participation in the present conference, expression by simulated that the representatives of the United States shall sign no agreement which does not fulfil the conditions necessary for suppression of the narcotic drug traffic.

the narcotic drug traffic.

'Despite over two months of discussion and repeated adjournments, it now clearly appears that the nurpose for which the conference was called cannot be accomplished. The reports of the vations committees plainly indicate that there is no likelihood under present conditions that the mode from of raw opinin and coca leaves will be restricted to the medicinal and scientific needs of the world. In fact, the nature of the reservations show that no appreciable reduction in raw opining show that no appreciable reduction in raw opining is to be expected.

It is believed, by reason of the very small bulk the case of transportation with minimum itsk of detection, and the maneral game obtainable from their illiest handling such drugs and their dentatives can only be effectively controlled if production of raw opium and cota leaves from which they are obtained is strictly limited to medical and scientific purposes. This the conference is the conference of the conferenc

ence is unable to accomplish

The stand taken by the American debgation at the Opium Conference was fully supported by President Coolidge and Congress. It fought for the production of optum on a medical and scientific basis at demanded that the only way to bring this about wa to strike at the production of opium especially in countries which produce it to the sole purpose of smoking and chewing

America has put its case, squarely before the world with Japan, China, India that Butish India), Egypt, and all the other Eastern nations staunchly supporting it. The world knows now who is protecting and

Is the tuating the opium trade

"The key to the failure of the international poun conference", says a dispatch from Paris Universal Press, "was held in London at the Butish foreign office This was the nearly manimous opinion of delegates from forts pations to the international conference. These below dos all saw British delegates them india) block all agreement to limit the libert trade .All the governments that opposed he Imerican program took their cue from he British The British government must here we accept full responsibility - What inghilal responsibility is England's

Allowether twenty-eight countries supportd the American plan. England and some the other countries with colonies deriving bout in per cent revenue from the opium raffic were in opposition. An overwhelming lajority of the nations represented at the onlerence were, therefore, against opuum

but what could they do against the chief profiteers of the trade who were deaf to all reason and dead to all moral appeals? Without the co-operation of this determined, but perverse minerity the Conference was doomed to failure. Besides as the virtuous British pointed out, international practice required unanimity in Conferences of this kınd

The profiteering nations lailed to subordinate financial interests to ethical principles and humanitarian purposes. They do not intend, if they can help to abolish the system which helps to line their pockets with blood money. That is the naked truth. All else is smoke screen

Where was India at the International Opium Conference - India, as is well known, was 'represented by men with such strange Indian names as Campbell and Clayton These two fellows were the Indian delegates-more accurately the delegates of the India Office in London They served India in a grand manner, these "Indian delegates The worthy pan held that the prohibition of opium production in India would only stimulate production in China

John Campbell speaking in the name of India, severely condemned China's optum evil. He was in his holy zeal doubtless presuming a good deal upon the unholy ignorance of the Optum Conterence. The fact is that opium was practically unknown in China until the eighteenth century. Then the Fast India Company was formed which founded the commerce in opinin It is the East India Company that started to potso?

China with the drug

John Campbell imagined that the deep ites did not know how England took Hong-Kong from China, and how the beliefers country was forced at the point of the bayonet to sign a freat - permitting the stillment of an unlimited supply or opium. It would have been more to the part of Haratable John could tell it Ingland ever trod to stop opium as China has done so ich plowing under two million [a_1 and a_2 of closing its opium dens, and his - Λ_{1000} can tupees of opium Britain sats n billine paper "having debauched () her for not being virtues. If " jer, apor c∞tc¶ merc one exception, opinio is 1000 hell in the Par Fast of the Ju Hung since Asia met Futor

Meanwhile Fight a the right to . drug the Indian or pic, and moposes to

12 4 F2

suppress the poison only after China has succeeded in doing it effectively. India must wait on China's success at suppression

Mr. Campbell was so utterly discredited as the spoke-man of India that he was withdrawn, and Lord Robert Cecil, who had just then returned from the United States with \$25,000 prize (Rs 75,000) of Woodrow Wilson Foundation for his efforts toward international peace, was substituted. This peace prize was supposed to invest Lord Cecil with some occult pre-tige of high state-man-hip. but it did not prevent him from getting sharp thrusts from the rapiers of American delegates in the vicinity of his fifth 11b

The world is beginning to understand how sincere is England in its professed desire to end opium. As a striking evidence of the British method of mangurating a campaign against opium The Chicago Herald

and Evaminer, observes

"After the war the British Indian government signed a contract with the British Hong Kong government for another five years to supply opining in large monthly quantities. This was a knowledged in the House of Commons (Rev. C.F. Andrews) Great Britain has now established a morphine factory in the Straits Settlement. Opining has been pouring into Syria Siam, North Borneo Cevion and Assam. and Assam

Mesopotamia was awarded to Great Britain by the league of nations. Yet her list act upon assuming control was to establish an opium mono-assuming control was to establish an opium mono-poly there to sell opium for the purpose of taising revenue. Is it any wonder that the Unionals want to free themselves, from the dominating force of Western tyranny and exploitation.

And yet the bineaucratic crew spews forth its hes, and shouts that it is eventing every nerve to shut the narcotic drug out What nerve!

The British government declared that it was unwilling to pledge itself to the suppression of opium as it knew beforehand that such suppression was impossible. Impossible?

Did it ever honestly try?

Japan had the actual effrontery to come forward and offer the Conference a working model of the system that has been adopted in Formosa with excellent results. Japan's plan of dealing with opium in Formosa is this

"All 'addicts are registered and no newcomers are admitted to the lists. They are supplied with opium, as they need it, till they either die or are cured of the habit. This opium, is sold at so low a price that smuggling is unprograme immigrant from China is detained two days on arrival, to see if he has the habit, and if so he is arrival. The this system the number of smokers at the system the number of smokers.

1923. Of these more than 27,000 are over fifty tears old, and mortality among them is heavy. In a few more years all smoking in Formosa will automatically end, and the whole thing will be over

Formosa is close to China so there is a danger of opium being smuggled into the island. That did not and does not provent Japan from trying to suppress opium in Formosa. Did Europe accept this Japaness scheme? "Far from it" wrote Ellen La Motte "Impracticable, says Great Britain, with an eye to the opium revenues in her many bar Eastern colonies Money no object, of course but still the thing's impossible. Honesth, there were days at this conference when one needed rubbers because of the crocodic tears?

The International Opium conference, called under the auspices of the League of Nations held forth from November till the middle of February The fable of the mountain's labor is truly applicable to its work. The Conterence at Geneva was a complete failing it did nothing to suppress opium, e-moullar for vice and degeneracy

Sao-he Alfred Sze Chinese Minister to the ! who represented China in the Opinio Conference with Mine Sze

The League of Nations was to P universal and unbroken peace; but the holling European members of the have once more demonstrated that I'

el to protect themselves, and are quite mg te permit the exploitation of the ent Instead of peace, they are actively moting antagonism between the East and West. Very probably that is one of the sons why the League was never more

nedited in America than to-day

Lord Cocil, the winner of the peace prize Woodrow Wilson Foundation and the st noisy champion of the League of ions in the British Isles, called opiuming "an ago-old custom, generally harmless I sometimes actually beneficial." Was a Cocil in his right mind. If this is the ntil attitude which characterizes the branced," pro-leaguers and their cohorts, ague can now close its shutters and go ice without delay.

The California poet, Bret Harte once phed and the Chinese in a verse which is with all over the English-speaking world esaure of the California poet, which is sted by all Western politicians anxious him the flames of face-hatred is that I uld like to remark that for ways that are kind tricks that are vary, the heathen

Chinese is peculial. The toke is now on the West. As the Geneva Opium Conference was about to adjourn, Dr. Alfred Sze, a delegate from the land of "the heathen Chinese," stepped to the platform. Facing the Occidental people who persist in foisting upon the Orient the abominable opium traffic. Dr. Sze paraphrased the words of Bret. Harte and delivered this delt stroke.

"I would like to remark that for wavs that are dark and tricks that we vain, first

opium conference is peculiar

A masterpiece of nony!

The bungling of the International Conference with the Opium question has aroused a tidal wave of moral indignation in this country. Opium is doomed, it is bound to be outlawed. America is determined to secure. Complete suppression of the opium traffic regardless of China, on the ground that China's mability to control the traffic citild in no way justify its continuance by other. Powers. A relentless was on this great curse of humanity is now on

Down with the traffickers of the deadly

dine"

THE FUTURE OF CIVILIZATION

'The Decay and Resteration of Civilization the name of a book by Dr. Albert Schwert-1. translated and published by Messis d C Black in 1923 In Upsala, Oxford penhagen and Prague he expounded the meples of his philosophy in public lectures which it is said, he proved himself an mental thinker who has much of great lue to say and to give to our age Let us e what is the gist of his teaching he have read Rabindianath Ingote - Vatronalm will not need to be told that there is inside able similarity between the line of ought of this Alsatian thinker and the idian age

Civelexation, according to our author, consists in moral and material progress, the present case lies in the unusually ong emphasis laid on the moral side of the moral side o

Evaluation is ultimately ethical and if the ethical foundation be lacking then civilization collapses.

What is the characteristic of Indian as opposed to European ethical thought

I thick is the activity of man dire? It is on the incorrection of his own personally. In risely at is quite independent of which it has the of the inniverse is possible store optimistic. But its sphere of a four is contracted or widened a cooling of it appears in connection with a theory of the first or the second type.

The Indian theory of the universe is photound and etineal, but alleged to be pessionated. The theory of the universe which the intuition needs must be ethical as a off-mistic, that is to say it must a mistic, that is to say it must a mistic, that is to say it must a mistic and the aspossessing value in itself so is a tanse existence in so far as our radice of canadant if to its highest level of vib.

ing to the world and to be so will produce here

sults of real value. So long as we look on our existence in the world as meaningless, there is no point whatever in desiring to effect anything in the world in nothing of real value in the world is ever accomplished without enthusiasm and self-sacrifice".

This affirmative and optimistic view of the world characterises Western nations in general as apposed to the negative and pessimistic view which Dr Schweitzer attributes to Indian philosophy

In the determinist—pessimistic theory of the universe, as we have it in the thought of the Brahmans or of Schopenhauer, ethics has nothing whatever to do with the objective world. It aims solely at securing the self-perfection of the individual as this comes to pass in inner freedom and disconnection from the world and the sprit of the world.

But European civilization is on its last legs it is approaching dissolution for over-organisation has killed individuality, and "our generation, though so proud of its many achievements, no longer believes in the one thing which is all-ossential the spiritual advance of mankind

What are the characteristics of the present age 2 Overwork, want of leisure and selfcultivation, of mental concentration, of selfcollectedness, over-pecialization leading to development, not of the whole man, but of special faculties and loss of humanity, and superficiality. The demoralisation of the individual by the mass is fairly complete modern man is "susceptible, to an extent that is almost pathological, to the views which society and its organs of expression have put, ready made, into engulation "No one as yet clearly perceives what a condition of spiritual poverty is ours to day organisation of our public life and institutions has been developed at the expense of spiritual life. Personality and ideas are subordinated to institutions and the effect is felt in the repression of creative and spiritual activity Life has lost in richness and variety in the degree in which living organisations have been made to resemble perfected machines "An elaborate system of uncivilization' has in a word, been brought into being by what the author calls our "barbarian civilized states"

An instance of this is to be found in the attitude of the white towards the coloured races

"Our society has ceased to allow to all men as such, a human value and a human dignity: many sections of the human race has become merely raw material and property in human form And what an amount of insulting stuff, some decently yelled, some openly coarse, about the coloured races has made its appearance during the last decades,

and passed for truth and reason, in our colliterature and our parliaments, and to become element in general public opinion."

The historical sense has lost its cut objectivity. There is no suppression of judices springing from nationality and of the greatest learning is allied with strongest bias, and the highest position historical literature is occupied by we written with propagandist aims, "our sell-history books become regular culture-heds historical lies."

Nationalism is an ignoble patrion exaggerated till it has lost all meaning cult of patriotism as such is to be consider as barbatism, as the purposeless wars at it necessarily brings in its train prove mentality of our age concentrates all enthusiasm of which it is capable on the id of nationality, but engligation is an interof all men and of humanity as a whole a the noble kind of patriotism is that who aims at ends that are worthy of the whole mankind A national civilization is an i healthy phenomenon Modern nations s markets for their civilization, as they do ! then manufactures' National civilization is matter for propaganda and export, and th the world has inflicted on it a competiti civilizations and between between national these, civilization itself comes off badly

Anything valuable in a personality of a suctiful undertaking is attributed to some special evidence in the national character. Foreign subassimilated to be incapable of producing the subassimilar, and in most countries this values grown to such a height that the greatest left are no longer beyond its reach.

What is needed, therefore, is to inquit new spirit to the age, to bring about an inner change of character, to build on the spill not on what is merely external. For

The various civilized nations have all such the same depth of harbarism. What we have experienced, and are still experiencing, must stall convince us that the spirit is everything and the institutions count for very little. Our it initial are a failure because the spirit of burbarism is work in them.

We must, therefore, draw from the spin strength to create new conditions. Now life and ideals are necessary to bring about the regeneration, but the age gets at adeas it its personalities, and it is the individual is sonality which must be looked to as agent in the new movement.

"It is only an ethical movement which rescue us from the slough of barbarism and ethical comes into existence only in individual forms of the slough of the future of the slough of the

all be depends not on how near its organization to perfection but on the degrees of worthiness its individual members.'

"Civilization can only revive when there shall me into being in a number of individuals a new ne of mind independent of the one prevalent ne or mind independent of the one prevalent nong the crowd and in opposition to it, a tone of ind which will gradually win influence over the dective one, and in the end determine its matter."

Not in the stoic ideal of resignation, nor in 10 Indian ideal of renunciation, will salvation f the future be found. All the existing ivilizations of the world, the Indian and the hinese included, are, in the opinion of the uthor, expiring For one thing,

"Material and spiritual freedom are closely bound p with one another. Civilization pre-upposes ee men, for only by free men can it be thought ut and brought to realization"

In the second place.

The earth no longer has in reserve, as it had me gifted peoples as yet unused who can relieve s and take our place in some distant future as aders of the spiritual life. We already know all hose which the earth has to dispose of. There is iof one among them which is not already taking ach a part in our civilization that its spiritual ate is determined by our own. All of them, the ulted and the ungifted, the distant and the near are felt the influence of those forces of barbarsin which are at work among us. All of them are, like surselves, diseased, and only as we recover can they reover. It is not the civilization of a race, but hat of mankind, present and future alike, that we must give up as lost, if belief in a rebirth of our Williation is a vain thing.

Quietism, repunciation, a mere negation of life, cannot bring about the rebirth of civilization. But is it all well with the Western intoxication of activity, the will-toaction and progress? Dr. Schweitzer has serious qualms of conscionce on the subject, and his observations deserve to be quoted in full The substance of what he says is that the Western will-to-activity is a mere groping in the dark without aim and direction, without any serious attempt to find out the key to the interpretation of life and its purpose, in a word, without a theory of the universe to guide its blind activities. But let him speak for himself :-

"How little reflection is present in the Western Itow little reflection is present in the Western impulse to action becomes evident when this tries to square its ideas with those of the Far East. For thought in the Far East, has been constantly occupied in its search for the meaning of life, and forces us to consider the problem of the meaning of our own restlessness, the problem which we Westerners burks so persistently. We are utterly at a loss when we contamplate the ideas which are presented to us in Indian thought. We turn

away from the intellectual presumption which we find there. We are conscious of the unsatisfying and incomplete elements in the ideal of cessation from action. We feel instinctively that the will-to-progress is justified not only in its aspect as directed to the spiritual perfection of personality but also in that which looks towards the general and material

For ourselves we dare to allege that we adventurers, who take up an affirmative attitude toward the world and toward life, however great and however ghastly our mistakes may be can yet show not only greater material, but also greater spiritual and ethical contributions than can those who he under the ban of a theory of the universe characterised by cessation from action

After this: effusion of Western vanity, the learned doctor writes in a more chastened mood :

And yet, all the same, we cannot feel ourselves And yet, all the same, we cannot reet ourselves completely justified in the face of these strange Eastern theories. They have in them something full of nobility which retains its hold on us, even fascinates as. This tinge of nobility comes from the fact that these convictions are born of a search for a theory of the universe and for the meaning of life. With us, on the other hand, which instructs and minutes take the place of a activist instincts and impulses take the place of a theory of the universe. We have no theory affirming the world and life to oppose to the negative theory of these thinkers, nothought which has found a basis for an optimistic con-ception of existence to oppose to this other which has arrived at a pessionistic conception.

Presently the author launches into this characteristically Oriental vein of reflections

How much would already be accomplished towards our salvation from our present Greum-stances if only we would all give up three minutes every evening to gazing up into the in-finite world of the starry heavens and meditating on it or if in taking part in a funeral procession we would reflect on the engina of life and doubt instead of engaging in thoughtless conversation as we follow behind the coffin. The ideals bein of folly and suffering, of those who make public opinion and direct public events, would have no more power over men if they once began to reflect about eternity—and mortality existence and dissolution and thus—learnt to distinguish between true—and false standards, between those which possess real value and those which do not

Maitreys, the spouse of the vedic sage Yajnavalkya, and Nachiketa, could distinguish between that which conferred immortality and that which did not, between Sieya and Preya, the true and false standards, and the Indian theory of the universe is the product of a spiritual civilization in which they were the ideal figures. The Western mind, Lowever, can never rest satisfied with such an ideal, and the authors misgivings . lead him to make the following queries

"But is there not a danger in challenging men with this question about the meaning of life and in demanding that our pupilse to action should justify and clarify itself in such reflection as that of which we have spoken? Shall we not lose, in acceding to this demand, some irreplacable element of naive enthusiasm?"

Dr. Schweitzer's solution is that "it is not the quantity but the quality, of activity that really matters. What is needed is that our will-to-action should become conscious of itself and cease to work blindly", that is to say, it must work with an ethical and spiritual purpose, and not randomly, for merely to die in harness in no worthy aim, unless we treat our whole life as a preparation for death. We must strive to attain a theory of the universe, affirmative of the world and of life in which the impulse to action may find access of moral justification in a fresh strength and become capable of formulating and of acting on definite ideals of civilization. inspired by the spirit of true humanitarianism.

The activist tendencies of the West do not meet with our approval, just as the quietist tendencies of the East are unbearable

to the Western mind. Each tries to its own attitude towards life with an a value, and find fault with the other not the truth lie between the two, ar not the West profit by our quie much, as we by their activism? Dr. S zer's book shows that the message East has reached the thinkers of the and they are trying to profit by i not the West also its message to del us, which we should try to assimile profit by? In stressing the spiritual c tion of India, we must take care to avdanger of reducing the doctrine to cant, for thereby we will deceive no ourselves. Great and noble as is our tual heritage, wo shall gain immensel lose nothing if we succeed in approx the activism of the West and tackin our spirituality and evolve a higher hu on Indian soils.

Book

M. ROMAIN ROLLAND'S REPLY TO A SWISS MISSIONAR'

By C. F. ANDREWS

A Swiss Missionary, named M. Gaston V. Rosselet, who had been engaged in India in the South Canara district at a place called Mulki, has written to the Swiss Press, criticising Romain Rolland's own book on Mahatma Gandin and charging him with inaccuracies. Above all he blames him for not taking count of the work done by the Y. M. C. A. and Christian missionares. The letter of the Swiss missionary is revealing, it seems to show an attempt to depreciate, which Romain Rolland notices in his reply My friend, M. Fernand Benoit, of Santiniketan, has translated both the criticism and the reply. In writing to me, M. Romain Rolland asked me to give .my own statement also, and I have included at the end the reply, which I sent to him for publication in Europe.

C. F. Andrews]

M. Gaston V. Rosselet's Letter.

Mr. Romain Rolland has been insufficiently informed. A single glauce at his bibliography, his short introduction, and his marginal notes, would suffice to show that all his sources of information proceed either from Gandhir himself or else his friends and admirers. Now Gandki is great enough,—it seems to

criticism If the author of 'Mahatma (had taken notice of the articles from t of the Moderate party in India, he wol have forgotten to mention, in his re the Prince of Wales's reception, (p. 14 Gandhi, in order to keep the people from the festival had organised on th day a great auto-da-fe of European From this 'Swadeshi' festival, the crowd destroy tramcars, to attack Christian and Parsi ladies, and to indi many other forms of violence. If had been told, one could much better stand Gandhi's humiliation and his undertaken because his 'Swadeshi' finstead of purifying, had fostered ha men's hearts.

Why does Romain Rolland not spethis book of the great scene of reconcestive things and Musalmans, on the hand and Parsis and Christians, on the in which a Christian of great distinction. Paul, the General Secretary of the Yellayed such a predominant part?

)n p. 140, we hear of a young Brahmin, became a sweeper in order to live ng the pariahs. I know the story. The ng man in question was no longer a min, but a Christian. It was after his version, that he became a sweeper, in r to serve the pariahs. Why are all these

ils passed over in silence?

Why, again, after enumerating ramme of action in the Non-Co-operation ement, does he go on to the description he results, and omit all the items which ed, thus giving the impression that the ers were successful? The paragraph, on 3 73. begins with a sweeping statement, ndhi's example was followed immediately" nay have been followed in other provinces certainly not in the Madras Presidency would like to take you through the ets of Madras and make you read the ionific titles, which many Hindus and salmans have inscribed on their villaa would be convinced that the abandonment titles was not general by any means second item of the programme proved adure as well, all the Government loans ng over-subscribed. About the third and uth items I can say this, that in South nara I do not know a single tribunal, 100l, or college, which has been abandoned e hoycott of councils, the refusal patterpate in official functions, the resal to accept civil and military posts, are t mentioned, because one cannot possibly that they had any success.

As for the last episode of the programme the Swadoshi campaign,—what a disgraceful ing it was! Whenever Mahatma Gandhi me to visit a place, everybody dressed in laddar but as soon as his back was irned, more than two thirds returned to leir imported or manufactured clothes hat an amount of cheating there was, in e sale of the so-called swadeshi clothes of ap! It went so far, that any merchant w-a-days, wishing to frighten away a stomer, could do so by simply offering him

mo swadeshi article!

The author, M. Romain Rolland, speaks th much contempt of the Chelmsfordontagn reforms; but he does not say that the Madras Presidency the scheme was copted roadily by a notable portion of the pulation. I could give many proofs of native Christians, Catholics and Protest-

ants, had assembled in Mangalore to celebrate Empire Day They represented a third of the population of the town. In the opening speech, M. T. A. Saldana said, "We have reached a high degree of civic development, thanks to the Government of India Act of 1919, and we may get more by showing ourselves worthy of full selfgovernment, which will be given to us some day or other" The festival ended with the issue of a message of lovalty to the Government. Such new-paper articles are numerous, but it is evident that you will not find them in the columns of the periodicals, whose only task is

to disparage Government

Let us now speak of the repressions and That there should violences of Government have been regrettable acts, errors of judgment, nobody thinks of denying. But it is false to say that violence has been general I shall quote, as a proof, one of the leading articles of the Y M C A newspaper, "The Young Men of India". One of the best informed men, K T Paul, the great patriot already mentioned, writes as follows a unique fact in the history of the world to see two forces, like the British Power and the Revolutionary Movement of Gandhi, fight each other with the firm resolution of never The Government is appealing to violence faithful to its resolution in spite of the cries of alarm raised by many political newspapers, which see danger in the air and entreat the Government to start action against the To the more uradepts of non-cooperation gent requests, the Government invariably answers "You must judge a movement by its Leave non-cooperation some time to fruits bear its one fruit, so that every one may judge what its fruits are like . And this is why, after waiting a long time, the Government of India could arrest Gandhi without causing any unrest. On the contrary, there was something like a sigh of relief at the news of his arrest, because in spite of all, Gandhi had no practical programme, and at the very time of his arrest Gandhi could no longer control the forces he had set loose

Mahatma Gandhi not only lacked a macticable programme in politics, but also in social matters. Whoever wants to ealise this, need only think for a moment of the femedy he proposes for struggling against famines (p 130 of R R's book) "Charke means But let it suffice to equote a passage has for millions of moribunds "-he says, m the 'Madras Mail' of May 28: 1924. What a Utopia I know the case passage of the control o of weavers in Southern India, and I

know that neither a man nor a woman can live by playing their spinning-whoel, because a man earns 3/4 to 11/4 annas a day and a woman half to one anna. Such a gain will not help to solve the problem of famine and misery in India. I prefer the Government programme, which tries to improve agriculture such as the culture of sugar-cane and cocoanut, by opening schools of agriculture, model farms, stations for observation and experimentation for the culture of cocoanut trees, sugarcano, fruit trees, etc. I also think of all the co-operative associations founded and encouraged, and now controlled by Government It is owing to these co-operative associations, that in South Kanara, for instance, thousands of people were saved from famine. It was immediately after the war, and the price of rice had risen alarmingly The Government then fixed the sale price to prevent it from rising more. But the owners refused to sell their stocks at the prices proposed by Government: so Government ordered them to deliver over a portion of their stock. The owners then handed over their stock of rice, which soon disappeared. Then Government had to import rice and sold it at a pince below the one formerly proposed. Later on, the cocperative associations adjusted and realised the price.

Another remark before I close In p. 142 and 143 it is said that "the A.I.C.C. stimulates the campaign against alcoholism, while governliquor sellers". ment protects the The Government is only opposed to the method used by the non-co-operators, while it gives its help each time a fight against alcoholism is going on. I shall only quote, as a proof of this, the experiments made by Miss Campbell, a Canadian Missionary. Through her tenacious efforts, she succeeded in bringing the population of a big district to ask the Government to close all its liquor-shops, and the Government did close all of them, one after another. There would be still many remarks to make about many passages of Rolland's book, but I will not over-tax your attention. What precedes will suffice to show you that I was right when I said that the author of Mahatma Gandhi's biography was badly informed. Those who have presented Gandhi to Romain Rolland wanted to present him as a counterpart of Christ. Therefore it was necessary to run swiftly over certain dotails and overlook others.

whom I believe to be very sincere and with a great ideal. I expect much from all the more so, that I see him being give by the extremists. Now that he is alon will be able to surround himself with who understand him, without betraying ideal, as occurred when he was the dem of one party.

Gaston V. Rosselet (Swiss Missionary

The answer of Rolland to Gasto Rosselet, late missionary at Mulki, : Kanara

"All I wanted was, to make El acquainted with a great spiritual move and a great man. If I am not mistake European missionary, since J. J. Deautiful and forgotten book, written in Transval in 1909, has presented him to in a worthy manner. Yet it should have their duty to do so long ago. And, in turn, I shall ask M. Rosselet, "Why those Christians passed in silence over career of the greatest Christian; talthe he is one by the spirit only, and not baptism?"

"My book never pretended to be a sync of all the religious and social movements modern India. I had no reason what to speak of the Y. M. C. A which is posse enough to look after itself and never negl to do so Of course, M. Paul is worth all respect. He also deserves a special st But each thing in its time. I may poss continue the series of these Indian skele My book has been revised by different line friends of mine and by one of the princ leaders of the Swaraj party—Laipat Rat II found it true on the whole. They poin out to me a few mistakes of detail. such the one-also pointed out by M. Rossell about the half-failure of the abandons of titles and dignities, by order of Committee of Non-cooperators. The fications they indicated will be taken account in my further editions of the They will very slightly alter my text and at all my conclusions.

Gandhi's biography was use who have presented olland wanted to present rt of Christ. Therefore run swiftly over certain others.

"T must nevertheless,"

"For the rest, Mr Gaston V. Remarks the champion of makes himself, it seems, the champion of the follow on this ground. I should have too means and I have little time just now what "is delayed is not lost. I should have too means and the follow of the follow of the follow on this ground. I should have too means and the follow of the foll

da-fe of foreign clothes. I cannot see why M Rosselet gives us to understand that I passed the matter over in silence I laid great emphasis (pp. 83-5) on C. F Andrews's nathetic exhortations and also specially on the opposition between Tagore and Gandhi I myself join my own regrets to those of

Andrews.

"(2) The 'charka' appears to M Rosselet as a ridiculous economic tool. It might be so, if Mahatma Gandhi advocated it as the only means of livelihood for the Indian villager But Gandhi never said such a thing said that the 'charka' would villager to add something to his meagre carnings and to spare on his clothing. In the number of 'Young India' of January \$2, 1925. the account of a large popular meeting in Viddhi is given. An old man of sixty tells Gandhi that he is now spinning daily after his hard day's work in the fields, not because of his faith in him, but simply because I spin for myself. I produce my own yarn, I weave my own clothes and those of my family Thus I can spare The home industry of the charka existed almost everywhere in India before the English came. The English have destroyed it. Gandhi ie-establishes it. It is not a medieval return to a forgotten and obsolete work. It is a natural, practical and immediate means of reducing the expenses while striking the foreign industries which come to rob India of sums that are consumed abroad.*

"For one of the greatest guevances of India against England is the following --All the conquerors that succeeded one another on Indian ground would-after committing carlier damages-settle down, become Indians. consume on the spot the riches they extorted In this way a generation might suffer, but India was not impaired Whereas, the English rule makes England live at the expense of India and undermines the latter

(3) M. Rosselet speaks about the co-operative associations created by fievernment They do exist. But I consulted my Indian friends. All independent Indians, and even Englishmen as well informed as the Head of the Agricultural School of Sriniketan, a branch of Santiniketan, agree in declaring that those co-operative associations are not based on a real spirit of mutual help: Should the Govern ment withdraw its pecuniary help, they would

at once disappear

"(1) Finally, to hear that "the English Government gave its help, whenever there was a case of struggling against alcoholism" will astonish my Indian friends extremely and I leave it to them to answer. But I need not wait for their answer to know that in these very days the English Government 1 imposing the poison of opium upon India while hypocritically pretending that it r simply fulfilling the wishes of the Indian people. And it stops its ears to their indig nant protests. But it does not succeed it preventing us from hearing. These protest poignantiv manifest themselves in the India press and also in the liberal English press such as the 'Manchester Guardian

February, 1925 Romain Rolland P > Let me add that Europeans, wh want to follow by themselves the Gandhi-Movement, had better read the weekly "Youn India, whose address I am giving

MR ASDREWS STATEMENT

I have just seen M Gaston V Rosselet' statement about Mahatma Gandhi published in "I e Nouvelle Essor of Geneva, Feb. 29 1925 It reveals in many parts an ignorance of his subject

I will take in my reply only one aspec of his criticism on which, perhaps, I may b now regarded as an expert, namely, the non co-operation campaign against drink and drug and its after-effects. Probably M. Rosselet i not aware of the fact that it was Mr W. F Johnson himself, an entirely impartial witneswho declared after his tour in India that Mi Gandhi had done more the one year than al the other temperance workers put together This evidence should be taken into account it judging the whole movement of non-co-operation

Miss Campbell whom M Rosselet mentions is my own friend and fellow-worker Sin would be greatly grieved to find her own work placed in contrast to that of Mahatmi Gandhi on the question of drink and drugs She herself would probably agree with Mi Johnson's verdiet. When she was with me at Santiniketan she told me about the disgrace of the opings sales in the poverty-stricken districts of Orissa, new sae had seen men and women struggling and almost fighting to purchase the Government monopoly opiur before the shops closed. The women who use

^{*} The khaddar policy has also, for tlandh, the value of a tactical experiment. As he wrote in a recent article, he wants to teach a disciplined people how to obey an order of pacific molalisation Pacific, but not inoffensive; the violence of the attacks that come from the English side show well that he has hit at the night place.

it to 'dope' their babies were the most eager to get it. Miss Campbell brought a Government officer to see the disgraceful sight. All he said was—"Please, Miss Campbell, stay a little longer, so as to organise some mother's meetings to persuade the mothers not to give their babies opium!"

Miss Campbell replied: "Why does not the Government stop the sale of it? Why does Government go on realising revenue out of

this poison?"

In Assam the consumption of Government opium by the Assamese race is nearly 24 times tu excess of that regarded as legitimate medicinal consumption by the League of Nations. Before the great temperance moveof Non-cooperation and Mahatma Gandhi's visit to Assam the opium consumption in those districts was more than forty times in excess. Yet his one visit, with the electrical effect of his personality, brought down the consumption of opium by 42 per cent in six months. Before his visit, for nearly 40 years there had been no appreciable reduction. But after his visit the reducation at once took place in the astonishing manner I have mentioned. Yet in spite of this remarkable moral progress the Government imprisoned over 800 non-cooperators who were doing peaceable temperance work in the Assamese districts. I know personally very many of those workers and have worked with them. I can say unhesitatingly that these Assamese non-cooperators whom I know and who suffered imprisonment offered no violence at all. They were not that kind of persons. But the Government, which received 40 per cent of its income from excise suddenly saw its revenue going down so fast that it was almost in a panic. This was, I believe, one of the true reasons for the bitter prosecution of non-cooperators which followed. The non-cooperators offered resistance. They did not defend themselves The principle of 'noblesse oblige' ought to have made the Government more chivalrous than to imprison inoffensive and peaceful temperance workers. I can, I repeat, vouch for it personally that my own friends at least, who were imprisoned for doing so were nonviolent in thought and word and deed.

Mr. Gaston V. Rosselet appears to think that the Government of India has conly to be approached in order to get passed any temperance reform that is needed. But let me some to some further facts. I have already

workers in Assam. That was not all 1921 the Rev. J. Nicholls Roy, a Christia missionary, a strong cooperator, brought fo ward a resolution in the Assam Legislatu Council proposing that the sales of opium Assam should be reduced by 10 per cent no annum, until opium was prohibited excen for medicinal use. This resolution was carried by an overwhelming majority. The only persons who voted against it were the Government officials, some Europeans and few title-holders. The votes were 26 against 13. Thus the Government vote was only half of the non-official voto. Yet the Government, entrenched in its executive powers, has since then refused to put into action the will of the Legislative Council

A few weeks ago another resolution wa passed, again with an overwhelming majority to the same effect. My friends in Assam have told me that a private member's Bill will also be put forward. But even if this a passed it is quite possible that the Government may not give its assent to the bill and

make it law.

At the present time, I am engaged a preparing a report for the All-India Nationa Congress of a commission held last year a Assam and now very nearly completed. The findings of the commission show very clearly the criminal neglect of the Assam Government in allowing optum consumption to drift on decade after decade, by which one of the noblest races in India, the Assamese, has become ruined. If revenue had not been one-half of the Government's own motto for excise, the responsible official could never have been content with such a policy.

In Great Britian the utmost security and protection against opium is afforded. But II India a man or a woman can go into a sho and purchase sufficient opium to commi suicide. I took up a Bombay paper this morning and saw a common piece of new that a poor woman had committed suicide h opium poisoning. Side by side with it wa the report of a death of a baby from an ovel dose of opium. The number of such children whose deaths are never even reported nin be quite large. Only a few weeks ago ti Bombay, lat wife of the Governor of Wilson called attention to the fact that in recent year the infant, mortality in Bombi stated that she had been told by her o'

tors that 98 per cent of the mothers who is in the factories of Bombay regularly the their children with optum before going to work. From my own experience I can firm this statement of the wife of the vernor For I have seen little babies, with ar shrank, old, wizened faces, lying drugged the opium on the floors of chawls of ombay.

Mr Gaston V. Rosselet as a missionary, all recognize that the number 666 is the umber of the Beast in the Apocalypse 1 would ask him to consider whether such an pum traffic from which the Government

draws its revenue is not devilish

But I will relate in conclusion one simple fact which might reasonably, apart from all else, prove my point and put; an end to the whole controversy. In August 1921, when the non-cooperation movement was at its height Mahatma Gandhi offered at once to begin once more to co-operate with the Government of India, if they were ready to follow popular Indian opinion in two ters—

i) The abolition of alcohol and optum

(ii) The promotion of hand-pinning and

weaving But though the offer was made and the right hand of triendship was held out on these conditions it has never been accepted. The reason has been partly innancial and partly a question of prestige. The Conveniment of British India have been too proud intherto to listen to the offer of Mahatma Gandhi, when he has given those simple conditions.

I have not taken up other subjects because it would make this letter too long but I cannot let one thing passumoticed. We Rosselet has again and again mentioned Mr. K. T. Paul an Indian Christian. Mr. Paul is an intimate friend of mine and nothing would make him more sad that to have his name used in this connexion. I know how he has read with delight M. Romain Rolland's book and that he is deeply thankful for the author's interpretation of Mahatma Gandin. For both he and Dr. Datta, another Indian Christian, believe that Mahatma. Gandin is the greatest living exponent in India of the message of the Cross,—which he procless rather than preaches.

Yours etc.

C F Andrens

MAGADHA

By PANDIT VIDHUSEKHARA SASTRI

(IMPLE facts mentioned throughout our hterature from the Vedas downwards make it perfectly clear that the country called lagadha is a very ancient one There is ardly any evidence against its identification ith the land of the peoples called Kikatas, ast referred to in the Rigveda which, accordng to Sudhara, the commentator of the Bhaparata Purana (1. 3. 24), is the region of Saya (Gaya-pradesa). The very name Kikatappears to show, as Yaska would derive and Aplain if, * that the people of that country here of little repute. According to him the and was a dwelling-place of non-Aryans man yadesa). This dislike of Megadhas found

Nirukta VI. 32: "kim kritah" what have they one? "kim kriyabbih" "what is the use of rites? hilologically it is quite possible that the word high might have been derived from kim kritah to Prakritism which is found in several cases in the RV.

clear expression also in post-Rigyedic works, and it ian so high that later on Arvan people were enjoined by an author of a Dharma-sastra not to enter there. But why so? Scholars have been and are still discussing the question Different views are expressed. I may, however, give expression to my own belief that it is not entirely due to the influence of Jimson and Buddhism, though they might have contributed to it to a great extent in later days. For the aversion to Magadhas is found not only in the contemporary and post-Junist or post-Buddhist works, but also in those which preceded them. It is also to be considered that these two religious were not confined to the Magadhas only The activities of their followers were found equally inside and outside Magadha in pre-Asokan days. And so the dislike for Magadhas in the earliest period must be accounted for in some other way, and this leads us to the only

possible conclusion that, as Yaska has told us, it was due to the fact that the country still remained a non-Aryan one. Be that as it may, even by supposing the Magadhas in the earliest days to have been a barbarian people, we have still much reason to be proud of them. Change is inevitable. Every thing changes every moment. Such is nature and nature cannot be thwarted Change is the sign of life. So there came a favourable change among the Magadhas showing thereby They evolved what they that they had life. had hidden in the innermost recesses of their mind, and afterwards achieved an evalted position which no other part of India has ever been able to do The country which was once non-Aryan gradually began to become Aryanized long before Jinism and Buddhism were preached. And we have strong reasons for believing it to be so, even if one does not take into account the evidence from the Mahabharata, which can in no way be ignored The highly civilized condition of the Kasis and Videhas (the older form being Videghas) need not be mentioned to those who are acquainted with Vedic literature view of the geographical position of the Magadhas, which are in so much close connection on the west with the Kasis and on the north with the Videhas, it cannot be thought that they were still barbarian in their times

Jinism and Buddhism, though with some marked differences, are in reality the two main branches of the same religious current of India running through the Upanisads. And the fact that they found their rich soil in the Magadhas show that the people were already adequately fit for understanding them,—and specially Buddhism, which, as the Buddha himself said, was very difficult to grasp

(duddasa).

Starting from this epoch and coming up to the time of the Pala dynasty, we have actual documentary evidence which goes to show the marvellous conditions of Magadhas in every direction-political, religious, educational, social, and so forth. all, one thing is most striking. It is here in Magadha that India had for the first time the opportunity of expanding herself beyond her geographical boundaries, both politically and religiously. We all know about the relation between Chandragupta and Scienkus Nikator, and between Asoka and the fire Greek kings, Antiochus, etc., mentioned in one of his rock edicts. Buddhist missionaries were sent out · to fer distant countries, and they crossed

seas and mountains even at the risk of the lives. They were thereby the forerunners the later Brahmanical colonists in Further India. † Intellectual and religious links wen also established with different countries, ve Central Asia, Tibet, China, Korea, Mongol and Japan on one side, and Ceylon and Fo ther India on the other. And that was it way in which India was able to carry to the lands the message of peace together with he literature, art, music, sculpture and medicin India could not then keep contains within herself; so immense was her treasur at that time. She gradually began to expand 1 every direction, sending out what she ha to give.

This was mainly due to Buddhism and t the Buddhist Universities in Magadha, whic attracted students even from far-off land at a time when travelling was dangerous a

almost every stop

In this connection we should particular remember Tibet and China, considering what, great treasure they have been keeping for man kind and especially for India in return for wha they received from her. The aucient univer sities in Magadha were the centre of Buddhist Students came here from these ic studies two countries in large numbers, and scholar also went there from here in equally great numbers They studied each other's language and jointly or independently, these Indian and Chinese scholars translated Tibetan. hundreds of Sanskrit books not only about Buddhism but also about secular subjects in Tibetan, or Chinese, or into both The Sanskrit original of most of these translations is lost for ever, and it is only through these two languages that we may have access to them. Therefore, it goes without saying the unless these works are studied with care and attention, we can hardly understand the reinstory of our own country The loss of mor than four thousand works is not a me matter. We are, therefore, thankful to of Tibetan and Chinese friends for still preset ing a large number, though not all, of them

To capture and conquer a country by phical force is a fact known to all. India however, shown to the world, through her per of Magadha, where Buddhism had its be how to conquer a country by matter "let Such is the wonderful land of the Magadh

[†] Why were the Jinists confined only to a part of India even though living side by side the Buddhists? Why could not they carry faith outside India?

CENTRAL ASIAN DISCOVERIES

By PROBHATKUMAR MUKHERJI

Labrarian, Visvabharati, Santiniketan.

FIRST ANNOUNCEMENT OF CENTRAL ASIAN MSS.

CENTRAL Asia has loomed large before the public only very recently thirty-five years ago that in an ordinary meeting of the Asiatic Society of Bengal on 5 Nov., 1890, Colonel Waterhouse exhibited a birch-bark manuscript and some coins, found by Lieutenant Bower in Kashgar. The following note by Lieut. Bower accompanied the exhibit: "While at Kuchar a man offered to show me a subterranean town, provided I would go there in the middle of the night, as he was frightened at getting into trouble with the Chinese, if it was known that he had taken a European there The same man procured me a packet of old anuscripts written on birch-bark. They had en dug out of the foot of one of the curious derections of which several are to be found the Kuchar district; there is also one in ie north bank of the river at Kashgar he one out of which the manuscripts were rocured is just outside the subterranean "ty * * * I believe the ruins and manuscripts obe Buddhist."

Col Waterhouse, who exhibited these manuscripts could not say anything further than this about the new find. Babu Saratchandra Das, the great Bengali Tibetan scholar and explorer, failed to decipher it and wrote that he believed that this MS is only a remnant of the Indo-Tartar Sanskrit, which was current in Khotan and Khasgar during the early centuries after Christ

It was however decided by the authorities of the Asiatic Society that a facsimile of two leaves would be reproduced in heliogravure, in the hope that some other member might be able to decipher it or throw some light upon its age and origin.

This account appears to have been reprinted in the Bombay Gazette, a copy of which fell into the hands of Dr. A. F. R. Hoernle, in Aden on his. way out to India, in March, 1891. It was the first notice he had of this discovery. Major Cumberland

whose companion Lieut Bower had been on his travels, was a fellow passenger of Dr Hoernle, and he gave him corroborative information On reaching Calcutta he found that the MSS were in possession of Col. Waterhouse, who at once gave them to this worthy person for examination

1890 -Bower MS

In a meeting of the Asiatic Society of Bengal, held on the 1st April, 1891, Dr. Hoeinle submitted a preliminary note on the Birch-bank MSS (Proceedings of the Asiatic Society, 1891, pp 54-65) In this Survey he gave a few hints on the book, which were presumably Sanskrit, the Script and the Language of the MSS, which eventually considerable interest in learned evoked The description of the MSS will, however be found at the end of this study. These MSS, henceforward, came to be known as the "Bower Manuscript' in honour of the discoverer, Mr Bowei The antiquity of the Indian MSS manuscript was noteworthy according to the western standard, are relatively young Prof Lueders in his paper "Uber die litterarischen Funde in Ust-turkestan ', savs, 'the destructive effect of climate and the pest of insects require their continual renovation The oldest MSS, preserved in Nepal on palm-leaves, date back to the 11th century Only two palm-leaves were hitherto known which had crossed the Indian border in 609 and reached Japan through China They are preserved in the celebrated monastery of Hornan as venerable relies The Bower MS, however, was a considerable and complete one. It was written in Gupta character, and hence had come undoubtedly from North-West India, and at the latest from the fifth century Later investigations have proved that it must date from the second (Traff. by G. half of the fourth century Nariman-Sanskrit Buddhism).

1891 PETROVSKI MSS OF BUSSIA

Fublication of these facts about the Bower,

MS and the Central Asian Scripts, created

great sensation among the learned world, and the possibility of such a discovery incited further research. Russian scholars had been working on Tibetan language and literature for a long time, so that the Russian Imperial Archeological Society was the first in the field of exploration. The Russian Consul-General M. Petrovski of Kashgar was at once ordered to look out for such MSS. The result was the "Petrovski Collection of MSS". which was utilised by Dr. Serge Oldenberg and subsequently published in the Records of the Oriental Transactions of the Imperial Russian Archeological Society, Vol. VIII, p. 81 ff. The British Government were not inactive and commissioned the Political Agents in Kashmir, Ladak and Kashgar to discover more manuscripts

1891.-WEBER MSS

The first lot of manuscripts that reached Dr Hoernle after the Bower MS was those received from Mr Weber. Reverend F Weber was a Morovian missionary in Leh ne Ladak. He was known among the prople there as a collector of Tibetan cur - Au Afghan merchant, hoping to discover barred treasure, excavated a burned house in ruin-, in Kugiar and found a lot of old MSS, nine in number, consisting of 76 leaves The manuscripts were taken to Mr Weber by a person, who had received these from the Afghan finder. The place of discovery—Kuigar is about 60 miles south of Yarkand, and situated between Leh and Yarkand. It hes just within the borders of Chinese Turkestan.

PECULIARITY OF C. A. MSS

Dr. Hoernle while examining these MSS. observed a peculiarity of the leaves He had observed that the Bower manuscripts were pierced by one hole, which is not in the middle of the board, but towards one side. The Weber MSS. as well as the Petrovski MSS. had the same peculiarity Ordinarily Indian manuscripts are either pierced in the centre or have two holes. This practice of using a one-sided hole, Dr. Hoernle decidedly said, would seem to be a mark by which a manuscript may be distinguished, as coming from Central Asia. The description of the manuscripts known as "the Weber MSS." was published by Dr. Hoernle in the Journal of the Asiatic Society of Bengal (Vol. LXII, 1893, p. 1-40).

1893.-MACARTNEY MSS.

T- Kachelly Mr. Macartney, the British

got a bundle of MSS., from Tsing, the man of Chinese Foreign Commerce at Kashgar, who was probably working as an intermedian in this work of manuscript collection in 1894 Lew. the Amban (magistrate) of Kucher had given these manuscripts to Tsing These were found by Lew under a mould 100 ft high. He worked there for two months with some men and got some "torn" leaves with writing on them". These he forwarded to Tsing, who in turn gave them to Mr Macartner Mr. Macartney in turn sont them to Su A Talbot, the British Resident in Kashmir The latter forwarded them to the Foreign Office in Simla, which made them over finally 6 Dr. Hoernle in April, 1895 The manuscrint passed through second hands before the reached the hands of the scholar

After the find of the Bower MSS in Dildar Khan obtained possession of the who of the moiety of the Kuchar flud, which probably divided into three portions of portion coming into the hand of Mr Web another of Mr Macartney and the third the Russian consul The material of the agments of Macartney MSS., is of the underent kinds, palm leaf, birch-bank ; paper There are nine collections which h 145 fragmentary pieces Dr Hoernle th on paleographical grounds that some of manuscripts of the Macartney collection written about 370 A D, and prob earlier

1895 - CODFREY MSS.

In Nov. 1895. Dr. Hoerale received fourth instalment of Central Asian manusc through the Foreign Office at Simla other three being the (1) Bower (2) V (3) Macartney MSS, previously ment Mr. A Pedlar, as President of the Society of Bengal, in the course of a Presidential Address delivered on the Feb 1896, spoke about the new tur the first time (p. 36). They were secu Captain S. H. Godfrey, British Joint-Co sioner of Ladak, and for that reason have been named "Godfrey Manuscript Godfrey wrote to Dr. Hoernle that th were dug up near Kuchar. The me who had given them to him were unwi give their names or any clue to their for fear of causing displeasure to the authorities, who did not regard the tions of old ruins with favour. They that archeological interest was m protext, and that a search for buried was their main object. When they

Dr. Hoernle's hands they were a mass of torn pieces of papers. It was due to his extraordinary patience and the skill of his wife that these pieces were deciphered.

The linguistic notices made by Dr. Hoernle in India, the paleographical and philological investigations by Prof Buehler about these MSS, and the researches of Dr. Oldenberg in the Journal of the Imperial Russian Archeological Society (vols. 7, 8) about the Petrovski MSS, and the discussion that followed them, created great interest and enthusuasm in Europe

1807 - SENART ON DUTRETH DE RIESS MAS

In August 1897 Dr Hoernle published his paper on the "Three Further Collections of Ancient Manuscripts from Central Asia (J A S. B. 1897, pp 213-260), in Calcutta and in Sep. 9, 1897, just a month hence, another remarkable announcement was made at the International Congress of Orientalists held at Paris, by the great French savant M Emile Senart. It was an ancient birchbark MS, containing a portion of the Dhammanada written in Kharosthi character This MS was discovered by the French traveller Dutieurl de Rhins, who had found three MSS in khotan in 1892, while he was travelling in Central Asia. M Senart proposed at the Congress that this MS should be named after that intrepid explorer, who had since been killed in those wild parts and was a martyr to the cause of science Sciart communication created a sensation in the Arvan Section of the Oriental Congress The MS was in Kharosthi script, which till then had been known only from inscriptions of the North-Western borders of India This Ms consisted merely of fragments, but there was sufficient evidence to show that it was a recension of the Dhammapada, differing comewhat from the version at present current The language was a Prakrit or a Pali, but was more allied to the Pali of Asoka Inscriptions than that to that of the classical books, and exactly agreed with no known variety of Pali Prof. S. Oldenberg announced in the same meeting that some fragments of the said Dhammapada had reached what was then known as St. Petersburg. In 1898 M Senart published a critical edition of the Unammapada with photogravures in the Journal Asiatique.*

Journal Asiatique 1808: Proceedings of the Asiatic Society of Bengal 4897, Nov., p. 136. Prairit Dhammapada, ed. by Dr. Benimadhava, Barna and Prof. Sailendra Nath Migna—Calcutta Universit.

Exeller Traveller in Cornal Asia, 1898 — Process First A Red Gold at Expedition

The impetus given by some chance discorrespond manuscripts at Kuchar gave rise to sistematic research These discoveries in the desert entires induced Dr. M. Aurel Stein to form the project of his explorations, of which we shall presently hear. But before we describe the sistematic work, we shall briefly narrate the adventures and proneer field-work of explorers, who preceded Stein. The first European to take any notice of the runs of Central Asia and Eastern Turkesthan, was Regel, who contributed a series of articles on the hetrogeneous ruins, which he thought to be Grecian ("Petermanns Mitteilungen 1879 Heft 10,11 1880, Heft 1881. Heft 10) Grun Gizimajlo, a Russian traveller, described the Turian Rums (pp. 278-380) in his book in Russian (2 vols St Petersburg' A Finnish Exploring Expedition was sent under Otto Donner in 1898 and his book 'Resa i Zentral-Asien' (Helsingfors, 1901) was the result

1898 -Russia - Fact American at Exposition

But the real scientific Archeological Expedition was first sent by the Russian Government under Dr Klementz, who se to work at Turfan in Fastern Turkestan in 1898 in account was published in the Imperial scientific Academy of St. Petersburg in 1890 Dr Klementz was followed by the other Russian Academicians, Raddoff and Salemann The great Swedish traveller Sven Hedin's name must not be forgotten as a path-finder

SILINS EXPORATION 1900-1901

The British Government were not idle and they found in M Aurel Stein the most energetic man to take up the field-work This born traveller, explorer and scholar took up the work and since the beginning of the twentieth century has been exploring in the unhospitable desert tracts of Central Asia Stein worked out a detailed plan of the expedition with Di Hoeinle and submitted the same to the India Government for -anction and a-istance The late Lord Curron one of the most calcured Viceroys of India who took lively interest in history and antiomities reagily helped Dr a Stein in undertaking his work the Government of Ind a pared Rs 11 000 to the estimated cost of exploration besides the services of Dr. Stem who was in the Imperial Educational Service as the Paperpol of Calcutta Madrasah

Besides these the Survey Department granted Rs. 2,000 and lent the services of some very able Indian officers, whose names occur in the Report. During 1900-1901, he and his party surveyed and explored the Tarim Valley and Khotan.

DISCOVERY OF FORGERY.

Before we deal with Stein's archeological discoveries of auch momentous value, we should speak of his greatest contribution to the science of archeology, viz. his discovery of forgery of "old books". When the importance of 'old books' were known, demand for them increased. During the last five or six years of the last century 'old books' or 'block prints' in a the variety of unknown languages had been sold from Khotan in increasing numbers to European collectors at Kashgar. "In regard to these acquisitions the suspicion of forgery had before presented itself to competent scholars and these strange texts continued to be edited and analysed in learned publications." Stein found out that a man named Islam Akhun was regularly carrying on a trade with those forged books and cheating people surreptitously. In 1901 Dr. Hoernle submitted a Report on the British Collection of Antiquities from Central Asia, in which he reviewed the work of the preceding decade and disclosed to the learned world the forger's activity which had been communicated to him by Stein from his itmerarv.*

STEIN'S FIRST BOOK.

The preliminary account of the explorations was first published by Dr. Stein in the Journal of the Royal Asiatic Society (April, 1901). After his return to Europe, he gave an account of his journey and excavations before the International Congress of Orientalists assembled at Hamburg in Sep., 1902. Stein's work was highly appreciated by the savants and they all expressed their admiration for the infinite trouble he took for the cause of science. It was not till 1904 that the public received from Dr. Stein his first book on Chinese Turkestan—"Sand-Buried Ruins of Khotan," which was a personal narrative of his journey or archeological and geographical exploration in Eastern Turkestan

materials in the vicinity of Khota But the scientific study of the vast mass materials in the form of antiquities a manuscripts collected during 1900-1901, to the author many years of patient work arranging, classifying and describing finds, and the result of such research a labour was his first monumental work "Anci Khotan," which came out in 1907.

1902-1906.-GERMAN EXPEDITIONS

Stein's success of 1901, admits Lueders, to the German expedition to Turfan in 19 This expedition was led by Prof. All Gruenwedel and Dr. Huth in Turfan and vicinity. These are the places excavated Klementz in 1898 under the auspices of Russ Academy. The German expedition left Ber in August 1902, reaching the ruins by end of November, where their excavation connued till March 1903. Gruenwedel wrote big report called Berichte ueber archalogische Arbeiten in Idikutschari and Umgebung winter 1902—1903."

This valuable report was published from Munchen by the Bavarian Royal Academy Sciences (Vol. XXIV. Band I). The book of tains many plans, pictures and reproducts of Turfan Art and frescoes. The result the first German expedition was very proming and fully repaid the trouble their auth took. After this with the exertions of Proceeding Pischel, a German Committee Research was formed with State help—German Emperor himself contributing 32,6 marks, and the State granting 10,000 marks.

The second expedition was led by Profeson Le Coq, between September, 1904 and Profeson Le Coq, between September, 1904 and Profeson Le Coq, between September, 1904 and Profeson Le Coq, between Level Level

By the middle of 1906, the third Gerexpeditionary party under Gruens arrived at Kashgar, where Prof. von Lewas sojourning after his hard work of year. He accompanied Gruenwedel to Kand Karashar and wanted to return hout as there was trouble in Russia, he could be the Karakorum, passed West Tibet and to India. His party reached Germany in

^{*} Stein-Sand-Buried Ruins or Khotan. pp. 447-459: Stein-Ancient Khotan, Vol. I, pp. 507-514: Dr. Hoemle-A Report on the British Collection from Central Asia, with 13 plates, 3 tables, 6 wood-

Sand-Buried Ruins of Khotan-Hui

i, the work of excavation, however, was tinued by Gruenwedel.

STEIN'S SECOND EXPEDITION

In the meantime Dr. Stein prepared for a and journey of discovery in the remoter rt of Central Asia and Westernmost China 'he extent of these explorations is sufficientindicated by the length of time spent over nstant travel and field-work, more than two ars and a half [1906-08], and by the gregate marching distance of close on ten ousand miles." (Desert Cathay, Vol. I, p. viii) bout his own work Dr. Stein says, "My cavations in 1900-1901 at ruined sites in e Taklamakan Desert around Khotan first venled fully the great historical interest of at ancient culture which, as the joint proact of Indian, Chinese and Classical | Greek | fluences, once flourished in the oases of nnese Turkestan. They also showed the rearkable state of preservation in which even le humblest relies of a civilization extinct ir long centuries might survive under the inds of a region vying with Egypt in its exeme dryness of climate. By my second jurney I succeeded in extending these systemhe explorations farther eastwards for nearly thousand miles in a straight line

There, along routes which from the last enturies B.C. onwards linked China with he kingdoms of Central and Western isia and the classical world, are scattered unis which yielded up plentiful relics hrowing light on the early history, arts and every-day life of regions the past of which except for rare references in the hinese Annals, seemed lost in darkness

(Desert Cathay I, p 11)

TUN-HOUANG CAVE

Di. Stein's wonderful adventure met with florious success at every step. At the florious site in Kharoshthi Script and a Prakrit Language, often bearing classical seal impressions. Many beautiful pecimens of Indo-Grecian Art also were found, which opened new vistas of research but the greatest of all discoveries, since the liscovery of Assurbanipal's Library at Kineveh, were the finds in the territory of un-Huang. Stein came across a portion, ltogether forgotten till then, of the Great Vali built by the Chinese as a protection gainst incursions of the Huns. Here a rindfall waited him fa the shape of an iterary treasure Buddhist piety of carly

times had honey-combed the rock-walls with hundreds of cave-temples, once richly decorated with fre-cors and stucco sculptures, and still objects of worship Dr Stein had the good fortune of gaining access to a great deposit of ancient manuscripts and art relics, which had lain hidden and perfectly protected in a walled-up rock chapel for about nine hundred years. He secured twenty-four cases, heavy with manuscript treasures secured from that strange place of hiding, five cases filled with paintings, embroideries, and similar remains of Buddhist Art It is said that a few years before Stein's visit, a Taoist priest discovered, in the Hall of the Thousand Buddhas, or Tun-huang as it is called, among the caves, a cellar which had been closed. This closed cellar contained those manuscripts. The cellar, it seems, had had been closed up in the 11th century portion of these manuscripts fell to the lot of the French Mission which was in the field of work under M. Pelliot in 1906-07

STUNN SER-INDIA

Di Stein returned in 1908 from his second tour of explorations and published in 1912 his personal narrative in two volumes known as "Ruins of Desert Cathay a popularly written narrative But the vast material collected by Stein took many years to arrange, catalogue and describe them. His results were published in "Ser-India",—a detailed Report of Explorations in Central Asia and Westernmost China in 5 quarto volumes. three volumes being texts, one volume plates, and one volume maps and plans It was published by the Oxford Clarendon Press in 1921. His other great book was the 'Thousand Buddhas' which gives the illustration of the Tun-Huang cave-

SCHOLARS CO-OPERATION

In preparing Sei-India, Dr. Stein got the collaboration of a large number of scholars such as H F Andrews, F M G Loumer, Laurence Binvon, E Chavannes, A H Church, A. H Francke, A F R Hoernle I A Joyce R Petrucei, K Schlesinger F W. Thomas Prof. Sylvain Levi compares Sii Aurel Stein to his saint abhishta-actata, the Chinese pilgrim Hiouen Tsang He says, "Both traversed the same countries in their percegniations; both had to endure the same hardships, had to prove the same energy both brought home a treasure of notes, of servations, and documents. "No incomplements in the pride interfered to raiso difficulties in the

working up of the mass of documents obligated by Stein, some of them have been entrusted to Vilhelm Thomson, a Dane, the wonderful decipherer of Orkhon Turkish runes; some to von Le Coq, a German, himself another explorer of Central Asia; some to La Vallee Poussin, a Belgian, one of the authorities on Mahayana Buddhism; Pelliot, the French emuhe of Stein, who shared with him the treasures hoarded in the celebrated cave at Tun-huang, was called upon to help for the Chinese manuscripts; Chavannes, the leading Sinologist of our day, had for his own part the task of publishing Chinese wooden tablets dating from early centuries A D M Senart, Father Boyer, both of high renown as decipherors of Kharoshti characters, were asked to accept a share as co-editors of the tablets traced in that sort of writing. Prof. Gauthrot obtained the Sogdian fragments. Prof. Levi received the leaves written in the Tokharian language" This was not all In some of the studies nobody could do any work quite alone. Scholar had to co-operate a Sinclogist with an Indologist, a Sogdianist with a Sanskritist, and so forth

The wonderful discoveries made by Sir Aurel Stein were all carefully sent to the British Museum, and although a large portion of the expenditure was borne by the India Government, no curios were deposited in any of the Indian museums. But the fact must not be concealed that there is no competent Indian scholar, who could deal with these subjects and we could hardly know of their contents if they were left with ordinary scholars and not with European specialists.

1906.—French Expedition

In 1906 the French Archeological Department sent M. Pelliot to Chinese Turkestan. The itinerary of the Pelliot Mission took three years to complete the work they had More than a third of the time, from Feb. 1907, to May 1908, was spent at Tun-Huang. We have seen that this town and oasis on the edge of the desert of Lop has figured in the accounts of other explorations made during the past thirty years; but the Mission Pelliot was the first to carry out a detailed and systematic examination of the frescoes and images existing in a series of Grottoes, known as the Caves of Thousand Buddhes, cut in the side of a cliff distant from the town nine miles to the south-east, Mission Pelliots-Toun-Huang in 6 volumes of Portfolios, Paris - -- sema time. Japan sent a mission

to exceed the Santal Asian Rains, and Count Charles and Mr. Anobibana, whose labou met with considerable success. To present the remains of Fun-Heisang library from detruction they despisabled its content to it National Library of Peking.

1913-14 GERMAN EXPEDITIONS

In 1918-14 Prof. von Le Coq led anothe German expedition of Research in Turkeshi The results of German labours are been published under the title "Ergebnisse de Preussischen Turian Expeditures Kgl. and the latest of these publications is the monumental work by A. von Le Coq who ha taken part in the three last German expedtions, on "Buddhist late-antique Art a Central Asia". Prof. M. Winternitz has sen recently in the columns of this magazing given an excellent analysis of this monument al work of German scholarship and thorough ness (see Modern Review, 1925, April)

STEIN'S THIRD EXPLORATION

In 1913-15 Sir Aurel Stein underlock his Third Journey of Research in Central Asia, a preliminary Report was published he may in the Royal Geographical Society's Magazina, 1916, we have not yet got any description and personal narrative from him like the 'Sand-Buried Ruins' and 'Desert Cathay We fervently expect another popular book as well as a learned sequel to it in the most future."

GALTHIOT'S MISSION

Hefore we finish our article, we sell briefly mention one more fact left unhinder by the untimely death of its author. The Setersburg Academy appointed M. Gautho in 1914, as the head of a Russian expedito to explore some parts of Pamir plate in, when dialects akin to the old Sogdian were still use. Prof. Gauthiot was one of the great Sogdian scholars, rather discovere of the dead language. His monumental work is Sogdian Grammar in French, and varianticles about Buddhist books in Sogdian which adore the pages of many find learned journals.

But the war sacrificed this great 'c' on its bloody altar, and the scholarly w is actually the poorer at his death.

^{*}A. Stein—Memoirs on Maps of Chinese T tan and Kansu, from the Surveys made duri Aurel Stein's Explorations, 1900-01, 1906-08, 15, with appendices by K. Mason and J de Hunter, in 2 vols., 1923.

HE GENEVA OPIUM CONFERENCE: ITS PRACTICAL RESULTS

BY C. F. ANDREWS

rel before has the subject of the control of opium come so prominently forward into world notice as it has during the veal. The publicity now given to the ject is, by itself, of the highest practical ortance For in earlier days it was a cein of experts; today it is a world cen Among the results of the Geneva ifenace, this world publicity of the subject y in the long run, prove the most effective to it has been my own task to read ough the cuttings from the new-paperbli bed in Great Britain and America, which we sat out to me Only the leading tracts were sent. I do not think that any destat interest on humanitarian lines has ad such a public press in modern times n the whole, the treatment has been enerous. sympathetic and serious general cause has been remarkably strengthened and consolidated by the wide circulation day by day, of accurate information 'Opium as a subject, cannot possibly recede into a corner again

When we come to consider the practical results of the Conference itself a wide distinction must be drawn between the First Conference and the Second There is unfortunately the strongest evidence that the First Conference was so arranged that America should be excluded, and it was only with the greatest difficulty that America obtained the full power of revising its proceedings.

This exclusion of America was one of the At acts in the whole business. It made ar, from the very first, that the interested eign powers in the Far East were determined keep their revenue as long as possible e First Conference became an affair of utual arrangement between the foreign wers in the Far East Great Britain. ortugal, Holland, France—as to how far they ould continue their present opium policy as lucrative monopoly, and how far they would e obliged to alter it to suit the times India admitted to this close corporation. ecause it was from India that all the opium vent out to these foreign possessions for moking purposes.

The tone of the First Conference may be

judged by the symbolic change which was made by altering the word opium dens' to opium divars. I have been not these opium divars in singapur and een sights in them that ought never to be seen on God's Earth. Two other points deserve notice.

(i) A pecial tottele which was unanjmously agreed to declared that minors of tender age sould in the allowed in these onium divans soft was made clear to the world that fairen years after signing the Hague Concention, little box had still been allowed to stock optum in these bortible places. The East Coference could not, lowever agree with regard to the exclusion of women. It are almost that it was nocessars to preserve woner, sugars, by giving them the doubtful privilege of entering these opium divans The dangers of such a course are obvious Prostitution and opium smokin, are very closely linked together. If proof it this were needed mear at nome, the evidence given by Babu Krisena Kumar Mitter before the Royal Commission in 1804, should be read it shows what was going or in Calcutta itself during those carlier days

(ii). An Article advising that, in those countries where opinin smoking was still going on, the voting should be educated about the evils of opinin addiction was carried but a clause was reserted which said that i for any adequate reason the contracting Powe thought it madvisable to give such instruction to the young, it might on excepted As Bisho Brent put it, a finer instance of hedging hancever been seen!

It is useless to go on with a recitation of the terms of this First Conference. Even a own begetters were ashamed of their offspring. The representative of India, the notorieus Mi John Campbell duly signed it. Then something happened All the rest of the delegates hurried away to consult their own cabinets. Mi Campbell was left ingloriously alone. Those who were present state that the scene was more like the actual man farce than the performance of a data towards humanity. It may be that out of this solemn farce some good may come for some of the delegates, were senously intent on progress.

But one cannot hope for much in an atmosphere. where the opium den' is turned into opium divan'.

But what can be said of the Second Conference? Here at least there was no close corporation. Also America, by threatening to leave the Conference at the very start, counteracted the frantic attempts of Government of India's delegates. Mr. Campbell and Mr. Clayton to keep the limitation of opium cultivation out of discussion 'India' was placed in the sorry position of being the sole obstructionist of full, frank and complete discussion. It would be interesting to know if the Government of India instructed Mr. Clayton and Mr. John Campbell to take up this singular attitude. It would be also interesting to know whether after declaring to the world, in a Government-authorised pamphlet, that opinm had been made a transferred subject, the Government of India took the elected members into their confidence either with regard to Mr. Campbell's appointment or with regard to his instructions as

delegate.

When the preliminary right of free and unfettered speech had been gained, the American delegate, Mr. Stephen bluntly accused the British Contracting Power which had acted at the Hague on behalf of India and the Far East possessions, of a breach of faith. He read a passage from a standard authority on International Contracts. and charged Great Britain with breaking the Hague Convention for financial reasons. Lord Robert Cecil rose immediately and said with emotion that the charge brought against Great Britain by America was very wounding indeed: if it had been a private charge brought against bimself as a private individual, he would have decided not to have anything more to do with the person who made it, until it was withdrawn. The hint to America to withdraw the charge was a broad one. but I have read every word of the proceedings which were sent to me, and I have found no withdrawal at all.

. America, instead of withdrawing the accusation, made one last offer. If Lord Cecil would give any reasonable definite time in which he would agree on behalf of Great Britain that opium smoking would be suppressed, he would accept it; but he would not accept an indefinite formula.

Lord Robert refused. He offered the indefinite formula that fifteen years after it had han declared by an international commission -- China had been suppressed. Great Britain would opium smoking in her For Eastern post

What Great Britain signed at the H January, 1912, was, that she would 'e ly and progressively suppress opium ing, and that if she was not able to immediately she would do so as soon sible,' (I am quoting the exact word, ? pointed to the Philippines where the ties from smuggling were even greate they were at Singapore. America sa the vague phrase as soon as possible Hague Article had been made the part endless delays already. She was not to to sign another dilatory clause such which Lord Cecil proposed, namely years after it had been declared by an national commission that opium smi from China had been brought under co Such an indefinite clause would only another interminable delay. Therefore rica made one last offer, suggesting a years from the signing of the Geneva (' tion (thus adding three more years to the vious offer): this would imply the year or thirty-one years after the signing Hague Convention in 1912. But Lord Cecil stuck to his own formula and American Delegate withdrow

Has then nothing been achieved? Probably more was accomplish the American withdrawal, followed by of China, than all the rest of the two ences put together. It drew the worl tention as nothing else could possibly done. It made it necessary for the tracting Powers, who remained, to they the out what signed to letter. Thev were put on their by America's challenge itself. The has been achieved. America's much shook to the ground the hollow of sham, which made up so much of th structive programme of the First Conf It brought people to their senses. heard since then, that Bishop Brent, wh Mr. Stephen Porter, fought, so outspoke the right and the truth, and uncovere hypocrisy of the First Conference, b that a great blow has been struck at t traffic and a great advance made.

She mus What must India do? down at once the hateful screen of which she is supposed to be represented man like Mr. John Campbell. She mu that in all the Councils, including the It Assembly, the opining question comes e into her own hands without any sub

whatever. She was not once that the recommendation of the Reforms that Exchange shall be a transferred subject in Assam, be carried out. She should send at once her own Congress Commission, not only to Assam, but to all the black spots m India and Barma, in order to enquire what can be done by the people themselves to make them white. She can at once impress on the mill-owners in Bombay, that she will no longer endure to have the babies of factory labourers doped, while the mothers go to work She can respectfully represent to the State of Malwa, that it is a dishonour to the fan name of the Motherland to grow opium only to be smuggled through to Assam and other places, and used for opium intoxication

All these things and many other things can India do, when once the conscience of the people is awake.

With regard to the new Convention itself, the American stand for restriction of cultiation has effected much In the Preamble hich was signed by all the Contracting lowers the effective reduction of the cultivaon of the opium poppy has been expressly nentioned.

I take from an authoritative source the ollowing summary of the articles of the new 'onvention :--

Factories are to be licensed and controlled all Pisons engaged in the trade are to be registered,

manufactured in the trade are to be registered, and a record kept of the quantities manufactured in otherwise dealt with."

"The certificate system is to be continued and arefully watched. Import and export shall only in permitted when the Governments immediately oncorned have given their consent by certificate if permit."

A permanent Central Board of Control is to be of up to collect from the Signatory Governments of the drugs required, and to secure full The Central Board is to consist of eight persons to be appointed by the Council of the League of Nations, the United States and Germany. If the Board has reason to suspect that excessive quantities are accounted by the Council of the League of Nations, the United States and Germany. If the Board has reason to suspect that excessive quantities are accountable in any country, and that moard has reason to suspect that excessive quantities are accumulating in any country, and that there is reason to fear that these stocks may be diverted into illicit channels, it will recommend that any further export to that country shall cease until the Board is satisfied."

"An important addition to this clause is that the Board will claim the right to follow the same course with any country which is not a signatory if there is a danger of that country becoming a centre of illicit traffic."

"At the end of the Convention there are provisions for applying adequate penalties for offences against these regulations."

"The Convention is not to come into force until it has been ratified by ten powers, including seven of the States who nominate the Central Board."

In a Protocol to be signed by the oppun-producing countries the vexed question of opium-smoking

which led to the American delegation withdrawing from the conference theme dissatished with the relied to delate it is dealt with. something less than wise

Lord Robert Cecil - own account of what has been acomplished may be gathered from a speech made at Bournemouth directly after his return. He made the following announcement

It has been agreed to appoint a new inter-national authority chosen for the impartiality and computence of its members, whose duty it will be to maintain a careful watch on the truffic. When the need arises an embargo on the drugs will be applied for so as to encumvent any attempt to thould a country with hainful drigs. This Central Board will present to the Council of the League an annual report of its processings. The British trovernment are ready and willing to c soperate to the utmost with the most forward and energetic, to stop the trading in drugs. The churt difficulty is, how to accept the aenical percept, without interforms with the donestic cone as in India. It was decided that the rule should be accepted that optim should be produced for medical and scientific pur-poses only but that any country imable to fall in with the rule should make a destration to that effect, and should be allowed to sign the rest of the Covenant . As regards the five uniforms Chinese outside China arrang whom there is much smoking, it was resolved to stop it within lifteen years, this term to be on o ben it is want of Chinese opinin well not be sure to I rate this Lastein terretiones where smal mo is to up analy permitted.

Most important of all is the Pres Announcement of M Herluf Zinle, the Danish Mishston at Berlin, who presided with such distinction

over both Conferences, and more than any one else saved the situation. He says as follows:—

"It has been the most difficult Conference in the history of the League of Nations. We have touched on the centuries' old practices of the East; we have come hard against the economic status of several nations; we have found ourselves confronted by the most complicated and baffling details: we have seen the struggle between the smuggler and the law-enforcer; and yet we have had to safeguard legitimate rights and legitimate uses of drugs when fulfilling their errand of mercy in alleviating suffering. The drug question is both a loon and a curse to civilisation: it contains much that is good, as well as much that is bad; but where it is bad, it is like a many-headed Hydra, rearing its ugly features, despite all precautions in the most unexpected places.....

"The Conference has not removed the world's

"The Conterence has not removed the world's drug evil. It makes no claim to complete success. Yet I do unhesitatingly believe that this Conference has struck a most powerful blow at the drug-evil No voice was raised, and indeed. I believe, no rowe can be raised, against the justice of the principles of the American delegation. The only question is as to the moment when they can be realised. The drug question has entered upon a new period. It

is now caught in the day-to-day machinery of League of Nations. It cannot escape.....The many-sided campaign, which we have out during the past eight weeks, will follow it on on through its various successive stages, until terrible scourge, from which so many diffibranches of the human family are suffering, have finally been laid to rest."

Finally we may take the verdict of delegate from the Irish Free State:—

"I want to tell you", he writes "that the against opium and the drug-scourge will contand although the results achieved through this ference have been less satisfactory than man us desired, they nevertheless constitute an imant step in the right direction... "To say that Conference has been a failure, because a solution of that problem has not been found, who to only be an exaggeration, but a misseprestion of the facts"

On the whole, then, we may be than indeed for the brave action of the Amer Delegate. We may believe from what a wards transpired, that he had the symptof a large number of the other delegates the action he took.

WHY MR. ROCKEFELLER AND MR. CARNEGIE HAVE NOT HELPED INDIA

By J. T. SUNDERLAND

The American Letter, signed "Mary K. Morse," in the March number of The Modern Review, in which she gives testimony from one "closely connected with the Rockefeller Foundation" regarding the surprising fact that, while vast sums of Rockefeller money have been given to help good causes in many countries of the world, none has gone to India, a land where the need is certainly as great as that of any other country.

Why has India been thus passed by? The reason given by Mrs. Morse is what many of us had long suspected, namely, opposition or at least unfriendliness on the part of the British Overnment. She says:

"The Rockefeller Foundation spends money in China, South American countries, European countries, and even in Canada, because the governments of these countries take kindly to its activities; but it does not goento any field where the government by its work. India

tells the world that all that is necessary for progress of the people of India is being done the British, the Rockefeller Foundation feels any activity in India might not be liked by Government and might even be resented."

Here we have it Here we see what means for a people to have no national existence,—to be not a nation, but only a mappendage to a foreign nation. Is not a condition of things an eloquent comment upon the claim put forward so constantly. Oreat Britain that she is India's friend a benefactor—that she is in India for Indigood?

A recent report of the Reckefeller Fountion shows gifts to China for medical edution, hospitals, etc., amounting to more it ten million dollars. There is one sin donation to the Peking Union Medical Colle of \$8,513,882. All this is admirable. He conditions in China are bad; she green needs such help as this which is being measurously extended to her. But Ind.

health conditions are quite as bad. And the real fact is that very little is being done to improve them. The British Government is not doing all, or more than a very, very small part, of what is necessary. The money sorely needed for founding and maintaining medical colleges, and for promoting hygiene, sanitafron, hospitals and medical aid to the people. to save them from the terrible scourges of malaria, fevers of all kinds, tuberculosis, plague and other diseases which devastate the land, is used for large salaries and pensions for the British overlords for the land, and for great armies to hold the people in subjection. No unprejudiced mind can doubt that if India had been a self-ruling nation instead of a people held in bondage by a foreign power, she would from the first have received as much attention and as generous aid from Mr. Rockefeller as he bestows upon China.

Turn now to Andrew Carnogic Why did not Mr. Carnegie, while bestowing his large benefactions upon his own and other countues, include India? There seems reason to believe that his motive was exactly the same as that which influenced Mr. Rockefeller and India was a the Rockefeller Foundation "possession" of Great Britain, and he knew that Great Britain would not be pleased if a extended help to any of her "subjects" she would see in it an implied criticism of her "subjects." She would see in it an implied criticism of her rule, -a suggestion that she was not doing for India all that she ought

to do I think it will not be out of place if I describe several efforts which have been made to induce Mr. Carnegie to give aid in one form or another to India.

In the year 1906, while I was hving in Toronto (Canada), Mr. Carnegio came to Toronto to deliver an address, and was the guest of the distinguished scholar and writer. Professor Goldwin Smith. Having a somewhat intimate Professor Smith, and with acquaintance knowing his interest in India, it occurred to me that this might be a favourable time to carry out, with his aid, a purpose which I had long had in mind, of endeavouring to obtain from Mr. Carnegie, a promise of some important practical benefaction to the Indian people in their poverty and need Accordingly, I wrote to Mr. Carnegie the following letter. which was delivered to him by Professor Smith:

Toronto, April 26th, 1900 Mr. Andrew Carnegie.

My dear Sir:

Probably Mr Goldwin Smith has mentioned to you the subject of India, with the inquiry whether, under any circumstances, you would be disposed to lend a hand in the promotion of Indian Education

As of course you know, the needs of India are very great. Her people are very poor There are few to help or take much interest in them. They are the subjects of an alien rule, which has only too little sympathy with their aspirations and ambitions. You will probably agree with me that in important respects they are the most gifted people of Asia. They have had a great history, of which they are proud They have created the most remarkable literature of the Orient, and philosophies not inferior to those of Greece and Germany They have given to the world two of its greatest religions Says Lord Curzon "India has lett a deeper mark upon the history, the philosophy and the religion of markind than any other territorial unit in the universe. The fate of such a people may well be a matter of concern to the world With the awaling of the Orient, the people of India are awaking They have felt deeply he influence of Japan More and more every tyear they are feeling the burden of then poverty, then political helidessness, and then want of facilities for education, especially technical and industrial Teducation Their former extensive manufactures are nearly all broken down Practically the whole people are now compelled to live on the land The rich resources of then country in other directions are largely undeveloped, and they cannot develop them, partly in want of scientific and technical knowledge, and there are almost no facilities at all in India for acquiring such knowledge. The Indian Government spends \$105,000 000 a year on its arm. and the paltry sum of \$3,750,000 a year on education of every kind

About two years ago an Association was . formed with some of the ablest and most influential men from all sections of India at its head to send students to treat Britain, thermany, Japan and America to acquire the scientific, technical and industrial knowledge which is so sorely needed. The Asperation is pushing forward earnestly, and has now sent out in all about 100 young ion But unless you have evourself been in India, you can have little conception of how poor the people are, and how severe a strain it is to raise money for even the most urgent objects.

It is to this movement, Mr Carnegio, that

THE SECOND

I wish especially to invite your attention. Would you not like to help in this important, this sorely needed effort to lift up a great people, to give them new hope, to increase their means of livelihood, to put into their hands new possibilities of self-help, and thus do something permanently effective to rescue them from those awful famines which have their cause less in lack of rain than in the appalling poverty of the people?

Allow me to make a definite suggestion And pardon me if my suggestion is of something large, for the interests, the welfare, the salvation, I may almost say the lives of 300, 000,000 of people are at stake I cannot forget that you offered twenty million dollars to secure the liberty and independence of the Filipino people. This noble offer makes me feel sure that your sympathies and interests take in not only Anglo-Saxon peoples but the world, and it gives me hope that you will be glad to do something in some degree adequate to the great need and the splendid opportunity. Would you not like to devote at least 10,000,000 to India's educational salvation,—the interest on your donation to be devoted first to the work of sending students to Japan, England and the continent of Europe and especially America, to be trained, and then, when the men are ready. to the establishment and maintenance in India of scientific, technical, industrial and agricultural schools in the different great Provinces?

Let me say, I have visited most of the leading universities, colleges and educational institutions in India, and know pretty well what they are, and I have also done some corresponding with leading men in India in regard to this matter which I am now laying before you. I do not speak authoritatively for any one except myself, but I think I have good grounds for believing that no benefaction you have ever made has been more warmly or gratefully received than this would he by practically the whole body of the Indian people.

If this matter is one that interests you, so that you would feel like giving it your consideration in case it came to you in a form that commended itself to your judgment, and from a body of thoroughly representative and responsible Indian gentlemen, I shall be very glad to know.

My only apology for taking the liberty of addressing year, is India's great need, and bolians is offered

work second in importance to none that you have undertaken.

Most respectfully yours, J. T. Sunderland.

P. S. Perhaps I ought to add, that I have been in correspondence for some time with Sir Wm. Wedderburn, Chairman of the London Committee of the Indian National Congress, about the matter, and he expresses very warm and earnest interest in the same and a desire to co-operate in any way in his power. I have also talked the subject over carefully with several eminent American educators, who have strongly urged me to lay the matter before you.

J. T S

To this letter I received the following reply from the Secretary of Mr. Carnegie

Government House, Ottawa, Canada, April 30, 1906 Rev. J. T. Sunderland, Toronto.

Dear Sir:

I am to acknowledge receipt of your favour of April 26 to Mr. Carnegie, and to say that Mr. Carnegie is unable to take up the subject which you bring to his notice.

Yours respectfully, (Signed by Mr. Carnegie's Secretary)

Four years later, when I was residing in the city of Hartford in the United States Principal H. C. Maitra, of City College, Calcutta, visited this country and spent some weeks lecturing in institutions of learning and preaching in various churches During this time he was my guest for several days. At his suggestion, on October 29, 1910, I wrote again to Mr. Carnegie, putting before him once more the pressing educational need of India, and asking if he would grant in interview to Principal Maitra on the sub ject. To this letter I received an answer (dated November 4), saying: "I am oblige for yours of October 29, but do not wish undertake foreign work, having quite enouto do at home, or at least within the hour of our own race. Having been in India at knowing something of the conditions there know the magnitude of the task."

Because this letter from Mr. Carne laid stress upon his desire to confine work to America, I determined, on further with friends, to address him

ird time, to ascertain whether he would to be willing to aid India in America, that to establish a generous number of scholarips for Indian students in American irresties. Consequently I wrote him once ore as follows:

Hartford, Conn., December 17, 1910. Mr. Andrew Carnegie, East 91st St., New York.

Dear Sir:

Six weeks ago I wrote you asking whether inder any circumstances you would be fulling to help India in her great need for direction—particularly scientific, technical, ignicultural and other forms of practical naturing. Under date of November 4th you eply that you "do not wish to undertake my foreign work."

I trust you will pardon me if I ask you he further question: Does this mean that you would not be willing to help Indian young men to come to America for study, by projuding a certain number of scholarships for them in some of our American institutions if harming? This would not require you to send any money to India, or to enter into invictations with parties in India. All could be managed in a very simple way through a pumpetent American Committee.

Japan has been very greatly benefited, as on know, by sending here so many of her oung men for scientific knowledge and traing China, through her more than 400 young en now studying in America, and the still iger numbers to be sent by the Government the near future, will be benefited quite much India's need is greater than either pan's or China's. Indian young men in cat numbers would already be coming here r training, without receiving any assistance all, were not the poverty of the people ere so very severe. What is required in der to open a new day to India, to enable r to develop her resources, to build up ce more her broken down manufactures, to eate new industries, and thus raise her ople to self-help and to hving conditions, more than anything else, scientific and hnical education.

Would you not, Mr. Carnegie, he willing furnish, say 50 or 100 scholarships for lian young men of high ability and prose, perhaps in the Institute which you urself have founded in Pittaburgh, or, if

it seemed to you wiser, partly in that and partly in other American Institutions?

I am sure the matter could be planned so as to give you no trouble beyond the selection of the committee to have the scheme in charge, and the provision of the necessary funds. And the boon which you would thus confer upon India would be of simply priceless value.

Yours very truly, J. T. Sunderland.

To this communication I received from Mi Carregie a courteous reply, but declining to make any promise that he would found the American Scholarships suggested, and giving no further explanation Here the whole matter ended

What was the reason, the real reason, why Mr Carnegie refused to aid the Indian people? It was not because he was unwilling to-extend his benefactions outside of America. As a fact, he gave thirteen million dollars for libraries to other countries, ten million dollars for universities in Scotland, a million and three quarters for the Peace Temple at the Hague, and gifts for various other objects outside of America amounting to three millions Nor was he antagenistic or even indifferent to the welfare of India. He had been there and knew its needs. Further more, he was a thorough democrat, a believer in freedom for all peoples. He is reported as saving in an interview in Chicago, March 31, 1910, nearly "I do in the language of Abraham Lincoln not believe God ever made any man er any nation good enough to rule any other man or any other nation

I never knew Mr Carnegu personally, but in talking with his friend, Professor Goldwin Smith, and with others who knew him well, I became convinced, as I have already said, that his reason was the same as that which influenced Mr Rocks feller and the managers of the Rockefeller Foundation, namely, unwillingness to antagonize or displease treat Britain As a steel manufacturer, he did wast amount of business with Fn_land , he himself was Scotch by buth, and he owned an estate and a historic old castle in Scotland whele for many years he spent his summers, the British people occupy a great place among the nations of the world, while the Indian people have no place at all , consequently it was not strange that he desired to preserve undisturbed relations with the British Government and people. Perhaps this was cowardly in him :

I think it was both cowardly and unjust. But it is easily understandable, and it seems clearly to explain his otherwise inexplicable conduct towards India.

In his case, then, as well as in the case of Mr. Rockefeller, we have an illustration of

what it means to the Indian people to b tionally nobody, in other words, unimpo and negligible subjects of a foreign p instead of a respected and honored n having a place (as is their right) among great nations of the world.

DR. STEN KONOW ON INDIA OF TO-DAY

We have received the following letter from America, with the cuttings mentioned therein, which we have felt it our duty to publish, not because any special importance attaches to the views expressed in them, but because appreciation of Dr. Konow's work and his portrait in Indian costume appeared in this Review. Our comments will be found among the Notes in this issue. Editor, The Modern Review

> "225, Sylvia Street, W. LAFAVERTE, IND. April 11, 1925.

"Editor, MODERN REVIEW. 91, Upper Circular Road, Calcutta, India. "Dear Sir.

"Enclosed you will find cuttings from The Chicago Daily News of a series of articles on India by Prof. Dr. Sten Konow These articles have been saved by a Chinese friend of mine for sending to India with a view to being published there

"In the February issue of the Modern Review mention is made of the good work done by Dr Konow by his studies of our ancient civilisation, culture and religion. It will be, probably, interesting also to know his political views about India, which may not be quite agreeable to many of our people at home

"Since Dr. Konow and Mrs. Konow have obtained so much admiration and love from our people that led to either their assuming, or our conferring on them Hindu names and costumes, it is quite proper that we should know more about them and their views about present-day India besides her past. This is particularly important, because it gives the the point of view of a disinterested foreigner, which we are not always in a position to

"I shall be very glad if you will give your attention to the enclosed cuttings and give them publicity, should you consider it proper to do so.

I remain,

BOUSHEVISM IN INDIA FOLLOWS QUEER TRAI Weakening of the British Empire-Object of Subtle Activities.

(Following is the first of four additional articles on holshind by Dr. Ston Konow. Professor of Indian Philol Inversity of Christiania (Odo), who is now a visiting pr f Dr. Ribudranath Tagore's university, Vissa-Bhanti, in Sci. tun Hengal India)

BY DR STEN KONOW

Special Correspondence of the Chicago 1 News Foreign Service

Santmiketan, Bengal, India, Jan. 15 -lin bolshevism started as a violent social unber The possessing classes were deposed, and power in the State as in society was nominally t ferred to the workers In most European com bolshevist propaganda relies on the antagonism ween capital and labor, which has long play prominent role in the social struggle, and bold agitators take their stand in the theoretical win of well-known socialist authors. Their them ever, is more than a social doctrine. It is on a different conception of man and mans the which is more akin to Asiatic than to have ideas

In Europe, as in America, the ideal his inhunited freedom for the individual in his life activity so far as that freedom does not this the natural rights of other individuals. The on the natural rights of other individuals. al mentality can perhaps nowhere be more ele grasped than in India, and especially in indian There one does not meet with individual feal but with types and more or less general t And in a similar way Indian religious ann at ? cipating man from the fetters of individual herse and bliss.

DREAMS OF A GOLDEN AUF.

It is a similar frame of mind one meets inf ism and holshevism, and, in a certain sense are religious. It is, accordingly, not a mere of chance that the bolsheviks have made against inherited religion. Bolshevism in its religion, with its essentially religious dream molden against the transfer of the months of the religious dream molden against the statement of the religious dream molden against the religious dream mo golden age, at least for the masses, if not for individue la.

o so.

It seems to me that this communist conn.

is deeply ingrafted on the Russian mind E fore the revolution Russian society to a great on soviets village councils, m

ancils, and so on. The representatives of the ore individualistic conception to a large extent ere foreigners, and bolshevist revolution was also a certain sense a national reaction. And outside Russia in Asia the aim of the bolsheviks has on largely a restoration of the Russian empire.

This state of things is everywhere apparent in holshevist propaganda in Asia. Its agents peal to the different nationalities and try to rouse ten to light for independence, wherever they are most foreign rule, and at the same time they atompt to strengthen the communist instincts of the state proples. The final aim seems to be an all-inputing holshevist organization with its center plassia.

Using the Koran for Propaganda

We have been able to follow the process in vurus parts of Asia. A short time after Lemm's revolution we were informed that a learned Mohameman had undertaken the task of proving that pishevism was in reality taught in the korm. It is apparent that the idea was to make use of slam in the struggle against the old capitalist opens. We can, therefore, understand the attitude of Moseow during the negotiations between Turkey and the allied powers. Turkey was the three Moseom empire, and an alliance or a close understanding with the caliph would have been of incalculable importance for the bolshevist movement over the khole Mohammedan would.

minimum e for the boisneyest movement over the hole Mohammedan world.

Mustapha Kemal Pasha made an end of such heams. He is a nationalist, and his aum is the establishment of a Turkish empire independent and laweful. He abolished the caliphate resairs he and that the interests of Islam might sometimes determinental of those of the Turks, and he would built is likely to submit to the dictates of a world-pupilism organization. Nationalism cannot well

e reconciled with international idea-

Such evidently, is also the opinion of the bolshoiks themselves, to judge from their behavior in the lateaus. To begin with, they acted as if they ere in favour of an independent Can asis, a son as the people nad organised, their home-inic owerer soviet troops appeared in order to establish soviet republic dependent on Moscow streetalmalities are only a means toward, the final aimulgest are as should be freed from the domination ["capitalist" empires because the latter is an batcle to bolshevism, but not in order to permit lem to carvo out their destay in their own way

hem to carve out their desting in their own wat As long as they do not feel strong enough to ring foreign peoples under their control, however, he holsheviks pose as the advocates of the rights the subject nations, or of the national cause here foreigners try to exploit a country in their treest Everywhere in Asia they are able to point the contrast between the rich Europeans and le mass of the population, and frequently also to mover the representatives of national critical, who pieto get rid of the European competition and not take into account that bolshevism in its very fure, is irreconcilable with their own interests ally a short time ago we heard of leading Chinese lisheviss.

The methods of the soviet propagandists in Asia is be studied with exceptional case in Atchanistan he aim has been clearly to lessen the Brinsh hold the country, and thus to contribute to the

weakening of the British empire, which everywhere in Asia stands in the way of bolshevism.

AIGHAN EVIR IN CONTROL

The new ruler of Afghanistan seems to be quite sincere in his desire to molernae his country. He has mell hunself independent on India after a war which the English newspapers in India described as successful, and since then he has been busy traing to develop Afghanistan points alv, industrially and commercially. Russian agents play a considerable role in Kabul and probably also Glewhere in the country and they are everying a not inconsiderable influence on the enuit. Evidently they do everything in their power in order to strengthen his position and to help him in anyting through his reforms.

Industrialism is not in itself repage and to bolshevist principles and Afghan industry is a state affair, just as are Russian in its at the present day. But the letter of the whole unfortising is the emigrant por even mornally a soviet or representative of the employees. And the same is the state of

times everywhere

It is evident that the Jolsheviks have chosen to abstract from bolshevism proper in order to a hieve some problemmary orgest. That can be only the wakening of Batish influence in Asia. Therefore, the bolsheviks ally themselves with Afghan nationalism, well knowing that it would not be too difficult to make Afghanstan submit to Russian controls, were Britain's powerful hand to be withdrawn.

WORK WITH INDEX NATIONALISIS

Similar considerations have induced the soviet authorities to sock connection with Indian nationalists. There can be hade doubt that Russian money has been placed at the disposal of ridians, and the nation dist coloring affected by soviet propaganda in As a has strengthened the Indian independentists who teel in a sec upon the Indian independentists who teel in a sec upon the Indian Russia stands behind them. For Russia is still to the average Indian a powerful antagorist of the British enipric. The Indian main rist will be still more calconized in this way than the ordinary nationalist for he knows that his rootheds have the said tion of the mights soviet organization. But even in Indian the rimmediate aim is to obtain independence for India. He is above all a nationalis.

Therefore when we can trace the influence of Rissia in India at the present day and hear the praise of bolsheyism sung to people who are themselves for is moved from its underlying ideas, the reason is that nationalism has become such a leading factor in India. In later articles, I shall speak of the development of the national idea in this

country

Santiniketan, Bengal, India, Jan. 15.—The idea of an Indian nation has not come as a natural consequence of the historical development of the Indian people. Since India emerged from the mist of prehistoric ages the country has been the home of different races and peoples never able to melt together into a community with common aims and interests. To a great event the whole population came under the influence of Aryan civilization and in the easte system was found a formula for co-operation between the different elements. But all and the caste system became a hindrance to the development of the feeling of unity. The Brahmin of one country felt himself, more closely akin to his caste-fellows in the neighboring State than to

his co-citizens.

The last great attempt at uniting the country in one State before the advent of the Europeans brought a new split in introducing a new religion

—Islam.

It was reserved to the English to accomplish what others had failed to do—to create a united India. Only after the establishment of the British Indian empire were the necessary conditions given for the development of an Indian nation. Only then could the Indians become accustomed to look on the whole people as a unity la nation c'est l'histoire.

EDUCATION PROMOTES UNITY.

For further development it was of far-reaching consequence that the British decided to build a new educational system on western lines. The result has been that European ideas have gradually found their way to India and impressed themselves on the minds of educated Indians the leaders of Indian thought, and among these the national idea has gradually come to occur, the forement idea has gradually come to occupy the foremost

There was a long time before the development led to a feeling of irreconcilable contrast between Indians and British To a great extent the educated Indian looked upon himself as a British critizen and Indian looked upon himself as a British critizen and was proud of belonging to the ruling nation. Even the great revolt in 1857 was more a reaction against a supposed tendency to introduce Christia-

nity than a national rising.

Gradually, however, the attitude of the educated classes underwent a change. The more the mind was filled with European ideas, and the less the British did to give the Indians equal rights within the country—not to speak of the empire—the clearer the Indians began to see that they were a subject race and not free British citizens This feeling brought them nearer together and strengthened the national idea, which grew up in consequence of the establishment of a common State and which, to begin with, seemed to tend towards the develop-ment of a unity comprising British and Indians. The more outspoken and particularized Indian nationalism therefore came as a reaction against

the foreign domination.

Before I was in India sixteen years ago the national feeling had become very strong and it was decidedly anti-English. Over and over again I noticed how the attitude toward me changed when it became known that I was not an Englishman.

MOHAMMEDAN AND THE HINDU.

Still the movement was not then universal. It was more or less restricted to the educated classes serverially to those who had studied in English

schools and universities. And the Mohamu were standing aloof. They knew that they were standing aloof. They knew that they in a minority and that their position in a dependent India would be worse than British dominion. As an intelligent Mohami ruler has repostedly said to his friends: were never ruled by Hindus and we never submit to Hindu rule? Islam was to them important than India There was mo generally an impression of the necessity of pring the connection with Great Britain. India not stand on its own less. not stand on its own legs.

Now it seems as if a thorough change has about Leading Mohammedans are joinin Hudus in claiming home-rule or independent the national idea has a firm hold on the mi much wider circles And what is perhapsumificant, the Sadhus, the saints whose should make them disinclined to take a should make them. worldly affairs are active in the anti-British

paganda

SIGN OF SIGNIFICANT CHANGE.

I shall never forget what happened to short time ago in an Indian town. I had del a lecture on a religious topic and during the l I had been asked to give a resume in When I had done so, a Sadhu rose and pout that I had just happened to throw a hight on the position of India. When a for spoke to them in English they all undevery word but when he translated his utter into their own sacred tongue only very few able to follow him And the Sadhu was I cheered

In order to understand the thorough chan atmosphere, it is not sufficient to point to natural growth of the national movement. must be special reasons. And among these I convinced that the great war must be men

When the war broke out, Lord Sub warned his compatriots against drawing India the conflict. He reminded them of the fact the pretorians remained loyal only as long a

the pretorians remained loyal only as long and did not think that they were necessary. He warning has proved true. The Indianated that they must come to the assistance of mother country in her struggle. They were over-willing, and the methods of recruiting not characterised by sympathy and leniency they went into the war, and they fought in and most Indiana were convinced that they deand most Indians were convinced that they de the issue. They drew one conclusion fro whole series of events. It was not Great I that was necessary for India, but on the con Britain could not subsist without India.

LOSE FAITH IN PHOMISES.

India was roused to a sense of her own in ance, and the Indians claimed a large share in administration of their country as a well-erward. The British were slow in listen such voices and when the reform came the lithought that they had been exploited a Britain's will. The anti-British feeling in still streams.

still stronger.

Moreover, the Mohammedans entered the They had gone to the war confiding in the ploof government that the caliph's power places of not be curtailed and the sacred places of would not be invaded. And they saw that troops entered Jerusalem, which to the Mos

holy town, and they were told by Lloyd George that the Turkish suitan could not hope to be better reated than the other enemies. The result was that leading Mohammedans lost their faith in British incerify and joined the ranks of the Hindu

nationalists.

It is curious that the great war, which was said to aim at liberating all nations and uniting them for the furtherance of lofty ideals, has led to a straining of feeling between the different races, The color prejudice of the winte race seems to be tionger than ever, and the colored races are more and more reciprocating the feeling of distrust and ill will. In such circumstances the anti-British feeling may some day spread all over India and become irresistible.

Non- Foreign Service

Santinikotan, Bengal, India Jan 15. The strengthening of nationalism in India, with the consequent claim for home-rule or independence has been brought about by the educated classes The people at large have had little or no share in the movement. The change has been due in part however, to events during and after the war

As a rule the suddiers who emisted for the war did not belong to the higher classes. Then experiences during the various campaigns were bound to be ome known in large circles. In the camps they heard about the great service they were removing to the British empire they must after all be of some account. And on the battlefields and in the trenches they were not always witnessing humphs won by the powerful samps then masters Sometimes they even saw the saints ther masters sometimes they even saw the saints flee for they have the tales the soldiers told when they testurned were repeated in the bazaars and they lost making in being repeated. There was an immense loss of prestige for the British arms, even in the minds of the simple villager.

To the villager sielers the British government

To the villager, sirker, the British government had hern a mystic power, something almost divine, which must be worshipped in fear and awe. But there was rarely any love for or devotion to it. Now, with belief in its invincibility and something of the awa distributions are aware heavy of low-caste. of the awe disappearing, we even heard of low-easte who saug out in joy at the rumor of Butish

defeats,

SAN FRANCISCO EXILES ACTIVE.

The coil is gradually becoming prepared for the pred of the nationalist movement among the udian masses. To a certain extent the movement as already made its way to them. It is possible to nont to definite among that have contributed o must be definite events that have contributed this result.

During and after the war there were many buring and after the war there were many fine of a widespread revolutionary movement, led lartly by Indian exiles who had found refuge an an Francisco. The authorities were nervous, and specially in the Punish, scope officials were

anxious. There more than elsewhere the recruiting for the war had been conducted with a harshness that lot to much resentment

Some unfortunate happenings led to an attack by a mob on the British quarters in Amitistr, where some Englishmen were killed and a lady was ill-treated. The leading fidians tried to quet the masses and condemned their violence in strong Then the town become quiet again

But then the British general Tryer entered the tage and forbade, all public meetings in the town His orders were not sufficiently published and a big meeting was anisonneed in the fahanwala Bigh, a big square with only one entrance. There tien Dyer posted his troops and ordered them to shoot on the assembled masses and about 800 to shoot on the assembled masses and about 800 to shoot on the assembled masses. Indians were killed Other repressive nearing followed and the following days were hard for the Indians.

GANDIN ENTERS THE LISTS

These events raised a torrent of indignation, all over India and Gandhi threw hijaseit with all his energy into the struggle He could mind, in strongest terms, the attracte of the government in Amits and with reference to the reace with Turkey, and started a compagn which some spread over all India

Gandhi is not a polyteren of the common, type He has devoted his life to a deinterested fight for these who are exploited and depressed first in South Viria and new in Index, and he has a unique position in the hearts of the lighter people This methods and his motives its differ et from those of the average politician. If does not have the Euglish on the contrary he is meltined to admire them and would be prepared to agree with Rabindi math Timore that the lest English men are the lest specimens of humanity. He knows is every reported pide; knows that the British administration in India has been of a high order and that the individual British will exert himself to the utmost of his power

Gardhi therefore was should more that any one else at these happenings because that sook his fifth He foresew that the Mohromedan question thicatened to be one fital for John and he poind hands with them paths to avoid a violen-continust of religious technic. He test to ed to appeal to the British authorates and only when this appeal failed did he throw himself into the struggle of which he son became the nominal

leader

GANDRI'S VIDAS NOT POLITICAL

Gandle did this wish greet relactance and only ifter having come to the con lesion that there was no other war available. He saw in the conflict between the British and it distants not so much a struggle for politi d power as a clish seween two different views of ide rid lifes unas forth, average European the chief things are power and pros-penty to Gandhi spiritual feedom and sli-control liss rewest religious and not could if

But he had come to the conclusion, that the conda t with Europe was a denserous poleon for India, and he pomed those we way d to heak off the come tion, or make it pow to see to work for

The police Gandhi also ited is chara tensite of the man. The linkings he usued should withdraw from every co-operation with government, the sata-one government, as a used to six and we now, understand how he came to use such a term. By such means he had triumphed in South Africa, and he had no doubt as to the result in India. The Indian should rely on right and justice, which were stronger powers than force and violence.

Above all, they must practise a chimas, avoid violence in any forms and horse he shows how funda-

lence in any form, and here he shows how fundamentally he differs from the bolshevist revolutionaries

of Russia

The state of the s

The Indian people at large worship Gandhi, the mahatma, as a saint. And the result of his joining the ranks of the nationalists was that the movement spread all over the country and came to comprise all classes of the people Indian nationalism is on all classes of the people its way to becoming very firm

GANDRI'S ADHERFACE HELD MOVEMENT.

Gandhi's preaching of ahmsa was not in vain. For many years it had been impossible for higher British officials to move about without expensive precautions. Otherwise their persons and their lives would have been in danger. Now there was a great improvement in this state of things, and it was only quite lately that the recrudescence of anarchist crime brought about a change for the worse,

The following current of events is too well known to need recapitulation. The movement which Gandhi accelerated spread like fire in dry hav, and here and there it proved impossible to restrain the mob from using violence. It came to deplorable excesses, and Gandhi did not shrink from the responsibility. He was airested and imprisoned for six years, till the precarious state of his health brought about a release last year.

But Gandhi in prison was even a more formidable power than he had been before, and his restraining influence was eliminated. And now he ing influence was chunnated. And now he is again active, trying to reconcile the different Indian camps and preaching his gospel of ahimsa and

home rule.

178.7

1 1

In my next letter I shall try to point out some of the reasons why Gandhi failed in keeping his followers from violence and some features which seem to me to contain a serious warning for the füture.

IV

OPPRESSED IN INDIA THINKING OF RIGHTS

Hou Bolsheersm Which They Little Understand, May Lead to Trouble.

(Following is the fourth and last of this series of articles by Br Konow on political and social conditions in India. Br Konow is professor of Indian philology in the university of thristiania (Oslo), but for some time has born visiting professor in Dr Rabindranak Tagore's university, VSCa-librari, in Santiniketan Bengal, India)

Special Correspondence of the Chicago Daila NEWS FOREIGN SERVICE.

Santiniketan, Bengal, India, Jan. 15.—The national idea, which is spreading over all India, is, in its origin, essentially a reaction against the

the origin, essentially a reaction against the foreigner, and it is a question whether it would have any ritality if the home rulers succeeded in making India independent of Great Britain.

I have mentioned in previous articles the strained relations between kindus and Moslams, and it is scarcely to be hoped that those relations will become better if the British wease to exercise control over the country.

control over the country.

between the wealthy and the poor classes,

high and low.

There are in India, and have always b institutions of a democratic or even co nature. The village has its council, villages often settle their own affairs. T villagers often settle their own affairs. men were formerly and to some extent are with shares in the harvest and not in conherited habits, however, are gradually ing, and life even in the village becomes tiated as in Europe and America.

Social Question Gains Important

The real power in matters of common quite vital interest has never been in the the many, but has been monopolized by and with the spread of western ideas th sooner or later realize that such is the social question is bound to play a consider in India as elsewhere in a not very distr Already there are signs of the coming though they are sometimes misinterpret to the nationalist propaganda.

Among the \$20,000,000 who form the

of India not less than one-eighth or about are so-called untouchables on whom ti classes look down as impure. They ca them or even approach them without them or even approach them without them-elves impure and defiled. Seven Indians have raised their voices against 1 mal state of things, but the feeling as outcastes is still strong, and quite reconstants. could witness how some orthodox Hindus a condition of their joining the home-the untouchables should not be allowed to certain places of worship

What is going to happen when these classes wake up to see the impistice of things and realise that it is possible and enforce their right as human beings a citizens? They are already beginning

themselves.

AGRICULTURISTS DEFFLY OPPRESSE

Then there is another grave problem of the Indian population is dependent tune for its living. In some districts tallers are also the owners of their plots of or are secure in their right as cultivat great extent, however, they are tenants to pay rental to the landlords, and in government regulations it has often prove sible to secure them against being a Moreover, they are often in the hands lenders who are not rarely usurers of

The position of these poor people is and they are too poor and too ignorant their rights against their oppressors, in even forced labor is exacted from them, is illegal. They receive a nominal pay in save appearances, and they are powerless of this kind of oppression, which is resorted to in the name of the higher officials.

Some days ago I went to a Santal look on a village dance. The good-nature have been allowed to settle down and blooms on ground belonging to a wealthy They have no written contracts, and their ged to make a poor living for themselves. the harvest had been good and they were ared to enjoy themselves. On the day when came, however, their innocent joy had been rhod: The landlord had ordered the men to a to his place for some days of forced labor.

CAUSES OF A TILLERS' RIOT.

thout fifty years ago an Englishman wrote that pressure on the Indian tenants was so great an explosion was bound to come in a near It has not come yet, but there have been asional outbursts.

A few years ago an Indian told a compatrot in adon that he failed to understand why the lants in his home, in Chauri-Chaura, had not ants in his home, in Chauri-Chaura, had not a before risen against their oppressors. In the when Gandhi's name was on everybody in the happened in this very place that the mobined against the police and birned many of ein to death. The Indian police always side the those in power. They are underpaid, with a result that bribes are taken or extorted and a common indian does not love the police. Now and had stirred up the whole people and the soil titlers in Chauri-Chaura gave vent to their since in a deplorable outburst of violence. clings in a deplorable outburst of violence

The whole matter was represented as the result t Gandhi's propaganda, but the real cause lay much deeper. In other recent happenings such is the Moplah rebellion, the troubles in Assam and n thidh, the pressure under which the lower knows live was largely responsible for the outbursts.

If we further bear in mind the rapid growth of ndustrial undertakings with the consequent massing of laborers in industrial centers it will be understood that there is more than enough of inflammable matter which only needs a spark to

Not long ago it happened in this neighborhood that a young Indian who had returned from the war began to organize the villagers for drill and spot. The matter looked quite innocent. But one

day some of the villagers came to the leaders of a neighboring institution and said. We hear that you also are suffering from the greed of the landlords. Only give the word and we shall burn down their home-teads"

TALK OF LIVING OVER VOLLAND

Indian friends have told me that they sometimes have the feeling of moving about on a volcano, and if one looks at the glaing contrast between ich and poor people in India one feels inclined to think that such must be the case

In such circumstances it may be understood why Gandhi has not been able to keep his people from violence. And one can easily see how dangerous it is when some nationalists who are themselves supporters of the ancient indian society pose as bolsheviks. Sooner or later the depressed classes will learn to understand that bolshevism is not merely nationalism but social gospel, which is bound to make a strong appeal to them. And some day political agents will come from abroad and enlighten them still more

There hes the real bolshevik danger for India Provisionally bolshevism is to most Indians only a vague idea which the nationalists fancy they can use in their striggle against the British But what about the day when it becomes a reality

If the masses can be organized and disciplined by leaders with strong will and settled aims they will some day rise not against Buttsh rule, but against their oppressors the wealthy Indians and the upper classes generally. And there will come a catachysin which will make a rend of the accient Indian society and to Indian civilization, millions of those who rose in rebellion will themselves die the death of starvation because it is as the soxiet republic has taught us so infinitely more difficult to build up than to pull down. It such an urreaval should come after the

Indians had see eded in turning out the British nothing would be able to seep it down. The func hand of the British ruler alone could succeed in

averting the disaster

ENGLISH.

Anong the Brankins and Parlians By J. H. Sauler. Translated from the German by Bernard Miall. Boni and Liveright, New York. \$3.00. It is difficult for an American who has not seen to India, to draw when writings of a book about India, a fair conclusion to andora the ments or demonts of such a book. There is however in the reading of books a certain pleasure which may reading of books a certain pleasure which may have nothing to do with the fruth of fishty of their contents - a pleasure in short derived. In connection with the reading of Herr Santer's from style.

book, Among the Brahmins and Pariahs, one's memory turns to another book, Island India, by Miss Augusta de Wit (Yale University Press) which is similar in style. The two places described by Herr Suiter and Miss de Wit, the one India and the other Java, are many indes apart, but there is an identity of treatment which is in each instance delightful. The bond existing between the two lies a delicary of touch in the writer's craftsmanchin which lifts the subject-matter writer's craftsmanship which lifts the subject-matter above the ordinary descriptive writing on travels and places it in a class of reading matter, which is always enjoyable.

As has been said, it is difficult for an American who has not been to India to judge Herr Santer's book. One is without authority to say whether he book. One is without authority to say whether he digresses from the truths or whether he approaches his subject of India with a just, or an unjust attitude. The only criterion for such a reader is whether the book is of merit from a literary view-point. This Herr Santer's book is There are passages in regard to the phrasing of which, the reader wishes the translator had used more originality. Certain expressions are used again and again in the English where one feels certain some variety must have existed in the original German. variety must have existed in the original German But the effect on the whole is very picture-que and very delightful

For instance, the description of the festival of Ganesho-Saira in a temple in Deoch in is one not

soon to be forgotten

The sun had disappeared behind the dark blue banks of clouds the last mys were growing faint and the stars were peoping forth in the vast dome of the heavens, growing always brighter and clearer, until at length when darkness had filled the whole sky, the silver-bright Milky Way shone forth in the heavens. From the city sounded the voices of many men mingling with the din in the temple court, until the night seemed full of the court, of breekers on a week shore. Pushed temple court, until the night seemed full of the roaring of breakers on a rocky shore. Pushed onward by the crowd we wandered once more from one side-temple to another. They were now brightly illuminated by countless oil-lamps burning within them. On the tall iron stands before the images of the gods sticks of meense were burning, giving off that sweet, slightly actid odour peculiar to the Indian Temple The booths were brightly lit with lamps of every kind, and there was no corner, not a parapet in the temple precincts without its row of truy lights."

Herr Santer makes the statement that occulent-

Herr Sauter makes the statement that occidental influences are gradually destroying Hindu customs and taste. He states further and as an example, that the manners may of the occidental example, that the manners ms of the occidental theatre and the plots of western drama are invading the precincts of the ancient Hindu drama and are destroying it. This statement is corroborated in a recent book by Dhan Gopal Mukern, My Ihothe's Face. Mukerji, after an absence of a number of years, returned to India to find that the passive Indian drama had begun to give way to the clink and clatter of gaudy Western melodrama and that the giving way was taking place with amazing rapidity. Oriental and occidental dramas are not at all alike and no one deplores the invasion of the latter into the field of Indian drama more than these two writers of oriental subjects. One wonders whether it is the same movement which wonders whether it is the same movement which wonders whether it is the same movement which inventorial the automobile and other modern inventorial life which has

Mr. Das Gupta, the Union of the East and the the organization formed by Tagore during h the organization formed by Tagore during haise to this country, presents a series of plays. The audionees attending these play increasing in number from year to year anomalies of western dramatic form in India and Indian drama invading the Wavery interesting One thinks, too, of the Minedan temple which is at present in contraction in Berlin. The invasion of Children Western drama into the Kingle of the Minedan and medons Western drama into the Kingle of the Ki ity and modern Western drama into the E not the only invasions. Eastern religion drama are also invading the West. What is the inevitable outcome? Will there be a rea of East and West?

TO A STATE OF A

Herr Sauter's book is a record of the a travels in India and his residence in that covering a period of several years. The billed with the author's reminiscences, recoll of people and places which linger in memor after the covers of the books have been One of these persons is Arun, an Indian of birth. Another is Swami Six Devanand. Bedelineated with such sympathy and such de of touch that they might be men whose are ance is enjoyed not only by the author. I the reader as well

Among the Brahming and Parials is a col of essays each of which is complete win it series of word-pictures. Side by side with d tion is the author's interpretation of the sophic concepts of the Hindus with whom come in contact. The book is one treating light and sections moments. It is a book we pleasant in both language and content and to be of interest to both Indians and America VIOLA TREVE COOL

Relacion Philosophy and History: (For) tenes) By Thomas B. Strong, Bishop of Published by the Oxford University Frees 1

In the first and the second chapter, the has 'considered the position of man in hi tions with the world round him and his vefforts to use it for his own purposes and to himself at home in it' (p. 42). In the las chapters he describes the importance of h and Christianity. He writes from the stan-

of orthodox Christianity

His Christianity is based upon some his events, by which he means the birth, life. and resurrection of Jesus (p. vi. 74-77),

He lays a special emphasis on the dest resurrection of Jesus. He writes: "The dis-tion of sacrifice was at an end, because the pose which the ancient sacrifices figured for effectively, had at last been achieved. If the death and resurrection of Christ, may become reconciled to God' (p. 71). (Italics of

In another place he says that philosophy but physical resurrection or even the approof a whost, can prove the immortality of the (p. 52, 76).

In the connection we may remark :—
(i) Brews, W. B. Smith, Robertson. Schwand others have challenged the very histof Jesus. We may not accept the constrained of their theories but their destructive cuis unanswerable. We are constrained to sathey have conclusively proved that the Jestenges had no existence.

scholars who believe in the historicity of Jesus scholars who believe in the mistoricity of Jesus and at the same time say that nothing positive can be known about his life and teachings. The Christ of the church and of the Gospels, too, is according to them, an ideal construction. Hound the instorical Jesus gathered many fables according to the needs of the church, and to him were attributed the actions of his predicessors, and contours according to the sayings of his predecessors and contemporaries. What in the of his life we can extract from the mass of the Gospel legends, is trivial and of slight importance, and we cannot say with certanty what precepts were really his the verdict of modern scholar-hip

Everything in connection with the life and precepts of Jesus is doubtful. But one thing is certain and it is this, that the Resurrection is a with pure and simple. And upon this mith our author has built the superstructure of his Christiamix Now what will become of this superstructure when its foundation is removed. Even if for argument's sake, we assume the resurrection to be an historical fact, still the position of our

author will remain untenable

How can the death and resurrection of desu reconcile man to God. The relation between God and man is direct and not mediate. Man is organically related to God, whether he feels it or not If there be any estrangement, it can be removed only by the parties concerned and the process is purely internal and spiritual. This estrangement cannot be removed by sacribeing an animal or a man by sacrificing and tesureting lesis or human sacrifice is a role of an old burbars tellgion which prescribed sarribee for appearing an angle and vindictive God

Not can resurre ton prove the immortility of the soul Physical resurrection cannot establish may obvised immortality. It can at the most place a femporary post-mortem existence

materialised soul.

A System of National Engerior By See Annabolic Chase. Published by the Arga Published Branch, College Street Market, Calcutta.

The book contains essays on the general principles of a sound system of teaching applicable for the most part to national education. The fame of ST Autolando as an intellectual is a despread enough to make it unnecessary here to enhance the most his keen analytical powers and professed learning. He criticises the enisting western system

of teaching as being 'based on an insufficient knowledge of psychology' and he say that it is safeguarded in Europe from disastrons results by the refusal of the ordinary student to subject himself to

the proces of it involves. The first principle of true teaching is that nothing can be taught. It is the teachers business to suggest and not to impose. Knowledge is always within the box and the teacher only helps it to rise to the surface. Such is the opinion of Sri Aurobando and he work out his ideas into details in this book

INDIAN RAHWAYS By K. 1 Iger Published by the Oxford University Press

tonden London Sir E. A. W. Budge wrete this book at the segestion of the late Lord Carnarvon, who with Mr. oward Carter discovered the tomb of Tutankhamen 1 December, 1922. The sensation that was created y their discovery is still fresh in our minds and use definite shape to all the numerous bits of inormation that has got into our mind since that nemorable occasion in 1922. The information supplied to the world by an over-excited press was not wholly correct. Sir Ernest says about this: "But some of them (the writers who discussed Tutakhamen in this press) have been led astray by their eagerness to do ample justice to the great discovery, and have introduced into their enlogies statements of a historical character which are incorrect." Sir Ernest has cleared up all our doubts regarding the history and achievements of Tutankhamen in his book and has also given us a good deal of information on the cults of Amen and Aten and on Egyptian Monotheism. The book is profusely illustrated with plates and pictures and the price of 10s. 6d. should enable all who are interested in the subject to get a cony.

INFLUENCES OF INDIAN ART Published by the India Society, 3 Victoria Terrace London S W Price 25 shillings net

This is a collection of six papers by Josef Strzygowski, J. Ph. Vogel, H.F.E. Visser, Victor Goloubeff, Joseph Hackin and Andreas Mell. The introduction is by F. H. Andrews India had throughout her long history economic political and cultural relations with the outer world. Naturally her art went with her emigrants. Of course the mark that Indian art has left upon the art of other countries shows that Buddhist India exerted the greatest influence in adding to and modifying the art of what we now call greater India. The countries to which India carried her artistic genius were not cultureless. They had all more or less highly developed arts of their own which with the advent of Buddhism, applied themselves to the service of this new religion. Representations of Buddha and the Buddhist Hierarchy attracted practically all the talent that these countries. could provide."

"The new religion," says Mr Andrews, "was in fact, a fertilizer and vitalizer which in providing new inspiration in the fields of art, awakened and re-energized latent talent to express itself, at first in the terms of Indian formulae but later to produce its finest works when native genius found it could declare itself more eloquently in its enriched vernacular."

So the arts of the countries which received inspiration from India at one time or another either directly or in a round-about way, should not be considered as exotic by the enthusiastic nationalists of India All that India should claim is a deep cultural sympathy. These lands developed the artistic traditions of India by the force of their own genius and talent and the fusion of their cultural heritage with that of India has produced wonderful works of arts such as, to take only Javanese examples, the Stupa of Boroludor which has been aptly called the Parthenon of Asia by Mr. Havel, Chandi Mendut and Chandi Pawon, the temple of Kalasan, the Dyeng temples, the Prambanan Sculptures depicting the story of Raman the Gangas of Bara, the Vishmu on Garuda.

۴

tual creations of any art, Eastern or Western,"

In the case of Far Eastern Art Indian influence first went to China, thonce to Korea and Japan China has lost most of her early Buddhist art owing to political, religious and climatic causes and it is Japan which gives us some idea of the glory of early Far Eastern Buddhist art. H. F. E. Visser, paper on Indian Influence on Far Eastern Art is masterly from the way in which it has embodied in it the researches of great authorities such as Edouand Chavannes. Ito Chuta, Petrucci, Foucher. Why Kies, Segalen, William Cohn, O. C. Gangoly and others. Visser concludes, "The two magnificent poles of the art of Asia are India and China. Before there could have been any contact between Chinese and Indian art, each of these arts had produced works of extraordinary beauty and masterly style. If there is any question as to operate the produced works of extraordinary beauty and masterly style. If there is any question as to operate Indian. "Some supreme Buddhist works created in Far Eastern countries seem to be the sublime result of a fusion of Indian and far Eastern art. "Can anything finer be imagned in the lustory of the art of Asia?"

sublime result of a fusion of Indian and rate Eastern art. "Can anything finer be imagined in the history of the art of Asia?"

The question of Indian influence on the arts of Indo-China, Tibet, Central Asia and Ceylon receives the attention of Victor Golonbeff, Joseph Hackin and Andreas Nell Their papers are, highly interesting and comprehensive. The book is a treasure-house of information on the subject it deals with The price is rather high for the average pocket and may lunder even keen student from possessing a copy.

SANSKRIT.

A, C

Shiwap Vallabhacarva's (1) Shibhantalahand (2) Suboddunt: Edded by M. T. Telinoda ll LLB, and DV. Sankalia, H.A., LLB, Khakl Burkhings C.P. Tank Bond Gergaon, Bombay

Messis Teliwala and Sankalia have be presenting us with a good many works on a Vallabha School of the Vasnavas. Today we have to be sent to us. The first of them, Sadhantarhas is a very small treatise composed of only eland a half slokas by Vallabhacarya. It forms of the sixteen prakarana works by him and is edited with eleven commentaries by the reno teachers of the school, 22. Cokulanatha, Raghum Kalvanaraya, etc., together with a ramana Ginrati by Purusottama and a well-written is duction in English. The subject-matter of simple language is that it is only by establish a relation to Brahman (Brahmanamhandhaka) that all sorts of deprayity of one's body and are removed, and one should first offer one's but thinking oneself just like a servant belonger Him. This offeriog (Samarjana) is to be perfewith the help of those who have composimple and pure teaching has, however, been a misunderstood by a large section of the follof the Vallabha School and consequently in practices flave crept into it, and their was once exposed to the public in the no Maharaja Libel Case. It may be noted i connexion that the defendant in that case efficiency to the large section of the follomanached by Vallabha himself and sanction

saying that a careful perusal of Vallabha's works will clearly show that his teaching is far from it, it can in no way be so. Students of religions and epecially the followers of the Vallabha School should feel thankful to the editors for bringing out the book, which is so dangerously misunderstood even by some of the spiritual guides of the school. The second book, Subodhim, is Vallablia's com-

mentary on the Stimad Bhagarata Purana extending to seven Adhyayas, 26-37, of tenth shandha in which the rasalia is included. The original and the commentary are too well known to require any description. There is a Gujarati translation of the Sanskrit slokas of the Purana as well as an appendix comprising some small but very useful appendix comprising some small but very useful treatises subsidiary to the original or the commentary. According to the Varsavas the best portion of that Purana is the resulting from which one can form an idea as to how the topis of Vrindavana sacrificed every thing in their possession to God, how they were always and entirely engrossed in Hun, and finally how they realized Hum as an embodiment of bliss, man, of which the seers say "rise realized." Those who really want to understand it from the who really want to understand it from the Vaisnavie point of view may read the work in the spirit in which it is written.

Viducishermana Bhateacharaa.

GUZARATI

Throsophy: Bu Frampi B. Pate. Hand edition Printed at the Bharid Sera Press. Bon but Pp. 196. Clab bound (1924)

It is difficult at the first oldship, a believe that this compilation comes from the pen of a Parsi so chaste and 2c wrate is the sanguage in spite of the subject being a highly technical one, because the subject being a highly technical one, because the exposition of Theosophy based on Theosophical manuals, notes on the Bhigavat data drowth of the soul. Path of Discipliship, require close acquaints ance with the vocabulary of metaphysics, religious philosophy, physics and some other scientific subjects. To those who are interested in the creed, the book is sure to prove a guide and a friend.

THE GREATNESS OF THE KORAN: By Jafar Ali "Astr". Printed at the Khurshed Printing Works, Bombay. Clothbound. Pp. 122. Price Rs. 2-0-0 (1924.)

By means of suitable: extracts from the Koran and discussions on them so far as they bear on the greatness of Islam, the writer has sought to support his thesis. The language used is, however, so high-pitched that we think it would not command popularity.

The Big Conspiracy in the Puniae: By Shachindra Nath Sanyal Pointed at Ganderi Printing Press, Surat. Paper oner. Pp. 116, Prue Re -/6/-(1924)

This is an interesting story of a prisoner caught up in the eddy of the revolutionary times in the north.

Petals of a Flower. By P. II Shukla Printed at the Diamond Jubilee Printing Press. Ahmedahad. Paper carci, pp. 68 Price -/7-(1925.)

The poetic flowers of Rabindaniath Tagore are sought to be followed in the prose-poems of this little book. The for word written by Rev. Bahadur Ramanbhai is remarkable for the trenchant criticism it makes on such abnormal attempts at thapsocheal writings. Another foreword written by Mr. Nanalal writings with an ethereal interest. For a notice the out-turn is certainly creditable.

Our Stories: By Sumate Nagardas Patel and Nagardas Patel, printed at the Nava-Yng Printing Press, Surat, Paper cover Pp. 79, Price -15-(1924).

A dainty little volume Sure to please the little ones for whom the stores are intended.

Kushna Vakual: By Premyogi. Printed at the Charotar Printing Press, Anand. Paper cover, pp. 57 Price 48i- (1924.)

There is a mythological story of Arjun and Hanuman vying with each other about the trial of their strength in bridge-building and bridge demolishing, in which Arjun loses, and is prepared to cat fire. Krishna intervenes and by his clever ness, pacifies both. This incident is dramatized here

KUL-LAKSHMI KAMLA: By Prasanna Violen Chhatrilaram Dakshit, printed at the Katamaya Printing Works, Surat. Paper cover, pp. 176, Price In III- (1924)

This book is the translation of a Bengali novel called "Kakima" by Banku Behari Dhar: it illustrates not an unusual feature of Hindu life, the self-sterities of the senior members of the family, male and female, for the preservation of harmony in the joint family, when younger members become impressonable and kick at the traces. As the feature is common to Gujrat and Bengal, readers can very easily follow the many incidents of the novel

Saint Joun von Bhanver By the late Mr Mark Shanker Rothage Bhutt, Printed at the Navious Printing Press, Alimedahud, Cloth bound, Pp. 129 (1924).

The Gospel of Sr. John appeals to all mystic The late Mr. Bhatt had a mystic turn of mind and hence has translated this part of the New Testament. A preface by Mr. Manilal Chhotalal Parella who has converted himself to Christianity, explans all that is necessary to appreciate the Gospi which otherwise, in its baid translated, form is not quite easy to follow.

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or weather papers criticizing it. As various opinions may reasonably be held on the same subject, thus section is not meant for the airing of such differences of opinion. As, awing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to brief and to see that whatever they write in strictly to the point. Generally no criticism of reviews and making to books in published.

Writers are requested not to exceed the limit of five hundred words.—Filial The Modern Review."

"Praja-Vishnu" and "Dhauurdurga"

The reply of Prof. V. Bhattacharya in support his untenable interpretation to which he still had not be allowed.

was pointed out to him that Vishan had just in dismissed from the ceremony and Vishan, therefore could not be the witness—a point which he he failed to notice—he "yould own his mistal lasted, he chooses to hide his face in the half of assumed wisdom—this seems to me to be chand

ata himself brings the god Vishnu, again after is dismissal". ... This is a pure misrepresentation handesvara is commenting on the very passage p s1) preceding the dismissal of Vishnun the text quoted by him (p 83) gangena pangapalana, etc. Chandesvara is not bringing back ishim after his dismissal? It is too much to another property that the Perfection appose on the ground of charity that the Professn has neade a mistake in regarding the ommentary on the very text independently and heating the text as composed by Chandesvara especially when he has entered on a serious controversy I am, therefore, forced to say that the Professor has perhaps unconsciously fallen into the educide method and for the sake of Saving this situation put forward a reply which is not approved in modern scholarship

this next reply is, "it is not a fact that at any time or anywhere in taking oath or making promise God is invoked as a witness. This is too wise. It leaves the question indes apart

After this treatment the Professor fa'ls on the After this treatment, the Professor fa'ls on the Mahabharata text. His attempt is based on the wing of the text—changing the text as publique againgdom (su) bhauma brahma—while the text is bhaumain, that is, it is the object of publicasing publim (su) and not adjectival to brahma as the Profes or would make it (See With Kumb ed to) 19th Santi-parva, by 10o 107 od Calcutation whole discussion—therefore, becomes multiple again the Pandit has taken to colonda method. lere again the Pandit has taken to estanda method nd to misrepresentation. It is hardly in consethe with present-day scholarly traditions

DHANT RDI ROA

What the Pandit writes at length on Dhanurmga is irrelevant to the controversy raised by m. The real point was that the reading of him's verse which Chandesvara gives is affected y lie bratith the oldest commentator of Manu-tyles of that, how could it be said as the Pandit

too wisely assumes, that Chandesvara was wrong Instead of meeting the clear point, the Pandit has taken upon himself to write out a thesis on irrelevant points. Throughout his note there is an evasion of the fact of Mediatithis reading

Reply.

I have read the above note of Mr. lavaswal dispassionately. I would have been dad it anything in it could have made me change thy position, but I see nothing in it which can make me do so

The only point which to my mad may reasonably demand a reply from me 1 a cardiar the reading blumman brahma, in that yers of the Mahahharata I do net remember whether I myself committed the mistake in writing bluming for bluming nor can I say with certainty that the anusiana (m) was somehow of other omitted in pointing of in carricting the profits. Owing to the want of proper types in the pross. On transliteration is not satisfactory at all and there is many other printing maccuracies. But be that as it may whether it be libraring or blutanian. Therefore it I take it as an adjective of brahma. Therefore it

does not affect my position in the least.

As to the rest I find nothing substantial in the above note of Mr lavaswal excepting some strong expressions levelled mainst me about which I have nothing to say I only want to accept them in silence as his kind of rings and will try to keep for his scholar-hip the same regard and esteem that I have for bim. I want to put a stop to the discussion which instead of being triendly and scholarly has unfortunately become personal, steppring beyond the limit of scholarly propriety and te straint

Finger Lamp Throws Light on Work and Saves Electric Current

For dentists, artists, watch-repairers and others in similar occupations or for use in the sick room, a handy electric lamp that is worn on the finger somewhat like a ring, has been invented. It is so shaped that the light is thrown directly upon the work and may be moved about by means of a convenient holder on which a reflector for the lamp

For the Sick, Finger Lamp 1s Found Convenient When Writing, and Spares the Eves

also is mounted. A transformer accompanies the outfit so that the lamp may be used with current from a wall socket. It requires but little electricity, is durably incased in metal and besides affording a bright illumination calculated—to spare the eves, does not bother persons man by a feature that commends its use for patients in a hospital ward.

Pigeons Messengers of Peace and War

Despite the advances made in scientific methods of communications, homing pigeons, message-bearers of the early Egyptians, are still relied on to maintain contact between widely separated places when all other means have failed.

rated places when all other means have failed.

While it is common for homing pigeons to cover courses of 200 or 300 miles, some can fly more than 1,000 miles without apparent harre. Such flights are generally made in a series of 'hops', the birds taking to shelter at night and resuming their journeys with daylight. Heavy rainstorms have little effect on them, and many records of fast flying have been made by pigeons forced to go through steady downpours. Nature protects them, covering the wings with a natural powderlike substance which keeps the moisture-from penetrating to the skin.

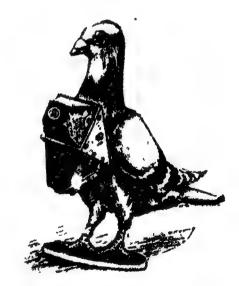

touch the "supraker" as the

through a swinging-gate arrangement which on a pivoted shaft. Alighting on the labord, the bird is coaxed by feed within to itself against wire strands which rise it is it passes and drop into place against the pigeon's exit. Backward are uiged by the gentle use of a light whip.

The Voice of HURANIES

The address which Rabindianath delivered at Milan contains some reminiscences of his first visit to Europe when he was a boy of harely seventeen. We have to omit these and reproduce some other passages

In our language we have the expression juputa decata, the Divinity which is fully awake. For the the soul of the individual, the Divine is not everywhere and always active Univ where our consciousness is illumined with love, does fied not through our spirit. The shrine of the wakeful Divinity is there where the atmosphere of faith and devotion has been created by the meeting of generations of true worshippers. So our pilgrins in India are attracted to those places where according to them, the divine spirit is active through

the religious life and work of devotees.

Some time in 1912 I felt such desire to make my pilgrimage to the shrine of humanity, where the human mind was fully awake, with all its lamps lighted, there to meet face to face the Eternal in man. It had occurred to me that this present age was dominated by the European mind only because that mind was fully awake. You all know how that mind was fully awake. You all know how that mind was fully awake. You all know how about the present as a spirit of present as a mind of night, with only a

I had this longing to come to Europe and see human spirit in the full blaze of its power beauty. Then it was that I took that voyage,—voyage of pilgrimage to Europe,—leaving for moment my own work at Santiniketan and children I loved.

While I was still busy doing service to child I don't know what possessed me all of a sude From some far away sky came to me a cal pilgrimage reminding me that we are all be pilgrims,—pilgrims of this green earth A vi questioned me: "Have you been to the sar shine where Divinity reveals itself in the thougand dreams and deeds of Man." I thought pobly it was in Europe where I must seek it. know the full meaning of my buth as a hu being in this world. And so for the second to the continent.

But meanwhile, I had grown up and lemuch of the history of man I had sughed w the great poet Wordsworth who became sad who he saw what man had done to man. We too h suffered at the hands of man -not tigers snakes, not elemental forces of nature, but his bonus. Men are ever the greatest enemy of M I had fen and known it all the same there's a hope, deep in my heart that I should find s-place same temple, where the immortal spirit man dwelt hidden like the sun behind clouds

Let when I arrived in the land of my one Louid not step the insistent question which is troubling me with a sense of despair. When it that Theope with all her power of inner tacked with unrest? How is it that she is overone with such a whirlwind of suspicion, realously and greed? Why is it that her greating teelf ofters a vast field for heriely content pressures to have their devil-dance in the induct of conformation.

light of conflagration 4

When I travelled from Italy to Calary I saw beautiful scenery on both sides of the raca. These men, I thought have the ability to be their soil and what a great power is this lov How they have beautified and made fruitful whole continent with heroic sa rifice! With force of their love they have fully won their comfor themselves and this ever-active service their devotion, for generations, has given us them to an irresistible power. For love is highest human truth and truth gives tillies life. The earth is overwhelmed by it not been of man's covetousness, but because of this f giving shower of heart and mind that he pointed around him. How he has struggled eradicate the obstinate barrenness from the new How he has fought and defeated at every the evil in everything that was hostile in surroundings. Why then this dark imisery low ing over Europe why this widespread menadoom in her sky -

Because the love for her own soil and child will no longer suffice for her. So long as de-offered to her only a limited problem, Europe more or less satisfactorily solve it. Her du v was patriotism, nationalism,—that is to say only for that and those to whom she happened he related According to the degree of truth this love she has reaped her harvest of well-But to-day through the help of science, the whi world has been given to her for a problem to maker it in the fulness of truth she has til loarn. Because the problem has become vast.

A great truth has been laid bare to you, and according to your dealing with it, you will attain the fulfilment of your destiny. If you do not have the strength to accept: it in the right spirit, your humanity will rapidly degenerate. Your love of freedom, love of justice, love of truth, love of healty, will wither at the root and you will be rejected of God.

rejected of God.

We shave no doubt reason to be proud of Science. We offer to Europe our homage in return for her gift of science, now bequeathed to posterity. Our sages have said "The Infinite has to be known and realised. For man the Infinite is the only true source of happiness." Europe has come face to face with the Infinite in the world of extension, the domain of external Nature.

I do not ery down the material world I fully realise that this is the nuise and the cradle of the Spirit. By achieving the Infinite in the heart of the material world you have made this world more generous than it ever was. But merely coming to a rich fact does not give us the right to own it. The great Science which you have discovered still awaits your meriting. Through what you have gained outwardly you may become successful but you may miss greatness in spite of the still cost.

Because you have strenuously cultivated you mind in Europe, because of your accuracy of observation and the development of your reasonazes ulties these discoveries you have undoutedly desired. But discoveries have to be realised by a complete humannity, knowing his to be brought under the control of Being before. Truth can be fully honoured. But our Being the fundamental to diffy in the human world with which as other tratics may easily be brought into humanity at any cest a got within the domain of Science. Fruit when not properly treated turns lack on us to destroy in Your yory science is thus becoming your destroyer.

If you have a quired a thin deriods to a you self you must carn the right arm of a god to be safe a place failed to cultivate these qualities which would give you full soverigh right over science and therefore you have missed poses. You erry for howe and only build another trightful machine on new powerful combination. Our temay reprosed by outside compulsion for a time but I' are comes from the inner spirit from the power of suff sacrifice not of the instation.

i have great faith in humanity. Lake the surain by clouded, but never extinguished. I also it the at this time when the bunan races have not to their as never before the has a elements appear to dominant. The powerful are expliring it to their of their victims. They take the name, or note to cultivate the school-box superstition that to take one might have claused with enough of the cartholic its never-ending sway over the destination of the cartholic interest. But they in their turn will be disorpointed.

There is the cry of a past that is dready exhausted, a past that has thrived upon the exclusive spirit of national individualism which will relonger be able to keep the balance in its perpetual dishaumony with its surroundings could those has will prosper who for the sake of them, own befortion and permanent safety are ready to cultivate the spiritual magnanymity of mind that diables

the soul of man to be realise I in the heart of all takes

For men to come near to one another, and yet to continue to ignore the claims of humanity, is a sure process of smede. We are waiting for the time when the spirit of the age will be incarnated in a complete human truth and the meeting of men will be translated into the lauty of Man.

I have come to voin door seeking the voice of human tv which must sound its solemn challenge and over one the chinom of the greedy crowd of slave-drivers. Perhaps it is an advised unitered in whispers behind closed doors and will grow in volume till it bursts forth in a thunbring city of judgment and the vulgar shout of brute force is silenced in awe.

The History of the Arrans in India

In his paper on the development of religious thought among the Indo-Arvais, Prof. Dr. Sten Konow says --

The history of the Aryans in India is accordingly a very long one, and a review of the religious development of the Indo-Aryans will have to cover a period of about 5000 years. Darring these long centuries the Aryans came into contact with the older races inhabiting. India brought them under their swar and gradually occame their leaders, and teachers in civilization as well as in religious thought till they all came to be more or less Aryans of

But this Arvanizing was not cft fed by force not in sich a way that the old inhabitants had to give up all their old notions and ideas and adopt the Arvin ones instead. To a great extent, they went on witshapping in their tribitional way only replacing the radius of their tribitional way only replacing the radius of their tribitional way only tolerate this state of things and even to do their best to isset such developing.

In this way the conquerous learnt to look on their ordenenes is people belonging to their own religious community, and the conquered races graduative besided the burner religious release of the Aryms, These analymated religious religious and the resulting common critis dan became situe at 15 which bound the whole population cogether religious matter but rather as parts of a great discorptishing success. A diase the Arys were the spiritual leafer, who is the Arys were the spiritual leafer, who is the Arys were the spiritual leafer, who is the Arys were so ever and vive a distributed to the religious sections of the older reliabilities the velocities as a ble of an Aryan strain parts to order to differ the order to a distributed to its on the section may which in Area turbuted to its on the section may be an arrival in Area turbuted to its on the section may which

The article on the Body in which Mr. C. I. Andrews with The Tunction of Islam less we remarkable does from the pen of a devoit to the passages and the Luity of the control of the Luity of the Body and the Luity of the Body in the passages and the Luity of the Body in th

The Dicther of two the Plus relation of Muslims for to a strateging the treatment of Muslims for to a strateging the treatment of the treatmen

for believers. "Know", said the Prophet, "that

for believers. "Know", said the Prophet, "that every Muslim is the brother of every other. All of you are equal. You are all one brotherhood."

Nothing could be more pronounced than this stress upon the unity of all believers. Nothing could be more significant than the precise limitation of this unity to believers only. It is here more than anywhere else that I find difficulty in reconciling Islam, in its present form, with universal religion and universal brotherhood. It would appear so though a certain exclusiveness were involved. as though a certain exclusiveness were involved within the very structure of the Islamic faith.

It is true that the spirit of brotherhood engendered by Islam not unfrequently oversteps the bayriers of formal creeds and overflows to all mankind The whole Sufi Movement in India has this ideal behind it. Such a true brotherly love I have inveself experienced within the homes and hearts of Muslims, who have been more than brothers to me But the division of hum in life between Muslims and non-Muslims seems almost fundamental both in Muhammadan law and social obligation. The fact that to-day in the Twentieth Century any non-Muslim who ventured openly within the city of Mecca would do so at the peril of his life makes painfully clear how hard and fast the line is still drawn.

I am well aware that Christianity has flagrantly denied in action the principle of universal brotherdenied in action the principle of universal brother-hood which its creed professes. I am also aware that Islam has far more effectively solved the race problem within its own borders than Christendom has done hitherto. Indeed, no apology for the Christian Church is possible as things stand to-day. The sin committed is against the light, and therefore it is all the greater. 'Race' Churches exist, in direct defiance of the will and spirit of the Founder of the Christian Faith. In the Southern States of North America and in South Africa, the situation has become quite indefensible, and from the humane has become quite indefensible, and from the humane standpoint quite intolerable. Neverthele-s the gulf of religion in Islam, between believers, and unbenievers is still unbridged, and there seems no way of bridging it except for the whole world to be converted to Islam.

With respect to the Islamic doctrine of the Unity of God I have no such criticism to offer a supremely uniting and not a dividing faith. One a supremely uniting and not a dividing faith. One of the greatest of all blessings which Islam has brought to East and West alike has been the emphasis which at a critical period in human history it placed upon the Divine Unity For during those Dark Ages both in East and West, from 600 to 1,000 A. D., this doctrine was in danger of being over-laid and obscured in Hinduism and in Christiants, itself owing to the improve acceptance of tianity itself, owing to the immense accretions of subsidiary worships of countless saints and demigods and heroes. Islam has been, both to Europe and to India, in their darkest hour of aberration from the sovereign truth of God's unity, an invalu-able corrective and deterrent. Indeed without the final emphasis to this truth, which Islam gave from its central position,—facing India and facing Europe,—it is doubtful whether this idea of God as One could have obtained that established place in his man thought which is uncontested in the intellectual world to-day

Furthermore, this divine truth which has thus been preserved by Islam is not merely an abstract in Islam, it was this aspect of the Divine which profoundly satisfied Raja Rammohan

SOME SANTAL SONGS.

MUSIC AND LIFE.

Dr Kalidas Nag contributes an 1 translation of an autobiographical fragu Romain Rolland, entitled "Music and to which he appends a note, in the cou which he observes -

Implated into the mysteries of music gifted mother, the one dream of Rolland's 1 been to interpret humanity in terms of mus spite of all the tragge eruelty of his life, never for a moment deviated from the path musical abhiesara the lover's quest of the S Harmony

While still a boy, Rolland would go eve from Paris to Versailles, just to translate h and sorrows his dreams and aspirutions, piano of a friend, for he could not afford to an instrument of his own. He was not able secrate his life to inusic, and fulfil the ch dream of his life to become a composer Nevertheless he persevered in his possionate to emerge as the greatest musical critic of l has more than a mere entire, -a revea creator.

The first to be appointed a professor of History, Rolland devoted ten years of his life 1912) to the proper clucidation and apprecia music through his crudite and illuminating l before the Paris University. His opening "About the Place of Music in General Histor as much an original reading of History Music.

So it is in the fitness of things that Rolland should be the first to harmonise the notes of modern history into a supreme creation in his Jean Christophe, a veritable of modern life unique alike in amplitude and ity are its improvisations on Life and Deaf and Immortality, with their equal distribut glamour and gloom, of lyric moonbeam an thunder.—a tenth symplony (the unfulfilled of Besthoven) achieved by this Beethoven this crisis in Civilisation we may gather courage sing with the immortal creator of Jean Christo-

ne: "Thou shalt be born again. Take rest. There nothing but one heart for all. The smile of the ight and of the day embrace each other. O Harnony, august marriage of Love and Hatred! I sing the God with the two powerful wings: Victory Life! Victory to Death!"

A Poet on a Painter

The Poet Harindranath ('hattopadhaya ontributes to Shama'a the following poem in nemory of his dear departed friend Rama kao, the Andhra artist:

'hose hands which wrought immortal works of art tre quiet in death, those deep dark eves now close igainst the world's old heauty in repose truck by the magic of Death's mystic dart

The wistful aching wonder of his heart las passed like splendour into star and rose lush, shed no tear, since now he is of those Who dreamers once, are dreams God dreams apart

He is not dead. How can he die who made Immortal things for us, drunk with the bright Vectar of dreams, who sat alone and played I pen a golden harp of inward. Sight Who revelled in dim worlds of light and shade Dreaming in silence of unshadowed Light.

The Present Political Situation

Mr. C. Y. Chintamani concludes his article in *The Indian Review* on the present situation in the following words—

Never, perhaps, within living memory was ladian public opinion more disorganized and therefore, more ineffective. Yet, and this is the tragedy of the situation, never before was the need so imperative of an organized and united body of public opinion to confront and to overcome the mighty forces of reaction entrenched in power, interested in maintaining it and determined not to surrender a particle of it. It is of little use that effectually all thinking Indians want Self-Government and that the British know it. This national longing has to become operative. There has to be the will to achieve. It is the lack of this that confuse the most formidable advantage of the bunents of India's progress. The remedy is apently simple. It is certainly indispensable. But Gladstone would have said, at the moment it

The Kenya Lowlands

In the same monthly Mr. C. F. Andrews ls all about the offer of the Kenra le

lands to the Indian settlers Says he in part:—

By far the most serious issue, outside South Africa, at the present crisis in the affairs of Indians abroad, is the question of the Kenya Lowlands. There is unfortunately no doubt at all that for a long time past the Government of India, through its Executive, has been tempted sorely to consider favourably the offer in the Kenya White Paper, which was published in July 1923, that a suitable territory should be found, if possible, in the Lowlands of Kenya so as to compensate for the reservation of the agricultural lands in the Highlands for the white settlers. This tentative offer was made in order to show, at face value, some sort of justice to the Indian settlers when their claims to be allowed to purchase freely land in Kenya according to their earliest legal rights was put on one side and definitely refused at the violent bidding of the white settlers.

It was not with any surprise that I saw in the White Paper this fatuous offer of a suitable site in the Lowlands to compensate for the reservation

It was not with any surprise that I saw in the White Paper this fatuous offer of a suitable site in the Lowlands to compensate for the reservation of the Highlands I have called it fatuous' because it has not really got a single good feature to recommend it when considered from the Indian point of view. Yet it has been this very offer, that the Government of India has taken hold of with eagerness as though it were a means of salvation.

It has to some extent been unexpected that the tovernment of India should have taken up this attitude but what has surprised me still more has been to observe the hestancy and uncertainty with which members of the Imperial Council of State and Legislative Assembly have dealt with the subject Instead of condemning it outright as Mahatma Gandhi did, they have been half afraid to refuse the offer I trust that what I have written in this article may help to clear up the nosition

Registration of Conversions

The registration of all conversions for which Dr R. P Paranjpye pleads in the same Review seems to us quite necessary He observes—

While conversions should thus to freely allowed, the State is quite within its legitimate sphere if it requires that these conversions do not lead to disturbances of law and order and that they are absolutely free and not forced or fraudulent. This is reasonable in the case of every State and it is much more so in the case of India where the conditions are so peculiar. A law with this limited objective, should not therefore meet with any objection from any icasonable person, to whatever religious community he may belong

He then proceeds to suggest the main features of such a law, which seem to us very reasonable A bill, embodying these suggestions, ought to be introduced in the Legislative Assembly

85-9

THE MODERN REVIEW FOR JUNE, 192

The Statues of the Nayaks of Madura

The paper on the statues of the Nayaks of Madura in the Pudu Mantapam which the Rev. H. Heras, S. J., M. A., contributes to the Quarterly Journal of the Mythic Society, with illustrations, has historical value. His opinion

The importance of the statues of the first ten Nayaks of Madura in the Pudu Mantapam, the Tirumala's Choultrie of Fergusson, in the history of fine arts in India, is undeniable. The statues mark the climax of the perfection of Indian sculpture in Southern India. The aim of that unknown Dravidian Phidias who carved them by Tirumala's order was to reproduce the previous kings of Madura as they were, not idealized as other sculptures did. And he attained his aim, indeed. Hence the importance of these statues for the historian. They are true portraits of the first ten Nayak sovereigns of the Pandya country.

But there is still another reason for the excep-

But there is still another reason for the exceptional importance of the statues as far as history is concerned. They are a tacit argument that confirms the succession of the Nayaks as given in the ancient Tamil chronicles

"The Lord's Prayer"

By quoting numerous biblical commentators and critics, Mr. Maheschandra Ghosh shows in the Vedic Magazine that the Christians'

Lord's Prayer is not free from tautology. Every one of the seven petitions is objectionable We cannot accept the Jewish Messianic idea embodied in the first three petitions. The fourth petition is intensely selfish and over-wordly. The fifth petition tries to avoid punishment and it further imposes a condition on God. The sixth has shocked even the orthodox Christians. The seventh is born of superstition. The Doxology is excellent but it is an interpolation-

Tagore's "Nationalism"

In reviewing in the same journal Mr Zutshi's pamphlet "India's Cruel Destiny." Madeline Ruth Harding speaks of

"That wonderful book by Rabindranath Tagore, Nationalism, which sets out in a great majestic way the sufferings of India. One puts it down with the cry, 'What can one do, the problem is so huge." It makes one long to raise a voice of protest and refuse even to be thought a part of a soulless machine which is crushing all that is precious in the lives of others."

· Religious Intelerance

Mr. Muhammad Yakub Khan writes in the Islamia World .-

To my mind there could not possibly be such thing as religious intolerance. The p is a contradiction in terms. Why, take any relyou would and you will not heatate to be a out that each one of them pooh-poohs the faidea of intolerance. For ought I know of H Hinduism, I can say it has no room for the p mindedness we find, to-day, embittering our communal relations to such a deplorable exposes not Sri Krishna teach as the very export in the such as the very export in the words. "Do not unto a what you do not like done unto yourself," come to that Prince of Peace, the gentle teach Galilee. What is his message?—"Do unto a syou would be done by?" How, on earth our Hindu or Christian brethren reconcile sublime words to any spirit of intolerance, I them to their own judgment. To my Mussa brethren, however, I have a right the speak plainly—even sternly. Did not the Holy Prinche to humanity? Did he not say "A man have the self-same meter humanity?" Did he not say "A man have whose name we never utter without invoking I blessings on him—give the self-same me to humanity? Did he not say, "A man has thoroughly believed unless he wishes for brother-man what he wishes for himself?" not the Quran charge the Mussalman with the red mission of defending any place of Worship his own life, if need be? How dare you demolistabernacle of God Himself as the heart of cman undoubtedly is? Does not the Quran the highest point of respect for others' relassisceptibilities when it enjoins: "Speak not twhat they worship besides Allah... for to every his own deeds are fair-seeming. How, in the of the religion that would not let so much as speak all of others' deries, could you kill theiget of worship?

But such is the irony of fate! In the name the self-same institution that is meant, above else, to weld man and man into a bond of fr nity, here we are, Hindus, Christians, Mussali running at one another's throats with all the si of the beasts of the jungle. Let us all, in one v proclaim . "This is not religion." This is ir-reli

Bodhgaya Math Not a Hindu Temple

We read in the Maha-bodhi:-

Meetings are being held in various partiBengal, Bihar and the United Provinces by
Hindus who are partisans of the Saivite Mahan
the Bodhgaya Math in his favour and paresolutions declaring that the great Temple
Maha Bodhi is a Hindu Temple and that it sh
be left in the hands of the Mahant. They
unnecessarily interfering in the matter. Not
Hindu who had been to Buddhagaya and seen
utter desecration of the holy site could sav
the Temple is Hindu. In a Hindu Temple, who
it be a Saivite or Vaishnava, there, are Brah
priests to make offerings to the gods in accordi
with the Hindu shastras. Mantras are repeated
offerings are made several times a day; but in
Maha-Bodhi Temple there is no Brahman pr
no mantras are repeated. A low-caste Hindu
the work allotted to a Brahman priest, and

mage of the Lord Buddha is clothed in such that the identity of the Image is unrecog-On the forehead of the Image marks are, some day they are horizontal, on other ey are vertical. The whole thing is a farce, ddhists are powerless, they visit the shrine of the sugusted, seeing the abominable tion. The all-powerful British Government in that it observes religious neutrality, eless it allows the Saivite Mahant to insult ings of the Buddhists. Since May 1894 and representations made by the Maha-Bodhi since 1894 had been of no avail. The ment is helping the Mahant to continue the able desecration. It has appointed a custowatch the Temple lest it be removed from the and the custodian obeys the Mahant.

Samaddar, M.A., is a Professor of the Patna ment College, who is employed by the Mahant to write articles on behalf of the in the English papers. He makes use of his dge to falsify Buddhist history. He says scholar but every word that he writes on iddhagaya Temple is untrue. He has ed a pamphlet under the title of "The Gaya Temple" full of distorted facts.

"Pay-Cutters"

tong other interesting contents, The stants' Comrade has the following ote:—

have been nicknamed 'Pay-cutters' in other departments. In this connection showing extract from the sketch of the late Dewan Bahadur Dr. Jnan Saran varti, a member of the Indian Finance nept' may be of some interest to our

another occasion a high officer of the I. M. S. o Afghanistan on some duty and after his called on Juan Saran at the office for his noe. While the bill was being checked and the officer explained to Juan Saran the off Pax Britannico, "You have simply to the frontier to perceive the difference," he 'On this side everyone moves about freely ed and unguarded. But cross the frontier ou will find that everyone who is of any nence has to be guarded day and night fixed bayonets and loaded rifice." Juan smiled in his pleasant manner and expressed nent and admiration. The officer continued a smile, "But I got one relief after crossing contier; there is no Accountant-General in the frontier and your objection slips do made us there. It is a place where Accountants al cease from troubling and officers are at Juan Saran laughed heartly at the loke consisted in the officer calling the Accounts then in your opinion? Juan Saran asked fiver replied, "Not wicked exactly—lost all reed that your department is an information."

that a considerable sum due to him for a long time had not been drawn. The officer was very pleased at this communication. He called personally at the office to thank Jnan Saran. "What about our wickedness now? - Jnan Saran, enquired with a laugh "I will now admit," said the officer rising and grasping Jnan Saran's hand warmly "that even the Accounts Department has some use"

Municipal Effort in London to Provide Housing

Mr. St Nihal Singh's conjously illustrated and informing article in Walfare on Municipal effort in London to provide housing ought to stimulate the city fathers of all our big towns to go and do likewise. Mr. Singh tells us.—

The London County Council and other Muncipalities in Britain have shown enterprise in providing housing accommodation for persons with limited means. But for such effort these men and women would either have been compelled to live in slums and still pay rents at extortionate rates, or they would have been forced to live far away from their work, which they could not conveniently do, for many of them have to work at night and many others have to begin work very early, or their hours are erratic.

and many others have to begin work very early, or their hours are erratic.

The blocks of buildings containing tenements of one, two, three or four rooms which the various municipal organisations in London and other British centres have put up have especially been godsend to policemen, tram and hus drivers and conductors, cabmen, taximen, printers, and persons engaged in similar occupations. In allotting accommodation the authorities in fact, give preference to such applicants. They, in any case, will not permit persons who can afford to rent flats in the ordinary way to live in one intended for people of more limited means.

The Manace of Political Parties

What Sudhindra Bose and Miss Ruth B Middaugh say in the same monthly of the menace of political parties in America ought to be a warning to us also in India

If there were no permetons expenditures of funds by political candidates if all party bosses cast a scornful eye upon the dollar and if the presidential candidates monal ratios were as clean and shiny as newly sambled lindeum, the insidious influence of parties would still remain it would remain because the greates, menace of the political party is not in terms of inducy, but un terms of brains.

At the last election nearly half the citizens were note slackers. In some of the States, the percentage of the charles voters who took the truble to go to the charles voters was as law as cight. Why did the voters stay away from the polic?

pecially politics of the stupid sort; but the situam is much more intriguing than that. Even
ose who do not vote usually follow the party
bel, right or wrong. The ordinary voter is not
nd of exercising his mental apparatus. He would
ach prefer to have some one else figure out remes for the ailments of humanity, leaving nothing
him to do but to imbibe this soothing castor oil.
ditical parties play the quack doctor beautifully.
Here is no need for the drugged voter to think;
he has to do is to fall in line and take his cue.
It he has to do is to fall in line and take his cue.
It his one of America's greatest afflictions.
In the some of the crowd complex
when man must belong to something; he does not
ssess enough individuality or self-reliance to play
game alone. If there is not enough stuff in him
belong to the Concatenated Order of the Who's
ho, at least there is no one who will keep him
t of the Republican Party.

The appeal of the political party is not to the eligence of the citizen, but to everything elsevere is, points out a writer of vision. "no search or fundamental issues, no determination to go ineconomic factors from the standpoint of principle, e party chooses its candidates, not on the basis their intelligence or fitness for the position, but he idea of picking a man who is politically 1 religiously "available" and who is reasonably to win. The ruling party, with all its okedness and corruption, keeps up the appearance "unity by temporary compromise rather than ity by sound fundamental reform." Are se the evidences of intelligent leadership."

National nominating conventions, political railies ch-light parades, mass meetings—these things not help to make better citizens, but instead lermine the intelligence of the voter by subject him to the influence of mob psychology. Many oter might cast his ballot sanely if he were free n the emotional appeal upon which parties lean strongly. How can a nominating convention be eliberative body, when many of its delegates ie under iron-bound instructions and when many sers are drunk, or hilarious, or mentally dead to world?

Calcutta as a Tanning Centre

Mr. B. Ramachandra Rau observes in the the chapter of his informing paper on the nomics of leather trade and industry in same periodical:—

To sum up the correlation of forests, fiver. infacturing site, rail, electric power, port and a ket is one of the most desirable things that cutta possesses and it can unhesitatingly be said. Calcutta may become one day the "Leeds" the "Bermondsey" of the East if only proper antage is taken of the economics of her industrial attention.

'he present chapter has been written with poiat, in view, i. e., the establishment of the ting industry on a commercial scale means the rting of tanned hides in place of raw hides are being exported in such large quantities.

[N.B. For other contents of May Welfare, see Readers' Guide to Welfare for May, 1925 printed elsewhere.]

Bhil Seva Mandal

We are glad to read the following account of the Bhil Seva Mandal in The Social Service Quarterly:—

It is a matter for regret that, despite the propaganda carried on by Mr. Amritial Thakkar and a few enlightened workers, there is little approximation in the country as a whole of the problem of the aboriginal and there has been a very or the aboriginal and there has been a very poor response to the appeals addressed from time to time to the general public to contribute towards the cost of conducting social and educational work among backward tribes and communities like the Bhils and Kalipraj. Foreign missionand the Salvaton Army find among these and the Salvation Army find among these communities a vast field for their propagands, and have established among them useful centres through which they carry on social and educational work assist in economic improvement, and provide medical relief. In the Bombay Presidency, as an officient of the community residency, as an officient of the community residency. offshoot of the campaign against drink among the Kalipraj of Surat and adjacent portions of the Baroda State much useful work has been under Baroda State much useful work has been under taken and there has been an awakening of the social instincts of the Kahpraj themselves. The only other indigenous effort is that made by Mi V. Thakkar of the Servants of India Society who has established his headquarters in the heart of the Bhil tract of the Panch Mahals district and hawith the help of a band of earnest and energety co-adjutors, started a Bhil Seva Mandal, a body of missionary workers which has accepted the Thakkar as its chief The Mandal has chalked out its programme of work and opened over half a dozen centres. The main work at these centres is the holding of regular classes under capable full time teachers for the education of the children of the Bhils. These hesitate to go for education to ordinary schools, so ingrained is their suspicion of institutions connected in their minds with these in authority and those who wield the money shell. in authority and those who wield the money and There are ten such schools run by the Mandal all with a fair attendance, and each one of them at good cheer among the Bhil population served by it. Some of these are central schools for a group of villages and at such places boardings are attached to the schools where the wholese are contral schools are attached to the schools where the wholese start with the schools and other are attached to the schools where are children stay with their teachers and other workers of the Mandal. Discourses for adults social gatherings and meetings are a feature of the school of the schoo work of these centres, at a few training is given trafts, gardening and agriculture along with education in the three R's, and another attraction in the three dispensary attached to some of them. The Mandal has engaged the services of two Vaids with move about in villages to attend to bad cases at dispense Ayurvedic treatment at the centres, end themselves or through some of the workers train themselves or through some of the workers tran-for the purpose. A general propaganda ab-elementary rules of personal hygiene and importance of maintaining homes and surroundi

in a sanitary condition is conducted through these schools and dispensaries, while another very useful activity is the promotion of economic improvement activity is the promotion of economic improvement by encouraging the spread of co-operative credit. The Mandal also undertakes to inquire into the complaints of the Bhil population, with whom its workers come into touch about the inconveniences under which they labour and grievances they have to represent, and its responsible workers, after proper investigation, seek redress of such complaints of the nublic authorities concerned at the lands of the public authorities concerned. With the extension of its various activities, the financial commitments of the Mandal have grown largely and the institution would have been sorely handicapped last year for lack of funds but for a timely donation from the Guarat Provincial Congress Committee to the extent of one-third of its expenditure. Even with this help, the Bhil Seva Mandal may just be able to carry on, but if its sphere of missionary effort is to be extended it will have to approach the general public for the financial support to which it is entitled in view of the importance of its work.

Brown Rice versus Polished Rice.

The Health states -

The bran of the rice grain cannot be removed so easily as that of the wheat grain. Its bran clings very tight To remove it the rice is put through a machinery process whereby the kernels rub against each other. The friction removes the bran in tiny particles—hence the term polishings and "Polished Rice."

Natural brown rice is unpolished the containing both the bran and the germ. It is generally obtained through pounding. In those days when there mills were unknown we used to have our more mills were unknown and rest good natural. rice mills were unknown we used to have our paddy pounded in our home, and get good natural brown rice for our food. The power of resistance to discases was great among our forefathers who were accustomed to feed on natural brown the But the polished tree that is now consumed is rid of its essential element—the Utamines, and no wonder we fall an easy prey to the ravages of discases. Science, like history, repeats itself. And thanks to the progressof science, it has now discovered our folly in eating the so-called polished rice which is nothing but that and wants us to go back to our old feed—the natural Brown Rice. Will you obey science and try to lead a long and healthy life or stick en to the dictates of fashion and civilization and court an untimely death? court an untimely death?

New Light on Hindu Political Science Literature.

According to an article by Mr K. P Jayaswal in the Journal of the Behar and Orissa Research Society.

I'p to this time the writers on Artha-astra or Hundu Political Science were known from references to their views in the Kautilina Artha-Sastra, the Manahharata, the Kamandakiya Phisam and

Chandesvara's Raja-nuti-Ratnakara I may also refer to Nilakantha's Nuti-mayukha and Mitra Misra's Rajanutiprakasa. But the latter does not carry our knowledge of the Artha-Sastra literature much further

The work which opens up for us a catalogue of hitherto sealed literature on the subject is a commentary on the Jama author Soma-deva Suri's Nitrakyamria. The Nitrakyamria is a well-known little book written for the education of young princes in the tenth century of the Christain of the and politics in short young princes in the tenth century of the Christain era. It is a mixture of ethics and politics, in short such or aphorisms. The commentary under discussion is by an author whose name is yet unknown. A manuscript of the work discovered is dated the 4th of Kartika Sudi, Vikrama Samval 1541 (=1463 A (*) in the reign of Sultan Bahloli Shahi i e Bahlol Lodi. The manuscript was presented by a pious Jaina lady to a Jaina scholar. Pandit Medhavi of Hisar, where it was placed in a Jain library at Amer Pandita Nathurama Premin of Bombay obtained this manuscript through som Jaipui friends and has printed the commentary a a volume in the Manuschindia Ingrimbara Inin Series. It discloses a welcome mass of information Series It discloses a welcome mass of information

About Women

The following paragraphs are taken from Stri-Dharma -

The Aca of Consent But

We are glad to be informed that the Age of Consent Bill that was thrown out in the la session by the Logislative Assembly has not bee really killed and it will be brought up again i the nett session in Simla. The letter that the Women's Indian Association sent to the member of the Assembly evidently had quite a defini of the Assembly evidently had quite a dennieffect, for we notice that various members quotifrom it in their speeches, and the Bill was regared sympathetically by a majority of the member
But when they had passed all the clauses, the
evidently got alaimed when they realised wh
they had done, and the white feather was show by the Swarajists who walked into the Governme lobby to throw out the Bill for they were afra that if they veted for the Bill, they would lo the support of the orthodox party

TURKEY

The following is a goes comple that mould vel be followed in Tuday

What is a wedding without the trousseau at the wedding breakfast. Yet in Turkev both appe to be doomed

The Turkish Government has invited the Cortantinople City Council to draw unjules for puttin down extravagance at festivals and the Council h

begun with weddings It is proposed that be abolished entirely and only sacets and syru offered to the guests. Apparently only a certa number may partake even of these for the wedding procession must not exceed the carriages or ca The bridegroom mat only give his bride of present (a ring), while the bride may contrib the furniture of only one room to the home-making, and the bride's outfit must not include

more than two dresses!

The Position of Woman in Russia

The greatest change of all, the English Trade
Union Delegation notes, "has been brought about
by the new status of woman....In Soviet Russia she has now been made by law entirely independent of man. What is right for a man is right for a woman, and vice-versa. Her responsibilities are equal with his, so also her freedom. Marriage is a contract by which both parties are equally bound or free by mutual consent at all times. As a consequence there is probably less immorality, in the sense of irregular sexual relationships, than formerly."

Prostitution has for the first time been made illegal. But the measures taken to stamp it out are mostly levelled against the man. Any payment to a woman for this purpose is a criminal offence. The former Government-controlled licensed houses, where girls were exposed for hire at a recognised fee, have been closed. In Tsarist days these houses were a recognised Government institution; the opening ceremony was undertaken by a police officer and the premises blessed by Typesian orthodox pricets." Russian orthodox priests."

Mahatma Gandhi's Ahimsa.

May Current Thought contains the story of how in 1896 Mahatma Gandhi was assaulted by a white mob in South Africa in the course of the early struggle for the Indian settlers' rights there and how be refused to prosecute his assailants.

A mob followed us. With every step we advanced, it grew larger and larger. The gathering was enormous when we reached West Street. A man of powerful build took hold of Mr. Laughton and tore him away from me. He was not therefore in a position to come up with me. The crowd began to abuse me and shower upon me stones and whatever else they could lay their hands on. They threw down my turban. Meanwhile a burly fellow came up to me slapped me in the face and then kicked me. I was about to fall down unconscious when I held on to the railings of a house near by. I took breath for a while and when the fainting was over proceeded on my way. I had almost given up the hope of reaching home alive. But I remember well that even then my heart did not armign my assailants... arraign my assailants....

On Mr. Escombe, Attorney-General with the Government of Natal, telling Mr. Gandhi,

"We desire that the offenders should be brought to book. Can you identify any of your assailants?"
I replied: "I might perhaps be able to identify one or two of them. But I must say at once before this conversation proceeds that I have already made up my mind not to prosecute my already made up my mind not to prosecute my mind not to prosecute my already made up my mind not they are at fault. What had obtained from their

them to be excited and do something wrong a fit of indignation. I would not blame them for Excited crowds have always tried to deal out jus excited crowds have always tried to deal out jus in that manner. If any one is to blame it is Committee of Whites, you yourself and, theref the Government of Natal. Reuter might have bled any distorted account. But when you knew to I was coming to Natal, it was your duty and duty of the Committee to question me about suspicions you entertained with regard to my a writes in India to hear what I had to say and the suspicions you entertained with regard to my a vities in India, to hear what I had to say and the do what might appear proper in the circumstant Now I cannot prosecute you or the Committee the assault. And even if I could, I would not served ressert a court of law. You took such steps seemed advisable to you for a leguarding the interests of the whites of Natal. That is a politimatter, and it remains for me to fight with you the political field to convince you and the Whites the Indians who constitute a large proport of the population of the British Empire wish preserve their self-respect and safeguard their rig without injuring the Whites in the least."

The Polish Nobel Prizeman.

The Young Citizen quotes from Lafe. S. A., some interesting particulars abo Ladislas Reymont, the winner of the 19 Nobel Prize in literature.

The outstanding characteristics of the preseprose laureate of the world are his simplicity a aversion to being lionised. M. Reymont, it is a corded, tried hard to gain an education, but he w expelled from every school he entered and then !

expelled from every school he entered and then I came a telegraph operator.

"Ladislas Stanislaw Reymont was born on M 6, 1868, in that part of Poland which at that tu remained under Russian domination," Mr. Hugh writes, in the course of his article, based on information secured from Reymont, while he was America: "He was of a family of twelve whi was very patriotic and poor. His mother took, where five brothers, an active part in the insurrect of 1863.

of 1863.
The schools at that time were instruments Russification. School children were not allowed speak Polish within the walls of the school. Remont went from one school to another, expelling from all of them.

"He began early to earn his living. He was store clerk and telegraph operator. He was actor in a wandering theatrical troupe. He was twice a railroad employee. He tried farming, at even entered the famous monastery of the Pauli Fathers in Czestochowa with the purpose becoming a monk. He entered the literary fic in 1894 with the publishing of a short stort and his novels now comprise twenty-three volumes.

when Reymont came to America, it were exceedingly Reymontian of him to behave as did. He came quietly, shyly across our threshol conferred with a few Polish friends, and could poly induced to permit amissation even amous in the compatitions.

" and a brief while in N

here numbers of Polish immigrants work in ne stock-yards. As soon as he had filled his yes, his ears, and his heart, he returned to Poland, there he is a farmer after a life of so many experiments."

The Importance of Indian History

The Indian Historical Journal, edited by Dr. Narendranath Law, which we welcome. is introduced to the reader by Professor Dr Sten Konow in an article in which he dwells on the importance of Indian history Savs he:-

There are numerous problems connected with the history of India which are of general interest and do not concern India only. The latest discoveries in Sind and in the Punjab hive raised the question about a possible connec-non between India and the ancient ovultzation of non botween India and the ancient divilization of M-sopotamia, which latter has played such a prominent role in the development of the Western World. If the antiquities uncarribed at Mohenjo llaro and Harappa belong to an old civilization connected with that of the Sumerians, which came to an end about 3000 years is a we shall have to reconsider the question about the date of the manufactor of India in the light of these pages. to reconsider the question about the date of the Arian invasion of India in the light of these new inds and it is probable that we shall arrive at results which are calculated to modify our ideas about the history of the Arian and the Indo-European periods in the history of our race. We shall be able to judge better about the relations existing between the different countries and the different civilizations in ancient times than we can at the present division with the shall probable. we can at the present div, and we shall probably had that there was much more intercourse and much less isolation than many people have been melined to think.

menned to think.

There are other questions which likewise take us outside the borders of India. Who were the Dravidians, and whence did they come? What can we find out about the ancient civilization which perhaps preceded the Dravidians and the Aiyans in India and in the continent and islands surrounding the Indian seas, and what does it teach us about the development of the eastern world in mechiatoric times. world in pre-historic times !

If we turn to later times, the importance of Indian history does not become less. Indian lustory has seldom been restricted to India itself. It forms an important chapter in the general history of the world, and the Indian trade, which looms so large in the statistics of many modern nations, has always been important. The history of the trade of the world would be incomplete if India's share in it were not carefully studied.

still more such considerations hold good with him who tries to disentangle the instory of the development of human thought and human ideals during the ages. Here, a conspicuous place is to be accorded to India, not only in modern times, but also in bygone ages. And much, very much, patient spade work will have to be done before we can hips to draw the historical outlines...... India is allowly, but surely, making her re-entrance is a separate unit in the world's concert. The ludian tribes and races are developing into a real

nation, with its own aims and its own tendencies; and the Indian people will necessarily take a greater interest in its past history.

An ancient people will never be able to hold its own in the world, if it chooses to live exclusively on loans from abroad. It must build up its future on the safe foundation of its material and spiritual exportence in the past. It cannot live in the past and seclude itself from the outside world by means of Chinese walls. The ancient barriers have been broken down, and every country must at the broken down, and every country must, at the present day, enter into compatition and co-operation with all the rest But it cannot enter into the com-plicated system of the modern world without backbone. And only a thorough understanding of the past, with intimate knowledge of such power and forces as have been developed out of the peculiar faculties of the people itself, can give the necessary self-reliance and strength if it is not to lose its individuality and become a mere spectator of the great drama

With the growth of the national idea in India the interest in the country's history must go hand in hand. It is India, with all her traditions and all her ancient history, which must secure her entrance in the modern world, and an historical journal is bound to occupy an important place in the development....

The necessary conducted in a scientific and critical spirit. It will not be enough to dwell on such periods in Indian history as bear witness to great power and strength. Also the times of decadence and disaster belong to the people's history and are often peculiarly interesting in its development...

Dyarchy or Provincial Autonomy in India.

In the Hindustan Review the Hon'ble Mi. Sachchidananda \inha observes that

It would be a great mistake in the present temper of the people to think of conferring upon the Council powers which may have the effect of controlling the activities of the Assembly

With reference to the Bihar and Orissa Government's despatch on the working of the Montagu-Chelmsford Reforms, he writes -

I do not find in the despatch any reference to to the grayevance of the Hon the Ministers that the to the grievance of the fron the Ministers that the rules of Executive Business are landing upon the Ministers though made, without consulting them, I am aware that it is so because the power of making the rules for the disposal of the Executive Business in the provinces is vested, under the Government of India Act in the Governor alone, It would be however in my opinion an improvement if the section sanctioning the present magnitude. ment if the section sanctioning the present practice were to be so amended that the Governor might share this responsibility with all the other members of his Government so that the rules may carry with them the concurrence of all of them or at any rate, of a majority of them.

He shows that the Reforms have been a failure, and has no alternative but to suggest that the present system in the

provinces be superseded by the establishment of complete provincial autonomy which alone seems to be the true solution of the difficulty."

"The Present Political Situation in India".

In the course of an article under the above heading in the same review, Lala Lajpat says that

From a close study of the mentality of the Muslim leaders, I am afraid, they are determined to have their own way. In that case, I will rather let them negotiate with the Government than agree to propositions which to me seem fatal to the very purpose for which an understanding is

desired.

There is another phase of the question to which I would like to draw the attention of all national leaders. It is clear to me that the only political leaders. It is clear to me that the only political party in Great Britain, which is likely to be of some help to us in our progress towards Swara, is the Labour party. The Liberal party is in this respect worse than the Tories and, mereover, it need not be counted upon as having any influence worth the name in Parliament. The only party which can deliver the goods safely and surely, if once we enter into an agreement with it, is the Conservative Party. An agreement with the Conservatives as to the terms on which they will allow us the management of our internal affairs would be worth while, even though we may have to sacrifice some vital points in order to arrive at that agreement. Failing that, as I have said before. the Labour Party is the only group of British politicians with whom we should negotiate. It will be extremely foolish to alienate them. It is true that they failed us last year when they were in office. It is also true that they are responsible for the policy of repression now being followed in Bengal and the Punjab. Yet, in spite of all this, they are the only party in which we have true and trustworthy friends.

Folk High Schools in Denmark

Mr. C. F. Strickland writes in the Young Men of India:-

The Folk High School takes grown-up men, not by the folk high School takes grown-up men, not boys, who left school at 13 and have since then been hardening their hands at their trade, and it has to do in six months what secondary schools do for their pupils in four years, that is, it has to bring them to an understanding of life. So far as that object is concerned it is undoubtedly better effected in six months than by a secondary school

effected in Six anomals, in four years.

At the present moment, Covernment subsidizes all the Folk High Schools, if they are efficient, giving them grants which vary from one-third to two-thirds of the total cost. I would estimate as an Budget for such grants ten

lakhs of rupees per annum for grants to 60 Fo High Schools. In addition to these grants, whi are given partly towards buildings, partly towar pay of the staff, the Government also gives schol ships on a large scale to those pupils who no them. In return for this help Government in D ships on a large scale to those pupils who not them. In return for this help Government in D mark carries out an annual inspection; if such spection be not satisfactory the grant will be duced or refused. The schools are in most convend by private individuals. Any man may a self-like school. But they are not founded rich men. The teachers are poor, enthusiastic devoted; in many cases they sacrifice their land certainly they sacrifice all prospect of we to the ideal of educating the nation, educating nation to understand the meaning of patric without politics. The pupils are the sons of sants, of landless labourers or of artisans, save up money from their wages, from the proof their agriculture or trade, to pay the fees Folk High School for six months. The usual c is for six months, from October to March or Nober to April. That is the time when in cold tries of the north very little agricultural wo to be done, and I estimate very roughly the A pupil at 70 or 80 Danieh crowns, say 50 r per mensem for six month, that is to say rupees, of which one-third will be school-fect two-thirds will be board and lodging. I partitions are proposed to the parties are noor men some of them owning of wish to emphasize that the men who pay the wish to emphasize that the men who pay the rupees are poor men, some of them owning on acres. It may be objected that this is an imideal for India. My answer to that is, does an Indian peasant owning five acres cless, spend on the marriage of his daughter pay of the staff rises in rupees from 150 to mensem, but if allowance be made for the cost of living in Europe that sum will be cost of living in Europe that sum will be a ble to 75 to 200 rupees in India. The are keen young men, sometimes unmarrie they are married their wives also usually the schools.

Mr. Strickland wants Indians numerous such schools, devote the of their lives to them and turn our adults into citizens fit for responsible

Banana Production in the En

The Agricultural Journal publishes the following:-

Although many people in the Unite associate the banana particularly wi and the Canary Islands, not more the of the fruit imported into the country those countries, the remaining three-supplied by Colombia, Costa Rica and t of Honduras.

In 1922, bananas were imported int Kingdom to the value of over £5,300,0 amount only about £800,000 repres of British Possessions. In view of the banana can be grown in most where labour is available, it would tadvisable to consider whether a graths banana industry could not be und

Ivear

Africa which are within a comparatively short distance of the home market. The present position of the industry in the various countries of the Empire is indicated in an article on. "The Banana and its Cultivation with Special Reference to the Empire," published in the current issue of the Bulletin of the Imperial Institute, which also gives particulars of methods of growing the fruit and the preparation of various products, such as banana flour and dried bananas or "igs," Of the British West India Islands, Jamaica is the only important banana-producing country, and last year exported (largely to the United States) 12½ million bunches valued at over £2,250,000, whilst in some years the exports have exceeded 16 million bunches. Trinidad, Barbados and Dominica formerly exported small quantities of fruit but the trade has now almost ceased. British Honduras has an annual output of about half a million bunches but British (miana although producing fruit of excellent flavour, has so far not built up an export trade in Australia, considerable quantities are grown for focal consumption in Queen-sland and New South Wales, and there is also a large import from Figure where banana-growing is one of the staple industries other parts of the Empire such as India Cevion Valava and East and West Africa at present only grow the fruit for their own use

Supply of Breeding Bulls

Mi Nilananda Chatteriee contributes an instructive article to the Welfare and sums up with the following

There are about 250 districts in British India with an average area of about 1000 sq. miles and an average population of 9, 31 000. The total numof cattle is about 147 millions of which only about 37 millions are cows and 13 millions are shebullables. These 50 inflions female cattle will be one one million good bulls to cover them. This means that an average supply of about 4000 (1000) the country. There is no death of bulls. The live sock statistics show that there are about 10 miles and bullocks. If 10 per cent of them are oud that will quite serve our purpose har thing required is the proper selection of these and then suitable distribution throughout the produces, the setting apart of selected breeding full- and the conversion of other bull- into bullocks and using them for draught purposes only and the organization and control of breeding by opening heating study in every Municipality and every things union are the only practical desiderata. The annual cost of each such centre ought to be taised by contribution of half by the Local Body and half by countary subscriptions amongst the inhabitants then solves and the recurring cost of maintenance hat is realised by charging a fee for each covering

In rural areas there ought to be two bulls in each centre one a Brahmini country bull and another a similar up-country bull. In urban areas there ought to be sufficient number of upcountry bulls according to requirement as well as a good number of Brahmini bulls. The cost of getting Brahmini bulls ought to be only nominal. Two model schemes—one for rural areas and another for urban areas are outlined below for the information of the reader.

Rural Breeding Station for Village Unions (with one country Brahmini bull and another apprountry bull)

	,
Initial Expansi The cost of a shed 100 sq ft for location of bulls below and their keeper above at -5- per	Rs.
The cost of an apcountry bull Brahmm bull being had free	5
Remaing Expanditure Total Rs	15t 20t
Cost of feeding 2 bulls with straw grass and oil-cake and occasionally with grain at -1-per head per day for one year	
Wages of one servant at -10- per month for	180

Feering Income
Feericepts for each covering 100 coverings
perhead at Rs 2 for each covering by upcountry bull at d Re 1 for each covering by
country bull

Union Breffero Station for Ment harting with 5 up-country bulls and 5 Brahami country Bulls)

Initial Principles The lost of a sleet 700 sq. ft. for location	
The est of pur lessing 7 un-country bulls	Same
at R- 200	1000 100

The cost of feeding to balls with straw grass offstake brain and grain at -s- por head per day for one year.

Wages of 2 servants at Rs. 15 per monte for 369 as your Rs. 2185

B arm home

Feet elepts for 100 exertance per box, per year to 5 up-country only at Rs 3- per covering.

Perfectly for 100 community per head proven for 5 ountry culls at Rs 2 per for covering

In this way freedry stells may be oncord throughout the country as with the best for all the Vetermary Assistants in the engrey of a finicipalities. Instrict Boards and the Government the organisation supervision and properties in a confidence study may be secured. The reading of these other country will be thus selve.

FOREIGN PERIODICALS

"Which Races are Best?"

The following is a summary, in its own ds, of an article in The Scientific erican by Mr. Albert A. Hopkins, Asso-Editor of that leading entific monthly -

What races really are the best, either for future zenship or for other things? Are the Nordies lly better than the dark-whites or are they worse; at are the essential differences between the es? How did the different races originate and at are the relations, biological and otherwise, tween them?

THERE IS NO PURF-BRID RACT

Unfortunately but few of these answers are ady Among all the domesticated animals man the one, it seems about which we know the ast. Yet there are three things about presently humanity which it does seem possible to say one of them is especially flattering to our racial ride.

The first is that there is no such thing in the nodern world as a pure-bred race The

vordic idea is a myth.

The second is that not one scrap of real evilence exists to prove that any one race is potenfally abler or more honest or more intelligent than any other race. The white man burden may be laid down any time with a clear conscience and with no fear that we are deserting our duty

to the world
The third is that racial mixture—even to what we would shrink from as extremes—seems much more likely to be beneficial to civilization than the

The facts on which these three conclusions rest have been discovered in the main during that remarkable advance of knowledge about ancient prehistoric humanity which has resulted from the excavations and museum studies of the last four

ŧ

decades.

The older geographers were accustomed to divide mankind into five races: the white, the black, the yellow, the brown and the red. It has been apparent for years that this classification is unsatisfactory, indeed, that it is impossible, atthough it persists to a considerable extent in the public mind. Its impossibility lies in the fact that the differences between these five so-called races are not sharp. There are vellow-brown races and black-white ones. What are we to say of the Turks and Lapps, who are white vet have distinct Chinese-like traits? Are the African pyumies negroes or a separate race? What are the Esquimaux?

> THE BRIEF MOMENT OF HISCORY "The fact is that no exact classification of "1- Mankind forms one great

the Negro, the Chinose, the American Indian. the Jew, the blonde-white or Nordic, the dark-white, the "blackfellow" of Australia. the brown islanders of the Pacific, the Esquimaux, and so on There are many blends between these groups The separations between them are not sharp, indeed it is only the extremes which are clearly distinct at all That is the present-day racial picture of the earth

"It has been the picture during all of that brief moment of the earth story that we call historic time But this historic time covers less than ten thousand years Man has been on earth, essentially in his present bodily form, for at least a hundred thousand years, possibly for five or six times as long as this. The origins of races, the roots of our present world politics, go back into this dim and distant prehistoric period when the great drama of the peopling of the earth wa-

just beginning to unfold

CLIVALE RULES COMPLEXION

"Exactly how these first men diverged into the different races of modern times is by no means so certain. We know that men, life other animals, are much modified by the conditions under which they live In the sunht tropies the human skin grows darket and the hair apparently grows short and kinky In the dimmer days and longer nights of the north the skin grows white and the hair long and blonde Nobody knows why this happens but it does happen. Many modifications are known. sımilar facts provide a clue, we believe, to how the races may have originated

"In the Asian homeland there has nev been much food to spare Within histori times there have rolled out of Asia out the rest of the world the successive huma waves of the Hittites, the Persians, the Gotl the Visigoths, the Huns. Eastward in same period, swept the tide of Mongo Famine drove them all. Always Asia is mother of peoples. Always the mother driv her peoples out, from time to time, to e quer other lands where food is easier to co

by than it is at home

BLACK MEN WERE THE FIRST. --- originated, then, by the -4n and C circumstances, of successive migration waves out of Asia. Possibly the stock left behind in Asia changed between successive migra-In any event, each wave of migrants encountered different conditions when it got All these changes have worked together to make the diversity that exists

to-day.

Since the very first millenniums of this process the peoples who have empted out of Asia have not found an empty world which they could occupy at will Instead they were confronted with a world already too well filled Hence the appeal to the sword. followed, in time, by some kind of racial fusion between the conquerors and the conquered. For more than a hundred centuries. then, the world has been a laboratory for mixing and blending races time we have full records of many examples In prehistoric times we have evidence, although less unmistakable evidence that the same thing was going on

Skylls Provide the Cuta

"One result of this is the conclusion that racial mixture is no new thing in the world America is not the first "melting pot bideed there is ample evidence that no liace anywhere in the world has kept itself unmixed with strains of other races, who left sooner or later than it did

A short time ago Professar Roland B Dixon of Harvard University tested some of these ideas by a strictly scientific method He collected all the human skulls that he could find, both modern and prehistoric neasured the relative dimensions of these what are called the indices of height, width length and so on, commonly used by anthropologists as one of the criteria of face. In addition he collected all the similar measurements which had been made by onthropologists He set down all this data and compared it

"One of his most remarkable conclusions that every race, no matter in what part of the world, showed evidences of mixture Many of the American with other races. linhan skulls showed negro-like characteristo. Some of the negro skulls were more or has like the Chinese. Many white skullshowed traces of the admixture of Chinese

11 Negro or American Indian blood

The most probable explanation of this, an "Vilanation which is supported by a vast array of other evidence, is that during the long period of man's presence and migrations

on earth all of the races have been more or less mixed with each other Even the famous

Nordics are a racial blend.

However this may be, the white race is already as blended as any other In our ancestry, as in that of the American Indian, we can trace the elements of early negroid races, of the Australian savage, of the same Alpines who helped to settle America, of Mongols, of half a dozen others. Among the ancestors of every American business man one could find, it is safe to say, every important incial element of prehistoric times, every type of human animal in the world, from the Chinese philosopher to the savage. chieftain of a caveman tribe

This is the argument for our first conclusion the conclusion that there is no such thing as a pure-bied race-not even a pure-bred individual—in the modern world All of our so-called races are already blends. Why should we be atraid of further blending?

From this argument too, it is easy to see that no great case can be made for any superiority of certain races over other races The great peoples of the past have not been of pure race. All of them have been like us, the products of slow but effective racial mixture

At the last meeting of the American Philosophical Society in Philadelphia, two scientists argued pro and con the problem of whether or not the white race is superior to the negre. The argument was inconclusive. It had to be. It is almost certain that both of the gentlemen in question, as well as the assemblage of distinguished scientists who listened had both whitehand negroid elements in their ancestry, in their blood in the very bones of their heads like those which Professor Dixon measured

To talk of meraces in racial maxime is equally abound. It racial mixture could have ruined mankind that ruin would have been completed many nullenniums before any scribe set down one word of history Indee a degree of racial mixt to seems actually to be stimulating to minian intelligence and

human enterprise

"It was a mixed tace that I sked bricks in the plans of the Tigris and Euphrates and built the walls of Babyl i li was another mixed race in the Vall of the Nac that dug the stones which went to Pit the Pytamids It was a thard mixed tire which torged the power of Rome another which he that tree can terch of lear-in the still burns in the minds of no. I the flese things that mixed races do, let us have more, not less of racial mixture in our world!"

The Schools of the Future

Sarah N. Cleghorn ventures to guess in the Century Magazine

That by 1950 the common schools of the world will be history schools in a far more fundamental sense than they ever were Latin schools, or, as we are still old-fashioned enough to call them, grammar schools. And just as now, in the United States a child's advance from grade to grade depends on his understanding of anthmenc, so in the schools of the future I think the willingness of a maturer group to admit any young person to its intellec-tual adventures will depend largely on the range and vividness of that young person's historical perceptions. By talking about historical perceptions, I mean quite concrete things. For one thing, I mean his power to discover fresh and meaningful analo-

gies between the present and the past
When I say "historical perceptions" I am thinking of the perception that history consists of a blend of cultures-skein of major human interests

as international as arithmetic

For these future schools will spend, I believe little or no time on compartmental history. These divisions and subdivisions which we call "English history", "French history", "ancient history", will begin. I am sure, to look quite old-fashioned by 1950. Or if the national histories are still in use 1 am sure they will have been completely re-scaled, all their proportions over-hauled and subordinated

to those of earth-history as a whole So, in a well-proportioned English history, the discoveries of Copernicus would take up most of the room now accorded to the fourth, fifth and sixth wives of Henry VIII, St. Francis would be featured in more detail than Thomas a Becket. In short, I believe the view of history which our grandchildren will take is essentially just that blend

of the area with which, when it is considered simply and innocently, nationalism has comparatively little to do.

Knowledge, as we all so longingly admit, far from being imposed upon children, ought to be treasure which they find in their forlicsome search after the wonderful and the beautiful, they should seek knowledge on the run, and find it with an exulting shout, as they find flowers in the woods in spring. This noble and simple ideal demands the abdication of the adult as the sovereign of the schools; it demands in the adult, whether teacher parent, or taxpayer, a spirit of faith and humility far beyond what any of us. I think, yet possess, or can even imagine without such a sense of absurdity. as many husbands used to feel when they contemplated, or tried to contemplate, their wives running for office. It means the actual hold application of freedom to the majority in the schools to govern them themselves. Can we look upon this possibility, fellow-adults, without the fear clutching at our vitals more or iess, lest these riches of knowledge we want to bequeath to the children, they should not care to take? I own that I cannot. That fear school playground when they take over their sc to run themselves.

But then I say to myself: "The teacher, must be free The children surely won't want other kind of teacher than he who freely and teaches what he loves to teach. Must not schools of the future be an association bet equals, a free and pleasurable association kindred minds. Let us draw a long breath take our chances I sanguinely hope there be some teacher, and some children, in those (who will like these notions, and try them expand them and-well, yes-improve them.

Thomas Henry Huxley

Edward Clodd recalls in the same jou the great days of the religio-scientific bat when Huxley was a doughty champion science. The writer tells of a memor duel between the scientist and Bishop Wil force at the meeting of the British Asso tion at Oxford in 1860

The atmosphere was electric, the bishop to time. The vacant place of agrument in speech was filled by declamation, and the deel, then became acted. He finished his harangue asking Huxley whether he was related on grand-mother's side or his grandfather's side t

The Lord hath delivered him into my har whispered Huxley to a friend at his side as rose to reply. And this is what he said. "I as ed and I repeat that a man has no reason to ashained of having an abe for his grandfather there were an ancestor whom I should feel si in recalling, it would be a man of restless versatile intellect, who not content with suin his own sphere of activity plunges into see questions with which he has no real acquaint only to obscure them with an aimless the and distract the attention of his hearers from real point at issue by eloquent digression-skilled appeals to religious prejudice."

Regarding the reception accorded to 'Origin of Species," we read --

Herbert Spencer was an ovolutionist in Drawin. Huxley said he was prepared to se

the stake if needs be in support of the book "Punch" found in Parwinsun material for a so did writers of light verse and squibs. Mr Chope made fun of it in his "Paradise of Bi of which this is a sample:

Eggs were laid as before, but each time and more varieties struggled and bred Till one end of the scale dropped its ancretail and the other got rid of his head. From the bill, in brief words, were developed.

birds, unless our tame pigeons and d

From the tail and hind legs, in the second oggs, the apes—and Professor Huxley Huxley's motto was that of the great Strat "Thorough." Drawin heatated, but Huxley

cak and claws, he opened the campaign in 1860 a series of lectures to working-men, followed by one to the Philosophic Institute of Edinburgh. These were published in a volume called "Evidence to Man's Place in Nature," which appeared in 1863. It pushed Darwin's theory to its logical conclusion in extending the processes of evolution to man, thus including him in a universal order of development whose continuity is unbroken. The

'In view of the intimate relations between man and the rest of the living world and between the forces exercised by the latter and all other forces I can see no excuse for doubting that all are coordinated terms of nature's great progression from the formless to the formed, from the inorganic to the organic, from blind force to onscious mtellect and will. I have endeavoured to show that no absolute structural line of demarcation wider than that between the animals which immediately succeed us in the scale, can be drawn between the animal world and ourselves, and I may add the expression of my belief that the attempt to draw a psychical distinction is equally futile and that even the highest faculties of feeling and of intellect begin to germinate in lower forms of lite.

Of Huxley the man we get some glimpses

He had his share of bereavements which brought out the tenderness and sympathy of his nature. In a letter to Lord Morley he says. The great thing a meet to Lord Moriet he says. The great thing one has to wish for as time goes on is vigour as long as one lives, and death as soon as vigour flags. Then he adds a human note which awakens quick response. It is a curious thing that I find my distance to the thought of extinction increasing as I get older and nearer the goal. No one insisted more fully on the limitation of our faculties none more deply on the mystery which environs us. The known is a narrow fringe round the unknown. We talk glibby of evolution, but we are ignorant as to its cause. Apparently we are as far as ever from any solution of the origin nature and if there he div of the meaning of life. In brief of origins we know nothing, of processes we catch only glummermrs although in this matter more light is slowly coming. As a wise man has said, 'Because science is sure of nothing, it is always advancing

(1) Darwin it is stated

On the twenty-sixth of April 1882 Darwin

Mas builed in Westminster Abbey

It the world which he left "old things had based away, all things were become new."

Theologians of the liberal school, from bishops to our dos, accept the proof supplied by an everingressing number of discoveries that man was not because created. In their attenuts to save the per and created. In their attempts to save the perhalt created. In their attempts to save the hurt from shipwreck, they have jettisoned nearly lift; cargo of beliefs which were held to be essential to salvation". The courageous bean age indepents a growing body of clerky men who are relegated miracles to the sphere of pious limited and who accept "the development of life top the non-living as a fact". How much, further her will go in rejection of the remaining in the life interesting to see.

Life and Art.

In the same review. Alexander Black

Whatever may be figured as the impulsions of art in the past, art consciousness in the future will draw closer to life Havelock Ellis has been speaking of dancing as the loftiest, the most moving, the most beautiful of the arts because it is moving, the most beautiful of the arts because it is no mere translation of abstraction from life, it is life itself. No right to esthetic joy is withheld or diminished in significance by the mistence as by Mr. Ellis, that the esthetic sense is a social necessity. It is a social necessity for reasonatesting in its social origin. That beauty needs beauty is part of the imperative that life needs beauty life, and the artist more each other desirents. Lafe and the artist need each other desperately lafe is still appallingly ugly. Art still has selfish futilities. Lake formulated religion like co-ordinated government it will learn that keeping close to life to get along without its committee because government has been bad without religion because churches have been meffectual, without art because certain artists have wanted a separate god, lifts no responsibility from the shoulders of men and women capable of a devoted leader-him

"The Astrology."

to the same review, Ellsworth Huntington contributes a thought-provoking article on "The Ven Astrology He begins by telling

The ancient alchemists dreamed of transmitting baser metals into gold. They failed but their work hed to chemistry for modern chemists have almost a complished the purpose of the alchemists. They have proved that one metal radium, is actually transmuted into various others, ending with lead so far-teaching is this discovery that many workers in the border-land between physis and chemistry believe that all the chemical elements are ultimately composed of the same and of ions or electrons. If we know enough, they say, we might reduce any element to love toll and the say are might reduce to the say and the say are say to the say. recombine these into other elements according to our choice our hy breaking up the atons we might release almost into its supplies of chelist Alchemy under the gaiss of radosactivity is fast becoming a reality and the reality is more wenderful than the early dream Will astrology run the same coarse An ten astrology sought to r ad the fut'y coarse the same burden astrologies. stars A few hundred years ago alto stars believed that the Biblical writer was a so and fact when he said. The stars of the stars fought against Sisera. If men he are the was certainly worth while to study tr s s long.
The ancient astrologous faired to

that the heaven's belt so that the man shealth prospect the averages of that he had been the test of the structure of the test ASTROBOBIL

races of men, with their varying capacities and talents. The weather depends to a considerable degree upon variations in the sun's activity. Sun-spots are the most familiar evidence of solar activity, but there are many others, including prominences, faculae, floceuli, and electro-magnetic disturbances. A considerable number of eminent scientists have concluded that many of the solar variations depend somehow upon the relative positions of the planets. If the planets affect the sun, the stars might do likewise, if they were near enough Each year the astronomers discover new evidence of the vast amount of matter scattered in space, and of the enormous size, brilliancy, complexity, and activity of some of the stars. Thus there arises a possibility—as yet it is no more—that the stars in their courses may disturb the atmosphere of the sun and thus bring about changes in weather and chinates, and hence in human life.

After elaborating his reasons, he concludes that "the new astrology may not be wholly a dream"

Mlle Curie

Children of the great are not always great-book-have been written about it. But the daughter of Mine Curie—famous French scientist discoverer with her husband of radium—seems to be following firmly in her mother's footsteps. Mile Irene Curie recently read a thesis in the Sorbonne, looking toward the degree of Poeter of Sciences which was promptly granted her. Her lecture, the result of ten years' work, was on the Alpha Rays of Polonium—with other big scientific words oppressive to the layman. The thesis was dedicated to Mine Curie by her daughter and pupil. —The Woman Cite en.

Wanted a Gospel of Scientific Unity

The unity of nature is the gospel that should be preached at the present day thinks In Edwin E. Slosson It would be well, he believes if there are injected into modern science something corresponding to the spirit of here innoitheism that the Jew and Mohammedan injected into theology to counteract the tendent of the specialist to set up his own ology as an independent god and make all the other ologies bow down to it. Here he says, is the opportunity of the teacher of science. In the high school are fresh brains which have not yet been partitioned off into the idea-tight compartments for segregation of the severel sciences. Teachers have a chance to give young men and women "a vision of the promised land from a Pisgah peak before it has been divided up among the twelve jeal his tribes." The Laterary Engest.

What White Colonial Servants Should Not Be Taught!

The Living Age writes -

The Netherlands is indulging in a lively controversy over the reported offer of certain wealthy having property interests in the Dutch

servants at the University of Utrecht. Hi the aspirants for that service have been to at the University of Leyden, which has a fe of six professors of high repute to deal with ferent aspects of colonial administration. But interests, it is said, are finding fault becaus Leyden professors give undue emphasis to thous of ethics, and their teachings on the resultity of foreign capitalism to the natives hable to misinterpretation. The result, it is is to encourage 'a revolutionary atmosphere at Dutch rule among the natives,' and in general attitude hostile to big capitalism.

We wonder if there has ever been such controversy in Britain over the que of suitable education for "Indian" servants

Occult Powers

Mi H Travers, w H, says in The A sophical Path —

There is a universal craze for occult power and any mention of the phrase is sure to a attention. Nor is it surprising that there are post people ready to take advantage of this deand to offer to show us the way to attain powers. But how often do we find what we awant? Who are the self-appointed teachers undertake by fectures and books and less a mitiate us into mysteries and set our feet on path of nower?

path of power?

Still we have to remember, in connexion occult powers especially that all is not gold glitters. Gold is tested by a touchstone, and is one sure touchstone in the matter of powers, and that is the question of motive conscience at the bottom of our aspirations personal desire?

Personal desire is our great bane, by who let ourselves be attracted to all kinds of of Desire is insatiable and grows by feeding him. To gain additional powers, while the of personal desire is still unconquered a puts weapons into the hands of our thefest feeding.

Desire may be harmless in the heasts be man there takes place an unhallowed all between desire and intellect and it is this was the cause of his trouble. Hence it is taught before occult powers can safely or night attained, we must purify out character by climing the self-shness from it. In other words must cultivate spectrual powers. The student Cecultism who is on the right path strive to a life of service to others, and, instead of ambitious for powers, he tries to get rail of ambitious, knowing that it is his chief obstair progress on the path he has chosen.

Child Marriages in America

The Woman Citizen of New 1

It is a great shock to most women to learn the legal minimum marriage age is twelve to for girls and fourteen for boys in New York Jersey, Pennsylvania, Kentucky, Louisiana Vir la Maryland. Rhode Island. Tennessee, Coio-Idaho, Maine and Mississippi, and that iage licenses are still being issued in large iers to children of twelve, thirteen and

coording to a report recently published by the ell Sage Foundation, there are 6,67,000 married ons in the country who were married when were under sixteen years of age in many sagirl can be legally married when she is

he report urges in its program for State lation that the minimum marriageable age for should be at least sixteen that fixe days me notice of intention to main should be n proof of age of applicants required, either n proof of age of applicants required, which is a partismal certificates of some other form documentary evidences that both applicants marriage licenses should appear in person the different. State laws should be made noming and that the minimum marriageable should not be lower than the minimum working or the compulsory school attendance age

Lord Curzon.

Thus writes The New Republic on Lord 170n - Indian career --

As Vicerox of India Curzon, devoted, mexhaustchergy to the perfecting of an aliminstrative ame that was already outworn. His policy and per stimulated Indian nationalism and thus pared the landfor can be. His most considerable cutive act (the division of the Bengal provincwas improssively revoked by to orze V at he and the India of his administrative necha-m was swept away by the Montagu constitution 1919. As Foreign Secretary Curron surply did cont. He was obliterated by Tloyd George in the was obliterated by Thord Gorge in the opening of the Peace Cinference intit the seng of Genoa. When I lovel George was read Curzon was beaten and humiliated by a monotoned by an At Lausunne he was punctured by not and completely worsted by Mustipha mat Last and West able the ruin of hes diploty bid to be redeemed by Rainsay MacDonald.

Foreign Landownership in Japan

We read in The Literary Ingest

the of landowner-hip by foreigners or land to found in some sections of the Japanese es and arises from the fact that a bill for landthe op by foreigners has been laid before the let be the thovernment and is now being examied to the House of Peers

Should this bill become law, tould be able, with greater consistency and logenes, to protest against racial discrimilation against her in America.

Encouragement for the Amateur Scientist

The Lining Age writes

Sn Oliver Lodge who after all is a physicist of immense distinction as well as a student of spooks, comes torward as a champion of the amateur in scientific research. His point is not that the amateur is a better scientific worker than his profes-sional colleague but men by that he can and often does do good work and that he possesses the valor of growniae which sometimes leads to discovering like the airplane. These interactives are called forth by a proposal to place amatem wite-less research under the control of a government department. Sir Oliver however, having a very wholesome district of government department security and that though some regulation may be points out that though some regulation may be necessary it should be reduced to an absolute minimum

Scientifi Correspondent of the Tious 4 - 11h points out the anatous have a good many scientific discoveries to their credit the reason being that they rush in where angels fear to fread An example of this profitable rushing in is the work of the Wright brothers in open detence of excepthing then known of accordances. Moreover, the practical flying men, the accounting who are usually quite inno ent of science have discovered aerial maneruves, which a theoretical student would have de lared impossible

THE MODERN REVIEW FOR JUNE 1925

ractice also, he is a non-resistant. And rrites as such:

ill your children or attack your wife?" riably ask some member of an audience to h you have been appealing for an attitude of impromising pacifism toward the abomination iternational war! Being myself a non-resistant, able to answer that I believe it unnecessary esort to force in a case of this kind. Familiar instances in which attack has been overcome instances. But suppose I am not, and do not at to be, a non-resistant in this sense. Suppose m ready to meet force with force in the case of set. I love. Suppose as a matter not of impulse to f moral conviction that I am willing to coerce bind, or strike, or disable, or even kill the assault of my family. What has this got to do with in, or my attitude toward war? Where is the inlarity, much less the identity between using the force as may prevent a man from committing personal assault upon myself or omebody else, if the mobilization of vast engines of destruction in the slaughter of unnumbered thousands of men inocent of any injury, or any intention of injury gainst me and mine?

To get anything like a parallel case here, we could have to imagine my killing the invader of my home whether such killing was necessary or not for purposes of protection then killing his amily and friends, his acquaintances and neighbors, all the inhabitants of his village, and keeping on with this work of murder and rapine until I had sated my list for revenge, and extorted reparations to soothe my injured feelings, and incidentally line my purse. But we do not have to imagine a horror of this kind for we have it right with us in the actual conduct of modern nations. What happens when a missionary is assailed in a remote portion of the world, or an Italian boundary commissioner set upon in Greece or an Austrian archduke assassinated in Bosnia. Armiesat in motion battles fought, cities burned, harvest fields destroyed women raped, and with their children driven homeless into unfamiliar places, men murdered by the thousands, or in the case of the arch-duke. It is the millions. This is not in But what has it to do with the duty of those associated with the missionary or the arch-duke or a woman attacked, to intervene with force against if they are successful in their assault? The two things have nothing to do with one another.

India in Western Films

Cinema films are one of the means by which India is degraded in the eyes of foreigners. Writing on this subject, Industrial and Trade Review for India observes:—

In our issue of February 1st we pointed out the danger to us from these films that only show either the gorgeous jewelry of the Princes which is nerpetuating the fiction in Europe that India is a or, on the other hand, the most harism in order to justify the present system of European imperialism and Christian missions. We are glad to find that our view is shared by a German writer in the Reichsfilmblatt, the official organ of the Association of German Cinematory of Theatre Owners, in which the writer quotes our Review and asks:

our Review and asks:

Will the Emelka dare to give us a picture of the real India? If it does it will have a mission to fulfil. But it will then have to struggle with many obstacles of which the ordinary Terman has not the least idea. At the very moment when the Emelka wishes to produce the projected film as a film of the real India, its permission to travel in India will be cancelled Automatically the English order will come into operation by which no German can enter the Dominion—examples missionaries.

There is not the least doubt that the political difficulties referred to by this German writer play a considerable part in affecting the actions of those Germans who have hitherto received permission to go to India for the production of films. Among them may be mentioned Dr Willi Wolfl, of the Ellen Richter Film Co, who was recently in India and is now exhibiting in Germany a film entitled "A Flight Around the World" in which certain scenes are shown to which objection may be taken.

One of the scenes which Dr. Wolff asserts was taken in India, shows a woman cleaning by nose with her inger. Undoubtedly such separative in India as indeed they occur also in Horia. But instead of regarding this as a mere incident in the entire picture, this particular scene is dwift on and one cannot avoid the impression that it done with disparaging intention. Another proposed which, however was taken in Herlin, and in which, however was taken in Herlin, and in which a German comic actor dressed in Indian clothes heures in a railway scene in India, shows how at Indian railway official kicked this alleged highwith the remark. "Coloured men at the back while on the other hand, he displays service scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which a woman is engaged in the scene in which as good prepaganda for India. He had shown good pictures of sceni in which he regarded as good propaganda for India. He also made the very significant remark to be indian very willingly and thanked it.

which the Indian very rightly replied.

"But that is not an Indian government the have no Government of our own."

It would take up too much space to describe in many hims of a similar character in which cohin but disgust can be aroused against Indians 191 of most the entire American and European film with its guilty of this unpardonable crime. In the case of Germans, such actions are particularly in which life for surely they have sufficient expensive lying Anglo-Saxon War propaganda about the larism, their brutality, and their "Unkultur for able to sympathise with the feelings of other in the ed nations.

"The Little Clay Cart"

Mricefakatika or, "The Little Clay in the heighborhood in

house, New York, in an English version. "Its theme is of all times and all nations, and the ancient Hindu conventions with which it is played simply make it the more delightful." The Woman Citizen also informs us that "the play is so popular that only standing room is sold night after night"

A Woman Inventor.

The same jourval states -

VASSAR'S INVENTOR

Taisia Stadnichenko, instructor in chemistry at Vassar College, has brought fame to herself by the mention of a micro-thermal furnace which will climinate much waste in oil refining. This furnace nakes possible an accurate observation of the disintegration of petroleum, enabling scientists to determine the exact nature of the byproduct torned—a feat scientists had declared impossible. The National Research Council has granted Miss Stadinichenko \$7,000 to continue her research in Washington.

The Present Economic Condition of Germany

M. Ludovic Naudeau writes in L'Illustra-

Let me cite a few facts bearing on this point Before the war Germany consumed annually to 000 tons of copper To-day she uses 250000 tons. The number of unemployed is constantly deceasing. Strikes are rive Samps-lanks deposits are rising. In Berlin alone they amounted to 11,370,000 gold marks in become The new savings and the country are that are during a single single contents. a marks in December. The new savings a muts opened in that city during a single mooth were 6251. The number of failures is failedly diminishing. There have been marked to be too in the prices of coal, gas electricity and it alway freights and postal charges. The salaries it civil servants have been raised. Laberal pensions are paid to ex-army officers. For example, a doubt narks a year A captain's pension is 4000 marks. This is equivalent to 1500 francs, or exactly the maximum pension for we pay to our retired ambassadors. Simultanty taxes are being reduced. For example, the ly taxes are being reduced. For example, the tax has been successively cut from two and half per cent to two per cent, then to one and half per cent, and now-since January 1, 1925 the light per cent, and now—since January 1, 1925 one per cent. The amount of each mined in the light is at least as large as it was before the light in 1913 the quantity raised was slightly over 12 000 tons. During the first ten months of 1924 it is 9,265,000 tons. Meanwhile there has been at onsiderable increase in the coal output of Upper 1935. thate. To cite one illustration, in 1913. German chi ats to Argentina were valued at 61 material gold posos: in 1924 they passed Silter that the posos

Recollections of Tennyson.

Willingham Franklin Rawnsley has contributed to the Nineteenth Century and After some delightful recollections of Tennyson from which a few bits are culled below

I should like to have written that. The sound of a line of poetry (for poetry, to be fully understood, should be read aloud) was very much to him stood, should be read aloud) was very much to him and he certainly wis unmatched in his use of yowels and in the melody of his verse. In speaking of Browning, he once said to me, 'I don't think that poetry should be all thought there should be some melody', and he carried his objection to a jungle so far that when, after publishing his first four bladls of the King, he learned that Enid' was properly pronounced Ennid, he changed his line beginning 'Had wedded Enid' to 'Had married Enid, the ringle of 'wedded Enid' was to his ear quite the jingle of wedded Ennid was to his ear quite impossible H instanced to me as fine-sounding lines and some of his best land he made, them all the lines to his magnificent way of rolling them out the lines about the burnal of Elaine -

out the lines about the burial of radine—

The maiden oursed not as one unknown

Not meanly, but with gengious obseques.

And mass and rolling mass like a quien.

I mucht add that Wordsworth said of Tennyson.

I have been trying all my life to write a poem like his 'Dota, but in vain. It is pleasant to hear. words of genuine praise from one real poet of another and Tenny on spoke non his heart when he said. Read the exquisite songs of Burns, each perfect as a berry and radiant as a dewdrop. There never was an immortal port if he be not one while it is its he said to me. It Keats had lived

while the its he said to me it nears had never he would be been the first of all its light of the holy which came out in 1879 we us a fine poeth indering of the versus of Malory but about the Holy tread volume, which was part held in 1869. Tenny son wrote to my tather 1 and you may nevi volume Arthur and the many British prince as I date. save ton will find out Arthur is the soul. The poet pointed out to me that an ideal was only a picture but he was very particular that it should he prenounced givil as the Greek word from which it is derived

He said. A poet's work should be done by the time he is sixty. If I am to do anything may it must be in the next six years. I either that the best play of Sophocles was written when he was seventy and as a mar r of fit in spate of his age the next twenty years saw the prode tion of no less than eleven new y dames.

fearfully twisted.

He spoke of Gladstone and how he had ventured He spoke of Gladstone and how he had ventured to remonstrate with him on his attitude toward Canada, saying, 'But if you follow a course like that, you will have the colonies cut themselves adult,' and Gladstone answered, 'I wish to God they would.' Tennyson thought such an attitude for a great statesman was quite incredible, and vehemently disagreed with him. Times and opinions have indeed changed since then' We could not find Browning's letter, but, sitting side by side on his larg sofa, we had much interesting converse. not nou prowning a letter, but, sitting side by side on his big sofa, we had much interesting converse and I having thoughtlessly used the only too common adjective awful, he reproached me with, 'You have used that word twice, and I can't bear it,' I said. Yes, but I have used it each time in its proper sense, still, I admit I had better not have used it at all' used it at all

He was very sensitive to criticism but always

He was very sensitive took his wife's opinion as final He complained to me. The critics won't allow me any imagination. They take a line like "Moanings homolosis sea and say Moanings." Horace 'homeless, Shelles, and so on But of course the same things are seen in all ages and naturally described in the same language. In my last volume, in the Progress of Spring I said.
"The starling claus his tiny castanets. The "The starling claps his tiny eastanets. The other day I saw it in a recent novel They will say I borrowed it, and I wrote that line lifts years ago, but they won't believe that Another real dread he had was the being made into a school book, and he appealed to me as a school-master. Don't let them do that The box will hate me.'

Electoral Reform and Organized Christianity in England

The second article on electoral reform and organized Christianity in England appears in the March number of Political Science Quarterly We can make from for only one extract.

The attitude of the High Church Party,
concerned in the "Oxford Movement, to the
liberalism of post-Reform Bill days, is set forth clearly in a tract published in 1340, wherein most of the reform schemes of the period are ascribed to the devil's efforts to bring about an apostasy of the Church of Christ The tract contains such

the Church of Christ The tract contains such paragraphs as the following.

'He promises you civil liberty, he promises you equality, he promises you trade and wealth, he promises you remission of taxes he promises you Reform This is the way he conceals from you the kind of work to which he is putting you. He demands you to rail against your rulers and superiors—he offers you knowledges science, arrichment of mind He scoffs at times

i-atitution which reveres

Prospects of Republicanism in Turkey.

Mr Edward Mead Earle remarks in the same quarterly that "war or the throat of wai has been a powerful motivating force in the accomplishment of so-called reform in Turkey" He then lays bare the cause which led to the "reforms" in 1856, 1870 and 1908

These "vain promises" were said to be characteristic of the "times of Anti-Christ" to which the

Oxford Movement was unalterably opposed.

In each of these cases the progressives Turkey were liberals in their desire to introdu-Western standards of administration into a foften imperial regime, nationalists in their desire

achieve reform before it was forced upon them.

There are certain distinctive differences, however. between the present republican reform in Turk and former half-hearted reforms in the Otton Empire The revolt of Mustapha Kemal agai the Allies was not like the shifty maneuves. Abdul Hamid or the precipitate acts of the You Turks, designed to maintain Turkish hegemony non-Turkish territory it was primarily concer with preserving a Turkish homeland against f Hellenistic expansion and Albed imperial Under the Suitans and to a lesser degree under Young Turks the passion for reform wand foreign pressure became less severe, a Mustapha kemal the most summeant revolution changes—namely, establishment of the bubble, abolition of the Calphate, and ado of a democratic constitution—came after a victory at Smyrna and a conspicuous diplo victors at Lausanne, when foreign intervention little to be feated Before the war refor Turkey, as elsewhere, was interpreted narrowly pointed sense so that the of liberalism were initiation for the stanes of racial progress, the new registrarket is founded upon fundamental is such as the separation of Church and St. which the constitution is but a necessary expension to the constitution is but a necessary expension to the constitution is but a necessary expension. The edicts of 1856 and 1876 were admed under the tender more of a reaction incompetent and corrupt bureaucract. a constitution of 1908 fell victim to an unser trumvirate the present constitution has a chance, at least, of being carried out by more are admittedly inexperienced, but who divorce themselves from Byzantinism. Ottoman traditions.

The writer adds

Whatever may be the ultimate fate of stitution and of the republic, a new so economic order has been established in Fifteen years of almost uninterrupted v their concomitants of disease, famine and have doalt a blow to the productive a of the nation which cannot be overcome the introduction of agricultural and other ery. The exigencies of war assisted in t cipation of comen from many of their fe abilities and compelled, as in other confidence in the relationships be

thousands of Greeks and Armenians have ipped the country of most of its intelligent and isperous middle class, whose place will be taken t slowly by Turks lacking in education and perience. The forcible detachment of the non-rikish portions of the Empire should divert to momie channels much of the intelligence and ergy which formerly was dissipated in the untenance of excessive military forces and a reflung aixil administration. It is as difficult to neeive the return to Turkey of the Osman masty and the Ottoman system as it is to imagine e return to Russia of the Romanovs and their arist regime.

British Snobbery in Science

A rumpus—albeit a rumpus of the decorous iontific sort—has been stilled up in England by a news that the Prince of Wales has accepted a presidency of the British Association for the francement of Science which is to hold its 1926 ceting in Oxford. The British Association is, as

everybody knows, one of the most famous scientific organizations in the world, and the annual address of its President is always looked forward to as one of the important scientific pronouncements of the year Almost invariably, therefore, the President has been a scientific man of great entirence.

Among the few exceptions have been the Prince's great-grandfather Prince's Albert, who presided over the Association on its Aberdeen meeting in 1859. At another Oxford meeting Lord Salisbury presided. However these noblemen were not quite in the same position as the Prince of Wales. Prince Albert had some scientific pretensions however mild Lord Salisbury assisted by Lord Raylogh, actually did write and deliver a scientific lecture. The Prince of Wales however knows nothing of atoms and elections, or fossils or insects or anything of the sort, and pretends to know nothing.

Consequently controverses rage between one school of scientificmen who have a time old crusty distaste for anateurs, and the other party which has a very British, and very human liking for prime os.

THE MAN WHO SAVED IRELAND: LIFE ROMANCE OF GENERAL RICHARD MULCAHY (II)*

By St. VHIAL SINGH

TPON the conclusion of the Anglo-Irish Agreement of December b. 1921. General Mulcahy, then Chief-of-Staff of the Irish Republican Army, found himselt in an exceedingly difficult position He snew that that instrument did not give id people all they demanded but it did give there the freedom to reconstruct Ireland according to their own wishes, and to manage coastal defence) affairs (excepting with at let or hindrance from any outsider. He further knew that the British Prime Mim for (Mr. Lloyd George) had openly threatened to resume the Anglo-Lush war and to prosecute it to the bitter end if the sh delegates did not append their signa-16 to the document which was placed iere them as representing the utmost the itish would give If the treaty was not tiled Britain would have no option but to carry cut that threat as it afterwa ds transpried, a scheme for raising 100,000 men for the purpose of crushing the Irish robels had actually been framed. If war eventuated, he as the chief feelinical executive of the Army, would be called in on to organise such righting strength as was left in the nation to continue the conflict.

In the estimation of Mulcal's -the man who could speak on these matters with greater authority than perhaps anyone else in the Sinn Fein ranks are peop! had not come quite to the end of their mulitary resources they could easily beyo carrid on the struggle for a tene We becomewer, that the ability to remain stochast and to snow confidence is any pay which the small band of men who sing occupied affines might choose to frame we have a sprastible If, instead of eleven, we to which the Treaty contained can pis sted, upon entering upon are to produce struggle which, once begre me, dia, on too de apprelensive that a long time he w

The first article appeared in the Moderns of the November, 1924.

ous breakdown might occur in the al of the people, or of their representatives ch, even if it were only partial, would be istrous, and there might even be a serious ulsion against persons who had laid them-res open to the charge of being "irreconibles."

Mr. Erskine Childers, one of the "Irregular" leaders, executed by the Free State authorities

In order to ascertain the actual position, Mulcahy, a few days after the signing of the Treaty, put to De Valera who still continued to be the President of Saorstat Eireann (the Irish Republic) this proposition:

Ordinarily the General charged with responsibility for war should be clear not only as to the military policy to be pursued, but he should also know something of the political forces that were going to be at play in the situation in which military action really formed only a part Such knowledge in the case of an officer

-tomant of

more important in the case of one who accepted the responsibility for war with a machine which did not contain the elements of a purely military success.

Mulcany submitted to De Valera his opinion as to the capacity of the available forces for military activity and operations, as he clearly saw that they had not the element of a purely military success in them. Havin

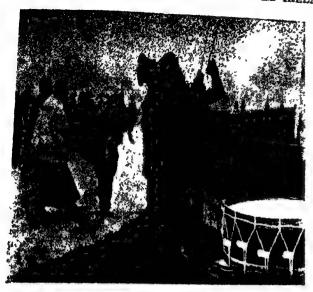

General Richard Mulcaby, outside his home lasfield House, near the Portobello Barracks, 1911

done so, he asked what the plan was newhich general political operations were be carried out, of which, obviously, military operations were only to be not

De Valera declined to discuss that p on that occasion and at no time subseque would be discuss it.

II

Mulcahy's ideas on the Treaty were clear. "While it did not concede to that we demanded," he said in talking, "it did give us absolute controur national resources, absolute controur administration, absolute control of the control o

eneral Mulcahy and General Hogan raising the Tri olout upon taking over "Collins Barracks", Dublin, from the British

ilisation of our resources—for the building of our country. It took the Englishman at of Ireland's business and, therefore, it of a position in which friction was exitable between the Englishman and the rishman. We realised the possibility of being absolutely friendly with the English people as distinct from English officials who interfered with our business.

"In this respect," Mulcahy continued. "I am reminded of Thomas Francis Meagher's natiative of his penal voyage to Tasmania He had just escaped the gallows at the hands of English officials here in Ireland at the time he wrote

As for the officers, they were inc. generous animal fellows. Owing to the restrictions imposed is the Home Office our intercourse with them as the may easily suppose, was extremely limited, but limited as it was, we were soon led to concern truest esteem for them. England may well be proud as long as she has such brave, upraching the proud as long as she has such brave, upraching the hearts to serve her. Their frank, generous warm nature, their manly, gallant bearing form its tithing contrast indeed to the cold, cramped The office of the officials here.

That talk showed to me that Mulcahy was not an "irreconcilable"—that he was not a later of the British—only a lover of his own people—that the motive spring of his his was not venom for the alien, but devotion to his own country. He wished to deprive the British of the control they had acquired over Irish affairs; but having Jone

so, he desired to live in peace—and, if possible, in friendliness—with them, his next door neighbours.

Realising the disaster which would result from an interneeme fight. Mulcahy sought to find a way by which the factions into which the Treaty had split the active Sinn Fein workers could be made to sink their differences and form a "joint plan of co-operation" After a fortnight's vain effort, he intervened, on December 12, 1921 in the debate on the Treaty which had commenced in the Dail on the 14th instant idem, and spoke his mind plainly "None of us" said he, want this treaty None of us want the Crown None of us want the representative of the Crown None of us want our harbours occupied

by enemy forces none of us want what is said to be partition and we want no arguments against any of these things.

An alternative to that Treaty was, however, necessary. Mulcahy emphasised Much had been said about a document (officially known as Document No 2) which had been put forward by the President at a secret session of the Dail, and to which he permitted no direct reference during the public debates until such time as he chose to introduce it in such form as suited him. He personally saw no alternative to the acceptance of the Treaty. That instrument secured to Ireland the control in Treland with full executive and administrative powers, and the Longitus in Ireland responsible to that control. He asked his fellow-Deputies.

Are we going to choose in the next onward march of this nation the were us which will give us dead in our country the Crompton-Smiths of England and the Potters of Louand of accepting going to take our own resources and grow to manhood in friendliness and with sea or claim of avoiding that polarisation of mind and a learsation in antagonisms with the Finglish population we have been forced into at the possibility.

This fine appeal was less on the Vera and his anti-Treaty of the damary 7. 1623, when the Iwas was token, 64. Deputes (recluding Maloday) was token, 64. Deputes (recluding Maloday) was in the front of the reinfection and 7 as another to the field President, and nominated Maloday as the Minister dent, and nominated Maloday as the Minister

The state of the s

for Defence, in addition to continuing as the Chief of Staff.

III

Within a month of the ratification of the Treaty and the setting up of the Provisional Government, the evacuation of the British troops began The Beggar's Bush Barracks (in a Dublin suburb) were taken over on Feb-

The Four Courts, the hand-omest structure in Ireland, after bombaidment by Fice Stateguins to dislodge the Irregulars who had made it their stronghold, and who, on leaving completed the work of destruction by exploding a name under the building

ruary 1, 1922. Some fifty men, led by Captain Patrick Daly with Lieutenants Joe Leonard and Patrick O' Connor—many of whom had taken part in the Rebellion of Easter, 1916—marched through streets lined with a cheering excited throng to the Barracks and relieved the British of their first military stronghold in the capital.

"Did the British impose any conditions?" I asked the General on one occassion.

"There were no conditions of any kind," he replied. "It would not have been reasonable for the British to impose any. When we look over any barracks for occupation, their boran." Soldiers

who were opposed to the Treaty managed to take some of the barracks over from the British and dug themselves in—particularly in southern and south-western Ireland. In mid-summer, when the differences between the opposing wings of Sinn Fein culminated in the bombardment of the Four Courts in Dublin and the destruction of that noble structure, the finest in Ireland, and almost immediately the flames of internecine warfare tlared up in the country. They constituted a perplexing problem for Free State.

IV

Hardly had the campaign opened when General Collins, Head of the Provisional Government and Commander-in-Chief of the Free State Army, was shot dead not far from his birth-place in county Cork and the responsibility of saving the life of the new State fell upon Mulcahy. In the oration which he delivered at the grave-side of his friend, and co-worker he revealed his own soul. He said in Gaelic

"Unless the grain of coin that falls into the ground dies, there is nothing but itself in

it, but if it dies it gives forth fruit."

That sentence, containing the quintessence of Gaelic civilisation—of all civilisation—constitutes the corner-stone of Mulcahysphilosophy and is the lodestar of his life. Without such a philosophy to inspire him he could not have carried to a successful conclusion a campaign directed against hisformer comrades. Only a highly-developed sense of stern duty could give a man the determination to take action which. To another circumstance, would nauseate him.

The military problem, in itself, was highly complicated Some of the best Army others had "gone irregular -a significant phase characteristic of the Irish genius—and taken away with them nearly all the best soldiers They had not only managed to occupy some of the best barracks in the country, but hal succeeded in effectively aiming themselves hi plundering a British vessel which under an insufficient guard, was carrying large quantities of arms, ammunition and equipment out of Cork Harbour. The Free State had by improvise an Army, as also to import and to distribute arms, ammunition, and general equipment, before it could operate against the "irregulars" who held the country south and west of a line drawn from Waterford 1 Limerick.

The military problem was, however, complicated by other causes. The anti-Treatyness

looked upon the men who remained faithful to the Dail as renegades. Some of them did not hesitate on December 7, 1922, to open fire upon the Deputy-Speaker (Padraic O'Maille) and Deputy Sean Hales, while they were riding in an open car near the quays in Dublin on their way to attend the Assembly The latter died up on the spot, while the former lay for months in hospital and survived only because he possessed a powerful frame* The evening newspapers of the

ful frame * The evening new papers of the next day announced that four of the "irregular prisoners in the hands of the military—Rory O'Connor, Laam Mellowes, Joseph Mckeley and Richard Barrett—had been executed in Mountjoy Jail that morning "as a reprisal"

As the Minister for Defence who had to sign these warrants high authorised these exutions, Mulcahy explained the Dail, on December 8th, asons which had prompted him to take such diastiction "The action that has ken place" he declared, has a taken place because a man is been assassinated whom held in honour, but because forces more victors, or insidious was striking rainst representative trovernment in Ireland, than any haloved by the British After isclosing the fact that the peaker of the Dail had

beater of the had teceived 'the armed letter from deatening adds of the destructive forces in Ireland od referring feelingly to the assassination bich had taken place the previous day he ented out that the fabric of Givernment ested on the Deputies elected by the people to design their laws and to regulate their The Army Council 'tesponsible for 110 hen safety to the people' was determined to " that "the representatives of the people an meet here in council, can walk through be country freely and numolestedly and hischarge to the people the very onerous and responsible duties that the people gave put on them " Exceptional and drastic

action had been taken because the assassination of Deputy Hales was the beginning of a policy on the other side to finish off the Dail He then continued

If, when our work is done, we do leave as a result of it an Irish people behind us they may blame us if they wish for any stains alleged, that our actions leave on the fair name of our country or on what were our own tai names but ne shall leave an bish people behind us. In recommending to the Government that this morning seation should be taken we did not

For further particulars the reader is referred the author's article entitled. "The Pail or the Irish House of Commons." in the August issue of this Review.

regime.

so long as he believed it was required of him to save his people. That is the quality of which heroes and martyrs are made—that is the quality which enabled Mulcahy to win through the period of the Anglo-Irish war

and the internecine struggle.

That policy has, however, given offence to many persons—exposed him to severe criticism, especially from that section of the people who do not see eye to eye with him politically, and who accuse him of breaking the pledge he had solemnly given to keep the Army "Republican." The executions horrified the people in general, and left a bitter memory behind. "Fight, Mulcahy' Don't murder", ran an inscription crudely painted in large letters on the wall surrounding Trinity College, Dublin. Those words accurately reflected the attitude of a considerable section of the community.

1

By the time (December 16, 1623) I arrived in Ireland, Mulcahy, aided by capable and loyal officers and men, had practically finished the latter job. Armed resistance to the Free State had broken down completely. Open fighting had ceased. The "Irregulars" had given in or had taken to the hills and were "on the run". With the exception of a few places in the south and south-west, the military had handed over the responsibility of maintaining peace to the Gardu Siochana, the civic guard, organised on a purely civilian basis, to take the place of the semmilitary police maintained during the British

Mulcahy, at the time of my arrival, was engaged in demobilising the Army It was, however, necessary to carry through the work of weeding out men, who, though quite useful in a time of crisis, were not good enough for a standing army, and particularly of sending away men who had held high rank, or of reducing them in rank, either because they were not fit for the rank they held, or the necessity for doing 40 had disappeared. It hurt materially—and what was still worse, it hurt the pride of the persons affected. It was, therefore, bound to rouse human passions. In the peculiar circomstance in which the country was placed, owing to the dislocation of economic life and the consequent unemployment which prevailed, it whipped up a storm.

The need of the nation was, however,

The reparation which would have to be ma for the destruction to life and property wou amount to as much or more, and wou cripple the present generation.

Impelled by this goad, Mulcahy reduce the Army from 50,000 to about 13,000 office and men. When his reorganisation schell had gone through fully, the standing arrowould for a time be 15,000 strong, and would be standing and would be standing arrowould for a time be 15,000 strong, and would be standing arrowould for a time be 15,000 strong, and would be standing arrow to standing arrow to

cost about £3,000,000, a year.

Just when task was nearing complete a group of officers who had been opposed Mulcahy's policy and programme mutuus. The Minister for Defence and Command in-Chief suddenly found his hands tied dealing with the matter, by dissensions the inner circle of the Government we executive Council.

The crisis involved his own resignation that of another Member of that Council (to Minister for Industry and Commerce), at the retirement, forced or otherwise, of the three members of the Army Council at many officers, some of them holding intrank. The President assumed, for the timbeing, the Military portfolio, General Ed O'Duffy, was placed in supreme communates the General Officer Commanding the Force and Major-General (raised to the rank Lieutenant-General) Paedar MacMahon appointed the Chief of Staff.

The explosion which removed Mulcal from office served also to demonstrate had well he had done his work. The hear which he had built held together, them shaken to its foundation. The Army, instead breaking up into factions, or seeking usurp power by a Coup d'Etat, remained in to the civil authority and silently accept the changes inaugurated in the high

direction.

TT

As a private member of the Dail Mulcale stands perhaps even higher in the estimate of his fellows then he did as an Executive Councillor. He has not permitted a sing word about the late crisis to escape his lip which would show that he had been eight tered or was thinking of himself even for moment—his thought, at any rate the thought to which he has given expression, have to variably been of others—his former colleague and above all, of the nation. Though shelonging to the Government Party he is formidable critic of the men in power.

Preedom from responsibility which bre shouldered for ten years without bre

except such as was afforded by incarceration in prison and the internment camp, will give incheral Mulcahy's mind and body a measure of rest which they should have had long ago lie has, for the first time in years, a little lessure to spend with his family and friends, who until recently saw practically nothing of him. With his wife and four children (Padraig, 4, Elizibeth 3, Risteard 2 and Unite 4 months) he still lives at Lissonfield flouse, where I first saw him, though the Military Guard is no longer at the gate to challenge anyone who seeks to enter

VII

I often wonder what Mulcahy's future wall be. That he has a great contribution to make to the progress of his people, I have not the least doubt. In what capacity, how-

ever, unlitury or coul-

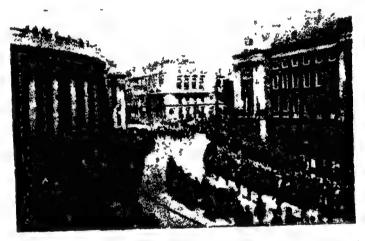

If Mulcahy has further apportunity of guiding the destines of the Irish Army. he will, I am sure, accomplish great good His ideas on military training or anisation are unique in conversing with me late one evening he frankly told me that he knew very little of general military science in so tar as it was a thing divorced tion his native intelligence and common sense. He posses ed books of various sizes and descriptions relating to uni tary matters-yes, books had gathered round him in turns ways. They Here wreten by ambitrous men wh had made a thorough state of the problems with

wie h they were dealing. He had found, however that for his people, whose problems were on their own doorstep, and were very pressing. the range was too far and too wide and, the fore, they were much too absorbing and sed cive, so much so, indeed, that ordinary military books had the effect of blunting men's mo de to the simple problems of life. For the Shalle factics that alone could be effective for the type of warfare carried on in Ireland he and his edeagues had set themselves to produce a shall series of books, each running into 30 of an all octavo pages, and embodying cards al points of common sense to be read and is read until fully mastered. He attached great importance to a somewhat thorough

mathematical education, tending, as he said, in the "straight line" direction, Euclid, Mechanics, Graphic Statics, and Machine Drawing, seemed to him to be an adequate substitute for the study of military science

A man with such ideas is needed to superintend the military organisation of a small nation which does not possess the possibility - practically unlimited resources in men and money --to carry on such organisation on the elaborate basis evolved by Sandhurst and other similar institutions

For my own part, I should like to see Mulcahy at work developing the potential wealth of the country. He has a constructive type of mind—possesses a magnetic personality and the driving power which enable a man to get things done. His speeches in the Dail and his talks with me, have convinced me that if his ideas in regard to

Funeral Procession of General Michael Collins Killed in Amoush by the Tregulars in 1922 (Photo by courtesy of Dr. H. G. Stach, D., ac

the improvement and extension of communications, arterial dramage, and the reconditioning of agriculture and industry were carried out, the unemployed in Irelaid could be easily absorbed, and the way payed for Irish prosperity

survey made of the economic improvement needed and of the number of unemployed to be absorbed in each zone. Attention should be directed particularly to reconditioning the roads and building better ones, in his opinion, for roads radiating from the important ports to various parts of the country, and a number of other trunk roads, were especially needed Provision for housing was also an urgent necessity, because he feared that wages and greater lessure on the part of the workers with bad housing may give rise to as serious a situation of social unrest as bad hours or bad wages. He further suggested the carrying out of important works to train rivers and drain low-lying, boggy land, and thereby bring waste or practically waste areas under tillage

These schemes. Unleaby pointed out, would soon pay for themselves. That was particularly the case in regard to roads, the money spent upon which, he believed, would be saved to the country in two or three years, even if the saving only came about through doing away with the expensive motor repairs falling upon the traders. As to drainage, it was proposed to drain a particular area in accordance with a scheme worked out by the Agricultural Department several years before—a scheme which would put money into the pockets of the people.

The speeches which Mulcally made in the course of the debates on the Budget estimatthis rear, particularly the estimates of " our exceedingly

asked his fellow-Deputies not to be stingy fixing the scale of pay of teachers, especia those in the secondary schools To sh them the folly of making £200 per annum minimum pay, he compiled a long list persons who carned as much or more. list included draughtsmen, electricians, bri layers, cabinet-makers, carpenters, joine coach-builders, plumbers, gas-fitters, plastorbakers, table hands, oven men, butchers, swi board attendants, tin-smiths, sail-makers, t makers, and upholsterers "You are start off," he warned the Deputies, "whatever in be said about what as done in the past, whatever may be said about what led up the present situation here ... with new ha educational system, and the upon нен outlook and new hopes

want to attract the you men leaving the universit to the ranks of the second teachers' profession I think would be unfair in the st that we hope to make no that there should be he simply a scale of salar without any reference nensions"

On another joccasion M cally suggested that the Ecation Department should up a special establishment training teachers, coming fr districts where, despite Brit efforts, liish was still a liv language, through the mediof that language, so that ti would serve as leaven in general mass of the peop He was auxious to pro-

that it was possible to bring to the task teaching the young, highly educated men: women who had received their training a education through the medium of the li language, and who had the self-confider and poise and full and proper expression t tenchers who deserve to be called teach should have. He believed that if sometime definite was not done to rear up young teach in an absolutely Irish atmosphere, they " neglecting a most important matter jude from the abstract: and comparative point view."

The plea which Mulcahy made on " another occasion for assigning to play i culture it+ true place in the scheme of edit tion and making adequate arrangements

Earl Winterton on Assam.

Earl Winterton has taken credit in the House of Commons for the great improvement that has taken place in Assam during the past four years with regard to the reduction of opium consumption. This is unfair. The consumption of opium during the cears 1875-1920 only very slightly varied according to the prosperity of the harvest, or the revise. The opium consumption in 1929 was hardly less than that in 1875. To give the figures, in 1875 the consumption was 1876 maunds, while in 1920 it was 1748. But from the time that Mahatma Gandhi visited Assam, and after the effect of the

Non-cosoperation movement was felt, the consumption has gone down so rapidly and steadily that today it stands at 854 maunds. That is to say, it is today only half what it was 5 years ago. But the chief credit for this is surely due to the Non-co-operation movement, which the Covernment did its utmost to suppress by sending nearly one thousand workers to juil 10 pickering the opinin shops.

The Government's Breach of Faith.

The American delegate at Geneva declared as clearly and pointedly as he possibly could,

that the British towernment had been guilty of a breach of faith with regard to the Hague Convention relating to the opinio trathe I ad I hort ceed couplained largette of this accusation which he saw was vory wounding and ed. The Amenear "Leather war still further and char Governor 1 But s idad mare " " ora 101 a t keeping of tool or afflor? Lad R . and and 11 2 2 2 2 3 · c · colge talked to part ds " . . lam. Am mean in nathatian the accusation, but nhi 4

Opiem Spoking in Assam

the Americans did nothing of the kind. They continued to assume that Great Britain had neither fulfilled its obligation under the Hague Convention, nor was it really intending to do so. At last, when a simple proposal, that within 15 years opium smoking should be suppressed at Singapore and other places, was rejected by Lord Robert Cecil, America withdrew from the Conference under orders from President Coolidge. This situation is told in the plainest possible language in the report of the proceedings of the Geneva Conference, which is now at hand. How far the American position is justified may

be seen from the article which is printed in this number of the Modern Review A further point has recently been brought forward to justify the British position. It is stated that the Hague Convention was never finally ratified before the European War. and that during the European war nobody ever thought much about it. Therefore, the writer states, a technical breach of the Hague Convention has never been committed But this argument is the argument of a man of business using hard business methods, and not the argument of a statesman and a humanitarian. Great Britain professed in the loudest possible terms at the Hague Convention, that she was

actuated by the highest considerations of humanity in her opium policy in the Far East. Those who are thus actuated by humanity, and humanity alone, do not use quibbles, or stick merely to the letter of a solemn engagement, without keeping the spirit of it. They go at once beyond the letter, in order to show the spirit of humanity which actuate sthem.

Lowlands in Kenya.

A Memorandum has recently been principled by the National Liberal Federation stating very forcibly the reasons why the Government of India should not send any officer to Kenya to explore that part of the Lowlands which might be offered to Indias as a compensation for the agricultural lands in Highlands, which have now been exclusively appropriated by the white settlers The Imperial Indian Citizenship Association has also published a statement which records my own impressions of the conversations in

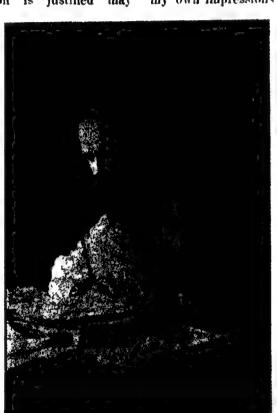

London with regard to Kenva in 1923 have received, from one who intimately knows the country the following answer to a question, as to whether there are really empty lands in Kenya, such as ladians might take up without any danger of expropriating the African natives writes to follows .-

"I nearly forzet to answer what you say about the offer of land in the low country of Kenya to Indians for settlement I wish you would emphasise to you friends the following points."

"1. There are all mense empty areas in the low country of Kenya. Some of the land may be work cultivating, but not

of it has been tested. The reason it has not been tested is, that it is all perfectly usele without irrigation. And as there are large rivers in Kenya, I presume arrigation is impracticable.

description does not apply is the lower T Valley. It is not a large area, but if C be irrigated fairly easily. The exploiting the last 20 years has halved the mapopulation, so that there might be room for Indians. But this area is very maken

Mr. C. F. Andrews

C. F. A.

"3. All Indian agricultural immigrants to Kenya would have to do their own cultivating. There are no African labourers

I have just come back from Assam, where large areas of tertile vacant land are still waiting for occupation Apart from all other considerations, it would seem to me the height of folly for Indians to go over to a new country, which is very malarial and would need irrigation, and would seriously hamper the native population if it again increased in numbers, instead of taking up land in their own country which is crying out for settlers. The injustice in m the Kenva Highlands was not in the refusal to Indians of Crown Grants of land for colonisation, but in the entire prohibition of open sales and transfers of land between Indians and Europeans, even when the latter wished to sell their land to Indians

CFA

Prof. Sten Konow on India of To-day

Professor Sten Konow sarticles, which we have reproduced elsewhere from The Chicago Duly News, are dated from Santimiketan, and in is introduced to the readers of that paper is "a visiting professor in Dr. Rabindranath Tagore's university To prevent any possible misconception, it is necessary, therefore, to -tate that as Visva bharati, the name by which Rabindranath Tagore's university is known, is not a political institution, its authorities do not enquire into the political opinions of those whom they invite to teach and deliver lectures there. It is neither hable to blame nor does it take credit for the political views of its teachers. For purselves we are prepared to congratulate Sten Konow on the truth of most of as observations, and where we differ, to give im credit for honesty of purpose, though we do not think he is free everywhere from unconscious bias.

In fairness to Dr. and Mr. Konew it hould be stated that Indian names were eightly given them by the university in token love and respect.

"Oriental Mentality"

We do not quite follow Di Konow when he says that bolshevism is "more akin to Asiatic than to European idens" Bolshevism rose in Kuropean Russia It is no doubt rightly considered a menace moother

countries, but every "pend" is not necessarily Asiatic like the so-called "vellow pend"!

Moreover, the Orient is so vast a region that it is rather risky to speak of "the oriental mentality" is some single entity equally characterising, e.g., the Japanese and the Chinese at one end and the Jews and the Arabs at the other. Europe covers a smaller area than Asia, yet we have heard and read that the Nordic rices have a mentality different from that of the Mediterranean races. Even in the small country called Great Britain the Celts and Savons are said to have different mentalities.

But assuming that there is such a thing as oriental mentality characteristic of all Asiaties it seems to us that it is not something quite peculiar to Asia Rabindianath Tagore, who has travelled much and "surveyed mankind from China to Peru says that he does not believe in any characteristic which is exclusively Oriental, bearing no intimate relation to the Western mind

Dr. Konow obscives

The oriental mentality can perhaps nowhere be more clearly graspid than in India and especially in Indian art. There one does not meet with individual features but with types and more or less general ideas. And in a similar way Indian religious aim at emancipating man from the fetters of individual limitation and not generally at individual happiness and bliss.

What the professor says of Indian art is only part of the truth. His observation is true only of some forms of Indian art in some provinces and ages. But even in the oldest Indian paintings, as in the Ajanta and Bagh caves, as well as in paintings of the Mughal, Raiput and Kangra schools, there are very many specimens in which individual character is to be found in the features gostures and poses. Individual character is to be found also in large numbers of modern Indian works of at. On the other hand, we have found in many old Italian madennas and other conventional pictures, not individuo character, but 'types and more or less general idea-

Not do we think that Pr d | k in w is quite correct in describing the a new to findian religious in the way he has done for dain religious and their subdivisors and their subdivisors and exactly the same

Put taking by less threat the correct what is the class of advided limitation Certainly, it is the attainment of biss I the individual in the Lyanishads Braining

is spoken of as Rasa (Raso rai sah), that is to say, as full of that quality which gives joy, and it is also said that by realising Brahman, man becomes "blissful" (anandi bharati).

The aim of all devoters in all Indian religions is not to be merged in the Infinite after emancipation from the fetters of individual limitation. As the Sakta saint Ramprasad puts it tersely, "Chini hote chai na Ma, chini khete bhalobasi", "Mother, I do not want to be sugar, I love to enjoy sugar."

If the object of human life according to the Indian religions were totally unconnected with individual happiness and bliss, the national genius would not have blossomed into so many different kinds of literary, plastic and other aits. Even the Buddhist monks, who are popularly supposed, particularly in Christian countries, to lead a joyless, colourless life, did not find it inconsistent with their spiritual aim to dwell in such beautifully decorated abodes as the Ajanta cave temples, which surely helped to make them happy and blissful

In the Hindu scheme of life, of the four arramas, or periods or stages of existence, the garhasthya arrama, that of the householder or family man, is said to be the pivotal one—that on which the others depend for their existence and fruition—And it is well known that the Hindu calendar is dotted with numerous religious festivals, meant for spiritual improvement as well as recreation.

The attainment of chatur-varga, namely dharma (right living), artha (riches), kama (objects of desire), and moksha (liberation) is a Hindu aim. This aim is not unconnected with the promotion of individual happiness and bliss.

In Mahayana Buddhism, many Bodhisattvas vow not to accept miriana for themselves so long as a single individual is left in pain. It may be assumed that the object aimed at, indirectly at any rate, is the happiness and bliss of individuals.

Professor Konow says that the bolshevists' theory "is based on a different conception of man and man's right which is more akin to Asiatic than to European ideas" and that Asiatic ideas or "the oriental mentality can perhaps nowhere be more clearly grasped than in India". This is calculated to indirectly convey the impression that bolshevism may find a congenial soil in India. And the professor does in fact attempt to show that

Let us look at the matter from a different angle. Perhaps the Hindu socio-religious organisation gives more tangible indications of Hindu ideas and Hindu mentality than theories deduced from interpretations of Indian art and Indian scriptures. The Hindu organisation is, however socio-religious built on foundations far different from polshevist theory and practice. Bolshevism stands for proleturian dictatorship; it does not stand for the predominant power and influence of the nobility and the intellectual classes. But what is the Hindu social theory followed in practice? At the top are the intellectual class of Brahmanas and the ruling and military All the other castes, formclass of Kshatriyas ing the vast majority or the proletariate, are at the bottom. This is the reverse of the bolshevik plan

Of course, wherever there is political or social oppression or both, bolshevism may gain adherents, and there is such a possibility in India, as in many other countries. But this is far different from suggesting that Indian art and Indian religious give indications of India peculiar fitness for the reception of bolshevism

Using the Koran for Propaganda, Turkey. China, Afghanistan.

What Prof. Konow writes in relation to using the Koran for propaganda may be based on correct information, we do not know

His observations on what Mastapha Kemal Pasha has done, we believe to be based on

What Dr Sten know writes of the lichariour of the bolsheviks in the Caucasus is to the best of our knowledge, founded on fact. He appears also to have correctly described the general aims, methods and policy of the bolsheviks.

We cannot say how far his information about China is correct. But we know that he is in a position to be well informed about Afghanistan.

Bolsheviks and Indian Nationalists

It were much to be wished that Profe or Konow had, for the sake of his own reputation, not indulged in vague sweeping allestions of the holsheviks having connection with Indian nationalists. We would not cheek to properly qualified statements capable of proof. Any politically-minded Indian who wishes his speeple to be masters in their and mationalist. Maha and

NOTES 703.

andhi, Mr. C R. Das, Pandit Motilal Nehru, andit Madan Mohan Malaviya, Sir Surendrath Banerji, Mr. Sripivasa Sastri, Lala ajpat Rai, Maulanas Shaukat Ali and Mohaled Ali, Mrs. Sarojini Naidu, Mrs. Annie esant, Mr. Jinnah, etc., etc., and their collegues and followers are all nationalists. The rofessor says.

Similar considerations have induced the soviet idiorities to seek connection with Indian nationalts. There can be little doubt that Russian money is been placed at the disposal of Indians.

Dr. Konow speaks of "Indian nationalists" and "Indians" without any qualifying of imiting adjective One is, therefore currous a know whom the professor charges with everying Russian money and how he would propose to prove his indictment subsequently, no doubt, he refers to the Indian adopendentists, but he does not say that hey alone have received Russian money

And speaking of independentists the present safter confesses that he is a dreamer of that ont, but regrets that no stream of gold has yet found its way to his empty treasury-vaults from the overflowing bolshevik offers

We do not "hear the praise of bolshevism sing by people who are themselves far removed from its underlying ideas it is possible, however that some brainy Indians vium we do not know, took Prof. Konow into their confidence, not suspecting that the chief was taking notes but faith he spirated them.

History of Indian Unity

in Sten Konow observes that "the idea of or Indian nation has not come as a natural ensequence of the historical development of the Indian people". He probably means that the idea of an Indian nation is not a purely renous growth unconnected with foreign conjugatest and rule, but that it is due to and tran as a reaction against the foreign domestion."

But does the historical development of a problem to necessarily exclude foreign refluence, every send either through conquest or by some of means of contact? We do not know of an great people whose historical development owed nothing to foreign contact. The unit of the different peoples of Great Britain main much to the Norman conquest, the nationalism of Italians was in parts born of a leartion against Austrian rule, German

unity owes its origin in part to the pressure of France, Norwegian nationalism owes something to the pressure of Danish rule and Swadish predominant partnership, and so on and so torth. But even if Indian nationality were a peculial and extraneous product, it would not necessarily be less valuable to the people of India than national unity is to other peoples. After all, it is the thing that matters most, not how it was bora or how we came by it—so long of course as it is a reality, not a sham

We do not know, not would we guess, with what object, it any, the Professor has discussed the genesis of the idea of an Indian nation. We want to treat it as a mere academic discussion and offer in that spirit some remarks not unconnected with the subject.

Independent nations have written their own histories to suit their own purposes They have duried over or entirely omitted to refer to their own internal divisions and differences and described very briefly those periods of their history during which they lived under subjection to foreign peoples, so as to create the impression that they have been almost throughout their histories independent and invincible and one people with common auns and interests. We do not want any such falsification of India's history But we cannot at the same time overlook the fact that owing to our history having been written for the most part by inferested foreigners conquests and invasions and difference of race and language etc loom larger than they ought to, and periods of Indian independence and peacetul accelopment almost disappear from view

The degree and extent of unity and community of aims and interests which existed in ancient India, are also lost sight of We think there was some such units, though if might not have been political or administrative unity for long periods When Prof. honon says that " to a great sextent the whole population came under the influence of Arvan civilisation, he implies some such unity, though it cannot be doned and we have no disposition to done the the easte system became a hindrance to the development of the teeling of we've a beautiful that there were other 1 sto which stood in the way of units mitted to be histor all place that in ancient India "all not an establishing a common empire ed The capito of Asoka or that of Samud , separa was a real entipire,

Service of the servic

not less extensive than the British Indian empire, so long as either lasted. No doubt, neither was permanent. But the Roman empire or the Macedonian empire and some other empires of antiquity had also limited spans of existence. So the historical truth seems to be that ancient Indian empires were real empires, though they were not as long-lived as some other empires of antiquity

We do not refuse to give due credit to the British people for what they have done—it may be in their own interests—to unify India. But we cannot at the same time ignore what Indian empire-builders achieved

in ancient times

The long periods during which Indianshave suffered from disunity and foreign domination, are calculated to produce a feeling of despondency which our opponents cannot be expected to dispel. One remedy lies in the study of history Let us, for instance, turn to the history of Italy We read in the Encyclopachia Britannica, eleventh edition—

The difficulty of Italian history lies in the fact that until modern times the Italians have had no political unity, no independence no organisad existence as a nation split up into numerous and mutually hostile communities, they never through the fourteen centuries which have elapsed since the end of the old Western empire shook off the yoke of foreigners completely they never until lately learned to merge their local and conflicting interests in the common good of undivided Italy. Their history is therefore not the history of a single people, centralizing and absorbing its constituent elements by a process of continued evolution, but of a group of cognate populations, eximplifying divers types of constitutional developments."

Our difficulties are, no doubt, not the same as, and in fact they may be greater than, those which the Italians had to face and overcome—the problems of no two countries can be exactly the same. But if the Italians could be free after fourteen centuries of foreign rule, it is not beyond the range of probability that India, too, would be free, seeing that her subjection has not been of such long duration.

"Some Results of World War"

Some of the results of the world war described by, Prof. Konow bear witness to his powers of correct observation. They are to he found in the last eight paragraphs or so

"Proud of Belonging to the Ruling Nation"

Doctor Konow states that there was a tin when "to a great extent the educated India looked upon himself as a British citizen at was proud of belonging to the ruling nation. We also have read such published profession of pride. But during our life of sixty years we have not heard a single. Indian political of any political party say in the course, private conversation that he was proud-belonging to the ruling nation.

Who Want Home Rule?

Dr. Konow says .-

The strengthening of nationalism in India with consequent claim for home rule or independents been brought about by the educated class. The people at large have had little or no variant the movement.

This statement is to be read with a subsequent statement that

The soil is gradually becoming prepared the spread of the nationalist movement \min the Indian masses. To a certain extent the \min ment has already made its way to them.

This process is not peculiar to India I many another country it is the educatelasses alone who have at first striven a political change. It is in Russia that higreatest proletarian revolution has be brought about. But there, too, it was to students and other educated people, where first worked in the villages, to prepare to people for the change; and Lemin, the greateleader of the revolution, was a universiman and a lawyer. He did not belong the masses

The professor says that at present to certain extent the nationalist movement he already made its way to the Indian mass. When he was in India sixteen years are if he had any experience of Bengal, he might have noted that the movement was even then far from being confined to the educated classes.

Is Gandhi's View not Political?

Dr. Konow holds that Gandhi's vin the religious and not political. We cannot subscribe to this opinion. Our opinion is that Gandhi is above all a politician. Into a politician who wishes to reach his political political and spiritual means. He

does not, so far as his main activity is concerned, like Buddha teach the people the way to nirvana, nor like Christ tell them of the heavenly kingdom to be established hereafter, nor like some Hindu sage of yore dwell on the path which leads to moksha or spiritual liberation; the burden of most of his speeches and writings is how to win earthly Swaraj.

Gandhi and Bolshevist Revolutionaries

Professor Konow is right in pointing out that Mahatma Gandhi differs fundamentally from the bolshevist revolutionaries. As the Mahatma's teaching of ahimsa has found a more congenial soil in India than it could have found anywhere else, it shows by implication that India is far less likely to welcome real bolshevism than many other countries.

Vitality of National Idea Doubted

Dr. Konow doubts whether the national idea would have any vitality if the homerulers succeeded in making India independent of Great Britain. The future, of course, can never be predicted with absolute certainty m any matter in any country; but our doubts regarding the vitality of the national idea are not as grave as the professor's And one reason why they are not so, is that making India independent of Great Britain would necessarily depend so much on the national idea being deep-rooted in the minds of all classes and communities, that after it had become so widely imbibed and deeply moded the chances of its dying out would nut be great.

Hindu-Moslem Relation

Hindus and Mosloms, Dr Konow observes that it is scarcely to be hoped that those relations will become better if the British cease to exercise control over the country it would not become us to assume the role of the prophet. But all political parties in India have good reasons to believe that the strength of the British position in India he-partly in communal rivalries and dissensions that the Government takes full advantage of these rivalries and dissensions, and that many (lovernment servants, whether instinctively or in pursuance of a secret settled policy foment communal featousies and conflicts.

If this belief be well founded, as we believe it is, the disappearance of a third and controlling party—a party which directly or indirectly promotes and profits by communal disunion-may in course of time partly conduce to better Hindu-Moslem relations. It is not, of course, a fact that the British Government is the only or chief cause of strained relations between Hindus and Moslems -there are other causes But wellauthenticated facts prove that Butish policy has made those relations worse. For instance, the idea that Moslems should claim and have separate representation in the legislative bodies originated with Lord Minto On the eve of the enunciation of the Morley-Minto Reform Scheme, it was at Lord Minto's private suggestion that a Woslein deputation waited on him to claim separate communal representation Lord Morley in his "Recollections" tells Lord Minto with reference to this move, "you started the Moslem hare In his Coconada congress presidential address Maulana Mohamed Alı characterised that deputation as a "command performance" It is well known that the separatist Moslem claims have gone on widening and increasing, so that Moslems now demand a separate and fixed share of seats in all representative bodies, including village unions and the university senates and syndicates, and a fixed proportion of appointments in the public services In provinces where the Moslems are in a majority, they want a proportionate majority share, and where they are in minority, they want a shale in excess of that to which their numbers would entitle them to. These separatist claims have given rise to endless and butter wordy waitare and sometimes indirectly to blows and bloody strife

Landlords and Tenants

Dr Sten Konow describes with grave apprehension the conflicting interests of landlords and tenants and the landlords' tyranny. His fears are not entirely groundless. But his picture may convey the impression that the landlords are all Indians, and it is they alone who oppress the tillers of the soil. Such, however, is not the case. The diovernment is the landlord in many provinces. Rock-lenting is practised by the trovernment as well as by some. Indian landlords, the rent being increased at each successive settlement. Indian peasants are for the most part poor, ignorant and disunted. In spite of that fact, however, in Kana district in Guirat, for

89---11

t

example, the tenants, a few years ago, refused to pay rent to the Government, because been it had fixed at an exorbitantly high rate. The struggles and sufferings of the passive refinal triumph of Kaira are sisters well known to all students of contemporary history. Similarly, in the Champaran district in Bihar there was, a few years ago, a struggle between the European landlords, who were indigo-planters, and the cultivators followed by passive resistobliged to ance. The Government felt appoint a committee, of which Mr. Gandhi was a member. The cultivators gained their points. In Bengal in the last century there was terrible oppression of the tenants by the European indigo-planters. Hurrish Mookherjee took up the cause of the cultivators in his Hindoo Patriot. At last, even the pacific Bengali ryots turned. A picture of those days is to be found in Dinabandhu Mitra's play Nil-Darpan, for publishing an English translation of which the Rev. Mr. Long was sent to iail.

We mention these facts, not in defence or exculpation of the conduct of oppressive Indian landlords, but to rectify the one-sided impression which the professor's article may convey. He says that cultivators are rackrented in spite of all Government regulations. Phat may be true in some places and cases. But all well-informed Indian publicists know that the Government has not done all that can and should be done. The rent payable by 'he cultivators should be fixed in perpetuity or for a long term of years, say 50 or at least 30, and peasant proprietorship should be exended to all provinces as rapidly as practicable. Above all, arrangements should be nade immediately for the universal free elementary education of children and for universal adult education. This would directly and indirectly protect the cultivators against oppression. But the Government has never initiated or even encouraged any schemes for universal education. It was left to the late Mr. Gokbale to fight for it; but he was deleated. After more than a century and a half of British rule, ninety-four Indians out of a hundred are illiterate.

Oppression of the Poor

We do not desire in the least to absolve rom blame all those among our countrymen the noor. On the contrary, we cracy and the intelligentsia in Russia conveys to all oppressors. But the Norwegian professor's picture appears to produce the impression that the Government has done all that is possible for the protection of the poor and it is the Indians who are solely to blame for the lot of the poor. That is not a correct impression.

For decades, nay generations, coolies in the Assam tea-gardens lived in a state of practical slavery and often received inhuman treatment. It is Indian publicists who have at great risk exposed these abuses. Even after some improvements, only recently large numbers of coolies left some of these plantations, which resulted in many tragedies. But the Government has not yet amended the laws to secure such terms for the coolies as would enable them to live like human being.

The horrors and miseries born of indentured labour abroad are also due to British rule and British exploitation.

In regard to the exaction of forced labour also, the professor speaks as if the Government and Europeans in general are entirely blameless. But who does not know that in places like Kumaon begar and uttrar, forced labour and the forced supply of provision, have been enforced according to laws made by the British Government? "This kind of oppression is sometimes resorted to in the name of the highest British officials." Yes, but these officials know, and connive at such oppression for their own comfort and convenience.

the Government knows that Similarly "the Indian police are underpaid, with the result that bribes are taken or exterted. and there is much resulting oppression. The is one principal cause of discontent against British rule. There are two chief remedies One is to educate the masses and improve their economic condition, the other is to pay the police adequate salaries. Both should go together. But education and economic betterment will stiffen the backs of the masses and make them assert their light not only against Indian oppressors but against foreign domination, exploitation and oppression also. That is one reason why the Europeans (Jovernment and non-official have always fought shy of mass education; and many altruistic honorary educators of the poor have been deprived of their liberty as political suspects. As for giving adequate salaries to the police, how can money be found for such a purpose after lavish militar senenditure and the payment of higher sale

European officers than what similar State servants receive in some of the richest

countries in the world?

The professor tells many stories which Indians have told him. As no Indian has told us these or similar stories, we are not in a position to comment on them. It is particularly noteworthy that we read even the story relating to "this neighborhood" for the first time in the Doctor's article. It is possibly because the present writer is a nolitical recluse that such stories do not reach his ears.

And one can easily see how dangerous it is when some nationalists who are themselves supporters of the ancient Indian society, pose as bolshey-iks. Sooner or later, the depressed classes will learn to understand that bolshevism is not merely nationalism but a social gospel, which is bound to make a strong appeal to them. And some day political agents will come from abroad and enlighten them still more.

We do not say that this danger is beyond the bounds of possibility. But we should like to know who are the nationalists who pose as bolshevika.

There lies the real bolshevik danger for India Provisionally bolshevism is to most Indians only a tague idea which the nationalists fancy they can use in their struggle against the British. But what about the day when it becomes a reality.

A Gloomy Foreboding

The professor concludes his last article with the following paragraphs:—

If the masses can be organized and disciplined If the masses can be organized and disciplines by leafers with strong will and settled aims they will some day rise, not against British rule, but against their oppressors, the wealthy Indians and the upper classes generally. And there will come a cataclysm which will make an end of the ancient Indian society and to Indian civilization. And millions of those who rose in rebellion will themselves die the death of starvation. because it is, as selves die the death of starvation, because it is, as the soviet republic has taught us, so infinitely more

difficult to build up than to pull down
If such an upheaval should come after the
Inlians had succeeded in turning out the British,
nothing would be able to keep it down. The firm
hand of the British ruler alone could succeed in
averting the disaster.

Dr. Konow implicitly believes in the Anglo-Indian (old style) claim that it is the apper classes who are the oppressors and the Europeans are the protectors. But he does not know or ignores the fact that speaking generally, most measures and movements for the amelioration of the condition, of the masses owe their inception to these upper classes; there is no room to give details. Ile himself states that Gandhi has devoted its

life to a disinterested fight for those who are exploited and depressed. But the Mahatma does not stand alone He has had forerunners in such work, he has contemporaries and coworkers, and he will have successors They may not all be as emment as he, and their work may not also get as well advertised as his; but they have been, they are, and they will be.

To Doctor Konow the British empire is a great and the greatest beneficent agency in Asia. We do not want to say that it is satanic, single epithets and brief characterisations must be inadequate and unjust either way It is only point by point, item by item, that the claims of the British

Covernment can be examined

In the professor's opinion "the Butish administration in India has been of a high order, and the individual Briton will exert himself to the utmost of his power" We have in the past shown again, and again, and others, too, have done so, that the British administration is efficient mainly, if not solely, for its own purposes and interests, and the individual Briton (barring a few real philanthropists) exerts himself to the utmost of his power chiefly, if not wholly, for promoting British interests; what benefits have accrued to Indians have been generally byproducts

The poverty of the masses, which the writer contrasts with the wealth of some Indian persons of the upper classes, has been due not a little to the ruin of indigenous Indian trades and industries and the destruction of Indian shipping brought about in the earlier periods of British rule, and the process still goes on. That some Indians are getting rich is also a by-product of British methods of administration, exploitation and

self-aggrandisement.

Europeans in India have been at least as great oppressors and impoverishers of the masses as the wealthier countrymen of the latter. The contrast between the wealth of the Europeans and the poverty of the masses is greater than that between the wealth of the Indian upper classes and the penury of the people Under the circumstances we fail to see why there is greater probability of the masses rising against their own countrymen than of their rising against Butish rale .- we do not want them rise against other. Of course, we know that our British, rulers always pose as the protectors and benefactors of the masses and try indirectly to poison. their minds against the, classes. But may

we ask, what, compared to what has been accomplished in far shorter periods in Japan and the Philippines, the white rulers have done for the education, wealth, housing and economic betterment of the masses in India?

The professor speaks of the contingency of a rising of the masses after the Indians had succeeded in turning out the British, and takes it for granted that this rising would be against the upper classes of their own countrymen. But does he not see that the British can be turned out only by the masses and the classes making common cause against the British? Will anybody tell us how else the British can be turned out—assuming of course that the majority of Indian political parties want to do so, which is not true?

The masses can be made to have confidence in and combine with the classes only by putting an end to social tyranny and agrarian and capitalistic oppression. Every student of the contemporary situation in India knows that attempts are being made by some persons exclonging to the upper classes to put an cond to all such tyranny in every direction. in Success an endeavour would also be tantamount to averting the upheaval apprehended by the professor.

Of course, bolshevist and even British propagandists may try to incite the Indian masses against the classes. We should, therefore, try our utmost constantly to avert any such catastrophe.

Forced Labour in Kenya

A revolt against the British Parliament has evidently taken place in Kenya carrying still further the labour policy of the late Governor, Sir Robert Coryndon. The Acting Governor made the following speech which was reported in *The Times* newspaper on March 20th.:—

"There is the strongest possible moral obligation on the part of the Government of the country to give the fullest assistance it can in securing to the European settler in this country the benefit of the developments which he has created to the lasting advantage of the Colony. I wish to make it perfectly clear that such is the policy of the Administration and that Government expects every administrative officer to give all possible encouragement to the labour within their district to work on the lands which have been opened by the settlets....."

" Inder-Secretary of State in London

the Acting Governor, made all kinds of adm sions which showed quite openly what k of a spirit was in them. If they had kno how soon the Acting Governor's words wo be contradicted in England, perhaps the would not have spoken so openly. But temptation was too great for them, and have a series of remarks, entirely of character, which show that the idea in Ken is fixed, that the one function of Government must always be to provide forced lab for the white settlers themselves.

Lord Delamore began as follows:-

Many officials were excellent friends to civition (he said), but there were a lot who were of sympathy with their own people. Some of twere at present put into native areas, they should put into white areas and come in contact with town race. Such a contact would teach them facts of the case. Those young officials who y stationed in the reserves did not understand native temperament and they became a menactivilisation,"

After him, Captain Montagu continued follows:-

"The Administration was certainly not plat the game...In this country young university saturated with democratic and socialistic is were being introduced, and had become a med to the prestige of the white man."

Captain Schwartze supporting Lord 14 mere declared that he thought,

"That the whole problem could be solved disciplining the Junior members of the Adminition. The Government was anxious to help was constantly hampered by those young offer who laughed at, or ignored the Government policy."

Upon this, someone named Mr. Har went still further and said as follows:

"Until the Civil Service was combed out present unsatisfactory state of affairs would exact the Junior officials whose views had been distorted by debating societies and who were inspired by anti-white ideas and Rolshevist tendences with defying the Government."

And Mr. Hawtroy ended this edifying a clarifying debate with the following animit ntterance:—

"The Government should regard the Europe farms as a training ground for the native perition—as a Kindergarten—and compel the native leave the reserves and work. It was necessary to conquer the Nonconformist conscience England, which held that a native must not we The Government was controlled by Hown Street and could not insist on compulsion."

I have been reading, month by month the East African Standard which is the leading paper of Kenya. This policy of companion the natives to come out of the reservable matter settlers.

heing continually advocated as the ultimate nolicy of all white settlers. A great debate is promised in the House of Commons on the subject at the end of May or carly in June. Dr. Norman Leys' book on Kenya will probably come in for scathing criticism from the very large conservative land-holding section in the House of Commons; but the facts that can be brought forward are damning, and whatever might be said about the book itself, the policy which Dr. Norman Leys sets forward is likely to be carried through. The white settlers will not have their way. The House of Commons has just been cordially congratulating H R. H the Maharajah of Nepal for his action in doing away with domestic slavery. It would be inconceivable for the same House of Commons to defend the system of forced labour in Kenya itself.

C. F. A.

Robbing the African Natives in Kenya

"It has been proved by competent authorities that the area of good agricultural land in Kenya is exceedingly small, and that there is hardly sufficient even now for the expansion of the native races." So, if the confiscation of 10,000 square miles of territory from the natives for being granted to the white settlers was an initial crime and blurder. leading to serious mischief, "it is obvious that the confiscation of another 10,000 square miles from the natives in order to give it to the Indians, would be a still more serious evil." But this is what has been proposed. With respect to this proposal, it is stated in the memorandum on the Kenya lowlands proposal, prepared by Mr. C. F. Andrews and issued by the Imperial Indian Citizenship Association

In spite of the fact that in London, 1923, the whole In spite of the fact that in London, 1923, the whole suggestion of a compensating area being given in the Lowlands to Indian settlers was rejected there is a tendency here and there among certain Indians in East Africa not to reject it, but to accept it. But I think it can be said without hesisation that the foremost Indian leaders are still wholly against the proposal and feel that it would be a fatal compromise, such as would put the Indian claim for equal justice among the natives on an entirely wrong basis. Among these foremost leaders I would mention the Rt. Hon. Srinivasa Sastri and Mahatma Gandhi.

Let me is conclusion arrose out the case a little

Let me in conclusion argue out the case a little from the Indian point of view

(1) To socret a large slice of territory exclusive ly for Indians in the Lowlands would be a definite and formal renunciation of the Indian vision in the Highlands.

(2) The policy of accepting territory in the

Lowlands would certainly involve a weakening of the present Indian friendly relations with the African natives. Indians are living in Kenya to-day on terms of friend-hip with the natives and not on terms of hostility. But to take this large slice of territory from the natives would mevitally lead to hostility growing up between the Indians and the natives.

(3) The policy of accepting land in the Lowlands would mean the beginning of an imperialism which would be unlike any form of Indian emigration in the past. It would not mean the occupation by Indians, as colonists, of lands that were entirely useless and never likely to be occupied by the natives of the country because it has been proved by competent authorities that The area of good agricultural land in Kenya is exceedingly small, and that there is hardly sufficiently even now for the expansion of the native races It would mean a definite expropriation of the native and as such would be an endices source of mischief, aggravating an exil situation

(1) To accept territory in the Lowlands, would be a reversal of the whole Indian claum; for as I have shown in 1923, the Indian deputation definitely rejected such a suggestion and equally definitely declared that their only wish was to recover the declared that their only wish was to recover the ligal right of open sales and transfers of land anywhere in Kenya Colony. This position, which was taken up by us all formally in 1923 would obviously be thrown on one side and it could never be taken up again if once the compromise light been used. had been made

These then are some of the main reasons why such a false step should not be taken by the Indian Geverament with the consent of the Indian people. The essentially moral cheracter of Indian entrement with moral cheracter of Indian entrement is at stake. Indian leaders to-day are speaking as strength as possible gained the critispirity of Western imperialism which has been so crushing to their selves in India and also in other Eastern countries. They assert, that the form of facility subjection and dispossession of other of fortible subjection and dispossession (f other people from then own territors by a foreign power is wrong in pranciple and must not be carried out now further but rather be undere.

For India to be a partner of Great Britain in imperialistic crime would be a great moral-disaster and would bring other evil consequences in its train.

Independence and Swaraj

In his presidential address at the Fandpur session of the Bengal Provincial Conference, Mr C R Das said in part -

Independence to my mind is rarrower ideal than that of swarar It in plies it is true, the negative of dependence that it itself it gives he no positive ideal. I do not for a moment suggest Swarat. But what is necessity is not more independence but the establishment of Swarat. India may he independent to merrow in the sense that the British people nerview in the sense that the British people nervicave us to con destiny but that will not necessarily give us what I understand by "Swarai Irdo presents an interesting but a complicated preview of consolidating the many

patiently conflicting elements which go to make of the Indian people. This work of consolidation is least process, may even be a weary process; of without this no Swaraj is possible...

Independence, in the second place, does not give ou that idea of order which is the essence of swaraj. The work of consolidation which I have mentioned means the establishment of that order.... In my mind Swara, implies firstly, that we must fo my mind, Swara; implies, firstly, that we must have the freedom of working out the consolidation if the diverse elements of the Indian people; secondly, we must proceed with this work on national lines, not going lack two thousand years ago, but going forward in the light and in the spirit of our national genius and temperament. Thirdly. in the work before us, we must not be obstructed

by any foreign power.

What then we have to fix upon in the matter of ideal is what I call Swaray and not mere Independence, which may be the negation of Swaray. When we are asked as to what 18 our national ideal of freedom, the only answer which is possible to give Swaray. is Swaraj. I do not like either Home Rule or Self-Government. Possibly they come within what I have described as Swaraj. But my culture somehow or other is antagonistic to the word 'nule'—be it Home Rule or Foreign Rule. My objection to the word. Self-Government is exactly the same. If it is defined as government by self and for self, my objection may be met, but in that case Swara; includes all those elements.

We have no desire to quarrel with words. But it must be pointed out that Mr. Das takes into consideration only the derivative meaning of "independence." He, no doubt, takes care to say that he does not for a moment suggest that independence is not consistent with Swaraj, but what he actually does is to assume that the contents of Swaraj are not found in the connotation of independence.

The full meaning of independence is not confined within its derivative sense. The derivative meaning is merely negative—the absence of dependence. But surely when The Americans fought their war of independence they did not fight for a more negation. That they acquired something very positive by their success in that war is proved by the political, economic and cultural position of the United States among the free countries of the world. The independence which they won has given them the power to gradually 'consolidate' the conflicting elements in the American population and to establish 'order.' CzechoSlovakia Take another example. won independence in consequence of the last world war. The solidarity, prosperity and enlightenment of that country show that in their case, too, independence is not a mere negative thing. Of course, there may be independence in the sense of a mere absence of dependence. But we must look facts in the face, not confine our attention

to the first meaning of a word given in dictionaries.

It should also be borne in mind that we Indians do not use the word "independence" in our vernaculars; we speak of "Swadhinata" or "Swatantrya," whose meaning is not negative.

In the case of Swaraj, Mr. Das assumes that it can have only that meaning in which he understands it. But are there not Indian Moslem who think that they had Swarai when Aurangzib was emperor? Are there not Panjabis who think that they had Swarm when Ranjit Singh reigned over the Land of the Five Rivers? Are there not Marathas who think that they had Swaraj under some Peshawa or other? But can it be said that in the days of those potentiates there was Swaraj in Mr. Das's acceptation of the wordthat there was 'consolidation' and 'order', for example, in the sense in which he understands them? Mr Das cannot name any Sanskrit or other dictionary in which the meaning of Swarn, is so defined as to prove that these Mosloms, Panjabis and Marathaare wrong in their use of the word and tha he alone is right in his interpretation of it.

Mr. Das practically assumes that independence does not mean sovereignty of th people and that Swaras necessarily mean such sovereignty.

He assumes that under Swaraj within the British Empire, the people of India are qui likely to have every opportunity for sel realization, self-development and self-fulfi ment, and if they do not get such oppo tunities they would carve out Swarn outside the Empire. What the chances of our gettisuch opportunities are may be judged fro the fact that though the Canadians are European extraction there is even now "aff the War," a movement for independer there. It is not likely that we who do belong to any European stock would obt such ample opportunities as to extinguish ever in our souls any desire for indepe ence. In South Africa, too, men of Eupean race are supreme. But there also th is even now an independentist movement.

On the other hand, not a single indepe ent country has ever sought or now, "I)ominion status the War", seeks. Swarai) within the British Empire. Denm Switzerland, Belgium, etc., are among smallest countries of Europe. But none them would exchange their independence the edvances of "Dominion status" within British Empire.

Not that its sounder Dominion status" like that described by Mr. Das valueless;— it is very much to be preferred to our present condition. What we object to is Mr. Dan's attempt to prove by special pleading and word-jugglery that Swaraj within the British Empire is better than independence To prove his thesis he supposes that "India may be independent tomorrow in the sense that the British people may leave destiny." But the fact is. us to our the British people mean to stay on and will not leave us to our destiny unless they are compelled to do so by some sort of struggle, as many of their leading men have declared. And to carry such a struggle to a successful close would necessitate just the kind of consolidation and order which Mr. Das speaks of.

"No Nation can Live in Isolation"

In order to prove the value of the Doninion status, Mr. Das observes

It is realised that under modern conditions no nation can live in isolation and the Dominion status while it affords complete prote true to each constituent composing the great Commonwealth of Nations called the British Empire so uses to each the right to realize itself develop itself and fulfil itself, and therefore it expresses and implies all the elements of Swaraj which I have mentioned.

It is true that under modern conditions no nation can live in isolation. But how do the nations (not the subject peoples) of the world actually manage to maintain then individual and separate existence. No doubt by inter-dependence. But the parties to this inter-dependence do not always remain the same. According to circumstances and according to the interests of the different parties, the groups vary in their constituent elements. There was a time when France and England belonged to opposed groups. now they are, externally at least, allies Once upon a time Britain was an ally of Russia But there is no alliance between them now During the earlier years of this century Japan fought Russia and defeated her. Later also, during the world war, there was little love lost between them. But now they are allies. From before the war there was an Anglo-Japanese alliance. But in spite of that fact Japan has sought and obtained the friendship of Russia. Examples may be multiplied. What we drive at is that independent nations maintain their exprence by choosing their friends according to varying circumstances. Is there the least posibility

that India's interests will always coincide with those of 'read Britain'? It cannot be so, considering teat our histories, cultures, racial stocks and geographical positions with all that they imply, are different. So our interests will clash, as they do even now and have even done so since the beginning of the British connection with India In consequence of such confect of interests, is there the least possibility of India as a part of the British compile ever being free to ally herself, if necessary, with any nation which is immical to Great Britain? There is none

Inter-dependence is a great ideal. But it can be truly realised only by independent nations and only so long as they are independent

"Equal Partners"

Many British and Indian politicians speak of the ideal of Britain and India being equal partners in the British commonwealth of nations. But have they seriously dived deep enough to discover the implications of such equality.

When equality is the thing to be discussed, no one, we hope, will object to our examining in the hist place the name itself of the commonwealth. In the British Empire, Indians outnumber by far the white population Therefore, as there is to be no racial superiority or inferiority, the commonwealth should be named the "Indian commonwealth of nations' after the inspority of its rahabi-Would the white citizens of the commonwealth agree to this? They would not. Well, as they have been masters so long, they may not agree to the total obliteration of then names. Would they then agree to the commonwealth being named the Indo-British commonwealth by way of a compromise? That also is hardly likely

In the next place, why should the capital of the commonwealth be situated in a small island, which is not inhabited by the majority of the commonwealth citizens? If the capital ought to be situated in a region which contains a majority of the population, it should be located in India. If it should be situated in the biggest slice of the earth's area comprised within the commonwealth, it should be located in Australia. What do the equal partnership men say to this? It is not right that the majority should have to send their representatives to a place which is nearest only to the habitations of the minority.

The next question to be decided is whether there is to be monarchy for ever. Of course, if the commonwealth is to become a republic, the president and other leading men may belong to any of the countries and peoples comprised within it. But if monarchy is to continue, why should the kingly office be for ever confined to a royal house of purely British or European stock. When there is a British reigning king, should he not be required by some constitutional law to marry an Indian woman, and when there is a reigning queen, should she not be similarly required to marry an Indian man? Otherwise there cannot be "equality". It must not be supposed that it is absurd to limit by law the choice of mates by kings and queens. The British constitution does lay down that a British queen or a British King must be protestant by faith.

And then why should the monarch reside in great Britain, which is inhabited by the minority? He should either live in India

or be peripatetic.

In order that equal citizenship may be real, there should be a commonwealth parliament to which all the peoples living within it are to send representatives. All representative bodies tend roughly to conform to the principle that the number of representatives should be proportionate to the number of electors. Adult universal suffrage is also coming to be more and more the rule. So in the proposed commonwealth parliament the Indian representatives would far outnumber the representatives of all other parts. Can the white citizens view such a prospect with equanimity.

It is easy to talk glibly of equal partnership, but it is not at all easy to face the idea in its real concrete form. We would welcome real equal partnership, but white men cannot

do so.

The British Empire Not an Organic Unity

The British Empire is in fact a huge mass, having no common life. It has no organic unity, and cannot have any. In the human or any other animal body, the pain or pleasure, health or illness, strength or ickness of one part affects or influences the other parts. No such thing is found in the ase of the British empire. India and Britain have been joined together for more than 150 years. During this period, Britain has made great strides in wealth, health, sanitation, salucation, enlightenment, acquisition and

exercise of civic rights, etc. Have we advanced with the progress of Englishmen in all or any of these respects? Whenever Englishmen have obtained any rights have we obtained the same automatically or even by striving?

On the contrary, the fact is that in many matters, Britain's progress has been at our

expense.

Things which are not held together organically by a common life cannot have a lasting connection. Therefore the British empire is bound to disintegrate, even if it be called a commonwealth.

Moreover, the days of the dinesaur, the megalosaurus and other huge animals are gone. Man is a much smaller creature, no doubt; but he is finer and of a higher type. Simplarly the days of huge and unwieldy empires are also numbered. Standardised and uniform life is no life. The days of small States with their distinct achievements, cultures and outlooks are in sight. They may and ought to be friendly to and co-operate with one another, but of free choice and independently.

Of course, in being a part of the British empire we have some advantages. For instance, in the matter of defence and protection; India has not to shift for herself. But in reality it is not an unmixed advantage. It has been progressively dwarfing our manhood, and absorbing also a much greater proportion of our revenues than it ought to, thus preventing or retarding progress in sanitation, education and material develop-

ment.

The Case against Violence

We are against the use of violent methods for progress towards our political goal, which can be nothing else but freedom and independence. We do not know how or when we shall reach the goal, but we cannot agree to call any other objective our goal; though we would accept "the Dominion status" as a

sort of half-way house.

Many of Mr. Das's objections, against the method of violence are quite sound. But when he speaks of the method of violence being hardly in keeping with our life and culture, it is difficult wholly to agree with him. It is true that "violence is not a part of our being as it is of Europe." But in a country where from time immemorial the socio-religious system of caste has given an konoured place to warriors, where many

avatars belonged to that caste and waged war and where one avatar's preaching of war is the central theme of a revered sacred book, it is unhistorical to claim non-violence as the sole or principal feature of its life and culture, "the special psychology of the Indian mind", though that may have been and is the ideal of iadividual men. China may with greater justification claim non-violence as in consonance with its life and culture, as the military profession is not held in honour there.

Mr. Das considers armed revolution impossible in India and even in England today. Knowing nothing of the art of war or of the strategic possibilities of different parts of India, we cannot express any opinion on the subject. But we should be prouder to be non-violent in spite of armed rebellion being practicable; it would be humiliating to feel that we were non-violent, because there was no help for it.

Mr. Das's next argument against the method of violence runs as follows

Violence is sure to be followed by more violence on the part of the Government and repression may be so violent that its only effect on the Indian people would be to check their enthusiasm for Swaraj. I ask those young men who are addicted to revolutionary methods, do they think that the people will side with them? When life and property is threatened, the inevitable result is that the people who suffer or who think they may suffer recoil from such activities. This method therefore is impractical.

It cannot be denied that there is some truth in this. But why does not this sort of fear deter Mr. Das from inculcating the duty of mass civil disobedience, if necessary Says he:—

The atmosphere for civil disobedience is created by compelling the Government to raise money by the exercise of its execeptional powers; and when the time comes we shall not hesitate to advise our countrymen not to pay taxes which are sought to be raised by the exercise of the exceptional powers vested in the Government.

In the few cases of civil disobedience in small areas which have occurred, the Government has not remained non-violent. There is nothing to show that civil disobedience on a larger scale will convert it to the cult of ahimsa.

Repression and Revolutionary Movements

Mr. C. R. Das has been able to prove by a detailed narrative of events and dates that

90-14

Repression was followed by revolutionary movement which again was followed by further repression, and that even when the British Government allowed measures which may be described as benevolent, they were always attended by others of a repressive character

The Catholic Hierarchy in China & Opium

We are glad to read the following in The Catholic Herald of India -

Drastic action has already been taken by the Catholic Hierarchy of China against all Catholic Chinese who should cultivate, manufacture, or traffic in opium making the offence punishable with the refusal of the sacraments Similar action may be expected in South America against growers of the cocoa plant

Sir Bamfylde Fuller on the British Services in India

The America Bazar Patrika quotes the following opinion of Sir Bamfylde Fuller on the British Services in India—

"Young British officials go out to India most imperfectly equipped for their responsibilities. They learn no law worth the name, a little Indian history no political economy, and gain a smattering of one Indian vernacular In regard to other branches of the service, matters are still more unsatisfactory Young men who are to be police officers are sent out with no training whatever, though for the proper discharge of their duties an intimate acquammance with Indian life and ideas is essential. They land in India in absolute ignorance of the language So also with forest officers, medical officers, engineers and (still more surprising) educational officers'

Exploiting Rabindranath Tagore's Name

Great men have often to pay a penalty for their greatness in various ways. One is that "enterprising" men exploit their names without their knowledge and permission for making money. The following extract from the Gazette, Montreal, Canada, dated Feb., 28, 1925, will explain what we mean

SPREAD PHILOSOPHY OF YOGIS IN U.S.

Robunds anoth Tagne Announces Plans for Founding of College

Calcutta, February 27—America is to have recollege for imparting instruction in the philosophy of the Yogas of India, Rabindranath Tagore, famous Assatic poet and philosopher announces here. His poet and philosopher announces here. His cousin, Puntit Joga Narayan, several other prominent Rahman priests and a number of wealthy limited States entizens now tourng the world aboard

100 红旗科学等

the Canadian Pacific Steamship "Empress, of France," including W. E. Clarke, Chicago, Dr. W. J. W. Copeland, Elmira, N.Y., and Charles de Houville, Albany, N.Y., and Carl F. Boetticher, Evansville, Ind., are responsible for the plan. Should it be found impossible to establish the college in America, these men will open it at Benares."

We have the Poet's authority for saying that he knows absolutely nothing about this College and has no cousin named Pandit Jogi Narayan. It is to be hoped that his friends abroad will not be taken in by the announcement of the Canada paper.

Bolshevist Plans Regarding India

The following telegram appears in the daily papers -

"The Times" Riga correspondent states that in a speech outlining the Soviet's plans for ousting Imperialists from Oriental countries, Stalin men-tioned particularly India, Morocco, Egypt. China and Java

Regarding India, he said that the revolutionary work there must be aimed at creating an alliance between the workers and the poorer section of the native hourgeoisie, which alone could make the eventual victory of Communism possible

He emphasized that different tactics would be necessary in other countries where the peculiari-

ties of the movement must be studied and utilized

Professor Sten Konow's article, entitled "Bolshevism in India Follows Queer Trail," which is reproduced elsewhere in this issue and Yonne Pouvreau's article on "The Heroic Struggle of the Republics of the Caucasus Against the Bolshevists" in the last July number of The Moder's Review should be read in this connection

We have said more than once and say it again that there is no other way to stave off the inroads of bolshevism and prevent it from obtaining a foothold in India than earnestly and unceasingly trying to ameliorate the social and economic condition of the poor and the depressed in a spirit of true brotherliness.

The note which follows shows to what dangers the Hindu community is exposed in another direction.

Intended Mass Conversion of Chamars

The Amrita Bazar Patrika publishes the following: 4-

(From a Correspondent) Lucknow, May 23. Hearing the cintended conversion 5000 Chamars to Mohammedanism in Budaun district, I, in company of Sj. Shanti Sarup, had been to the affected villages. While at Ujhani we were told that the situation had become normal and the danger of conversion did no longer exist. And on discussing the situation with the Chamar Headmen in the villages, however, it was found that the Chamars were still dissatisfied with the Hindus and might go over to Islam any moment. In fact they were even then negotiating with Hindus and might go over to Islam any moment. In fact they were even then negotiating with Mohammedan leaders. The situation is grave and requires to be handled by very influential and reputed leaders. The evil cannot be remedied so long as the Hindus do not meet the just demands of depressed classes in a spirit of truthfulness and benevolence.

Benevolence is very frequently synonym for patronising and condescending charity. But that is not what will suffice to prevent the mass conversion of Hindus of certain classes to Islam or Christianity for social and economic reasons. Only an active sense of justice and a genuine feeling of human brotherhood can avail to give these classes the help needed and to restore to them the sense of self-respect of which they have been inhumanly deprived turies

Good and wise are they whose conduct towards others is regulated by just. and fraternal principles before the pressure of circumstance makes it necessary. Prudent are they who are able to perceive betimes the signs of the times and are just and humane in order to avoid being crushed under the chariot wheels of Nemesis. But foolish and suicidal is the conduct of those who have been so blinded by pride, prejudice or superstition or so lethargised by use and wont that nothing can make them do unto others as they would that others should do unto them. Should we not all try to avoid being classed with the last?

Earthquake in Japan

Japan has again been devastated earthquake, though it is not so catastrophic in its consequences as the one which occurred in September, 1923

The sympathies of all nations go out to Japan in her terrible trials.

States Subjects Conference

In his inaugural address as president of the fifth session of the conference of the subjects of Indian States, Mr. B. S. Kamat impressed upon the rulers of Indian States the desirability of making an earnest beginning in the direction of the establishment of representative institutions and suggested a Round Table Conference with popular representatives for the purpose. He also demanded immediate grant to Indian States subjects of the liberty of the press and liberty of speech on the same terms as in British India This, in his opinion, should be the minimum demand of the Conference on behalf of the subjects.

This Conference ought also to consider in what organic relations the Indian States should stand to a self-ruling India

Mahatma Gandhi's Tour in Bengal

There can be no question that the vast majority of our men and women—particularly our women-require some means of earning a living. Most of those who have some remunerative occupation, need a supplementary source of income The spinning wheel, though it may not bring in much money, is the easiest of such means to adopt. In the case of our women particularly, it is a means of giving them the power to maintain them self-respect. Therefore, even those who are not charka-enthusiasts like Mr Gandhi, would be sincerely glad if his tour in Bengal led to the wider use of the spinning wheel in the huts and cottages of Bengal Those who do not want to make a business of it can, in any case, provide for themselves their own clothes by the work of their own hands That would result in not a little saving to themselves and to the country at large. And the moral gain, in making the people self-confident, selfreliant, self-disciplined and industrious would be great

We have always thought that Mahatman does not go far enough in what he says regarding the removal of "untouchability Nevertheless, we should be truly glad if we Bengalis could get rid of the curse to the extent he enjoins, though it is not so bad in Bengal as it is in some other parts of India.

We do not know how far his visit will improve Hindu-Moslem relations We can only hope against hope.

Above all, we should consider ourselves blessed, if his tour made some of us at loast

endeavour to be as spiritually-minded and as unselfish and fearless in our lives as he

The Char Manair Case

In a village in Bengal called Char Manan a dacorty took place The Police arrived on the scene almost at the same time The villagers mistaking the police to be also among the dacoits maltreated some of them Then, it was alleged, in order to punish the villagers larger numbers of police-men came to the village, whereupon most of the male villagers fled It was futher alleged that one Musalman male died in consequence of the cruel treatment he received at the hands of the police, and a good many women were ravished and otherwise ill-treated. Dr. Pratap Chandra Guha Ray was among those who made these allegations and he was prosecuted. His trial had been going on, now in this court, now in that, for two years Recently the Bengal Government has withdrawn the case against him, on the ostensible ground that it was instituted long ago. We do not believe that that is the real cause. If the case were at all strong, the Government would have proceeded with it to the bitter end. To us it seems clear that Dr. Guha Ray has been harassed because he tried to get some policemen punished whom he considered guilty of revolting and lawless conduct. That he has got off even now is a piece of good luck But we cannot congratulate the Government on the practical immunity which offending policemen enjoy What is also to be ashamed of is the cowardice of the Hindu and Moslem men of Char Manair who fled from the village, leaving their womenfolk to be victimised by some police underlings

Calcutta University Post-graduate Education

A committee had been appointed by the Calcutta University Senate to consider and report upon the means of effecting, economies in the post-graduate departments and stabilising them. The majority of the members of this committee drew up one report and a minority of four diew up another After everting debates in the Senate, lasting for several days, the majority report has been

The state of the s

opted. This result could be anticipated on the beginning. For, for a number of ars, the Senate has consisted of a majority the followers of Sir Asutosh Mookerjee, d the committee also consisted for the most art of his followers.

Not having seen either of the reports, we e unable to discuss them on their merits. it one remark we must make in favour of e position taken up by the majority. Lord ytton, the pucca Governor of Bengal, had omised more than once that he would make grant to the university which would suffice make up the deficit, after the real needs the university had been made known to m. He had not definitely fixed the amount the promised subsidy, nor had he said at the university must effect such retrenchents as would make its own resources ffice for its needs without any State help e majority, therefore, did not feel called upto make retrenchment the sole or main ject of their deliberations, which is what minority did. We think under the cumstances, the majority were right.

As regards the grant of three lakhs per num which the university asks the Government to make, we consider this a moderate mand when the grants made to some ier Indian universities are considered. For tance, take the case of Lucknow. It edues a smaller number of students in a aller number of subjects than Calcutta t in its report for the year 1924, for a py of which we are indebted to Dr. G. N. arkervarti the vice-chancellor, we find it ted in the treasurer's report.—

"The estimates of 1924-25 indicate an expendis of Rs. 19,09,478 against a possible net income
Rs. 6,85,971 (including Rs. 50,000 expected from
scriptions) and unless the University receives a
rernment grant of at least Rs.13,95,000, it is very
ibtful if the whole of this expenditure can be
ertained. In this connection it may be pointed
that the Universities Economy Committee apnted by the Legislative Council have recomnded a block grant of Rs. 7,87,000, excluding
Medical College Hospital, (which will in future
shown under the Medical Provincial Budget),
is sum is calculated on five years' averages, and
t of this amount has to be kept in reserve for
ess of expenditure over the block grant two
rs hence."

If the Bengal Government and the ngal Legislative Council had definitely used to make any grant, it would then we been certainly necessary to think of astic retrenchments, to the extent of even olishing the chairs in some subjects. But the case was not so desperate as that,

one fails to see the necessity of the many motions for lopping off several subjects. It seems to us strange that Pandit Haraprasad Sastri of all men felt called upon to move for the abolition of the study of Pali, which contains so much valuable literature and so many source-books for the study of arcient Indian history, sociology and religion.

We have already said that we have not seen the majority and minority reports, and therefore do not know whether all the existing members of the teaching and office staff are going to be retained.

We have repeatedly given expression to our opinion that there should be no pluralists, that not a single professor should be retained who does no teaching, lecturing or research work—we once definitely named at least one such man, that plagiarists should not be encouraged, that disciplinary action should be taken against them, that there ought not to be a superfluity of librarians or secretaries or clerks, etc. etc. But we do not expect that there will be any reform in these directions.

The Proposed Secondary Education Board

It is said, the Bengal Government is going to introduce a bill for the creation of a board which will take charge of the Matriculation and Intermediate Examinations and the classes which prepare students for the same.

The Sadler Commission, no doubt, re-commended the creation of such a board We could not see our way to support this recommendation -But leaving aside the objections which we formerly urged, let us see what conditions were attached by the Commission to the recommendation. One was that the board was to be an independent unofficialised body, uncontrolled by either the Government or the university. But it is said, the board which the Government wants to create would be an officialised body practically under Government was that Government Another condition should give a subsidy of forty lakes for the Intermediate Colleges to be created. This also, we are told, would not be forthcoming

There is some experience, too, to guide the Indian public. Intermediate Colleges have been now in existence in the Allahabad Upiversity for some years. They have, however, been pronounced a failure. Vide. for instance, the extract from the Allahabad University Magazine given in our last issue, p. 565, on this subject. As regards pecuni-ary support, if the U. P. Government with its larger revenue could not give enough money for Intermediate Colleges in U. P. how can the Bengal Government with its beggarly income do so?

We do not want any extraneous body to have the strangle-hold on our colleges and University. But practically the proposed Board would have such a hold. Most of our colleges cannot go on without the inter-mediate classes. Moreover, if the proposed Board insists on passing too few Matriculation and Intermediate candidates, as the University has hitherto insisted for financial reasons on passing a very large percentage of them, how can the University of the majority of colleges go on?

The Madras Vice-chancellor

We congratulate the University of Madias on the selection of Sir Venkataratnam Naidu as its Vice-chancellor He is a man of high attainments and high character who has spent his life in doing good to society as an educator, a social reformer and a religious teacher.

Some Hindu Resolutions

It is a hopeful sign of the times that the Hindus assembled at Faridpur last month passed the following resolutions -

Whereas for want of Vedic Culture among the Hindus and inability to perform religious rite and ceremonies by oneself there has been a gradual degeneration of manliness and spirituality, this Conreference requests every male and female member of the Hindu accety to read the Vedas and perform the religious rites and ceremonies by his own hand.

This Conference recommends and supports the following means for the removal of untouchability from among the Hindus and does ever tevery

from among the Hindus and does expect every Hindu to observe them in his daily affair, vir

Every one irrespective of colour and creed has the right to read the Vedas.

Every Hindu will have equal rights to access

and use of all public temples, schools and water

All Hindus will be able to drink water teached by any other Hindus.

Priests, washermen, barbers, bearers etc. will be entitled to serve every Hindu irrespective of castes and no Hindu should raise any objection in that respect.

While affirming that Brahmacharya should be the ideal of the Hudu widows, this Conference holds that if any Hindu widow remarries, she or her husband should not be outcasted or deprived advantage of the Hindu

As many Hindu women are being oppressed and outraged by rufhans and are being compelled to live miserable lives and sometimes to adopt other religions, this Conference requests every Hindu to be determined to prevent such outrages and to keep all outraged women in society and to give them all corts of help if necessary. them all sorts of help, if necessary

Whereas the power of organisation is almost extinct amongst the Bengali Hindus and whereas mutual sympathy in case of dangers and difficulties in total sympathy in case of dangers and difficulties is found wanting amongst them, this Conference resolves that a Hindu volunteer organisation beformed in every district subdivision thana and village for help in cases of dangers and difficulties under the Provincial Hindu Sabha. It will be the duty of these volunteer organisations to serve and succour every oppressed and needy person irrespective of caste, creed and religion.

This Conference expects that the Bengal Provincial Hindu Sabha will try its best for the attainment of health and strength by all classes of Hindus by physical cultura.

of Hindus by physical culture.

This Conference expects that the Bengal Provin-

cial Conference will make special efforts so that every Hindu man and woman reads the Gita Whereas in Bengal, due to various factors, the number of Hindus is dwindling day by day and whereas many Hindus have embracing other religious it is therefore resolved that in order to consolidate and are resolved. that in order to consolidate and strengthen the lindu society the Hindus should take back in their fold those who have torsaken the Hindu religion but are now willing to come back to the Hindu society after performing necessary lites

All these resolutions are in consonance with the outspoken presidential address delivered by Sii P C Roy at the Faridpur session of the Provincial Hindu Sabha

Interdining at Tamil Gurukul

An acrimonious controversy has arisen out of an attempt to make interdining among students of all eastes in the Tamil Gurukul compulsory Much as we are in favour of interduring, we consider it absolutely wrong to make it compulsive. In the Visya-bharati University interdining is optional, the result being that the vast majority of the students and staff interdine

The Bawla Murder Case

Whether capital pum him of should be retained in the penal codes of nations is a question which continues to be discussed. , as it has not yet been abolished in is, it can be asserted without any hesitathat the men who murdered Bawla, the nbay Muslim millionaire in the attempt to map his mistress Mumtaz, have been htly awarded the highest penalty of the

But these men were evidently hired tools in e hands of some powerful and wealthy man men. From the details of evidence published, is clear that the moving spirit or spirits t this crime is a resident of the Indian tate of Indore Public opinion rightly urges be Government of Bombay to ferret out the ffender or offenders and mete out conlign punishment.

The Nizam's Ban Against Malaviya

Hitherto the Nizam vented his spleen mostly upon newspapers. Now he has passed an order that Pandit Madan Mohan Malaviya should not enter that ruler's territories. The Pandit had been invited to preside over a conference of Hindus in the Hyderabad State. When will the Nizam learn wisdom? He is not a minor. His subjects are mostly Hindus, and it is only right and proper that they should have the liberty to set their house in order under the guidance of a man of their choice.

Perhaps the Nizam thinks this sort of policy the best suited to win over the opinion of the Berar Hindus to the restoration of that province to him

"Separate Budget for Moslem Education"

One of the resolutions passed at the educational conference of Bengal Moslems held at Berhampore under the presidency of Mr. Fuziul Huq demands that there should be a separate budget for Moslem Education.

If separatism is to be just, it ought to be logical. If there be a separate educational budget for a particular religious community, justice would require that that community should not have the benefit of the general educational budget; for no one can justly demand to be served twice, whilst others are served only once. Is that what the Bengal Moslems want? Let them then press for the establishment throughout the country of

primary and secondary schools, colleges and universities for themselves alone, and let them withdraw their boys and girls from all institutions meant for all religious communities without any distinction.

Indians Holding King's Commission

Mr George Lansbury has learned from the reply to a question asked by him in the House of Commons that in the Indian army 3300 British' officers and only 81 Indian officers hold the king's commission. "Indianisation" has reached this stage after eight years. At this rate complete Indianisation would require 326 years' That is jolly good news.

Cow Protection

At a special session of the Cow Conference held in Bombay, Mahatma Gandhi, presiding laid stress on the point that cow protection meant not merely non-slaughter of cows but also that cows should be properly bred and taken care of After emphasising the need of educating public opinion in the matter, the Mahatma urged people to help cow protection societies to carry on their work and support the proposed establishment of a dairy in Bombay.

Maulana Shaukat Ali in giving his support to the movement for protection of cow observed that the fact of his being a Muslir did not stand in the way of his looking up on the cow with as much reverence a Hindus.

Sir Frederick Whyte on von Hindenburg

When the German nation chose to ha as their political head a military genius li Field-Marshall von Hindenburg, the alarmis of the allied countries sat up and saw visic of fresh wars. It is of course foolish to as ciate the beginning of wars with Field-M shals; for Field-Marshals merely carry wars, while financiers, politicians and ideals of a particular class begin them. Althou some people would like the world to belie that it was the militarists (whoever the might have been) of Germany who starthe last war, the world knows a little

Sir Frederick Whyte, President of the Indian Legislative Assembly, interviewed by the Associated Press gave the following opinion

on the recent election in Germany

I see no reason to tremble for the peace of Europe because von Hindenburg is the German President but do have qualus about the future when I think of him vis-a-vis the French in their present frame of mind. It appears that two causes brought about you Hindenburg's victory—(1). The orought about von inndenourg's victory—(1) The last German election in Germany showed a decline in the strength of what we may call the 'Laberal' parties because they had failed to give the average German either a sense of domestic security or any sign of returning prestige abroad. The German shove all wanted to feel a fum hand on the remainer to the American did when they also tall 'Tall' in the strength of the American did when they also tall 'Tall' in the strength of the American did when they also tall 'Tall' in the strength of the American did when they also tall 'Tall' in the strength of the American did when they also tall 'Tall' in the strength of the American did when they also tall 'Tall' in the strength of the str inst as the Americans did when they elected Calvin Coolidge or the British electors when they returned

the Baldwin Government to power last autumn
"Von Hindenburg gained millions of non-aguresive German votes, especially those of women on this account. To that extent he is not a pertent of the revival of German militarism but merely fluggerman symbol of a world-wide desire for study German symbol of a world-wide desire for study of the mast Government after the disturbances of the past

reactionary and some of them look to him as the agent of a Hohenzollern restoration. In a measure therefore, his election is a victory for the Monarchusts. But since the monarchust hook for its not win on its own strength we must look for its possible allies among those who may despin of the forman future in any other hands

Now what has made moderate thermans who number millions, despair of any appeal except that of force? The bald truthful answer is the French Government. From the occupation of the Rain down to the latest announcement regarding the conditions on which France will permit Germany to enter the League of Nations, each successive French Government from M. Pomerre to M. Pamerre to M. P leve has done its best or its worst to prove to the Germans that the appeal to reason is vain and that they must appeal to force Most Germans do not want to appeal to force but are being slowly driven back to it.

You Hindenburg's election is, therefore ad inger

signal. Moreover, it greatly increases the difficulties and the influence of the British Government. Mr Chamberlain has it in his power to deprive the German election of its evil results, but if he is to succeed, he will have to be equally him with both with Germany and with France especially with France."

We quite agree with Sir Frederick in his diagnosis of the reasons which induced the Germans to sway away from "Liberalism towards "Nationalism." Germany is not the only country in which perfectly sober-monded people are finding it essential to establish a firm government able to take things well on

hand, drive all nonsense out of national induses and guarantee proper execution of the nation - will Germany has suffered a lot on account of political slackness. Should we be surprised if Germany tried to go back to her pre-was efficiency and marvellous organi-Sation?

We do not know it Sir Frederick is right in assuming that the Germans "despair of any appeal except that of force, but he is not far off the mark We do not know if France alone is to blame in driving treimany back to her faith in force. There is a good deal of truth in what Sir Fiederick says The German election may not be a danger signal but there is trouble brewing in that country. It is for England and France to do a little thinking in between taking all sorts of "action," if they want to aveil the consequences of all that they have allowed to take place from the Peace of Paus till vesterday

The Indian Daily Mail re Forward

On April 30, 1925, The Indian Daily Mart of Bombay published what they have called an exposure of Forward . "Andaeious Attempt The accusation is that to Bluff Advertisers Forward, a Calcutta daily edited by Mr C. R. Das, has used a 'disingenuous certiheate of enculation provided it by a Government Certified Auditor And that the circulation claimed by Finund is three hundred per cent in oxcess of its actual enculation as calculated by The Indian Duely Mail It is not possible for us to offer any opinion on the controversy. We merely give a summary of the indictment for its topical interest. It ippears from Pic Indian Daily Mail's "exposure' that l'onund used the following document to attract advertisers

To MI . WIT TAY CONTAN

This is to entity that I be amued the business of Forward with a year to arrive at the REU. CIRCLIATION of the labe on three dats he paring SURPLAST VISHS and council that the worder is 770 per diem

this document is signed by an Mi Ser. tempta who is a Government Corphed Auditor The Indian Didy Mail commonting upon

this precious document says.

The methods when a fovermient Certified Auditor outht to adopt to dis over the toal errulation of a ewspaper are thoroughly wellknown. They consist in the xamunation of the accounts of

THE PARTY OF THE P

newspaper, not of "the printing"—whatever at means.—No man—leave alone an auditor—
his senses will examine the "printing" of a swspaper to find out "the real circulation". The me is as different from the other as chalk is from

There is not a sentence in the "certificate" that will bear the slightest examination for a moment. But, on the strength of it, "Forward" claimed a circulation of 38,000 copies.

Turning to the Profit and Loss Account of the Forward Publishing Co. for 1924, copies of which reached shareholders in Bombay a few days ago, we take the following figures of revenue

61,615 Agency Sales 34,149 13 3 Subscriptions Cash Sale 68,588 6 3

Total 164,353 9

from subscriptions and sales alone during the six months between July 1 and December 31, 1924—not the whole year—would have been Rs. 3,80,000. But the total revenue of "Forward" from all sources, including advertising, for the whole year was only Rs. 3,34,627.

There is also another way of arriving at a cal-culation of the correct net daily sale of "Forward." Newspapers in India pay a discount of twenty-five per cent. to sales-agents. Let us assume that all copies of "Forward" in 1924 were sold through agents and that the figures in the profit and loss account represent net receipts at the rate of three pice per copy. Rs. 164.353 are equivalent to 10,518,592 pice, which divided by three will give one the total number of copies sold in the year. one the total number of copies sold in the year. The result is 3,506,197 copies, or, assuming 300 publishing days, 10,000 copies per day.

The Indian Daily Mail attempts yet another way of arriving at an estimate of Forward's circulation.

The total value of the paper consumed in 1924 were Rs. 1,17,300. That represents a monthly expenditure of Rs. 9,775. Whatever else may be possible, it is quite impossible to produce more than a third of 38,770 copies of the "Forward" newspaper at a cost of Rs. 9,775 per month. We are assuming normal import prices, but the Directors state in their report, "We were obliged to buy paper locally at about double the cost of foreign paper, involving us in heavy loss.....We have now placed orders for paper both in Sweden and in Central Europe at satisfactory prices." and in Central Europe at satisfactory prices.

So that, if Forward had to pay higher prices than usual they must have printed even a lesser number of copies than assume

by The Indian Daily Mail.

We reiterate our inability to express an opinion on this delicate matter. We should however like to say something in favour (Forward. From their "document" one doc not get any idea of the Real Circulation assumed or otherwise, of the Forward. The certificate states that the average "printing per diem was 38,770. It does not sta whether the "printing" was carried (throughout the day. That would have bee in violation of the Factory Act. Assumin that a day consists of 24 hours and the working day at the Forward Press of hours, the "Printing" done at the "average rate of "38,770 per diem" should give us "real" "printing" of 12,923.3. copies. Th does not go much against the estimate mad by The Indian Daily Mail. Auditors a people who habitually like to state thin If, as a result of the mathematically. training they end up by making things obscu to the unmitiated, should we grumble?

Britain's Wealth

The report of the Commissioners of Inla Revenue for the year ending March, 1924, show that 89,000 persons paid £62,500,000 super tax a total income of £510,000,000. One hundred as thirty-four persons had incomes of over £100.0 a year - Reuter.

From the above one gets an idea of the number of extremely wealthy people th Britain possesses. It shows that there a 89,000 people in Britain who have an average per capita income of over £5730 or R 85.950 per annum. One hundred and third four persons had incomes exceeding Rs. 1 00000 lacs per annum.

The Calcutta School of Architecture

India has been from centuries past a lar of wonderful buildings. Her architecture h evoked admiration in other lands and th building art of India has attracted the a tention of students all over the world. Bu as in many other fields, Indians ther selves have been the most backward in bo appreciation and the revival of Indu architecture. The builders' art in India h the revival of Indu suffered along with all other arts as a resu of the degeneration that had set in in Ind with the loss of her political independent

This is demostrated by the large number of uncouth and hybrid constructions that offend the eye whenever one has occasion to traverse the streets of any city or town in India. People have forgotten their own architectural ideals and have not made any serious study of foreign architecture. The result is the nameless jumble of walls and windows which is such a constant source of irritation to the sesthete.

Fortunately for us the Swadeshi movement although primarily a political movement has started a sort of Renaissance in India. Under the stimulus of Indian Nationalism every branch of Indian life has seen development and progress. Architecture has been no exception. It is pleasing to find in postswadeshi and specially in post-war buildings a revival of the ideals of Indian architecture. The most modern buildings (when constructed by the right men) combine Eastern mestinetics with Western science. For the execution of this ideal type of work, we require the services of men who have studied both art building engineering thoroughly present there are not many places where one can get proper training in this line We are glad to note that Mr. V. V. Vaduerkar L. S. A. (London) who has been for a long time attached to the Visva-bharati has started a school of architecture in Calcutta. premises of the school are at No 226 A Bowbazar Street, Calcutta and the name of the school is the Calcutta School of Architecture. Mr. Vadnerkar is arranging the hours to suit every class of students wish the school every success. Intending students should apply to Mr. Naduerkar for details. A. C

A Ghastly Incident which Hides a Ghastlier Truth

We reproduce the following from daily

Sentence of death was passed yesterday by Mr.
Justica. Page, presiding over the High Court
Criminal Sessions, on Jogendra Nath Khan, who
was charged with the murder of his ten-year old
wife Lilabati.

wife Lilabati.

The girl was married to Jogendra two years ago but fived with her parents, who are sweetment-sellers in Sankaritolish Lane, Calcutta On February 9. Jogendra came to Calcutta to take his wife to his place in the Midnapore District, but as the next five days were inauspicious the girl's parents asked him to wait a few days and he agreed. For the first two hights the couple slept in a room set apart for them but on the find

night the girl refused to sleep in the same room with her husband and slept with her mother instead.

On the night of February 12, Jogendra having asked for some pan, his mother-in-law sent the girl to his room with it. Jogendra closed the door and, shortly after, the mother and the nighbours heard the noise of two successive blows followed by groans. The mother rushed into the room and found her daughter lying face downwards on the floor in a pool of blood. A stone pestle besmeared with blood was found near her head, which was so badly smashed that her brains had come out.

The story is one which will sicken every decent man. The fate of the poor girl will rouse pity in every heart. The brutality of the man, whose execution is hardly enough of a punishment for him, will fill all minds with disgust and fury. But these are not the only things one is made conscious of when one goes through

the gruesome tale

The whole incident should be charged to the criminal system which allows extremely young girls to be handed over as fullgrown women to the tender mercies of men whose instincts are no more under control or polished than those of wild animals (It would be only right to say that the instincts of animals are far more true to reality and are never so feverishly morbid as those of men A wild animal knows if its mate is fully grown and does not attempt to treat a female cub as a mature beast) The guilt also rests upon the Government which boast of their benign nature and calmly leave malignant systems to work the degeneration of the nation They would excuse themselves by proclaiming their policy of noninterference but everybody knows that wherever interference helped then own ends, they have interfered They do not want to displease people unless it paid them to do so. In the case of the child wires who are subjected to the worst torture and some time to muiderous assault, so that husbands may satisfy the cravings of their diseased minds, the Government would lay the blame on Indian society and get busy where it is useful. We do not for a moment support Indian society or sav that it is not to blame, but we must say that the Government blame, but we must say that stamping out are scandalously slack in stamping out. They filthy systems and harbarous customs ought to make the life and honour of Indian womanhood safe from brutal assault and rape (and their various side-issues) by both scoundrels and husbands The League of of Nations or all civilised nations should mulate the British Government to move this matter, if they do not wake up to seir duty by themselves. In the story iven above, it is palpable how the girles forced to sleep in the bed of a full-rown savage when she was merely a child of ten. Her refusal to surrender to this grangement so infuriated the husband that he murdered the child rather than give up what he considered to be his rightful claim. Are the government going to proceed against the parents of the girl as persons who helped the terrible process?

One word for the leaders of orthodoxy in Hindu India. Some of them fight so hard for the retention of the system of handing over children as wives that to their audience Hinduism appears as a glorification of sexual crime. No sincere man credits them with honesty of conviction as well as with educated minds. Throughout the ages reactionaries have exploited the average man's prejudice against change. Our reactionaries are no exceptions. The average man sees nothing unusual in the usual, be it ever so injurious. If religious sanction (either true or perjured) is added to the customary strength of an evil, it becomes doubly difficult to wipe it out. Tales of horror and shame, such as the above, which are not at all rare, should penetrate the religious hide of our reactionary big men and reach their conscience.

A. C.

More Bolshevik News

One of the most regular items in the columns of British journals is the news of Bolsheviks conspiring against the British Empire. Since ages ago, we have been served with the news of Bolshevik leaders proclaiming their intention of helping "Indian Revolutionaries," (whoever they are) to the last bullet or to the last Russian coin of the lowest denomination. Perhaps the British papers forget to send copies of the various resolutions the Bolsheviks pass to the movers of the same; or why should there be so much resolving and so little doing? Even Bolshevik leaders may err through ignorance. We reproduce one more below.

Among the resolutions passed at the enlarged plenary session of the Executive of the Third Internationale recently held in Moscow, says the Morning Post, is one proposed by Zinoviel himself which insists on the necessity of supporting the demands of the Isdian Nationalist organisations and

•

the creation of an "Independent Democratic Republic" in India after "the Indian people have overthrown the British yoke."

The resolution also demands that the Comintern and the Soviet Government shall "accord the

The resolution also demands that the Comintern and the Soviet Government shall "accord the maximum of support in their power to the leaders of the Indian revolutionary movement, directed towards the overthrow of the British Empire."

We hope Zinovieff subscribes the Morning Post.

Sir Purushotamdas Criticises Budget Calculations

Interviewed by the Bombay Chronicle Sir Purushotamdas Thakurdas expressed views on the recent announcement of the Government of India's loan policy currency policy to the effect that he considered it rather extraordinary that the Government should find it unnecessary now to borrow in order to balance the budget. in view of the fact that it was but two months ago that the Finance Member was persuading the Assembly to pass the Finance Bill. He naturally infers from this that the Finance Member could not foresee even - two months back a saving of 12 crores. In his opinion a budget that could go wrong by twelve crores in two months must be a budget based on very loose figures. He hoped the Government would make this situation clear by giving details of the sudden and unforeseen improvement which enabled them to do away with the necessity of floating a loan of twelve crores said to be required by the Government two months back. He also criticised the Government as follows:

When members of the Assembly asked for a remission of taxation either in the postal rates or in the salt duty, or in regard to the Cotton Excise Duty, the Finance Member pleaded that any tinkering with the proposed figures on ever so urgent or important grounds would enable the Government of India to disown their responsibility for the Budget. Perhaps the Finance Member then did not realise that the result of the wrong currency policy he was persisting in might before sixty days had expired compel him to modify his own calculations to the extent of twelve crores.

Sir Basil Blackett may take consolation in having collected till now enough money to do away

Sir Basil Blackett may take consolation in having collected till now enough money to do away with the necessity of borrowing twelve crores of rupees this year for capital expendisture and to that extent the rates for Government securities may appreciate, but the prosperity of the country as reflected in the condition of trade and industry would be found to be extremly low. To this extent Government will find they have purchased better credit for the inselves in the financial market at a dear price. Whether that is a consolation to the

Government or not remains to be seen. It certainly cannot be a consolation to those who are anxious to see the country advance in all directions, since there is no doubt that the state of commerce and industry at the present time in India is far from satisfactory and cheerful, and the buying power of the people as a whole has been sadly low. One natural result of this is terrible unemployment of the middlackses.

We are awaiting a Governmental reply to Sir Purushottamdas' criticism.

A. C.

An Appreciation of Settlement Officers

Sir Ganga Ram giving evidence before the Economic Enquiry Committee said that he did not think it worth while to carry out an economic survey as suggested by the Committee; because Zemindars never gave correct information. He was in favour of ascertaining the potentialities of the land in regard to production; but he did not advocate the for the purpose. expenditure of money He did not say how one was going to get the required information without spending any money. Sir Ganga Ram in answer to Pandit Hari Kishan Kaul said, "The Settlement Officers can never get at the truth; the statistics of Settlement Officers are not worth the paper on which they are written."

Later on another witness Mr. Townsend, Commissioner of Juliundar opined that there would he no difficulty in getting information as to the value of production under agriculture; in fact, this information was contained in Settlement Reports. There appears to be a difference of opinion between Sir Ganga Ram and Mr. Townsend.

Orders for Railway Material Go Abroad

Ever since protection for Iron and Steel got into the Indian mind, one of the chief things that people hoped for or feared (according to their interest) in that connection was the injury that it was expected to inflict upon the Iron and steel trades of Great Britain We have, of course, never thought for a moment that Britain will suffer in any way on account of the sort of "protection" that has been given to the Indian trade. The news given below proves nothing but has some value as evidence in support of the view of those who think that the present scheme of

protection is a method of disbursing revenue and will not help the proper development of the indigenous Iron and Steel industry in India

London, May 13.

The Barsi Light Railway Company has ordered 5 000 tons of rails and also steel sleepers from the United Steel Companies Limited of Workington for the extension of the lines to Miraj. Orders for fishbolts and nuts will be placed with Messrs Guest, Keen and Nettlefold. It is hoped that subsequent, valuable orders for new locomotives, rolling stock and other equipment will be placed with British firms,—Reuter's Special Service.

English Sportsmen Join In

England always boasts of her sportsmen and of their strict adherence to the principles of fair play and broad-mindedness. Recently at Cambridge two Indian players, both old blues refused, to play for the university because Mr Lezard, who is junior to both of them, was elected captain and they were passed over It is the customary thing in the University Lawn Tennis Club to elect the seniormost blue as Captain. Messrs Rutoam and Hadı, the Indian blues, were passed over in spite of their seniority on account of some metaphysical "difficulties" that were expected to arise from the election of an Indian to the captaincy The nature of the difficulties is of course not divulged and many people have associated the same with mental condition of the electors. If race prejudice creeps in into the field of sport also, it will indeed he a tragedy. Many pens have got busy since the refusal of Rutnam and Hadi to take the insult lying down and brave Englishmen have already told the world that they had a right to please themselves and manage their own affairs in their own way. One gentleman, an ex-member of the Cambridge University Lawn Tennis Club has even gone into politics in this connection. This is not the first occasion that English sportsmen have failed to live up to their principles We remember other cases of passing over Indian, when captaincies or college colours were at stake. We admire the courage of Rutnam and Hadi in standing up against this sort of meanness They will have to suffer a lot of peering and sneeping, but they shall have the pleasure of having done the right thing

THE CLEANSER

Why do they shun your touch, my friend,
and call you unclean

Whom cleanliness follows at every step
making the earth and air sweet for our dwelling
and ever luring us back from return to the wild?

You help us, like a mother her child, into freshness
and uphold the truth, that disgust is never for man.

The holy stream of your ministry carries pollutions away
and ever remains pure.

Once Lord Shiva had saved the world from a deluge of poison
by taking it himself,

And you save it every day from filth with the same divine sufferance.

Come friend, come my hero, give us courage
to serve man, even while bearing the brand of infamy from him.
